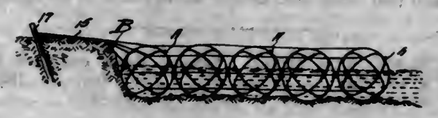
on said body, and nuts on said studs engaging the body, said nuts being so formed and co-operating with the body so that they are held fast by the driving torque for holding said body tight on said hub and thereby causing said body and rim to run true and silently under varying driving stresses.

1,635,896. DISTILLATION OF TAR. JOHN STANLEY MORGAN and DOUGLAS RIDER, London, England, assignors to Thermal Industrial and Chemical (T. I. C.) Research Company Limited, London, England. Filed June 1, 1922, Serial No. 565,102, and in Great Britain June 7, 1921. 7 Claims. (Cl. 196—92.)

1. A process of distilling tar, which consists in feeding the tar under the surface of a mass of molten metal, maintaining the temperature of the molten metal at a temperature adapted to vaporize the more volatile constituents and to leave as residue of the distillation semi-pitch containing the greater part of the anthracene present in the tar, withdrawing from the surface of the metal the semi-pitch produced and raising the temperature of the semi-pitch to that at which it gives up the anthracene which it contains.

1,635,897. AEROPLANE. HANS JULIUS NELSON, Palo Alto, Calif. Filed Dec. 23, 1925. Serial No. 77,302. 1 Claim. (Cl. 244—15.)

In an aeroplane, a body portion, landing devices mounted below said portion, a driving propeller, lifting propellers mounted on vertical axes, a plane extending transversely of the body portion, a pilot house above the plane and body portion, vertical elements supporting the pilot house, guiding propellers independently controlled and having their axes of rotation in alinement, transversely of the body portion and on opposite sides thereof, and braces extending from the upper portion of the pilot house to the surface of the plane, at the end portions thereof.



1,635,898. VEHICLE SIGNAL. EMIL W. NITZ, Rochester, Minn. Filed Nov. 11, 1926. Serial No. 147,774. 5 Claims. (Cl. 116—42.)

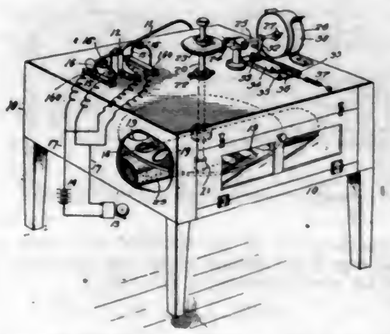
1. In a vehicle signal, a casing, a sign forming one wall thereof, a hinged cover normally covering the obverse face of said sign, a disk rotatably mounted in said casing in a plane at right angles to the plane in which the sign is disposed, a push link pivoted to the disk and to the aforesaid cover for outwardly swinging the latter when

the disk is turned in one direction, the casing being formed with a slot through which said link passes, and means for effecting turning of said disk.

1,635,899. JETTY AND UNIT THEREFOR. CARL L. NOHLEN, Cleburne, Kans. Filed Dec. 9, 1926. Serial No. 153,631. 5 Claims. (Cl. 61—3.)

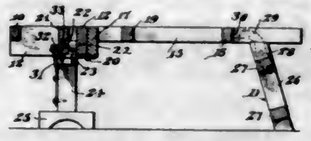
1. A jetty unit consisting of a plurality of circular hoops intersecting each other at different angles and rigidly connected to each other to form an open work sphere.

1,635,900. HANGER AND SUPPORT. FRANK OBIOLS, Winnemucca, Nev., assignor of one-half to Thomas A. Sykes, Winnemucca, Nev. Filed Sept. 10, 1925. Serial No. 55,553. 2 Claims. (Cl. 40—151.)



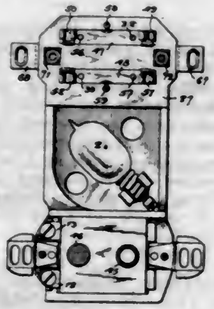
1. A wire easel of the character described comprising an inverted substantially V-shaped base portion, an arm extending from the apex of said V-portion, a pair of arms extending in divergent relation from said first mentioned arm, a downwardly and laterally directed arm extending forwardly from the free end of each of said divergent arms, each of said last mentioned arms having the free end thereof formed to set up a laterally directed substantially U-shaped article engaging member having the legs thereof lying in a plane extending substantially at right angles to the arm of which it forms a part.

1,635,901. INCUBATOR. ALBERT OLLER, Waldron, Ark. Filed Apr. 16, 1924. Serial No. 706,937. 3 Claims. (Cl. 119—35.)



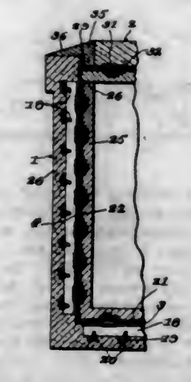
3. An incubator comprising a casing, a vertical shaft, an egg carrier mounted upon the shaft within the casing, a spring motor, a shaft receiving motion from said motor

mounted upon the top of the casing, a gear connection between said shaft and said vertical shaft, a movable ventilator member mounted on the top of the casing over



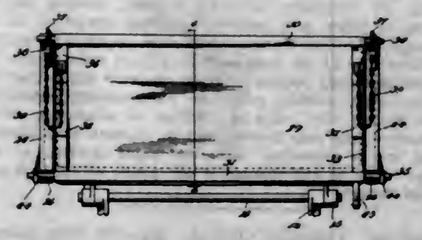
an opening therein, a spring holding said member normally in closed position and a crank on the motor driven shaft that moves said member in opposition to the spring.

1,635,902. TUB BENCH. FRED F. PAGEL and CARL E. KLAWITTER, La Crosse, Wis. Filed Jan. 25, 1927. Serial No. 163,451. 1 Claim. (Cl. 68—35.)



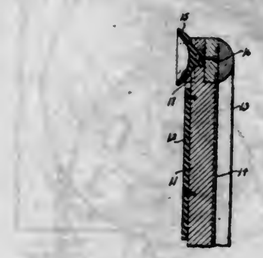
The combination with a bench having foldable sections hingedly connected together at their inner ends, legs for the outer ends of said sections, a support for the inner ends of said sections comprising a standard provided with a relatively wide foot, a socketed hanger block on the bench, a hinge connecting the standard to the block, and a snap spring hinge latching element on the standard having a ball engaging keeper adapted to enter the socket in the hanger block for locking the standard in supporting relation to the bench.

1,635,903. ELECTRIC FITTING. MALCOLM PETERSON and MARTIN J. DANIELSON, Bridgeport, Conn., assignors to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 17, 1924. Serial No. 738,196. 1 Claim. (Cl. 173—330.)



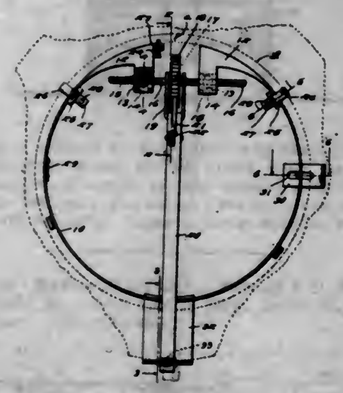
An electric fitting comprising an insulating base, a plurality of electrical devices of different character mounted on one face of the base, shunt bars located on the opposite face of the base and electrically connected to said devices, wire terminals electrically connected to the shunt bars, said base being recessed at one end to form a depressed ledge shaped to interchangeably receive the bases of contacts differently located thereon, mean establishing electrical connection between said shunt bars and said contact bases, together with cover block means shaped to the ledge and to the contacts mounted thereon, and having a depth substantially coincident with the depth of the ledge, means for holding the cover block in position on the base, and means for supporting the base in an outlet box or the like.

1,635,904. BURIAL VAULT. ERNEST H. PINKERTON, Harlingen, Tex. Filed Feb. 26, 1927. Serial No. 171,268. 6 Claims. (Cl. 72—7.)



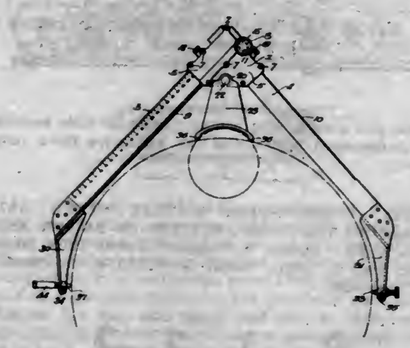
1. A burial vault comprising a metallic reinforced metallic container having an open top, a lining for said container having its top positioned below and in proximity to the top edge of the container, an outer covering for and throughout said container, and a lid including a metallic body portion having a non-metallic lining and a non-metallic facing, said non-metallic lining seating on the lining of the container, and said lid further including a non-metallic facing continuation extending and projecting on the covering for the container, said metallic body portion abutting against the inner face of the container and connected therewith and further concealed by its non-metallic facing continuation.

1,635,905. END GATE. JOHN C. POTH, Galion, Ohio, assignor to Perfection Steel Body Co., Galion, Ohio, a Corporation of Ohio. Filed Nov. 17, 1925. Serial No. 69,665. 2 Claims. (Cl. 296—51.)



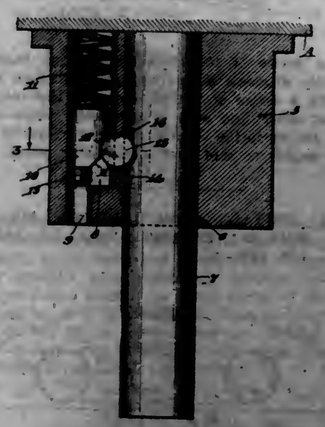
1. In combination with a body, of a pivoted end gate therefor having an edge portion bent to provide a channel, a pivot rod located in the channel, angle bars reenforcing the end portions of the gate and closing the open ends of the said channel, and retainers carried by the angle bars and extending across the open side of the channel and in contact with the said pivot rod to hold it in place.

1,635,906. WINDSHIELD ATTACHMENT. JOHN E. REED, Quinter, Kans. Filed Mar. 21, 1925. Serial No. 17,300. 1 Claim. (Cl. 20—40.5.)



The combination with a vehicle window or windshield, of an attachment comprising a frame adapted to engage against the window or windshield, a compressible cover for the engaging face of the frame, a transparent panel secured to the frame and spaced from the engaging face of the latter to provide a dead air space between the window or windshield and the panel, said frame having recesses in the engaging face thereof and interrupted portions at the corners of the compressible lining at said recesses and rubber vacuum elements carried by the frame to removably secure the panel frame in position, said elements being disposed within the recesses when the panel is in use.

1,635,907. COMBINED TIRE AND RIM CARRIER AND RIM TOOL. JOHN C. RUMMER, Flemington, Pa., assignor of one-half to David Stewart, Lock Haven, Pa. Filed Oct. 28, 1926. Serial No. 144,740. 3 Claims. (Cl. 224—29.)



3. A tire carrier of the character described including an expansible and contractible band split at one point, the ends of the band having inwardly extending heads, vertically slotted longitudinally and transversely, the transverse slots extending downward to the lower face of the corresponding head, approximately globular nuts mounted in the transverse slots of said heads for oscillation, an oppositely threaded screw passing through the heads and engaging said nuts, manually operable means for rotating said screw in either direction and tire clamping means mounted on the band in each side of the split therein.

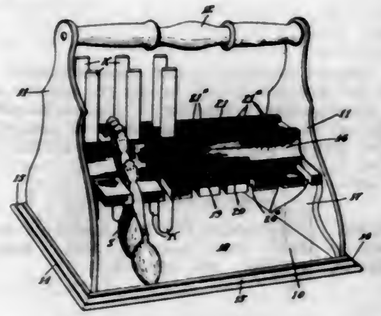
1,635,908. CALIPERS. JOSEPH STUART, Wilmington, Del., assignor to Lobdell Car Wheel Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 17, 1924. Serial No. 738,171. 8 Claims. (Cl. 33—165.)

1. Calipers comprising a body, arms adjustable in the body and relatively movable to vary the distance between the corresponding extremities, a support member pivotally secured to the body and adapted to assume an operative position between said arms, and resilient means tending to move said member on its pivot toward one of the arms.

1,635,909. REMOVABLE PUNCH. MAX EMIL TOBELER, Detroit, Mich. Filed Dec. 29, 1926. Serial No. 157,820. 1 Claim. (Cl. 279—30.)

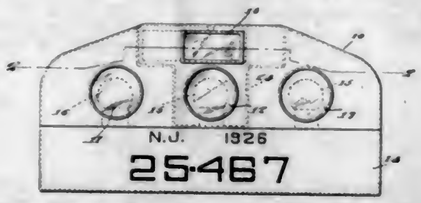
A device of the character described, comprising a body having a tool socket and a cavity at one side thereof opening into the same, a tool removably insertable in the socket and having a wedge shaped notch, a roller located in the communication between the cavity and socket and engageable in the notch, and manually displaceable spring tensioned means having stepped wedge surfaces coacting with the roller for automatically forcing the same into the notch.

1,635,910. CAR TRUCK. JAMES H. TUCKER, Petersburg, Va. Filed Feb. 13, 1925. Serial No. 8,965. 6 Claims. (Cl. 105—183.)



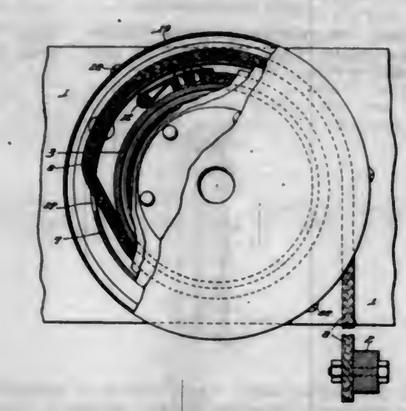
1. A car truck comprising a pair of truck units each embodying a set of wheels, side frames connecting them,

and a bolster supported at its ends in the side frames and having its central portion depressed to a level below



its ends, and a connecting bolster having its ends bearing on said depressed portions of the respective truck unit bolsters.

1,635,911. COMBINATION DISPLAY STAND AND CARRYING TRAY FOR ARTICLES OF SILVER AND THE LIKE. ALBERT H. VEGKLEY, Forest Hills, Mass. Filed Dec. 1, 1924. Serial No. 753,114. 6 Claims. (Cl. 211—28.)



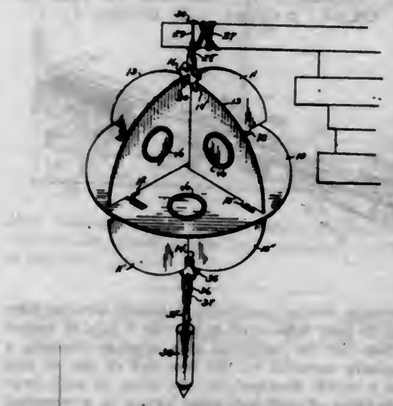
1. In a device of the class described, a base, and a horizontally disposed holder supported thereon and provided with a series of spaced slots for the reception of articles of silver, and with a superposed series of spaced slots for the reception of other articles of silver disposed at right angles to said first named slot series.

1,635,912. SIGNAL. AUREA D. WAGNER, Atlantic City, N. J. Filed Oct. 22, 1926. Serial No. 143,443. 1 Claim. (Cl. 116—45.)

A signal of the character described comprising a casing having spaced upper and lower lenses on one wall thereof, a vertically disposed electric light bulb arranged behind the lower lens, an indicator of segmental contour in plan pivoted within the casing for movement in a horizontal plane and having its curved wall operating behind the upper lens, said wall being divided into halves, each half having a particular significance and adapted to be singly presented to view through the upper lens, said signal being arranged directly above the bulb and adapted to be illuminated thereby, and means for operating said indicator from a remote point.

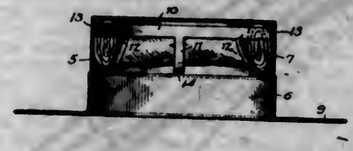
1,635,913. MOTION-CONTROLLING MECHANISM. JOHN WARREN WATSON, Wayne, Pa. Filed June 6, 1919. Serial No. 302,218. 6 Claims. (Cl. 267—10.)

1. In mechanism adapted to control relative motion between two elements, a member adapted to be secured to one of said elements, a member revolvable with relation to said first-mentioned member, a flexible member adapted to be secured to said other element and which is wrapped upon said revolvable member and which also frictionally engages said first-mentioned member, and a spring connecting said flexible member to said first-mentioned member.



1,635,914. CRUTCH. JOHN A. WEIS, San Luis Obispo, Calif. Filed Nov. 16, 1926. Serial No. 148,696. 4 Claims. (Cl. 135—49.)

2. A crutch comprising a bifurcated crutch staff, a hand grip mounted between the separated parts thereof, an arm rest, tubular members depending from said arm rest and spaced apart a distance normally somewhat less than the distance between the upper ends of the arms of the bifurcated staff, spacing blocks or discs mounted in said tubular members and cushioning means interposed between adjacent discs, whereby a crutch is provided which may be readily adjusted as to the distance between the arm rest and the hand grip and a frictional contact secured between the arm rest tubes and the arms of the



bifurcated staff, due to the inherent spring force in said arms when sprung toward each other sufficiently to enter the lower ends of the tubular members, substantially as set forth.

1,635,915. TRAFFIC WARNING DEVICE. WILFRED JONES WHITE, Detroit, Mich. Filed Aug. 18, 1926. Serial No. 130,035. 2 Claims. (Cl. 40—128.)

2. A warning device, comprising a main plate, elements hingedly connected with the plate and movable to angular position with reference to each other, and means for retaining said elements in angular relation, said means including a pivotally mounted device movable thru one of the hinged elements and alongside of the remaining hinged elements.

1,635,916. HAT COVER AND CARRIER THEREFOR. BENJAMIN MILLARD WILLIAMS, Philadelphia, Pa. Filed Aug. 10, 1926. Serial No. 128,395. 2 Claims. (Cl. 2—185.)

1. An attachment for hats particularly adapted to hold a folded cover within the hat crown when not in use comprising an elongated resilient member adapted to be bowed to conform to the curve of the hat crown and provided with depending fingers to engage with the crown.

1,635,917. MASSAGE DEVICE. FREDERICK M. WRIGHT, St. Louis, Mo. Filed Sept. 5, 1925. Serial No. 54,803. 2 Claims. (Cl. 128—55.)

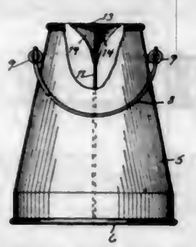
1. A massage device including a casing open at one end, a wheel rotatable in said casing, a removable cap closing the open end of said casing, percussion members slidably carried by said cap and removable from the casing with the cap, said percussion members being provided at their outer ends with suction cups and at their inner ends with heads, the heads and suction cups serving to limit sliding of the percussion members through said wheel and prevent displacement of said members when the cap is removed, means for rotating said wheel, and means carried by the wheel to sweep over the heads at the inner ends of said percussion members for depressing the same when the wheel is rotated.

1,635,918. COMBINATION DISH AND COVER. ANTOINE L. ALAJ, Chicago, Ill. Filed Jan. 30, 1926. Serial No. 85,013. 4 Claims. (Cl. 65—53.)

1. A combination dish and cover comprising a dish element formed of a continuous, shallow body portion closed at its bottom and provided at its top with an outwardly directed, right angularly disposed continuous flat flange terminating in a continuous up-standing portion merging into an outwardly directed, right angularly disposed continuous flat rim, said flange and rim, in cross section, extending in parallel planes, and a cover element formed of a continuous hollow open bottom body portion and a top for the latter and with said body portion having its lower edge conforming in contour to the shape of, seating on and co-extensive with said flange, said top arranged within and positioned below the upper edge of the cover element body portion to provide in connection with that part of the latter projecting above said top therefor a pocket conforming in contour to the body portion of a dish element seated in said pocket for receiving and holding such body portion.

1,635,919. SURGICAL APPLIANCE. CEDELIA BARTHOLOMEW, San Francisco, Calif. Filed Apr. 25, 1923. Serial No. 634,476. 2 Claims. (Cl. 128—130.)

1. A surgical appliance for the uterus, comprising a shank portion adapted to extend into the orifice of said organ which shank comprises a plurality of spaced substantially parallel wire arms, and portions adapted to extend around and engage the outer cervix of said organ, which portions curve outwardly and then rearwardly from one end of the shank portion and are formed as continuation of said wire arms, the inner ends of the arms of said shank being joined and diverged.



1,635,920. AUXILIARY FASTENER FOR DOORS. PRESTON BELVIN, Richmond, Va. Filed Sept. 30, 1925. Serial No. 59,637. 2 Claims. (Cl. 292—300.)

1. An auxiliary fastening device for a hinged door comprising an attaching plate to be secured to the hinged edge of the door, and a locking finger projecting from the plate and, in the closed position of the door, engaging in a recess formed in the door frame, the said

finger being of arcuate form and tapered towards its free end and having one edge concentric to the axes of the hinges for the door whereby the prong will have wedging fit in the recess when the door is closed.

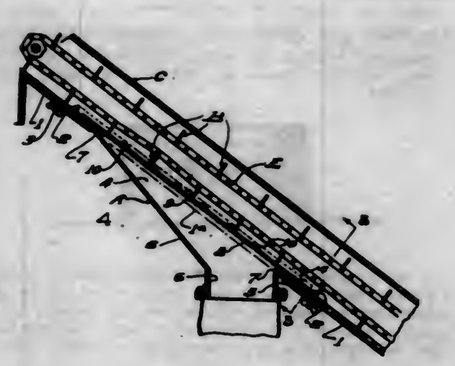
1,635,921. MILKING PAIL. DONALD W. BENNETT, Winton, Calif. Filed July 19, 1926. Serial No. 123,549. 1 Claim. (Cl. 31—50.)

In a milking pail having an open top and a closed bottom, a division plate positioned within said pail, and vertically disposed therein, a horizontally disposed plate secured to the top of said pail and to said division plate, and fillers positioned adjacent said division plate and said horizontally disposed plate, for the purpose specified.

1,635,922. WALL BOARD. PAUL THEODORE BETGRAU, Berkeley, Calif. Filed Nov. 17, 1925. Serial No. 69,691. 1 Claim. (Cl. 154—45.9.)

A wall board, comprising a cementitious body, wooden strips wholly enclosed in an open weave fabric and embedded in the body, a cementitious facing for the body, said facing having a portion of its ends thickened, and a sheet of an open weave fabric between the body and facing and wrapped entirely around the end wooden strip to form the enclosure therefor, the board having beveled edges and the outer portion of the end wooden strips underlying only a portion of the beveled edges.

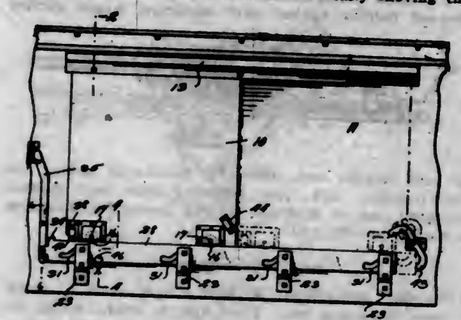
1,635,923. ANCHORING STAKE. NORRIS E. BRAY, Argyle, Wis. Filed Aug. 25, 1926. Serial No. 131,471. 1 Claim. (Cl. 189—91.)



An anchoring stake comprising a cross sectionally rounded shank having one of its ends rounded to provide a hook and its opposite end flattened and widened to provide a substantially triangular fluke, the bill of the fluke being arranged in a line with the axial center of the shank, the sides of the fluke being rounded in opposite directions from the fluke and the upper ends of the fluke being rounded from the shank to the sides of the said fluke.

1,635,924. MASSAGE DEVICE. THOMAS ANDREW BUCKLEY, Yonkers, N. Y. Filed July 14, 1926. Serial No. 122,446. 2 Claims. (Cl. 15—20.)

1. A massage device comprising a handle member having one of its ends bifurcated to provide a pair of spaced resilient jaws for the reception of a massage element, a ball swingingly mounted on the free end of one of said jaws, and a notch provided on the other of said jaws for the reception of said ball when swung to a clamping position.

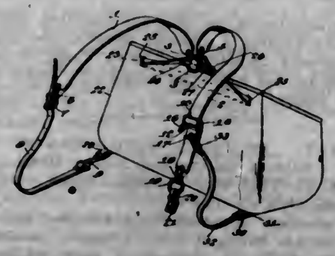


1,635,925. BOLTER. MARVID C. CARLSON, Fort Dodge, Iowa. Filed Oct. 12, 1926. Serial No. 141,142. 1 Claim. (Cl. 209—358.)

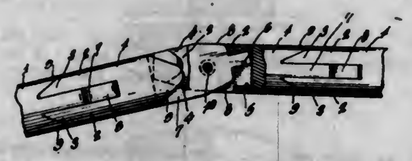
A bolter comprising, in combination, a plane screen, a flexible conveyor in proximity to the screen and having bars movable thereover, and an undulating track adapted to move the conveyor bars away from and towards the screen surface at an angle thereto to agitate the material while conveying the same over the screen.

1,635,926. SLIDING DOOR FOR CARS OR BARNS. DAVID EMERY CONRAD, Eldon, Iowa, assignor of one-half to Van V. Baldwin, Eldon, Iowa. Filed Sept. 4, 1926. Serial No. 133,668. 9 Claims. (Cl. 16—99.)

1. The combination with a sliding and vertically movable door, a vertically movable track upon which the door slides, and means automatically locking the door when the door and track are lowered, said means freeing the door for longitudinal movement when the door is raised, of means acting as the door and track are raised, automatically shoving the door towards open position when the door is closed, and means acting as the door and track are raised, automatically shoving the door towards closed position when the door is open, said second named means being manually shiftable out of operative position.

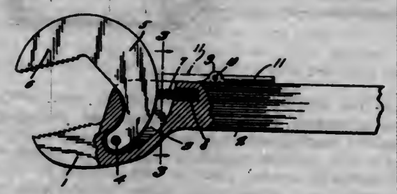


1,635,927. PERPETUAL CALENDAR. ARTHUR L. CURTIS, Chicago, Ill. Filed Jan. 16, 1925. Serial No. 2,725. 2 Claims. (Cl. 40—117.)



2. In a perpetual calendar, the combination of a casing having a display opening therein, a frame member removably supported by said casing, said frame member having a recess therein, three month indicating blocks adapted to be disposed horizontally in the upper part of said recess, year indicating tubes associated with the ends of said month indicating blocks, a plurality of day indicating blocks adapted to be disposed vertically in the lower portion of said recess, a spacing block between said month indicating blocks and said day indicating blocks, said spacing block having a longitudinal recess therein for receiving projections on the upper ends of said day indicating blocks, day-of-the-week characters on said spacing block, a locking block having a recess therein for receiving projections on the lower ends of said day indicating blocks, and means for locking said locking block in said frame member.

1,635,928. CREEL CARRIER. WILLIAM R. DAVIS, Wallace, Idaho. Filed Mar. 6, 1926. Serial No. 92,905. 3 Claims. (Cl. 224—5.)

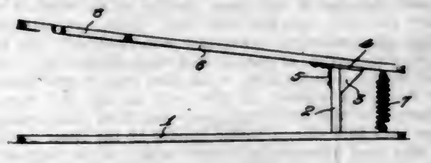


1. A harness for supporting a creel comprising a pair of main supporting straps adapted to be passed across the shoulders of a wearer, a ring connecting the rearward ends of said supporting straps, a buckle carried by said ring, an attaching strap secured at one end to said ring and adapted to be threaded through horizontally spaced openings in the upper portion of the back of the creel and then engaged with said buckle, an attaching strap adjustably and detachably connected with the forward end portion of one of said main supporting straps and having a snap hook at its free end, a link carried by the lower portion of said creel at the end thereof adjacent to said snap hook, said snap hook being engageable with said ring, a buckle carried by the lower portion of said creel adjacent its opposite end, a strap engageable with said buckle and having a snap hook at its free end, and a hook member adjustably carried by the forward end portion of said second named supporting strap with which said snap hook is engageable.

1,635,929. UNIVERSAL FLEXIBLE SHAFT. ELMER C. DEAN, Frankfort, Ind. Filed Apr. 8, 1925, Serial No. 21,622. Renewed June 3, 1927. 2 Claims. (Cl. 64—30.)

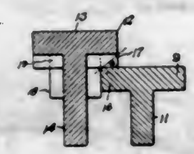
1. A flexible shaft including a plurality of pivotally connected sections, each section including a body having spaced ears at one end and a recess between the ears, a centrally disposed tongue at the other end of the body having reduced outer ends and a tapered ear upon each side of said tongue.

1,635,930. WRENCH. PETER A. FOASDAHL, Sulphur Springs, Alberta, Canada. Filed June 28, 1924. Serial No. 723,011. 1 Claim. (Cl. 81—99.)



A wrench including a fixed jaw having an offset shank provided with a pocket adjacent to the jaw, a swingable jaw having a rounded shank which is received in the pocket and pivoted therein, there being a pair of upstanding ears on the shank of the fixed jaw, a stop rod pivoted therebetween and normally held from movement by frictional engagement, said stop rod being swingable into contacting engagement with the pivoted jaw and designed to rest against the shank of the fixed jaw when in such contacting engagement.

1,635,931. AMUSEMENT DEVICE. THOMAS J. FREE, Neillsville, Wis. Filed June 2, 1926. Serial No. 113,229. 1 Claim. (Cl. 272—55.)



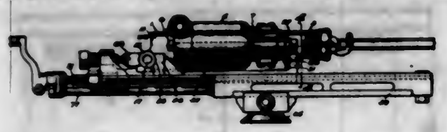
An amusement device comprising an elongated flat substantially rectangular base designed to rest on the ground or on a floor surface, an upright secured to the base adjacent to one end of said base, said upright having its outer end cut at an inclination and having on its outer face a head extension whose outer edge is cut at the same inclination as the upright, a compressible strip on the outer end of the upright and on the head, a seat

carrying a plate of a length approximately that of the base having its under face resting on the compressible strip and being hingedly connected to the upright, and

spring means between the plate and base for normally sustaining the plate in contacting engagement with the compressible strip.

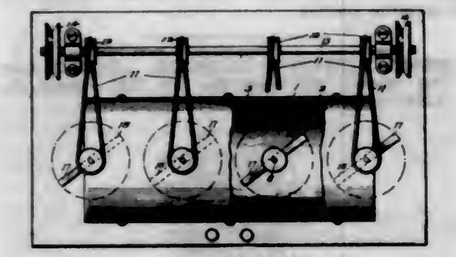
1,635,932. GRATE. JOHN R. FULWEILER, Moylan, Pa. Filed Jan. 2, 1925. Serial No. 257. 4 Claims. (Cl. 126—163.)

2. An upper grate bar of T-shaped structure provided with horizontal and vertical supporting lugs, and a lower supporting bar for so engaging said lugs as to prevent the warping of said upper bar.



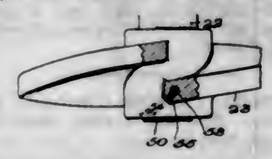
1,635,933. ILLUMINATED SCREW DRIVER. VINCENT GENOVES, Honolulu, Territory of Hawaii. Filed May 25, 1926. Serial No. 111,610. 3 Claims. (Cl. 240—6.4.)

1. A tool of the character described, comprising a handle, a working member, a sleeve at one end of said member for engagement over one end of said handle and having a cone portion extending therefrom provided with an eccentrically located aperture and adapted to receive said member end, illuminating means within said cone portion eccentrically of the end of said handle and in alignment with said aperture, for directly illuminating the other end of said member, a battery in said handle and having a center electrode, and a contact element concentrically of and engaged by the illuminating means and the center electrode.



1,635,934. DRILLING MACHINE. GEORGE H. GILMAN, Belmont, Mass. Filed Aug. 22, 1923. Serial No. 658,825. 20 Claims. (Cl. 255—51.)

1. A drilling machine having in combination, a cradle, supporting means in which said cradle is slidingly mounted, means for feeding the cradle relatively to said supporting means, a percussive hammer tool, said tool having a reduced rearward end, lugs projecting from opposite sides of said reduced rearward end, said cradle having lugs at opposite sides thereof embracing said reduced rearward end of said percussive hammer tool and against which said lugs projecting from opposite sides of said reduced rearward end bear, releasable means for engaging the rearward end of said percussive hammer tool and forcing the same forwardly to clamp it against said lugs projecting from said cradle, said percussive hammer tool having side bolts, means forming forwardly facing shoulders at the forward portion of said percussive hammer tool, a member carried by said side bolts and clamped thereby against said shoulders, means carried



by said member and cradle for detachably locking the two together, said lugs projecting from said reduced rearward end of said tool having means for attaching a handle to said tool.

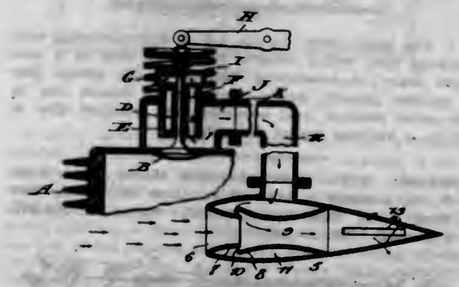
1,635,935. SOLENOID MOTOR. ALEXANDRE F. GODFROY, St. Louis, Mo. Filed Apr. 8, 1922. Serial No. 550,671. 2 Claims. (Cl. 172—36.)

1. An electric motor which comprises a hollow solenoid, a plurality of armatures disposed along the axis of said solenoid and adapted to be affected by a variation in the field of the solenoid, a driven shaft, connections between the armatures and said shaft whereby motion of the armatures is transmitted to the shaft, a circuit connected with the solenoid, and means in the circuit for varying the current in the solenoid in accordance with the motion of the armature.

1,635,936. SACKING, PACKING, AND MIXING MACHINE. MONROE GOTTEN, Memphis, Tenn. Filed Mar. 25, 1926. Serial No. 97,437. 13 Claims. (Cl. 226—25.)

2. In a machine of the character described, means for sacking and packing a granular material and mixing a liquid therewith including a packing auger having discharge means, and means for supplying a liquid to said discharge means.

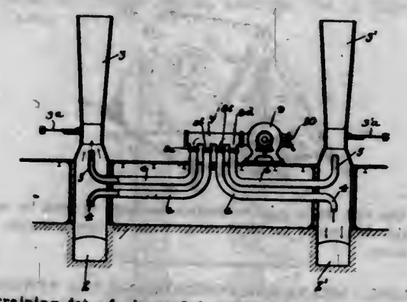
1,635,937. ANIMATED WIND-OPERATED ORNAMENT. STANLEY GRILLO and JOSEPH GUERRA, Tuckahoe, N. Y. Filed Sept. 28, 1926. Serial No. 138,251. 2 Claims. (Cl. 46—14.)



2. An ornament of the character described, including a bearing bracket having a pair of spaced parallel arms having alined bearing openings, a shaft journaled for rotation in the bearing openings and having oppositely disposed crank terminals, representative figures journaled on the crank terminals, a wind-wheel connected with the

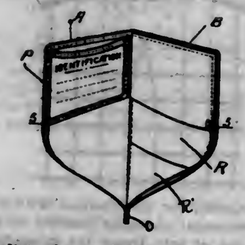
shaft for rotating the same, and means for limiting the representative figures to a rocking movement upon rotation of the shaft, consisting of slotted portions in the

bearing bracket arms, and arms on the representative figures having offset terminals engaging and movable in said slotted portions.



1,635,938. COOLING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. JOHN W. HUDSON, Lynbrook, N. Y. Filed Oct. 16, 1920. Serial No. 417,297. Renewed Dec. 4, 1926. 2 Claims. (Cl. 60—32.)

1. The combination with an internal combustion engine including its exhaust manifold and exhaust valve and means for controlling movements of the latter, of a guide member for the stem of the exhaust valve, said guide member having a portion interior of the manifold and a portion exterior of the manifold, the said guide member having an air space opening at one end on to the exterior portion of the member and at its opposite end on to the interior portion thereof, a valve carried by the aforesaid exhaust valve and movable therewith and with respect to the exterior portion of the guide member so as to respectively cover and uncover said space in movements of the exhaust valve, and means for inducing suction in said manifold, said means comprising a hollow member having an intake end and an exhaust end, a throat section arranged in said member, the walls of the throat section at one end of the latter extending directly against the walls of said hollow member in sealed engagement therewith, the walls of the throat section at the opposite end thereof being in communication with said intake, and an opening between the ends of said hollow member for communication with the exhaust manifold.



1,635,939. APPARATUS FOR REVERSING AND CONTROLLING REGENERATIVE FURNACES. GEORGE H. ISLEY, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 15, 1923. Serial No. 619,184. 3 Claims. (Cl. 158—7.5.)

2. Apparatus of the class described, comprising an outwardly opening duct leading from each end of a regenerative furnace, an air nozzle in each of said ducts, and means for supplying air to said nozzles for the creation in one of said ducts of an inwardly directed air-

entraining jet of air, and in the other of said ducts of an outwardly directed air jet for entraining and discharging waste gases from said furnace.

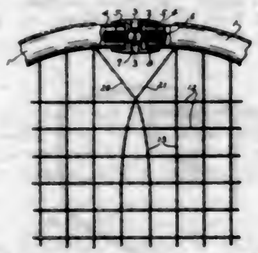
1,635,940. WALLET. MAXWELL KANZEL, New York, N. Y. Filed Sept. 22, 1926. Serial No. 136,961. 3 Claims. (Cl. 150—38.)

1. In a wallet, the combination of a body made from a single sheet of leather foldable upon itself to form a pair of wings, said wings being disconnected at the top and sewn together at the bottom, a rectangular member separating said wings from each other and sewn to said body along two of the four edges thereof and a series of pockets along one side of said partition member.

1,635,941. VANITY-CASE HINGE. WILLIAM G. KENDALL, Newark, N. J. Filed July 3, 1926. Serial No. 120,832. 1 Claim. (Cl. 220—31.)

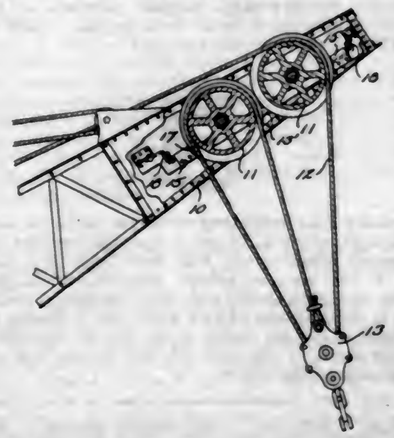
A vanity case, comprising a flanged body, the flange of the body having a cut out portion and provided with an integral tubular pintle, said pintle being of a length equal to the cut out portion, disposed therein intermediate the depth thereof and offset inwardly a distance equal to the thickness of said flange, and a flanged cap, the flange of the cap having at the edge an extension of a width equal to the said cut out portion and bent around said tubular pintle.

1,635,942. FOLDING FARROWING HOUSE. HANS KNUDSEN, Schleswig, Iowa. Filed Oct. 31, 1925. Serial No. 66,002. 2 Claims. (Cl. 119—19.)



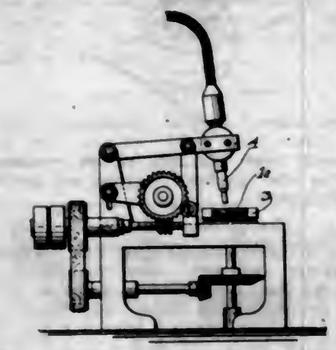
1. In a folding farrowing house, side walls hinged together, said side walls terminating at their free ends in sleeves, base rods disposed in said sleeves, folding sec-

tional end walls hinged to said side walls, doors for said end walls, cross rods releasably connecting said base rods, angle pieces releasably connecting said cross rods



and the end walls, and retaining brackets carried by one of said side walls for said cross rods in one position of the same.

1,635,943. MEANS FOR CONTROLLING THE TENSION OF A TENNIS-RACKET STRINGING. WILLIAM A. LARNED, Summit, N. J., assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 7, 1924. Serial No. 684,810. 1 Claim. (Cl. 273—73.)



In a tennis racket, the combination with a frame and vertical and horizontal stringing therein of a turnbuckle located at the top of said frame for expanding and contracting the same, and with the two vertical strings which are nearest to the longitudinal axis, crossed upon each other and also crossed upon the top horizontal string.

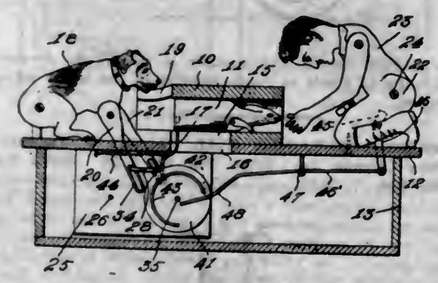
1,635,944. CABLE GUIDE. JOHN ANDREW LE BLANC, White Castle, La. Filed Aug. 2, 1926. Serial No. 126,555. 2 Claims. (Cl. 254—190.)

1. The combination with a support and a sheave journaled thereon, of a cable guide comprising spaced angle bars mounted on the support at opposite sides of the sheave and in close proximity thereto, and a block supported on said angle bar directly in advance of said sheave and having a curved edge conforming to and arranged in close proximity to the periphery of said sheave, and cooperating with said bars to permit a cable to be guided into the sheave at different angles without jumping the latter.

1,635,945. MANUFACTURE OF WIRE-DRAWING DIES. KENNETH B. LEWIS and FRANK H. ELLSWORTH, Worcester, Mass., assignors to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 14, 1924. Serial No. 699,263. 7 Claims. (Cl. 76—107.)

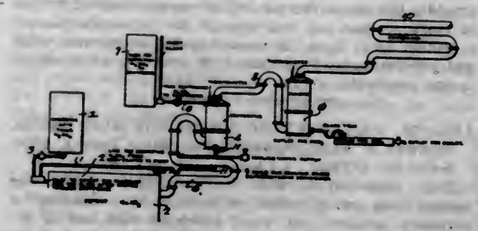
1. The improvement in the art of manufacturing wire drawing dies, which consists in heating dies to a uniform degree, automatically hammering the heated dies a uniform amount, power punching the heated dies in the same manner, and quenching the punched dies to obtain a uniform degree of hardness.

1,635,946. TIE. HARRY BARNETT MAPOU, New York, N. Y., assignor of one-half to Jacob M. Green, New York, N. Y. Filed Apr. 24, 1926. Serial No. 104,487. 2 Claims. (Cl. 2—146.)



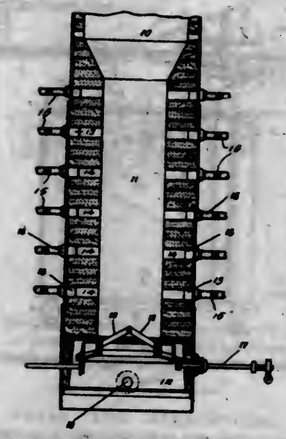
1. In a necktie including a tubular body of a stretchable material and a lining, a rubber elastic tape independent of the lining secured to the inner ply of the body longitudinally thereof for tensioning the same against stretching and for returning the same to a normal unstretched position.

1,635,947. TOOTHPICK HOLDER. CARL MARCH, Chicago, Ill. Filed Sept. 8, 1926. Serial No. 134,318. 1 Claim. (Cl. 206—28.)



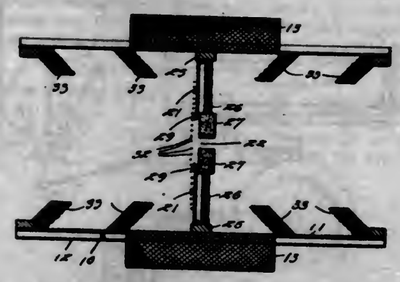
A sanitary tooth pick holder comprising a receptacle having its bottom extended beyond one wall thereof, a short wall rising from the bottom and forming a trough therewith, said wall of the receptacle having a transverse slot through which the tooth picks are discharged into the trough, said walls having aligned finger receiving openings, an inverted V-shaped member arranged within the receptacle and reposing upon the bottom thereof, and defining a compartment for a reserve supply of tooth picks, one wall of said member constituting an inclined partition for guiding the tooth picks in the direction of said slot, and said wall having a finger receiving opening, whereby the member can be slightly elevated to release a quantity of the tooth picks contained in said compartment.

1,635,948. MECHANICALLY-OPERATED FIGURE TOY. GEORGE W. MILLER, Waynesville, N. C. Filed Sept. 1, 1926. Serial No. 133,047. 4 Claims. (Cl. 46—40.)



1. In a device of the character described, a hollow member, an animal-like figure normally arranged within the member, means intermittently projecting the figure beyond said member a predetermined distance, means for retracting said figure within the member from its projected position, a figure representing a hunter disposed at one side of the member and having arms extending toward the latter, said last mentioned figure being pivotally mounted to gravitate toward said member, and means controlled by the first mentioned means for normally holding said figure spaced from the member and allowing said figure to gravitate in the direction of the member at a predetermined interval.

1,635,949. MANUFACTURE OF NITRIC ACID. EDWIN L. NELLIS, Allentown, Pa., assignor to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,264. 7 Claims. (Cl. 23—160.)

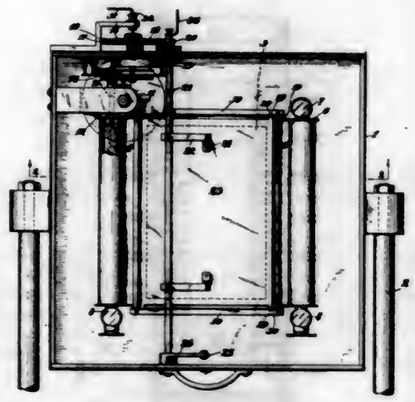


1. In the manufacture of nitric acid by distillation of reaction products of nitrate of soda with sulfuric acid, the process which comprises reserving approximately one-fourth of the total amount of sulfuric acid used in a distillation, and passing said reserve acid into the still in countercurrent to the weak distillate.

1,635,950. PROCESS FOR THE MANUFACTURE OF SPONGE IRON. PHILLIP WILLIAM NEVILL, Perth, Western Australia, Australia. Filed Nov. 21, 1925, Serial No. 70,639, and in Australia Dec. 1, 1924. 2 Claims. (Cl. 75—77.)

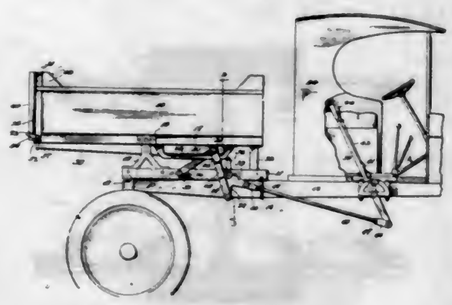
1. A process for the manufacture of sponge iron by reducing the oxides to metal without fusion, consisting in passing iron ore and carbonaceous fuel without flux through a shaft furnace and supplying air at a plurality of places, whereby reduction extends over a considerable zone so that excessive localized heating is avoided.

1,635,951. FLYTRAP. EDWARD M. NEWCOMER, Newburg, Iowa. Filed Sept. 14, 1926. Serial No. 135,897. 7 Claims. (Cl. 119—156.)



1. In a fly trap for removing flies from animals, a passage having the lower portions of the side walls thereof opaque and the upper portions screened, a screen ceiling for the passage, means combining with the ceiling to provide a fly trap and directing upwardly moving flies thereinto, means at the center of the passage for engaging an animal passing therethrough to remove flies therefrom and means upon the side walls of the passage directing flies moving upwardly upon said side walls toward the center of the passage comprising screen strips secured to said side walls and projecting inwardly therefrom, said screens inclining from their lower to their upper ends toward the transverse center of the passage.

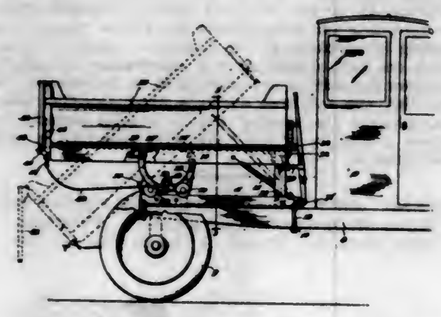
1,635,952. RÖNTGEN-RAY PHOTOGRAPHIC MACHINE. MAURICE M. POMERANZ, New York, N. Y. Filed Nov. 25, 1925. Serial No. 71,388. 9 Claims. (Cl. 250—84.)



1. In a Röntgen ray machine, the combination with a Röntgen tube and electric circuit therefor, film supply and take up spools for moving a film into and out of

position for exposure, means for operating the film take-up spool, and means operated by the film moving means for intermittently arresting the motion of the film and its take up spool, of an electric switch operated in

harmony with the film and take up spool for automatically closing the tube circuit when the motion of the film is interrupted and opening the circuit when said motion is resumed.



1,635,953. DUMPING UNIT FOR MOTOR TRUCKS. JOHN C. POTH, Galion, Ohio. Filed Oct. 2, 1924. Serial No. 741,254. 3 Claims. (Cl. 298—19.)

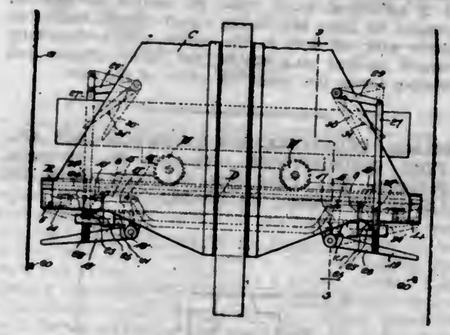
1. In a dumping unit for motor trucks, a frame, a pivoted body carried thereby, a guide secured to the body at its forward end, coacting levers one pivotally connected with the frame, a yoke at the upper end of the other of said levers straddling said guide, a roller mounted in said yoke to coact with the guide and the body, a pin extending through the yoke journaling the roller and pivotally connecting the former lever with the latter lever, and means associated with the latter lever for actuating the levers and tilting the body.

1,635,954. DUMPING UNIT FOR MOTOR TRUCKS. JOHN C. POTH, Galion, Ohio. Filed Mar. 27, 1925. Serial No. 18,829. 2 Claims. (Cl. 298—10.)

1. The combination with a supporting frame and a body mounted to tilt thereon, of pairs of rollers mounted upon the frame in spaced relation, the rollers of each pair being spaced apart and arranged in tandem, channel rockers attached to the body and disposed with the channels facing downwardly and receiving the respective pairs of rollers, and a retaining member mounted upon the frame and engaging over the rockers opposite the spaces between the rollers of the several pairs to hold

the rockers thereon and movable to release the rockers and body to admit of ready removal of the latter when required.

1,635,955. CONTAINER SEAL. ALBERT P. POUPART, New Orleans, La. Filed Aug. 23, 1926. Serial No. 131,039. 1 Claim. (Cl. 215—47.)



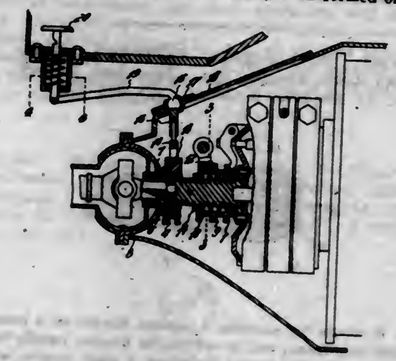
A seal for containers, the combination of a non-porous receptacle having one end thereof opened and having a flanged mouth on the open end thereof; said receptacle being adapted to receive a corroding acid, terminals adapted to be arranged in the receptacle and formed of pliable material adapted to bear at one end against the side walls of the receptacle and further adapted to straddle the flange thereof and a stopper adapted to rest in the container and bear against the terminals in such a manner as to force the terminals against the side walls and prevent upward movement of corrosion with respect to the terminals.

1,635,956. CAR-CHOCKING MEANS FOR MINE CAGES. STEPHEN J. REAP, Olyphant, Pa. Filed June 1, 1926. Serial No. 112,999. 4 Claims. (Cl. 187—97.)

2. In combination with a vertically movable cage having rails for alinement with rails at a landing; a normally operative car wheel chock at each end of the cage, separate operating levers for said chocks fulcrumed to the cage and extending transversely thereof, the outer ends of said levers being operatively connected with said chocks, transverse rock shafts mounted on the cage near the ends thereof and having crank arms linked to the inner ends of said levers actuating arms projecting from said rock shafts, the actuating arm at either end of the cage being active to move the chock at said end to an

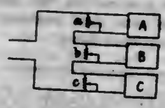
extreme position beyond a wheel-clearing position, two latching bars extending longitudinally of the cage and connected with said crank arms of the rock shafts respectively, two latches for said bars mounted on the cage adjacent the aforesaid levers, the latch at either end of the cage being co-active with the latching bar connected to the rock shaft at the other end of said cage to hold the chock at the latter end in said extreme position, each chock being shaped for movement to but not beyond said

wheel-clearing position when engaged by a wheel of a car forced onto the cage to move a cage-carried car from the other end of said cage, and releasing means for said latches, movement of either rock shaft under the last mentioned or wheel-effected movement of the connected chock serving to release the latch of the latching bar connected to the other rock shaft permitting the previously held chock to return from said extreme position to operative position.



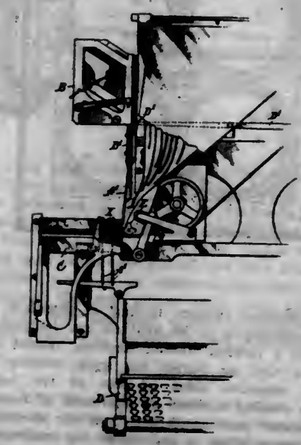
1,635,957. REENFORCED AIR HOSE. ALLAN S. RICHARDSON, Butte, Mont. Filed Aug. 3, 1926. Serial No. 126,842. 3 Claims. (Cl. 137—90.)

1. An air hose having a flexible suspension flange externally and continuously thereabout having means to facilitate attachment of the hose in use to a suitable support, said flange comprising connected strips separate from the hose and provided with inner portions extended along and in connection with the hose substantially upon opposite sides of the flange, whereby to reenforce the hose adjacent to the flange.



1,635,958. TRANSMISSION. FRED G. ROSE, Rocky Ford, Colo. Filed June 29, 1923. Serial No. 648,604. 1 Claim. (Cl. 192—67.)

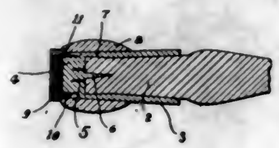
In a transmission structure of the character described, a drum shaft including spaced longitudinal teeth, a collar slidably mounted on the shaft, teeth formed in the bore of said collar and engaging the teeth on the shaft to prevent rotation of the collar with respect to the shaft, means for shifting the collar on the shaft, a ring gear formed on one end of the collar, a universal joint associated with said shaft and including a squared portion, a hollow stub shaft having a squared portion to accommodate the corresponding portion of the universal joint, and an annular flange at one end thereof, teeth formed on the



edge of the flange and adapted to be engaged by the internal teeth of said ring gear, and an abutment on said drum shaft for limiting the movement of the coller.

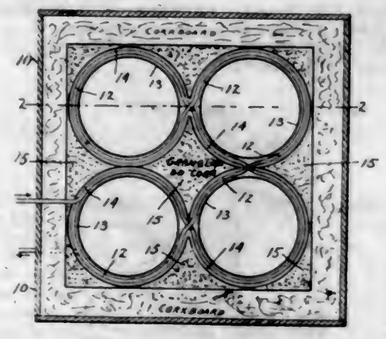
1,635,959. MEANS FOR REPRODUCING SOUND. HENRY JOSEPH ROUND, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Feb. 2, 1924, Serial No. 690,221, and in Great Britain Feb. 5, 1923. 9 Claims. (Cl. 179—1).

1. In means for reproducing sound, a plurality of diaphragms of different pitches each having its own electromagnet and the coils of the magnets being connected together and a shunt across one or more of the magnets.



1,635,960. JUSTIFYING SPACER OR SPACE BAND. JOSEPH LEE ROUSSEAU, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Oct. 4, 1926. Serial No. 139,310. 6 Claims. (Cl. 199—68.)

1. In a linotype machine equipped with circulating matrices, means for assembling the matrices in line, and a series of justifying spaces arranged to enter the line

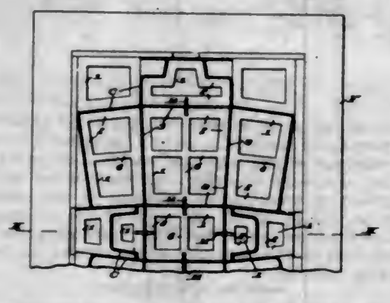


from above, said spacers being cut away at their lower ends so as to avoid contact with the side walls of the matrix characters as they enter the line.

1,635,961. TOOL-HANDLE FASTENER. PERRY EDWARD ROWE, Amarillo, Tex. Filed Sept. 9, 1926. Serial No. 134,510. 3 Claims. (Cl. 306—33.)

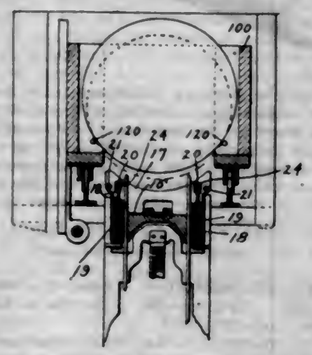
3. A means for securing a wooden handle on a hammer or like implement, and in which the wooden handle has a tapered end, said means including a split sleeve, which is tapered and which has its reduced end formed with a head extension, the latter being round in plan and having exterior teeth, the bore of the sleeve being tapered for a distance from its juncture with its head, said head having its inner face slitted and being formed with a rearwardly extending wedge between said slits, said wedge adapted to be inserted in the mentioned end of the handle to spread said end to contact with the bore of the sleeve, the outer face of the hammer head being beveled around its eye and the sleeve adapted to be inserted through said eye and a split nut screwed on the head of the sleeve and having an inner cone face received in and contact with the eye of the hammer head.

1,635,962. ICE-CREAM CABINET. CHARLES D. RYDER and CHARLES F. MOORES, New York, N. Y.; said Ryder assignor to Rotary Refrigeration, Incorporated, New York, N. Y., a Corporation. Filed Jan. 2, 1925. Serial No. 291. 4 Claims. (Cl. 257—192.)



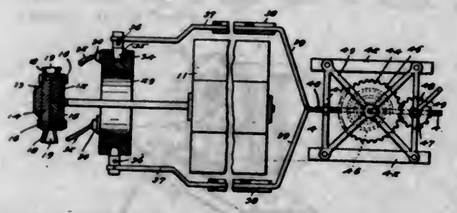
4. A refrigerator cabinet having a plurality of containers for substances to be kept at low temperature by the action of a flowing cooling medium, means comprising an inlet and an outlet for such cooling medium situated on opposite sides of one of the containers whereby the cooling medium at extremes of temperature will be adjacent such container, and for directing flow of such cooling medium to and about the exterior of each of the other containers in succession from said inlet and from the last container to the outlet adjacent the first container.

1,635,963. ROTARY VALVE. CHARLES HENRY SEIFERT, Hempstead, N. Y. Filed May 18, 1926. Serial No 109,946. 4 Claims. (Cl. 123—190.)



1. A cylindrical rotary valve for engines, constituting a passage for gases and having a port therein adapted to register with the port in the engine, and a diagonally arranged packing ring around the valve cylinder and extending across the transverse plane of the port.

1,635,964. FURNITURE FOR PAPER-BOX DIES AND TYPE COMPOSITIONS. WILLIAM W. SHINNICK, Baltimore, Md. Filed June 21, 1926. Serial No. 117,477. 23 Claims. (Cl. 93—58.)



16. The combination of a plurality of blocks for use as die blocks or as printer's furniture each block being provided with a keyway located in its side face and upper surface and coinciding with the similar keyway of another block and a key inserted in the coincident keyways to hold the blocks in position.

1,635,965. PHONOGRAPH. OBERLIN SMITH, Bridgeton, N. J.; Percival H. Smith executor of said Oberlin Smith, deceased. Filed June 25, 1926. Serial No. 118,582. 8 Claims. (Cl. 274—10.)

3. A magazine or holder for records of automatic playing machines having means to support in the same record receiving space records of different diameters at different times, comprising a movable record engaging device that yields under the weight of one record, but does not yield under the weight of another record.

1,635,966. PROPELLER. HARMON G. STANTON, Grand Rapids, Mich. Filed Aug. 14, 1926. Serial No. 129,214. 3 Claims. (Cl. 170—163.)

1. In a propeller, the combination with a driven shaft, a hub secured thereto a rim surrounding the hub in spaced relation thereto and rigidly connected therewith, radially directed blades having their inner ends rotatably mounted in the hub and their outer ends rotatably mounted in the rim, means longitudinally adjustable upon and rotatable with relation to the shaft and connected with said blades for rotating the blades about the pivots thereof, said means comprising a ring surrounding the shaft and having in its periphery a groove, a second ring slidably engaged in the groove and held against rotation with relation to the first named ring, a rack connected with the second ring, a disk confronting the toothed face of the rack and having a spiral rib for coaction with the teeth of the rack and means for rotating said disk.

1,635,967. COMBINATION CIGARETTE OR CIGAR AND MATCH. FRED STONE, Rosalia, Wash. Filed Feb. 4, 1926. Serial No. 86,027. 1 Claim. (Cl. 131—52.)

In combination with a cigarette having a wrapping and a filling of tobacco, the wrapping having overlapping edges secured together, the outer overlapping edge having a tab extending circumferentially of the wrapping and having its outer end fastened to the wrapping; and a match extending longitudinally on the outside of the wrapping and held to the cigarette by virtue of its engagement with the tab.

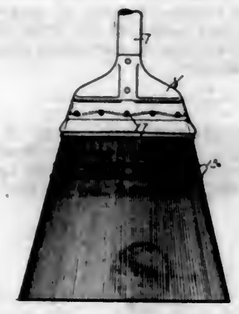
1,635,968. TOOL. CHARLES STROBL, Appleton, Wis. Filed June 19, 1926. Serial No. 117,146. 3 Claims. (Cl. 51—206.)

1. In a tool of the character described, a rotatable shaft, a frame mounted on one end of the shaft for rotation therewith, a circumferential series of tool carriers pivotally mounted on said frame, each carrier terminating to provide an offset apertured extremity, grinding tools associated with said carriers, rods pivotally supported on said frame and upon which the said apertured extremities of said carriers slide, springs surrounding said rods and arranged to exert an outward pressure on said carriers, and means on the outer ends of said rods for limiting the outward movements of said carriers for the purpose specified.

1,635,969. INFLATABLE TOY. JOHN F. WINKLER, Painesville, Ohio, assignor to The Wooster Rubber Company, a Corporation of Ohio. Filed Apr. 11, 1924, Serial No. 706,085. Renewed May 25, 1927. 3 Claims. (Cl. 46—37.)

1. A toy device of the character described, comprising, in combination, head and body members of elastic material in one piece, a circular band adjustable longitudinally between said members to limit their respective diameters, said body member tapering downwardly and terminating with an orifice, and a pair of supporting members spaced apart to form a slot adapted to engage and hold said tapered lower end when drawn therein, substantially as set forth.

1,635,970. BRUSH. HENRY CAVE, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed June 20, 1925. Serial No. 38,581. 3 Claims. (Cl. 15—206.)

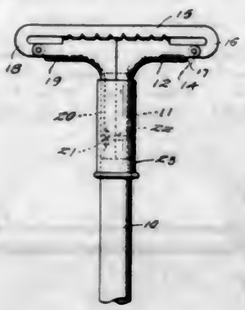


1. A brush comprising a core having brush material secured thereto and bent into a frame-like form with the ends outturned at an angle to the main part of the frame, said core being devoid of bristles for a distance on both sides of said outturned ends, and a cover sleeve enveloping said bared portion of the core and having a hole opening laterally at substantially the lengthwise center thereof through which said bent ends extend, whereby said ends are held against separation and the form of the frame and rigidity thereof is preserved.

1,635,971. BROOM. HENRY CAVE, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 31, 1925. Serial No. 53,541. 2 Claims. (Cl. 15—171.)

1. A broom including a broom body formed of strands closely associated and compacted at one end, a holding

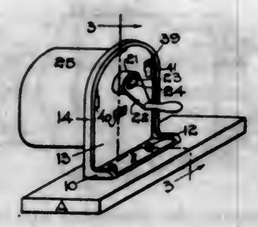
band encircling said strands near the end of the broom body, a head encircling the end of said broom body, and rivets extending through said head and said broom body,



said rivets and holding band being arranged to dispose part of the rivets above and the rest of the rivets below said band.

1,635,972. MILK-SUGAR BISCUIT. BANESVAR DASS, Bloomfield, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Feb. 18, 1922. Serial No. 537,605. 3 Claims. (Cl. 99—11.)

1. A whole wheat flour biscuit containing not substantially below five percent of milk sugar.

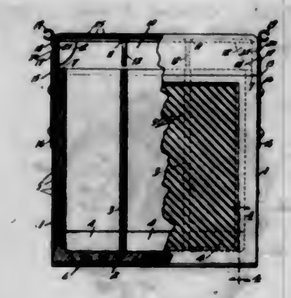


1,635,973. MOP HOLDER. NIKOLAI HILL, Iron Belt, Wis. Filed May 17, 1926. Serial No. 109,632. 3 Claims. (Cl. 15—150.)

1. A mop holder including a stick, a clamping jaw formed of two sections, each section having a complemental shank receiving the stick end, one of the shanks being permanently secured to the stick and the other releasably engageable therewith, a second clamping jaw pivotally connected at each end to the sections forming said first jaw, and means slidable on the stick into and out of embracing relation to the said shanks for holding the parts in mop cloth clamping position.

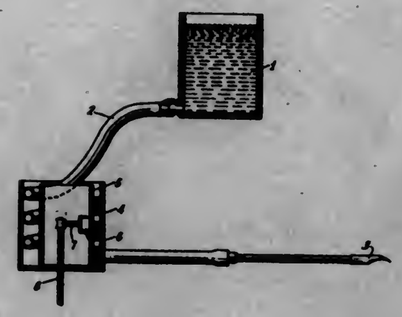
1,635,974. PENCIL SHARPENER. MILTON D. MERRIHOLE, Milford, Conn., assignor to The Ansonia Novelty Company, Ansonia, Conn., a Corporation of Connecticut. Filed Sept. 7, 1926. Serial No. 134,094. 9 Claims. (Cl. 120—96.)

1. In a pencil sharpener, a box for receiving the cuttings from a pencil, consisting of a casting constituting the top, bottom, side and rear walls of said box, and a blank of metal constituting the front wall of the box, said blank of metal being of outline to snugly fit within the open end of the casting adjacent the bottom wall of the



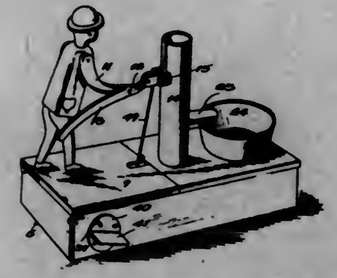
box between the side walls thereof, and said blank of metal including lugs adapted to be fastened in depressions in the end portions of said bottom and side walls.

1,635,975. COUPLING FOR TIRE CHAINS. WILLIAM T. NARDIN, Moorestown, N. J., assignor to George J. Campbell, Philadelphia, Pa. Filed Aug. 31, 1926. Serial No. 132,673. 6 Claims. (Cl. 24—232.)



1. A chain coupling comprising a member adapted to be permanently attached to one end of the chain and having a slot with a terminal spur and a vari-directional lateral approach for reception of the end link at the other extremity of the chain, the terminal spur of such slot being inclined somewhat relative to the longitudinal axis of the member in a direction away from the approach aforesaid.

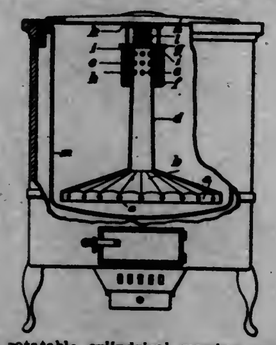
1,635,976. STORAGE-BATTERY CONTAINER. LEON O. PERCY, Cincinnati, Ohio, assignor to The Cooper Corporation, Cincinnati, Ohio, a Corporation of Delaware. Filed Sept. 27, 1922. Serial No. 590,773. 2 Claims. (Cl. 206—2.)



1. A receptacle cover, of mouldable material, having interior reinforcing ribs integral therewith, the opposite ends of the ribs thickened and integral with the side walls of said cover.

1,635,977. INK SUPPLY FOR PICTURE RECORDERS. RICHARD HOWLAND RANGER, Newark, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 19, 1925. Serial No. 51,192. 4 Claims. (Cl. 178—96.)

1. In a graphic recorder utilizing marking fluid, the combination of a marking stylus, a marking fluid reservoir and power driven means for supplying fluid from said reservoir to said stylus under the positive pressure.



1,635,978. TOY PUMP. JOSEPH A. ROSS, Nanticoke, Pa., assignor of one-half to William L. Delaney, Sheatown, Pa. Filed Dec. 28, 1923. Serial No. 683,218. 2 Claims. (Cl. 46—37.)

1. A toy pump comprising a substantially closed casing having means within the same defining a substantially closed reservoir and a substantially closed motor compartment, a receptacle on the top of the casing communicating with the reservoir, a tubular member extending above the casing and receptacle down into the reservoir, said tubular member having a spout discharging into the receptacle, the portion of the tubular member above the casing representing a pump body, reciprocable means within the tubular member for elevating water from the reservoir through the tubular member to the spout, a handle mounted on the tubular member and connected with the reciprocable means, a figure having a movable member associated with the handle for apparently actuating the same, and a motor concealed within the casing and operatively associated with the reciprocable means for reciprocating the reciprocable means.

1,635,979. WASHBOILER. WALTER SAARE, Leipsig, Germany. Filed Mar. 6, 1926, Serial No. 92,913, and in Germany Sept. 25, 1925. 2 Claims. (Cl. 68—30.)

1. The combination of a wash boiler, with an insertion consisting of a shallow round bonnet having a perforated circumferential edge and an upwardly extending central tube thereon having outlet openings in its top end, of

an axially rotatable cylindrical member on the top end of said tube having apertures therein adapted to coincide with the outlet openings in said tube.

1,635,980. ELECTRICAL TESTING APPARATUS FOR FLUID-PRESSURE ENGINES. FRANK WILLIAM HIGHFIELD and HERBERT EDGAR TAYLOR, Coventry, England, assignors to The Highfield Electrical Company Limited, Coventry, England. Filed Nov. 10, 1924, Serial No. 749,007, and in Great Britain Dec. 8, 1923. 2 Claims. (Cl. 265—24.)

1. An apparatus for conditioning and testing engines comprising a dynamo-electric machine adapted to be operatively coupled to an engine, an electrical circuit comprising said dynamo-electric machine, a variable resistance, an overload relay and a minimum load relay, means for indicating the electrical energy flowing in said circuit, main load lines connected to said circuit, and means for introducing a short circuiting resistance across said main load lines.

1,635,981. ABRASIVE ARTICLE AND METHOD OF MANUFACTURING THE SAME. LOWELL HAINES MILLIGAN and CHARLES HERBERT QUICK, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 4, 1925. Serial No. 54,582. 10 Claims. (Cl. 25—157.)

1. The improvement in the manufacture of abrasive articles containing crystalline alumina and a vitrifiable bond mixture which comprises firing the article to soften the bond mixture, and thereafter cooling the bond constituents to solidification under non-oxidising conditions.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 360—No. 3. TUESDAY, JULY 19, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimer.

1,501,062.—*Paul H. Horwitt*, Brooklyn, N. Y. SHEET OF FOLDED MATERIAL. Patent dated July 15, 1924. Disclaimer filed June 24, 1927, by the assignee, *Independent Paper Mills Inc.*

Hereby enters this disclaimer to the said claim No. 1 in the said specification, which is in the following words, to wit:

"A sheet of material folded into a plurality of substantially coextensive sections, and an end section which is non-coextensive with the other sections, the sheet being then folded transversely to cause the non-coextensive end section to lie along one edge at the top and bottom thereof."

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,524,448, J. A. Murphy, Plating and method of accomplishing same, decided June 6, 1927, claims 1 and 2.

Pat. 1,557,488, L. R. Van Sant, Method and apparatus for controlling the siphon in liquid-fuel-burning systems, decided June 27, 1927, claims 2, 4, and 10.

Pat. 1,580,151, O. W. Moore, Radiator cap and indicator, decided June 10, 1927, claims 1, 2, and 3.

Pat. 1,559,908, Parsons, Cook, and Food, Manufacture of gear wheels, decided May 28, 1927, claims 1 and 2.

Pat. 1,614,632, T. H. Sloan, Glass-forming machine, decided June 1, 1927, claims 1, 2, 3, 6, 7, and 27.

A final decision in interference has been rendered against the following trade-mark:

T. M. 134,146, Writing tablets, writing papers, and correspondence envelopes, The Wynne Paper Co., New York, N. Y. Registered August 10, 1920. Decided May 31, 1927.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

Ex parte Freedlander.

Decided June 8, 1928.

Invention—Selection of Good Features of Prior Art.

Where the various features of the claims, except the feature of prestretching the outer layer of the belt, are disclosed in the patents to S., B., and P., and S. discloses prestretching the middle layer, *Held* that it was not invention to select the good features of the patents and to carry forward to the outer layer the prestretching disclosed by S.

[Note.—This application has resulted in Patent No. 1,611,829, December 21, 1926.]

Appeal from Examiners in Chief.

Application for patent for driving belt filed June 14, 1922, Serial No. 568,156.

Messrs. Toulmin & Toulmin for the applicant.

Kinnan, *First Assistant Commissioner:*

The applicant appeals from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 7 to 12, inclusive, of which claim 7 will serve for illustrative purposes and is as follows:

7. A driving belt comprising a compression member composed of rubber mixed with fiber and having corrugations on the inner surface, a central member composed of rubberized cord fabric, and a tension member composed of rubberized fabric cut on the bias, the material of the central member being laid on the compression member and that of the tension member on the central member.

The references relied upon are: Dodge, 450,909, April 21, 1891; Price, 1,192,794, July 25, 1916; Gates, 1,281,158, October 8, 1918; Gates, 1,354,738, October 5, 1920; Brucker, 1,510,449, September 30, 1924; Short, 1,538,303, May 19, 1925; Fisher, 1,438,870, December 12, 1922; Hebblewaite, Br., 2,843 of 1886.

The applicant, as appears from the record, was unsuccessful in an interference with the patent to Short, interference No. 48,254. Short discloses prestretching the fabric of the middle portion of his belt and employing straight-laid fabric strips. The layers are bound by rubber composition, and the outer member may be bias cut. This reference does not disclose the compression member having corrugations on the inner surface; but this is old in Brucker, although the latter does not employ the rubber mixed with fiber as the material for the inner member. Price has disclosed that rubber mixed with fiber makes a good belt material, and to select that particular material for the corrugated inner member of Brucker would, it is true, involve making a specifically different belt and possibly a superior one, yet its superiority would be due to the applicant having merely selected from the prior art the good features which he there found and deemed worth adopting. The only novelty set forth in any of the claims here on appeal is that of prestretching the outer or tension member. As stated by the Examiners in Chief, since Short discloses the stretching of the central member there would seem to be nothing more than an obvious carrying forward of this feature to the outer member. With this state of the art there would seem to be no merit in any of the appealed claims. Some of them recite certain of these features, while others recite all of these old features. It is not thought any of such claims are patentable.

The decision of the Examiners in Chief is affirmed.

Court of Appeals of the District of Columbia.

Olm v. Cather.

No. 1,902. Decided February 7, 1927.

Interference—Priority—Reduction to Practice.

Where C. was entitled to March 26, 1921, for conception and reduction to practice, and O. and his witnesses testified to his disclosure of samples of the envelope prior to that date, *Held* that the credibility of the witnesses is in no way impeached and that O. reduced to practice as early as February, 1921.

Mr. J. H. Milans and *Mr. C. T. Milans* for Olm.

Mr. Geo. H. Kennedy, jr., for Cather.

Appeal from the Patent Office. Reversed.

Before Martin, Chief Justice, and Robb and Van Orsdel, Associate Justices.

Robb, *J.:*

Appeal from a decision of the Patent Office in an interference proceeding in which priority was awarded Cather, the senior party. The issue is expressed in a single count as follows:

An envelope made from a single blank and having two opposite walls of substantially uniform size, said blank having two openings, one providing a slit and the other providing a window in one wall of the envelope, and a flap extending from the outside of said wall adjacent the slit and adapted to be secured to said wall on the opposite side of the slit.

As will be observed from a reading of this count it relates to an envelope used in the distribution of automobile license plates and in which the registration certificate is also enclosed. The tribunals of the Patent Office found that the senior party Cather was entitled to the date of March 26, 1921, as his date of conception and reduction to practice. The appellant does not challenge that finding.

Mr. Olm had had wide experience in the manufacture of envelopes. He testifies in detail as to the conception and disclosure of this invention in the latter part of 1920 and early in 1921. His testimony is corroborated by a Mr. Bates, a Mr. Wasley, a Mr. Hart, and a Mr. Anderson, also by Hon. Mike Holm, Secretary of State of Minnesota.

Concerning this testimony the Examiner of Interferences said:

The foregoing testimony, it must be admitted, has a tendency to establish that samples of two types of envelopes were in existence in January, 1921.

Because, however, the Examiner entertained a doubt as to whether the type of envelope that subsequently came to be used was in existence at that

time, he practically discarded the testimony, although he admitted that the type as to which the proof was clear and satisfactory fully responded to the issue. The Board and the Commissioner followed the reasoning of the Examiner.

The conclusion reached by the tribunals of the Patent Office was largely influenced by their belief that there was a conflict in the testimony of Olm's witnesses. We find no such conflict. Mr. Anderson testified that in January of 1921 he exhibited some sample envelopes to Mr. Holm; that Mr. Holm was interested and that he, Anderson, then had some printed with Mr. Holm's name on them and in February submitted these to Mr. Holm. Mr. Holm testified that he had talked with Mr. Anderson on a number of occasions about envelopes for license plates. He was then asked:

> Do you remember any particular instance of a two in one envelope Mr. Anderson showed you?
> Well, I don't know of any particular instance. He has been showing me envelopes from time to time ever since I came here.

After stating that Anderson had shown him a two in one envelope in the early part of 1921 he was asked if he could describe that envelope and replied:

> The envelope that he showed me, that I recollect, was a home made affair, did not have any printing on it, in fact I suggested to him something with regard to the folding of the envelopes. Then he brought me an envelope and showed it to me and asked me if this would do.

The witness' subsequent description of the envelope shown him responded to the issue. It is apparent that crude samples were first shown Mr. Holm and that a month later, that is in February, the finished product was shown him. He subsequently purchased envelopes from Olm.

The testimony of Mr. Ernest E. Hart, the foreman of the paper company exploiting these envelopes for Mr. Olm, is very clear and satisfactory.

Unless we are to reject the testimony of witnesses whose credibility is in no way impeached, we must find as we do, that Olm disclosed and reduced this invention to practice as early as February, 1921. The invention is simple and it is inconceivable that these witnesses could be mistaken in their testimony.

While the concurrent opinions of the Patent Office are entitled to respect, if material error has been made to appear it is our duty to correct it and enter judgment accordingly. *Bungay* v. *Grey*, 305 O. G. 207, 52 App. D. C. 63, 281 Fed. 423.

The decision is reversed and priority awarded Olm.

Reversed.

Court of Appeals of the District of Columbia.

RICE-STIX DRY GOODS COMPANY *v.* JOSEPH HOROWITZ & SONS, INC.

No. 1,923. Decided February 7, 1927.

TRADE-MARKS—OPPOSITION—MARKS SIMILAR.

Where applicant's mark, used on outer shirts, consisted of the words "Big Chief" associated with the side-view figure of an Indian head with the headdress of an Indian chief, and the opposer had established prior use, on similar goods, of a mark consisting of the word "Chief" associated with a full face view of an Indian chief, *Held* that opposer's use was a bar to the registration applied for by the applicant.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Jos. J. Gravely for Rice-Stix Dry Goods Company.

Mr. P. B. Turpin and *Mr. J. K. Brachvogel* for Joseph Horowitz & Sons, Inc.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.*:

This is an appeal from concurring decisions of the Patent Office denying appellant's application for the registration of a trade-mark, because of the prior use of a similar mark by appellee upon goods of the same descriptive properties. Appellant's application was filed on October 15, 1923; the mark consists of the words "Big Chief" associated with the side-view figure of an Indian head dressed after the fashion of an Indian chief. The mark was claimed for men's and boys' outer shirts, and use was asserted by appellant since January 11, 1915.

It appears that the appellee, on June 23, 1919, had obtained registration of a mark also consisting of the words "Big Chief" accompanied by the representation of an Indian head, side view, with the headdress of an Indian chief, for use upon work shirts. The record of this registration disclosed no earlier use of the mark by the registrant, now the appellee, than the year 1919. In the present case however the appellee has introduced evidence tending to prove that as early as the year 1906 it adopted a mark consisting of the name "Chief" associated with a full face view of an Indian chief, for use upon similar goods, and had used the same continuously from that date until the time of its registration. Appellee claimed that this fact served to preclude the registration now applied for by appellant.

Passing upon the testimony relating to this issue the Examiner of Interferences and the Commissioner alike sustained appellee's claim to the use of such a mark prior to the adoption of the present mark by appellant, and held that this use was a bar to the registration applied for by appellant.

We have examined the testimony, and find it sufficient to sustain the conclusion reached by the Examiner and Commissioner. The decision is therefore affirmed.

Interference Notices.

U. S. PATENT OFFICE, *Washington, June 22, 1927.*

Warren E. Sadler, his assigns or legal representatives, take notice:

Interferences have been declared by this Office between an application for patent filed by Warren E. Sadler, 1440½ West Twenty-third Street, Los Angeles, Calif., and applications for patent filed by Samuel K. Wellman, 2720 Derbyshire Road, Cleveland Heights, Ohio, and Arch M. Brown, 423 Kansas Avenue, Chickasha, Okla. Counsel for Sadler state they are unable to locate said Sadler. Notice is hereby given that unless said Sadler, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, June 22, 1927.*

Henry F. Bauer, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent filed by Harry Aaron, 415 North Washington Avenue, Scranton, Pa., and Patent No. 1,494,573, issued May 20, 1924, to Henry F. Bauer, Wheaton, Minn., and a notice of such declaration sent by registered mail to said Henry F. Bauer at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Henry F. Bauer, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 19, 1927.

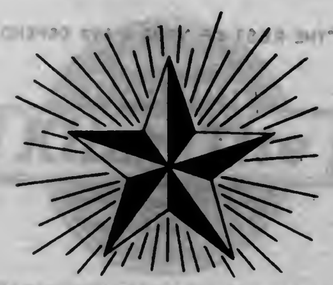
[VOL. 360. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 174,864. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN A. JOHNSON, doing business as Sylvania Perfume Co., Philadelphia, Pa. Filed Jan. 9, 1923.



The abbreviation "Phila." is disclaimed apart from the mark shown.

Particular description of goods.—Perfumery.

Claims use since Dec. 1, 1922.

Ser. No. 176,510. (CLASS 45. BEVERAGES, NONALCOHOLIC.) STAR EXTRACT WORKS, INC., New York, N. Y. Filed Feb. 23, 1923.

Particular description of goods.—Maltless Flavorings and Flavoring Extracts for Use in the Making of Beverages Sold as Soft Drinks.

Claims use since 1890.

Ser. No. 210,595. (CLASS 37. PAPER AND STATIONERY.) WESTENHOFF & CO., Hanover, Germany. Filed Mar. 5, 1925.

Neoptimus

Particular description of goods.—Duplicating Machines of the Kind Which Use Stencils and Stencil Sheets for Use in Connection with Such Machines, Duplicating Machines of the Kind Which Use Gelatin or Like Transfer Surfaces, and Hectographic Paper, Either in the Form of Sheets or of Rolls, for Use in Connection with Duplicating Machines of the Kind Employing Gelatin or Like Transfer Surfaces.

Claims use since Feb. 8, 1912.

Ser. No. 213,411. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) OSCAR A. TURNER, Chicago, Ill. Filed Apr. 27, 1925.

FABRITECTURAL

Particular description of goods.—Textile Doilies and Scarfs for Furniture.

Claims use since January, 1921.

Ser. No. 217,293. (CLASS 39. CLOTHING.) PEDOX PRODUX, INC., New York, N. Y. Filed July 13, 1925.

Applicant owns registration Nos. 201,525 and 211,080.

Particular description of goods.—Heel Liners.

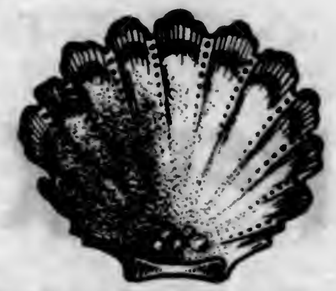
Claims use since about Oct. 1, 1924.

Ser. No. 223,104. (CLASS 43. THREAD AND YARN.) IGNACIO MIR ROVIRA, Sarria, Barcelona, Spain. Filed Nov. 10, 1925.

Petitioner disclaims the Spanish phrases "Hilo Japonés Superior" and "Marca Registrada" as being descriptive matter, and also disclaims the word "Barcelona" as being a geographical term, and states that same do not form part of the mark shown on the drawing. The representation of the spool of thread being, according to law, incapable of exclusive appropriation is hereby disclaimed. The picture forming a feature of the mark is fanciful.

Particular description of goods.—Sewing White Linen Thread.

Claims use since Aug. 8, 1911.



Ser. No. 223,634. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FREE & KLINCK, INC., Brooklyn, N. Y. Filed Nov. 21, 1925.

SHELL

Particular description of goods.—Dried Beans, Catchup, and Chili Sauce.

Claims use since about Apr. 20, 1923.

Ser. No. 224,241. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) FREE & KLINCK, INC., Brooklyn, N. Y. Filed Dec. 4, 1925.

Particular description of goods.—Dried Beans, Catchup, and Chili Sauce.

Claims use since about Apr. 20, 1923.

Ser. No. 225,863. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. BARON & CO. INC., New York, N. Y. Filed Jan. 13, 1926.

DAISY

Particular description of goods.—Crushed Fruits and Sundaes and Toppings in Bulk for Use in Ice Cream—Viz, Crushed Pineapple, Crushed Strawberry, Caramel Sundae, Cocoa Paste, Orange-Pineapple, Fruit Salad, Bitter-Sweet Cocoa Paste, Select Whole Cherries, Chop Suey (Mixture of All Soda-Fountain Fruits), Sliced Peaches, Crushed Peach, Tutti-Frutti, Crushed Cherries, Fruit Cocktail, Mixed Fruits, Crushed Raspberry, Walnut Sundae, and Pineapple Tidbits.

Claims use since 1914.

Ser. No. 226,195. (CLASS 39. CLOTHING.) HENDERSON GLOVE COMPANY, INC., Creston, Iowa. Filed Jan. 21, 1926.

Particular description of goods.—Cotton Fabric Gloves.

Claims use since Mar. 16, 1925.

Ser. No. 226,322. (CLASS 32. FURNITURE AND UPHOLSTERY.) ADAM WURST, Cincinnati, Ohio. Filed Jan. 23, 1926.

"THE REST OF YOUR DAYS DEPEND-

ON THE REST OF YOUR NIGHTS"

Particular description of goods.—Bedding—Namely, Mattresses, Box Springs, and Pillows.

Claims use since Jan. 18, 1926.

Ser. No. 226,334. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) CUPPLES COMPANY MANUFACTURERS, St. Louis, Mo. Filed Jan. 25, 1926.

The trade-mark comprises the spot of double convex outline located at the outer margin of a jar ring, the ring per se being disclaimed.

Particular description of goods.—Jar Rings.

Claims use since about Oct. 10, 1925.

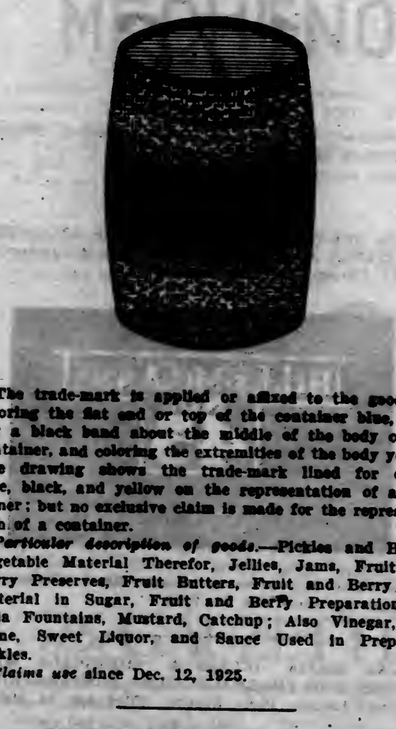
Ser. No. 226,855. (CLASS 39. CLOTHING.) ISAAC PROUTY & COMPANY, INC., Spencer, Mass. Filed Feb. 4, 1926.

No claim is made to the exclusive right to the use of the word "Shoe."

Particular description of goods.—Leather Shoes.

Claims use since about Aug. 1, 1913.

Ser. No. 226,819. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) KLING-TITE PAINT PRODUCTS COMPANY, Chicago, Ill. Filed Mar. 8, 1926.

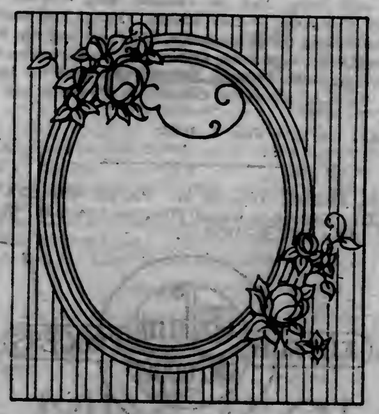


All wording appearing in the drawing other than the words "Kling-Tite" is hereby disclaimed aside from the mark shown.

Particular description of goods.—Roof Paints.

Claims use since Dec. 1, 1915.

Ser. No. 228,672. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) SQUIRE DINGEE COMPANY, Chicago, Ill. Filed Mar. 15, 1926.



The trade-mark is applied or affixed to the goods by coloring the flat end or top of the container blue, placing a black band about the middle of the body of the container, and coloring the extremities of the body yellow. The drawing shows the trade-mark lined for colors blue, black, and yellow on the representation of a container; but no exclusive claim is made for the representation of a container.

Particular description of goods.—Pickles and Brined Vegetable Material Therefor, Jellies, Jams, Fruit and Berry Preserves, Fruit Butters, Fruit and Berry Raw Material in Sugar, Fruit and Berry Preparation for Soda Fountains, Mustard, Catchup; Also Vinegar, Dill Brine, Sweet Liquor, and Sauce Used in Preparing Pickles.

Claims use since Dec. 12, 1925.

Ser. No. 228,804. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) CELLUCOTTON PRODUCTS COMPANY, Neenah, Wis., assignor to Kotex Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 18, 1926.

The name "Kleenex Company" appearing on the specimens is fictitious. The color of the striping is gray on a white background.

Particular description of goods.—Absorbent Pads or Sheets for Removing Cold Cream.

Claims use since June 16, 1925.

Ser. No. 228,822. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) MARKWELL MANUFACTURING CO., INC., New York, N. Y. Filed Mar. 18, 1926.

176

Particular description of goods.—Binding, Stapling, and Tacking Machines.
Claims use since about Nov. 13, 1925.

Ser. No. 229,681. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) HILLS-MCCANNA COMPANY, Chicago, Ill. Filed Apr. 5, 1926.

HILLS-McCANNA NO. 45

Particular description of goods.—Metal Alloys.
Claims use since Mar. 31, 1923.

Ser. No. 230,178. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LUCIEN LELONG, Paris, France. Filed Apr. 14, 1926.

TOUT-LE-LONG

Particular description of goods.—Perfumes and the Following Toilet Preparations—Namely, Toilet Waters, Astringent Lotions for the Skin, Alcoholic Lotions for the Hair and Scalp, Eau de Cologne, Rice Powder, Rice-Powder Compacts, Beauty Cream, Liquids for Softening and Nourishing the Skin, Rouge, Lip Paste and Lip Sticks, Eyebrow Pencils, Massage Cream, Oil for Removing Make-Up Preparations, Solid or Liquid Substances for Imparting a Gloss to the Hair, Complexion Powders, and Bath Salts.

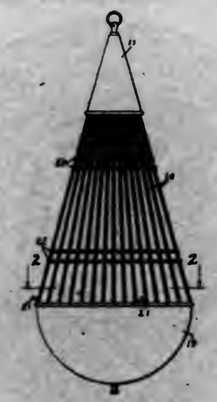
REISSUES



JULY 19, 1927.

16,680. TREAD GRIP. CARLTON L. HOFF, York, Pa., assignor to Hoff Metal Products Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 10, 1925. Serial No. 14,585. Original No. 1,499,579, dated July 1, 1924, Serial No. 633,734, filed Apr. 21, 1923. 10 Claims. (Cl. 152—14.)

1. In a device of the class described, the combination with a vehicle wheel, of a flexible anti-skid device loosely encircling the tread portion of the wheel, said device including a plurality of tread members each having a rotary movement about a contained axis extending transversely of the plane of the wheel and having its periphery defined by a plurality of wheel engaging faces and with adjacent faces angularly disposed, said member being held from rotary movement when in operative position between the ground and the wheel and, when thrown clear of the wheel by centrifugal action, being free to rotate and then present its different faces to the wheel as it is revolved bodily by the wheel.

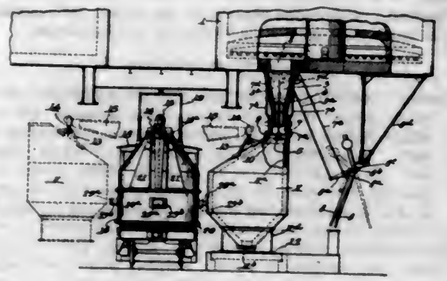
16,681. BIRD CAGE. WILLIAM FREDERICK SCHLEICH, Harrison, N. Y., assignor to Schleich Studios, Inc., New York, N. Y., a Corporation of New York. Filed May 9, 1925. Serial No. 29,252. Original No. 1,502,748, dated July 29, 1924, Serial No. 604,481, filed Dec. 2, 1922. 15 Claims. (Cl. 119—17.)

1. A bird cage comprising an upper body portion and a lower body portion having its walls offset inwardly from the upper body portion, a shield adapted to telescope over the lower portion and closely embrace the lower edge of the upper portion to form a closed structure therewith, and means carried on the shield for engaging the upper body portion to secure the shield thereon.

16,682. METHOD OF VULCANIZING RUBBER. RAYMOND MARK WARNER, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 31, 1927. Serial No. 195,576. Original No. 1,540,580, dated June 2, 1925, Serial No. 721,076, filed June 19, 1924. 20 Claims. (Cl. 18—53.)

1. The hereindescribed method of producing an article of rubber having one part vulcanized and another part unvulcanized, which consists in mixing two separate stocks, one containing rubber, sulphur and a vulcanization retarder, and the other rubber but no sulphur, juxtaposing said stocks, and subjecting the same to vulcanizing temperature.

16,683. STEEL OF HIGH-TEMPERATURE STABILITY. WILLIAM ROBERT SHIMER, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed May 26, 1927. Serial No. 194,520. Original No. 1,624,075, dated Apr. 12, 1927, Serial No. 752,929, filed Nov. 29, 1924. 6 Claims. (Cl. 75—1.)



1. A low-carbon, tough, and readily workable commercial steel containing between .40 and .60 chromium, between .50 and .80 manganese and with tungsten between 1% and 1.50% added thereto to preserve the strength of the steel at high temperatures.

16,684. METAL POLE. ADOLPH W. MALONE, Fillmore, Utah, assignor, by direct and mesne assignments, of one-third to Albert H. Vestal, Anderson, Ind., and one-third to Alvah M. Lockwood, Houston, Tex. Filed June 2, 1927. Serial No. 196,133. Original No. 1,617,262, dated Feb. 8, 1927, Serial No. 130,285, filed Aug. 19, 1926. 7 Claims. (Cl. 189—24.)

4. A pole formed of two groups of continuous members, the members of one group extending around the pole in a direction opposite the members of the other group, one or more of said members having a rib disposed substantially at right angles to the surface of the pole, substantially as set forth.

16,685. APPARATUS FOR TRANSPORTING CALCINE FROM ROASTER FURNACES AND CHARGING SAME INTO REVERBERATORY FURNACES. ALEXANDER GRANT MCGREGOR, Warren, Ariz. Filed July 1, 1926. Serial No. 121,730. Original No. 1,549,141, dated Aug. 11, 1925, Serial No. 630,589, filed Apr. 7, 1923. 25 Claims. (Cl. 214—18.)

1. An apparatus for transferring hot ore product from a roasting furnace to a smelting furnace, comprising a container having a heat non-conducting or insulated outer wall, a filling opening at its top, a discharge opening at its bottom, and a gate for controlling said discharge opening, combined with means for transferring said container from beneath a roasting furnace when filled to a position over a smelting furnace into which its contents are to be discharged, said means comprising a transfer car provided with lifting and transporting means adapted to raise said container when filled and place it on said car and subsequently move said container from the car and place it over the smelting furnace.

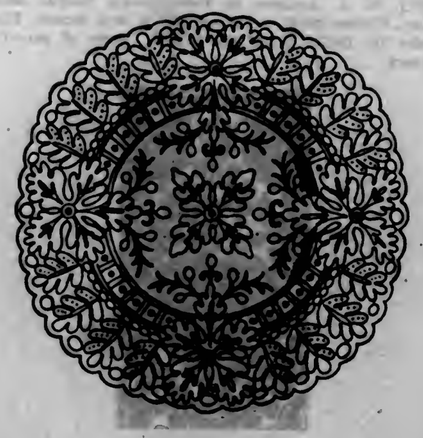
16,686. GARMENT AND LIKE ARTICLE OF MANUFACTURE. HARLEY C. MOULTON, Maplewood, Mo., assignor, by mesne assignments, to Lewis Invisible Stitch Machine Co., a Corporation of Maine. Filed May 24, 1926. Serial No. 111,462. Original No. 1,574,405, dated Feb. 23, 1926, Serial No. 567,043, filed June 9, 1922. 7 Claims. (Cl. 112—268.)

1. In a seam, the combination of two separate body fabrics arranged in superposed relation, the inner marginal portions being inturned and secured by a line of stitching, and a line of blind stitches connecting the fabrics and extending parallel with said inturned marginal portions but spaced therefrom, said blind stitches including a series of equally spaced and anchored penetrant needle thread loops which enter and emerge respectively from the inner faces of said body fabrics.

16,687. SURGICAL INSTRUMENT. OTTO H. OBSTERWITZ, Syracuse, N. Y. Filed Mar. 3, 1925. Serial No. 13,006. Original No. 1,448,858, dated Mar. 20, 1923, Serial No. 538,184, filed Feb. 21, 1922. 10 Claims. (Cl. 128—309.)

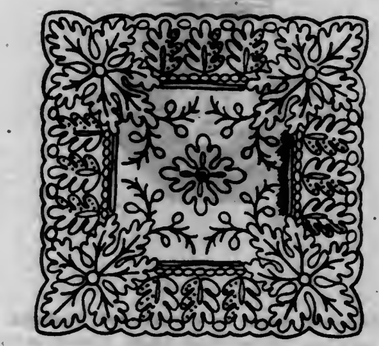
1. In a surgical instrument of the character described, the combination of a frame, a tubular sleeve mounted thereon, a spatula secured to the sleeve and provided with an opening having a shearing edge, a cutter reciprocally movable on the spatula to and from a position across the opening and cooperating with said cutting edge, a jaw reciprocally movable on the spatula to and from a position across the opening, and separate devices for reciprocating the cutter and jaw independently of each other.

DESIGNS



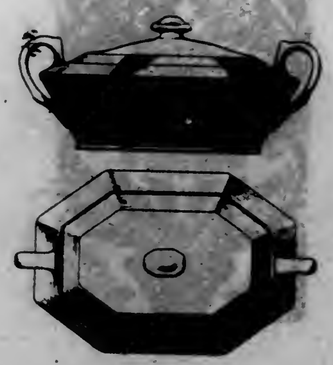
JULY 19, 1927.

73,058. PLATE OR SIMILAR ARTICLE. ALPHONSE BIER, Forest Hills, N. Y., assignor to Palm, Fechteler & Co., New York, N. Y. Filed May 12, 1927. Serial No. 21,944. Term of patent 7 years.



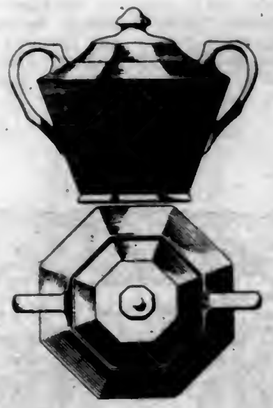
The ornamental design for a plate or similar article, as shown.

73,059. LACE MAT. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Apr. 21, 1927, Serial No. 21,667, and in Great Britain Feb. 17, 1927. Term of patent 3½ years.



The ornamental design for a lace mat substantially as shown.

73,060. LACE MAT. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Apr. 21, 1927, Serial No. 21,668, and in Great Britain Mar. 31, 1927. Term of patent 3½ years.



The ornamental design for a lace mat substantially as shown.

73,061. CASSEROLE. SAMUEL BRUNT, Sebring, Ohio, assignor to The Sebring Manufacturing Corporation, Sebring, Ohio. Filed Apr. 27, 1927. Serial No. 21,762. Term of patent 7 years.

The ornamental design for a casserole, as shown.

73,062. SUGAR BOWL. SAMUEL BRUNT, Sebring, Ohio, assignor to The Sebring Manufacturing Corporation, Sebring, Ohio. Filed Apr. 27, 1927. Serial No. 21,764. Term of patent 7 years.

The ornamental design for a sugar bowl, as shown.

73,063. TEXTILE FABRIC. GEORGE CALUORI, Jersey City, N. J., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed May 10, 1927. Serial No. 21,915. Term of patent 7 years.

The ornamental design for a textile fabric substantially as shown.

73,064. TEXTILE FABRIC. GEORGE CALUORI, Jersey City, N. J., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed May 10, 1927. Serial No. 21,916. Term of patent 7 years.

The ornamental design for a textile fabric substantially as shown.

73,065. TEXTILE FABRIC. GEORGE CALUORI, Jersey City, N. J., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed May 10, 1927. Serial No. 21,917. Term of patent 7 years.

The ornamental design for a textile fabric substantially as shown.

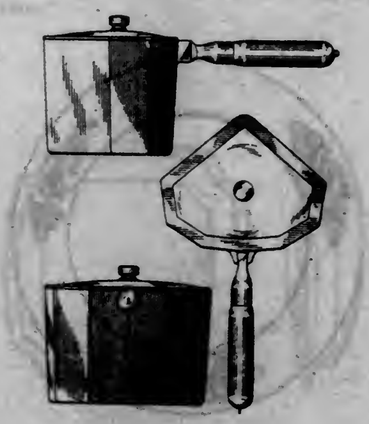
73,066. TEXTILE FABRIC. GEORGE CALUORI, Jersey City, N. J., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed May 10, 1927. Serial No. 21,918. Term of patent 7 years.

The ornamental design for a textile fabric substantially as shown.

73,067. BISCUIT. GURTH F. CHAMBERS, London, Ontario, Canada, assignor to Canada Biscuit Company, Limited, a Corporation of Ontario, Canada. Filed May 17, 1927. Serial No. 22,011. Term of patent 3½ years.

The ornamental design for a biscuit as shown.

73,068. CANDLESTICK OR ANALOGOUS ARTICLE. PAUL CRICCHIO, New York, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc., a Corporation of New York. Filed May 16, 1927. Serial No. 22,000. Term of patent 3½ years.

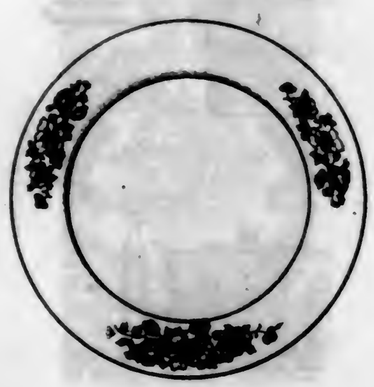


The ornamental design for a candlestick or analogous article substantially as shown.

73,069. LANTERN PANEL. LE ROY A. CRUMLEY, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 9, 1927. Serial No. 21,072. Term of patent 3½ years.

The ornamental design for a lantern panel as shown.

73,070. STEWPAN OR SIMILAR ARTICLE. SAMUEL DACHMAN, Brooklyn, N. Y. Filed Mar. 19, 1927. Serial No. 21,218. Term of patent 3½ years.



The ornamental design for a stewpan or similar article as shown.

73,071. DRESS. TAUBE DAVIS, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 16, 1927. Serial No. 21,618. Term of patent 3½ years.

The ornamental design for a dress, substantially as shown.

73,072. PLATE OR SIMILAR ARTICLE. WALTER DE VILLE, East Liverpool, Ohio, assignor to The Decal Products Company, East Liverpool, Ohio, a Corporation of Ohio. Filed Jan. 13, 1927. Serial No. 20,360. Term of patent 3½ years.

The ornamental design for a plate or similar article as shown.

73,073. AUTOMOBILE INSTRUMENT PANEL. ARTHUR F. DRAPER, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 1, 1927. Serial No. 21,425. Term of patent 14 years.

The ornamental design for an automobile instrument panel, as shown.

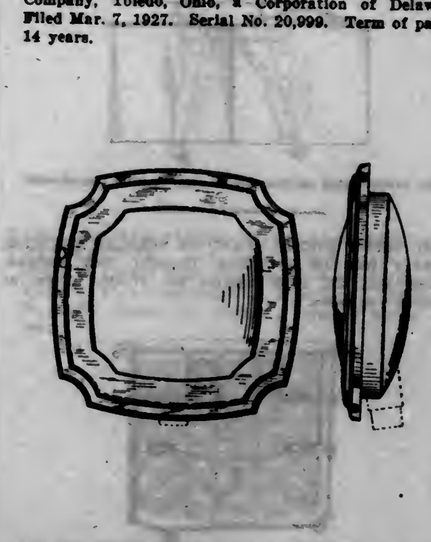
73,074. LENS FRAME FOR SPECTACLES. ERNEST E. EMONS, Philadelphia, Pa., assignor of one-half to Robert E. Hillier, Akron, Ohio. Filed Oct. 19, 1926. Serial No. 19,410. Term of patent 14 years.

The ornamental design for a lens frame for spectacles as shown.

73,075. LENS FRAME FOR SPECTACLES. ERNEST E. EMONS, Philadelphia, Pa., assignor of one-half to Robert E. Hillier, Akron, Ohio. Filed Oct. 19, 1926. Serial No. 19,412. Term of patent 14 years.

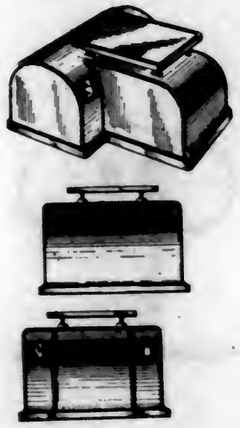
The ornamental design for a lens frame for spectacles, as shown.

73,076. LENS FRAME FOR SPECTACLES. ERNEST E. EMONS, Philadelphia, Pa., assignor of one-half to Robert E. Hillier, Akron, Ohio. Filed Oct. 19, 1926. Serial No. 19,414. Term of patent 14 years.



The ornamental design for a lens frame for spectacles, as shown.

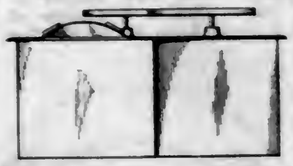
73,077. EYEGLASS FRAME. JOHN GASPARI, New York, N. Y., assignor to De Luxe Optical Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 6, 1927. Serial No. 21,495. Term of patent 14 years.



The ornamental design for an eyeglass frame as shown and described.

73,078. VEHICLE LAMP OR SIMILAR ARTICLE. GEORGE GRAFF, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 7, 1927. Serial No. 20,999. Term of patent 14 years.

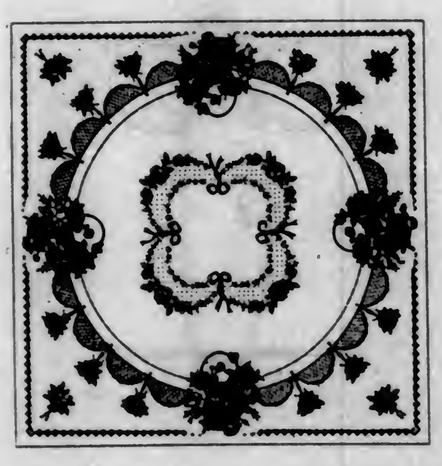
The ornamental design for a vehicle lamp or similar article, substantially as shown.



73,079. SCALE CASING. NATHAN A. HALLWOOD, Columbus, Ohio. Filed May 20, 1926. Serial No. 17,781. Term of patent 14 years.

The ornamental design for a scale casing, as shown.

73,080. SCALE CASING. NATHAN A. HALLWOOD, Columbus, Ohio. Filed May 20, 1926. Serial No. 17,782. Term of patent 14 years.

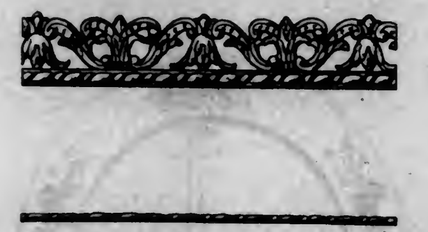


The ornamental design for a scale casing, as shown.

73,081. GRAMOPHONE STAND OR SIMILAR ARTICLE. HENRY WILLIAM SEW HOY, Dunedin, New Zealand. Filed Mar. 27, 1926. Serial No. 17,086. Term of patent 3½ years.

The ornamental design for a gramophone stand or similar article as shown.

73,082. TABLE COVER OR SIMILAR ARTICLE. HAROLD S. HULL, New York, N. Y. Filed Mar. 11, 1927. Serial No. 21,110. Term of patent 3½ years.



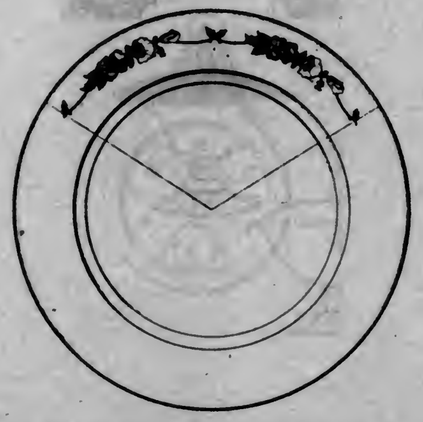
The ornamental design for a table cover or similar article, as shown and described.

73,083. TABLE COVER OR SIMILAR ARTICLE. HAROLD S. HULL, New York, N. Y. Filed Mar. 11, 1927. Serial No. 21,111. Term of patent 3½ years.

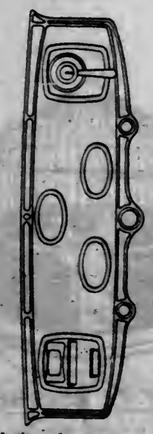
The ornamental design for a table cover or similar article, as shown and described.

73,084. BANDING FOR LIGHTING FIXTURES. WALTER W. KANTACK, St. Albans, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Nov. 3, 1926. Serial No. 19,587. Term of patent 7 years.

The ornamental design for a banding for lighting fixtures, as shown.



73,085. BANDING FOR LIGHTING FIXTURES. WALTER W. KANTACK, St. Albans, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Nov. 3, 1926. Serial No. 19,589. Term of patent 7 years.

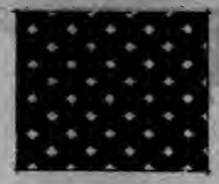


The ornamental design for a banding for lighting fixtures, as shown.

73,086. PLATE OR SIMILAR ARTICLE. LOU B. KAUFFMAN, New York, N. Y., assignor to Nathan Strauss & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1927. Serial No. 21,353. Term of patent 14 years.

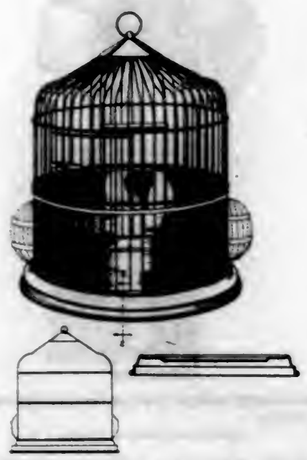
The ornamental design for a plate or similar article substantially as shown and described.

73,087. AUTOMOBILE INSTRUMENT PANEL. PHILIP J. KENT, Royal Oak, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 1, 1927. Serial No. 21,427. Term of patent 14 years.



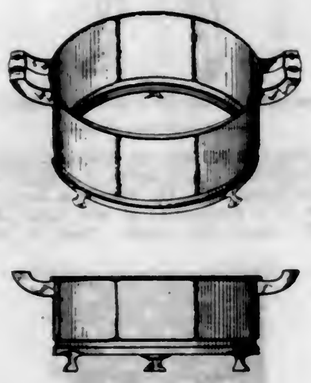
The ornamental design for an automobile instrument panel, as shown.

73,088. DOLL. KRESTINE KNUDSEN, Oakland, Calif. Filed May 10, 1927. Serial No. 21,903. Term of patent 14 years.



The ornamental design for a doll as shown.

73,089. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. JACK LADER, Brooklyn, N. Y., assignor to Ceason Mills, Ch. Perman & Sons, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1927. Serial No. 21,800. Term of patent 3½ years.

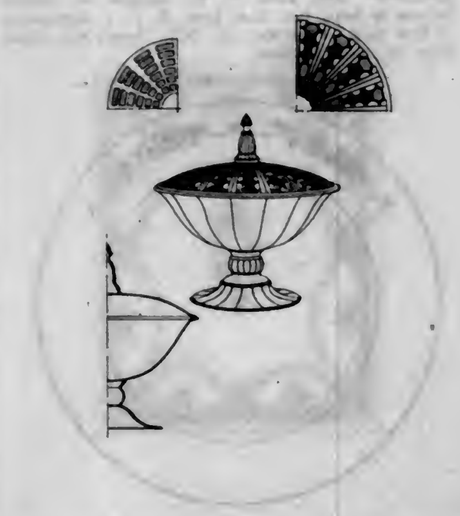


The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

73,090. BIRD CAGE. LEWICKI J. LEON, West Chicago, Ill. Filed Jan. 8, 1927. Serial No. 20,308. Term of patent 14 years.

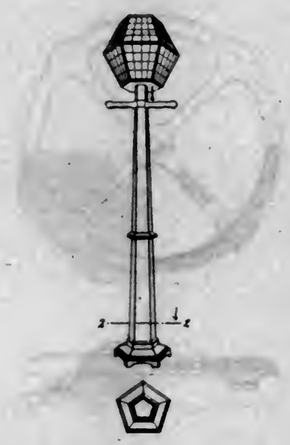
The ornamental design for a bird cage, as shown.

73,091. CASSEROLE FRAME. HARRY LERNER, Brooklyn, and ABE GINSBURG, New York, N. Y. Filed July 21, 1926. Serial No. 18,429. Term of patent 3½ years.



The ornamental design for a casserole frame, as shown.

73,092. PLATE OR SIMILAR ARTICLE. PERCY N. LEYLAND, Glen Ridge, N. J. Filed Sept. 21, 1926. Serial No. 19,140. Term of patent 3½ years.



The ornamental design for a plate or similar article, as shown.

73,093. TABLE CENTERPIECE. ERIK MAGNUSSEN, Providence, R. I., assignor to Gorham Mfg. Co., Providence, R. I. Filed Mar. 21, 1927. Serial No. 21,241. Term of patent 14 years.

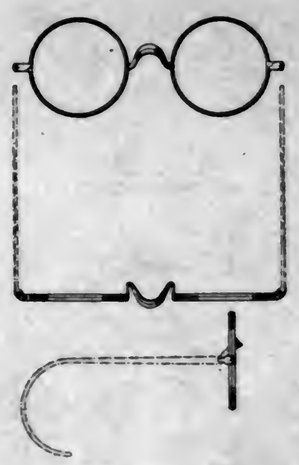
The ornamental design for a table centerpiece, as shown.

73,094. LAMP. WILLIAM MCCOY, Huntingdon, Pa. Filed Feb. 8, 1927. Serial No. 20,652. Term of patent 7 years.

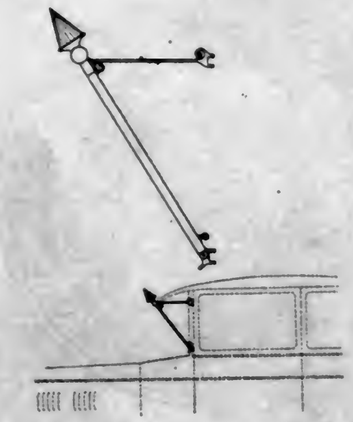
The ornamental design for a lamp, as shown.

73,095. COMBINED WATCHCASE AND APPENDAGE. CHARLES MESSICK, Brentwood, N. Y. Filed Feb. 11, 1922. Serial No. 666. Term of patent 14 years.

The ornamental design for a combined watchcase and appendage, as shown.

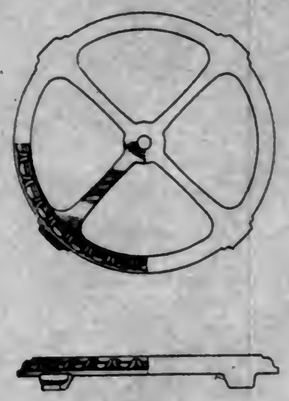


73,096. BOTTLE. SAMUEL C. MILLER, Louisville, Ky. Filed Mar. 16, 1927. Serial No. 21,153. Term of patent 14 years.



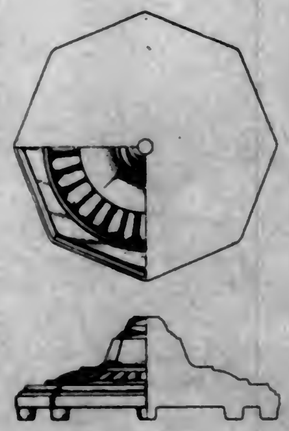
The ornamental design for a bottle, as shown.

73,097. EYEGLASS FRAME. GEORGE E. NEARNEY, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a Corporation of Maine. Filed Nov. 18, 1926. Serial No. 19,758. Term of patent 14 years.



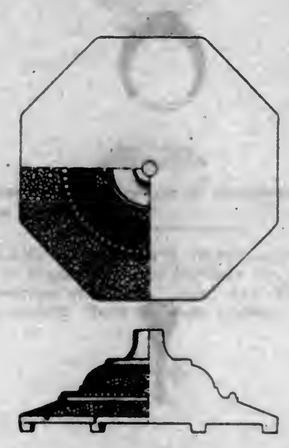
The ornamental design for an eyeglass frame as shown and described.

73,098. COMBINED SIGNAL LAMP AND SUPPORTING BRACKET FOR AUTOMOBILES AND OTHER VEHICLES. CHARLES RITTENHOUSE, Jr., Cincinnati, Ohio. Filed Feb. 3, 1927. Serial No. 20,502. Term of patent 7 years.



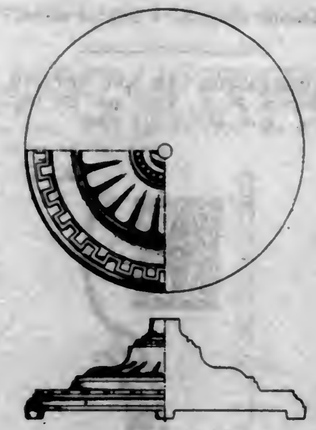
The ornamental design for a combined signal lamp and supporting bracket for automobiles and other vehicles, substantially as shown.

73,099. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1927. Serial No. 21,354. Term of patent 3½ years.



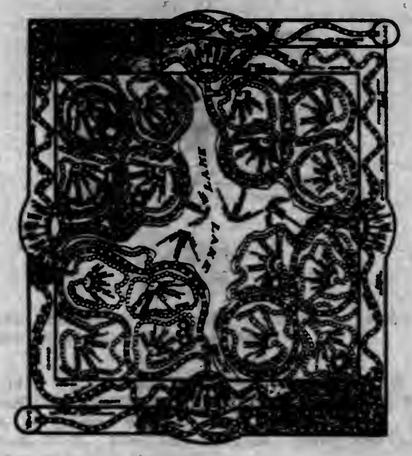
The ornamental design for a lamp base, substantially as shown.

73,100. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1927. Serial No. 21,355. Term of patent 3½ years.



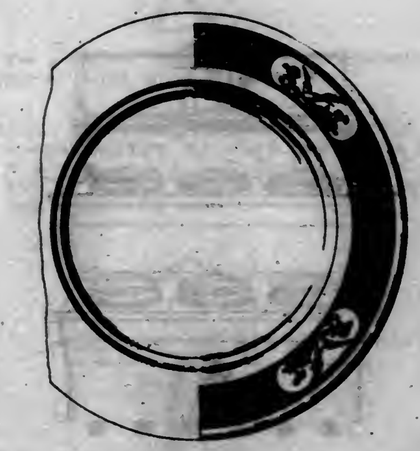
The ornamental design for a lamp base, substantially as shown.

73,101. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1927. Serial No. 21,356. Term of patent 3½ years.



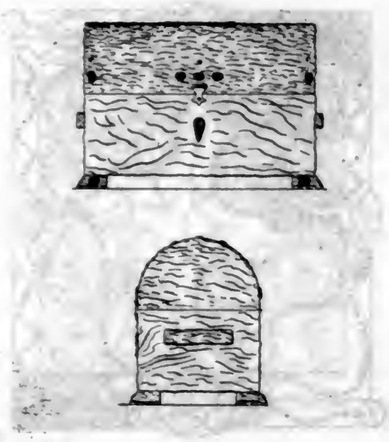
The ornamental design for a lamp base, substantially as shown.

73,102. LAMP BASE. MAX ROTHBART, Chicago, Ill., assignor to Rembrandt Lamp Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 26, 1927. Serial No. 21,357. Term of patent 3½ years.



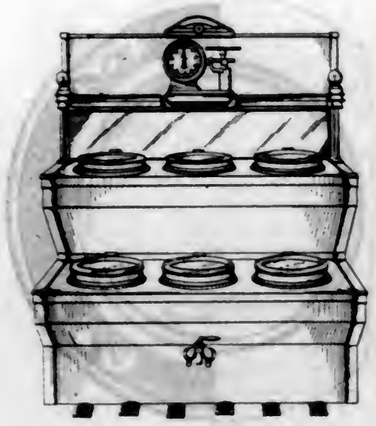
The ornamental design for a lamp base, substantially as shown.

73,103. GAME BOARD. WALTER ROWE, Chicago, Ill. Filed Nov. 26, 1926. Serial No. 19,840. Term of patent 14 years.



The ornamental design for a game board, as shown.

73,104. PLATE. EMIL L. SCHNEPF, Trenton, N. J., assignor to Scammell China Co., Trenton, N. J. Filed Nov. 23, 1926. Serial No. 19,824. Term of patent 14 years.



The ornamental design for a plate, as shown and described.

73,105. BOX. MARGUERITE SHAW, Venice, Calif. Filed Feb. 24, 1927. Serial No. 20,877. Term of patent 3½ years.

The ornamental design for a box, as shown.

73,106. REFRIGERATING CABINET. MORRIS SHORE, Philadelphia, Pa., assignor, by mesne assignments, to Simon Pearl, Philadelphia, Pa. Filed Jan. 21, 1926. Serial No. 16,194. Term of patent 3½ years.

The ornamental design for a refrigerating cabinet as shown.

73,107. FINGER RING. MICHAEL E. SOMAN, New York, N. Y., assignor to Greenberg & Schwartz, a Copartnership composed of Harry Greenberg and Benjamin Schwartz, New York, N. Y. Filed Dec. 15, 1926. Serial No. 20,057. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

73,108. RING. CHRISTOPHER L. STANGE, St. Louis, Mo., assignor to The Grand Council of the Order of De Molay, St. Louis, Mo. Filed May 22, 1926. Serial No. 17,812. Term of patent 3½ years.

The ornamental design for a ring, as shown.

73,109. COMBINATION GEM AND SETTING. ISIDOR STERN, Newark, N. J. Filed Apr. 27, 1927. Serial No. 21,734. Term of patent 7 years.

The ornamental design for a combination gem and setting, as shown.

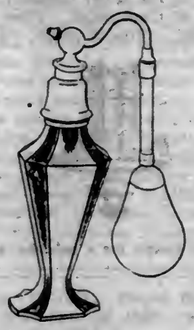
73,110. COMBINATION GEM AND SETTING. ISIDOR STERN, Newark, N. J. Filed Apr. 27, 1927. Serial No. 21,735. Term of patent 7 years.

The ornamental design for a combination gem and setting, as shown.

73,111. LAMP. THEOPHILE A. STIFFEL, Chicago, Ill., assignor to Ornamental Iron Products Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1927. Serial No. 20,516. Term of patent 7 years.

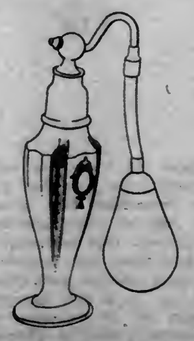
The ornamental design for a lamp as shown and described.

73,112. PANEL FOR A LIGHTING FIXTURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Owen Walsh M'fg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1927. Serial No. 21,540. Term of patent 3½ years.



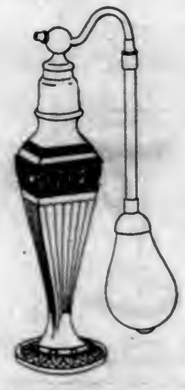
The ornamental design for a panel for a lighting fixture substantially as shown.

73,113. PERFUME ATOMIZER OR ARTICLE OF SIMILAR NATURE. ABRAHAM L. WAGNER, New York, N. Y., assignor to A. L. Wagner Mfg. Co. Inc., New York, N. Y. Filed May 21, 1927. Serial No. 22,118. Term of patent 3½ years.



The ornamental design for a perfume atomizer or article of similar nature, as shown.

73,114. PERFUME ATOMIZER OR ARTICLE OF SIMILAR NATURE. ABRAHAM L. WAGNER, New York, N. Y., assignor to A. L. Wagner Mfg. Co. Inc., New York, N. Y. Filed May 21, 1927. Serial No. 22,119. Term of patent 3½ years.



The ornamental design for a perfume atomizer or article of similar nature, as shown.

73,115. PERFUME ATOMIZER OR ARTICLE OF SIMILAR NATURE. ABRAHAM L. WAGNER, New York, N. Y., assignor to A. L. Wagner Mfg. Co. Inc., New York, N. Y. Filed May 21, 1927. Serial No. 22,120. Term of patent 3½ years.

The ornamental design for a perfume atomizer or article of similar nature, as shown.

73,116. PERFUME ATOMIZER OR ARTICLE OF SIMILAR NATURE. ABRAHAM L. WAGNER, New York, N. Y., assignor to A. L. Wagner Mfg. Co. Inc., New York, N. Y. Filed May 21, 1927. Serial No. 22,121. Term of patent 3½ years.

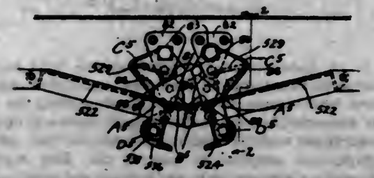
The ornamental design for a perfume atomizer or article of similar nature, as shown.

73,117. BOBECHE. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Apr. 15, 1926. Serial No. 17,305. Term of patent 3½ years.

The ornamental design for a bobeche, as shown.

73,118. BOTTLE. ALBERTIS E. WRIGHT, Chicago, Ill., assignor to A. E. Wright Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1927. Serial No. 21,629. Term of patent 7 years.

The ornamental design for a bottle as shown.



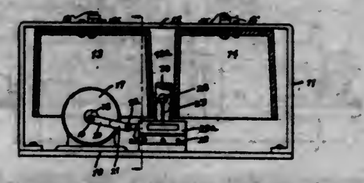
PATENTS

GRANTED JULY 19, 1927.

1,635,982. ELASTIC COMPOSITION FLOOR. FREDERIC E. BOELKOW, Wauwatosa, and FRIEDRICH WILHELM OTTO LIETING, North Milwaukee, Wis., assignors to Durable Floor Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 20, 1926. Serial No. 82,579. 5 Claims. (Cl. 94—19.)

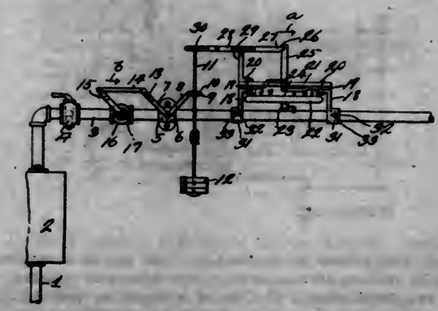
1. An improved composition for floors formed as a mixture substantially in the proportions stated of wood flour, magnesite, white silica, and flake asbestos, saturated with magnesium chloride, and adapted while plastic to be pressed into place.

1,635,983. CAR-DOOR-LOCKING MEANS. ARGYLE CAMPBELL and ALBERT E. ZIMMER, Chicago, Ill., assignors to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Original application filed Aug. 26, 1921, Serial No. 495,665. Divided and this application filed June 26, 1925, Serial No. 39,632. Renewed June 2, 1927. 8 Claims. (Cl. 105—308.)



1. In a car having a door opening defined by fixed hopper sheets, and a pivotally mounted hopper door, the door extending transversely of the car and oscillatable about a transversely fixed axis, the combination with laterally extended fixed projections on each side of the car adjacent the corresponding free edge of the door when the latter is in closed position; of latching elements duplicated at opposite sides of the car, pivotally mounted on the door and co-operable with said fixed projections to lock the door in closed position; and common operating means for locking said elements in operative position and also for disengaging them from said projections.

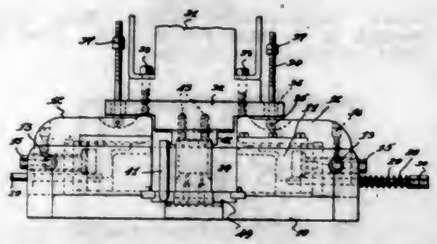
1,635,984. REVOLVER HOLSTER. KATHERINE CORRISTON, Westerleigh, N. Y., assignor to William S. Swift, New York, N. Y. Filed Feb. 7, 1925. Serial No. 7,504. 3 Claims. (Cl. 224—2.)



1. A revolver holster having a lower pocket like section containing the free end of the barrel; an upper half open, or winged section embracing the main body of the revolver, but leaving the handle free; a plate bridging the ends of the wings of the said upper section, and having a recess towards the open end of the holster for receiving the trigger guard and a seat for said trigger guard at the bottom of the recess; and spring pressed latch means pivotally mounted upon said bridge plate for engagement over the trigger guard to retain the same on the said seat.

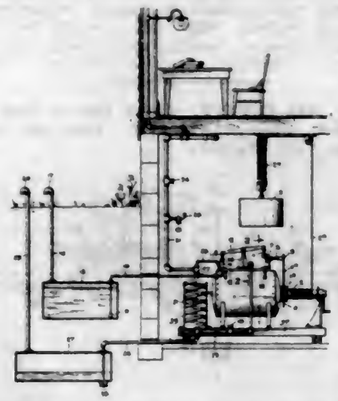
1,635,985. NOISE-MAKING ALARM. FRANK DAVIS, Brooklyn, N. Y. Filed July 30, 1925. Serial No. 47,037. 6 Claims. (Cl. 177—288.)

6. In an alarm mechanism, a base, a frame-work rising from said base, a pair of gong-like sound producers suspended from said frame-work above said base and spaced slightly apart, a reciprocable actuator beneath said sound producers, guide means mounted on said base to operatively mount said actuator for reciprocable sliding movement in horizontal plane, an upstanding resilient striking arm carried by said actuator to extend upwardly between said sound producers and arranged to vibrate in vertical plane, said arm having an impactor on its free end, a comparatively high speed electric motor having a crank member in connection with its armature shaft, a connecting rod between said crank member and said actuator, all whereby said actuator is rapidly reciprocated to vibrate said resilient arm and forcefully move said impactor in alternate sounding contact with said sound producers.



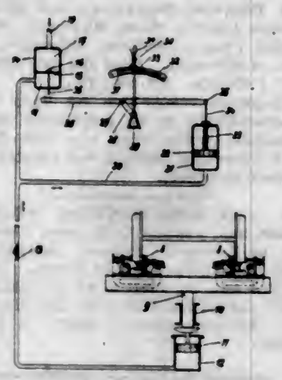
1,635,986. GAS CUT-OFF. FRANK EDWARD ERBE, Pontiac, Mich. Filed Jan. 18, 1927. Serial No. 161,790. 2 Claims. (Cl. 67—116.)

1. The combination with a gas supply pipe, a cut off valve carried by said pipe, of a thermostat control for closing said valve, said thermostat control comprising an annular thermostat above the pipe, brackets carried by the pipe for supporting said thermostat, said brackets being movable towards and away from each other, arms extending inwardly from opposite sides of the thermostat, a vertically disposed trip lever, said last named arms being pivotally connected to the trip lever at spaced points, an upwardly extending bracket carried by one side of the thermostat, a rock lever carried by said last



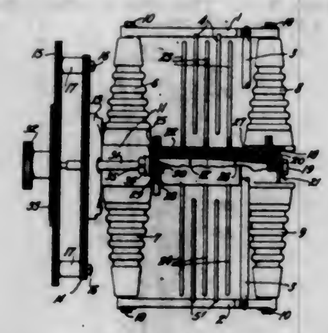
named bracket and having one of its ends disposed in a recess in the trip lever, a weight suspended from the other end of the rock lever, a bell crank lever carried by the pipe, said weight being also suspended from one arm of the bell crank lever, an arm carried by the valve and a link connection between the other end of the bell crank lever and the arm carried by the valve.

1,635,987. CLOSING-IN MACHINE. WILLIAM FIEGEL and WINFIELD S. ENDERICH, Detroit, Mich., assignors to Bohn Aluminum and Brass Company, Detroit, Mich., a Corporation of Michigan. Filed May 24, 1926. Serial No. 111,400. 18 Claims. (Cl. 153—48.)



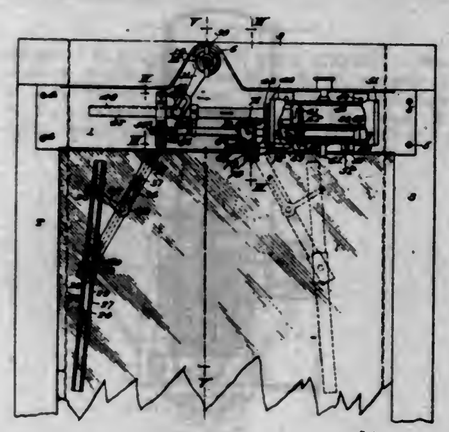
1. A fixture for closing-in a semi-cylindrical bearing or like segment having flanged ends comprising a die for holding the bearing and a movable ram for closing-in the same, means movable to a position adjacent the flanged ends of the segment for preventing distortion of said flanged ends during the close-in operation, and means responsive to the movement of the ram for actuating the said means.

1,635,988. METHOD OF MAKING AIR GAS. HANS FOERSTERLING, Jamesburg, N. J. Filed Mar. 5, 1925. Serial No. 13,068. 13 Claims. (Cl. 48—219.)



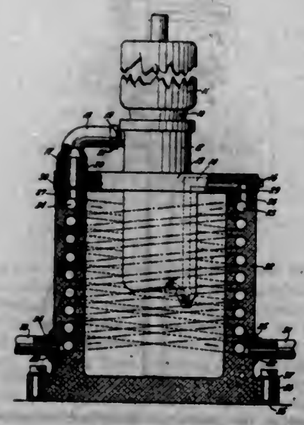
1. The method of producing an air gas of a substantially uniform heating value, which comprises exposing in a vaporizer without the use of a flame for heating the vaporizer, a moving thin stream of gasoline at atmospheric temperatures to a current of air of low pressure in counterdirection and in quantities substantially not greater than are required for deriving a predetermined heating value of the resulting air gas, regulating the quantity of gasoline independently of the current of air to obtain an air gas of said predetermined heating value, maintaining such regulation independently of the rate of consumption of the resulting air gas, and recovering from the vaporizer the unvaporized portion of the gasoline.

1,635,989. FLUID-PRESSURE REGULATOR. ERNST FAÖLICH, Essen-on-the-Ruhr, Germany, assignor, by mesne assignments, to The Hannauer Car Retarder Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1925, Serial No. 32,300, and in Germany May 28, 1924. 6 Claims. (Cl. 303—59.)



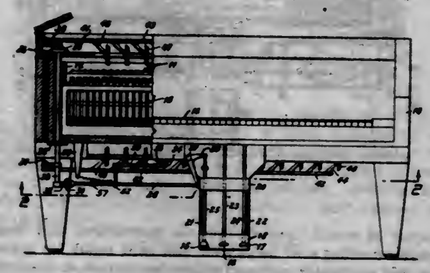
1. In an apparatus for controlling the fluid pressure: a combination of a fluid container having a supply of pressure fluid thereto and means for regulating the supply of the pressure fluid to the container, with an operating lever arranged outside and independent of the said fluid container, but adapted to control the fluid regulating means, and an adjustable hand lever hinged outside of the fluid container and adapted to shift the fulcrum of the said operating lever, a cylinder separated from or communicating with the said fluid container, and a spring pressed piston within said cylinder, and connected with the said operating lever.

1,635,990. ELECTROSTATIC CONDENSER. JOHN O. GARDAN, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1924. Serial No. 734,194. 6 Claims. (Cl. 175—41.5.)



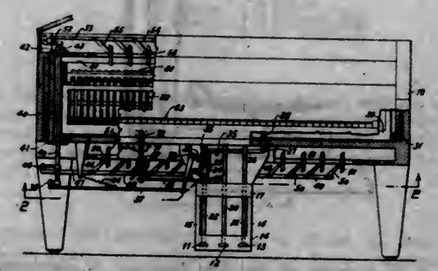
1. In a variable air condenser, a supporting member, a frame mounted thereon, stationary condenser plates supported by said frame, other plates adapted to be moved in overlapping relation with the stationary plates, a spindle supported by said member and supporting the movable condenser plates, and a gearing device for rotating the movable plates on said spindle and including means for eliminating backlash.

1,635,991. APPARATUS FOR CLEANING WINDOWS. LOUIS HACHENBERG, Throggs Neck, N. Y., assignor of one-half to William Brady, Ossining, N. Y. Filed Dec. 11, 1925. Serial No. 74,792. 6 Claims. (Cl. 15—253.)



1. An apparatus for cleaning windows comprising, a plate adapted to be fixed to a window frame and provided with a tubular bearing, a sleeve journaled in said bearing, an arm fixed on said sleeve, a shaft mounted to rotate with the sleeve, a wiper arm carried by said shaft, means on said wiper arm pivotally supporting a cleaning element, a device pivoted on the wiper arm and having abutments arranged to be engaged by the upper end of the cleaning element to arrest and limit its movement in opposite directions, and mechanism coacting with the arm on the sleeve for oscillating the shaft and wiper arm.

1,635,992. ELECTRON-DISCHARGE DEVICE. ARTHUR HADDOCK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 4, 1924. Serial No. 741,530. 4 Claims. (Cl. 250—27.5.)

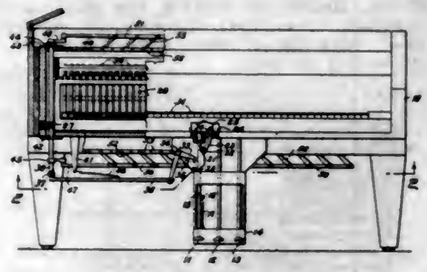


1. In combination, an electron discharge device, a water jacket having a flange, said flange having a recess, a support for said jacket, comprising a molded frame surrounding said jacket and having a helical passage formed therein, and means for providing a fluid tight connection between said recess and said passage.

1,635,993. MODIFYING DEVICE FOR MODULATION CONTROL. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Apr. 2, 1925. Serial No. 20,111. 10 Claims. (Cl. 84—182.)

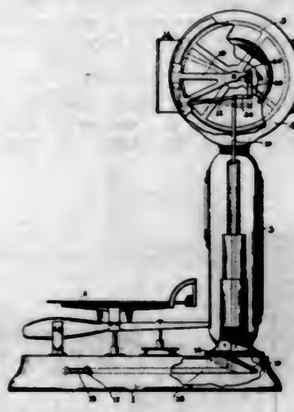
2. In a musical instrument, the combination of means for reducing the volume of sound effectively produced by the instrument, a manual control therefor, means operatively interconnecting said sound reducing means and said control arranged so that movement of said control in one direction reduces and in the opposite direction increases the effective volume of sound, and a manual device acting on said interconnecting means to interchange the direction of movement of said sound reducing means with respect to said first named manual control.

1,635,994. PIANO-MODULATOR-CONTROL DEVICE. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Apr. 8, 1925. Serial No. 21,483. 16 Claims. (Cl. 84—182.)



11. In a musical instrument having hammer control mechanism and a pedal for controlling said mechanism, a plurality of shutters for varying the volume of sound emitted from said piano, and means interconnecting said shutters and said pedal for actuating said shutters independently of, or simultaneously with, said hammer control mechanism selectively.

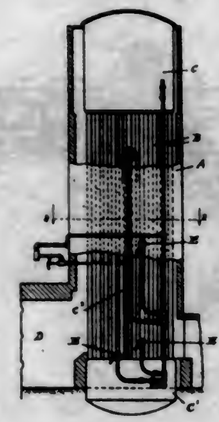
1,635,995. SUCCESSIVELY-OPERATED TONE CONTROLS. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed May 5, 1925. Serial No. 28,167. 13 Claims. (Cl. 84—182.)



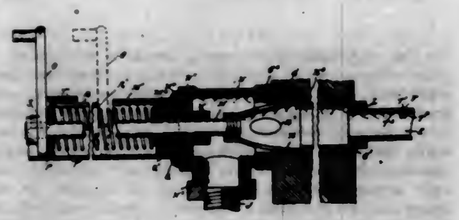
2. In a musical instrument having a percussive action for producing sound, a pianissimo mechanism for con-

trolling said percussive action to vary the amplitude of sound produced thereby, a pedal for controlling said pianissimo mechanism, a tone modulator for varying the

volume of sound emitted from the instrument, and means interconnecting said modulator and said pedal for actuating said modulator and said pianissimo action successively.

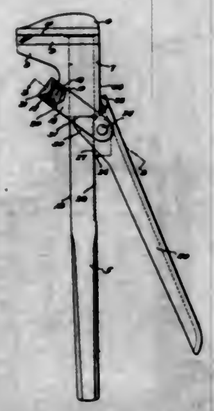


1,635,996. WEIGHING SCALE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed June 3, 1920. Serial No. 386,305. 10 Claims. (Cl. 88—1.)



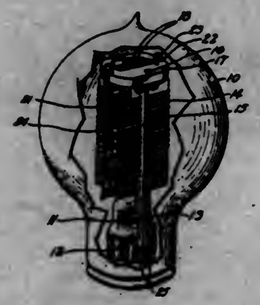
1. In a device of the class described, in combination, a chart having a plurality of optically dis-similar sets of value characters, a scale for each set of characters, and means for selectively bringing each set of characters and its co-operating scale into prominence.

1,635,997. BOILER-CLEANER CONSTRUCTION. SAMUEL J. HERMAN, Detroit, Mich., assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 2, 1918, Serial No. 264,933. Renewed Dec. 30, 1925. 6 Claims. (Cl. 122—392.)



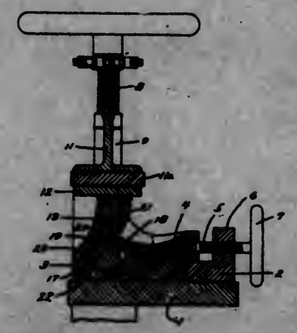
1. In a boiler cleaner, the combination with a rotatable blower pipe having discharge orifices, of a mounting slidably and rotatably carrying said pipe and adapted to admit steam thereto, a stem projecting rearwardly from said pipe extending exteriorly of said mounting, a sleeve enclosing said stem carried by said mounting, said sleeve being formed with intersecting longitudinal and circumferential slots, and a crank carried by said stem whereby the blower pipe may be rotated, movable

in the longitudinal slot during sliding of the blower pipe, and in the circumferential slot during rotation of said pipe.



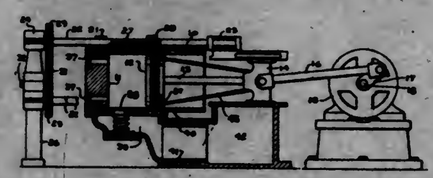
1,635,998. TOOL. EDWARD HOGE and FRIEDRICH KARL HOGE, Philadelphia, Pa. Filed Feb. 15, 1926. Serial No. 88,274. 12 Claims. (Cl. 81—87.)

1. A tool of the character described including a shank having a toothed rack and a jaw said shank having a free extended end forming a hand grip; a jaw carriage on the shank; a device having a portion adapted to intermesh with the teeth of said shank rack; a spring-controlled means for holding said portion of said device in mesh



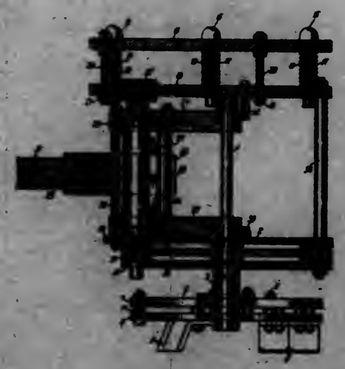
with any of the parts of the shank rack; and a lever having a bearing on said device and having a free sliding contact cam effective, when the lever is operated, to move said jaw carriage along said shank toward said first jaw for clamping purposes.

1,635,999. ELECTRON-DISCHARGE DEVICE. WILLIAM G. HOUSKEEPER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 22, 1922. Serial No. 589,734. 5 Claims. (Cl. 250—27.5.)



3. An electron discharge device comprising an insulating block having an elongated aperture, resilient members mounted in said block at either end thereof and passing through said aperture, and a filament supported by said members.

1,636,000. MACHINE FOR FORMING LEATHERS FOR POOL POCKETS. GUSTAV A. JAEGER and AUGUST F. JAEGER, Morrison, Ill., assignors to Perfect Pool Pocket Irons Company, Morrison, Ill. Filed July 18, 1924. Serial No. 726,886. 1 Claim. (Cl. 69—8.)



In a machine for the formation of a pool pocket iron leather, including a body portion and appended parts, a suitable baseplate; a die-block fixed thereon, and provided with faces assisting in the formation of said body portion and appended parts; wing members at the ends of said body forming face, limiting the movement outwardly of the material contained therein; a die member movable with relation to one of the other faces thereof, and means for giving thereto a clamping action, the engaging face of said movable member conforming to that of said fixed member; and a movable die member and means for causing the same to engage said fixed member under force, the engaging face thereof conforming to the adjacent face of said fixed member.

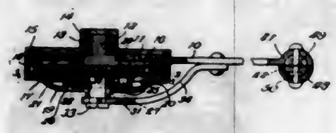
1,636,001. BLOWING ENGINE. ALEXANDER T. KASLEY, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 18, 1924. Serial No. 726,775. 15 Claims. (Cl. 230—27.)

1. In a pump comprising a piston adapted to reciprocate in a cylinder provided with a head, a plurality of nut members carried by the cylinder, screws adapted to operatively engage the nuts, and means including a gear train to simultaneously rotate the screws, whereby the position of the cylinder may be adjusted with respect to the piston.

1,636,002. CLEANING DEVICE. WILLIAM J. KENT, Brooklyn, N. Y., assignor to The Mechanical Rubber Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 11, 1923. Serial No. 668,032. 6 Claims. (Cl. 15—77.)

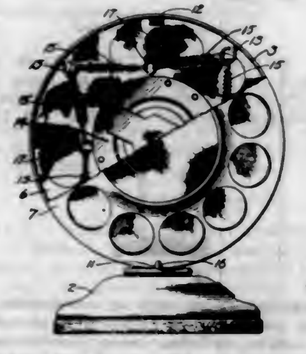
1. In a device for cleaning between opposed surfaces, a frame, opposed bearing means and cleaning means carried thereby, and resilient means carried by the frame adapted to project said bearing means and cleaning means outwardly of the frame.

1,636,003. BRAKE SHOE. LUDGER ELIZE LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 22, 1926. Serial No. 110,832. 5 Claims. (Cl. 188—250.)



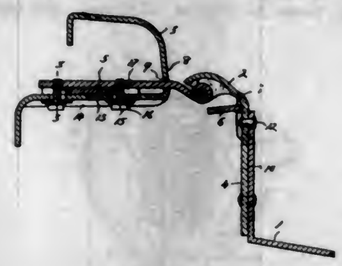
4. A brake shoe comprising, in combination, a cylindrical band, and a channel-section part secured to said band and forming stiffening means therefor and having its sides extended beyond the end of said band to form a pair of projecting arms, said arms being provided with openings at their ends to embrace a pivot and with openings near the end of the band for the pivot of a shoe overlapped thereby.

1,636,004. BRAKE. LUDGER ELIZÉ LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 22, 1926. Serial No. 110,833. 9 Claims. (Cl. 188—250.)



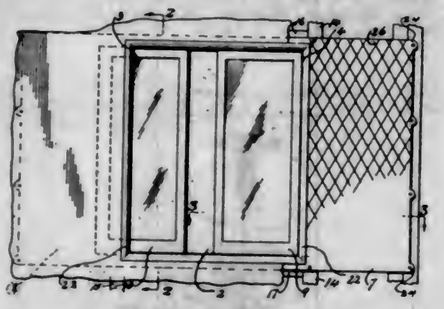
5. A brake shoe having at least at its end two spaced stiffening webs each consisting of two flanges secured together, one of each two flanges having an opening and the other being drawn out to form a tubular boss coaxial with respect to the opening, the opening and boss giving spaced bearing surfaces to be journalled on a pivot.

1,636,005. SHOCK ABSORBER. EDWARD L. LEINBACH, Chicago, Ill. Filed Mar. 14, 1921. Serial No. 452,184. 10 Claims. (Cl. 188—130.)



1. A shock absorber including a casing having a predetermined amount of fluid confined therein, a friction disc, a flexible friction element co-operating with the said disc, there being a fluid chamber across which the said flexible element extends, and means for causing the fluid to operate against the said element to force the latter against the said disc to increase the friction therebetween.

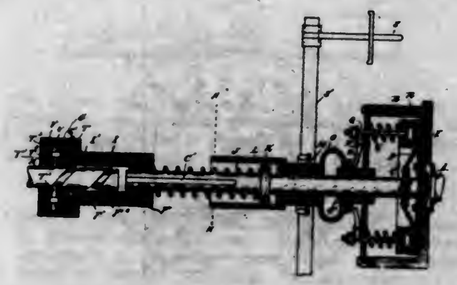
1,636,006. TELEPHONE TRANSMITTING MOUNTING. GEORGE R. LUM, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 28, 1922. Serial No. 591,016. 6 Claims. (Cl. 179—179.)



1. A transmitter mounting comprising an enclosure having a perforated band of cylindrical form, a perforated closure for each end of said band, a fine mesh screen completely lining said band and said closures and shock-absorbing means supporting said transmitter within said enclosure and out of contact therewith.

1,636,007. HINGE CONSTRUCTION. WILLIAM MARSHALL, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed May 24, 1926. Serial No. 111,420. 8 Claims. (Cl. 16—135.)

4. In combination, a pillar having a substantially flat web, and a lateral flange at one edge of said web, a hinge having pivotally connected sections, one of said sections extending through said flange and across said web, and securing means for said hinge including a headed element extending transversely of said web and threadedly engaging said hinge section.

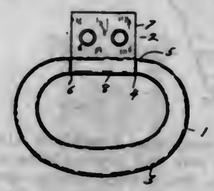


1,636,008. METALLIC CLOSURE STRUCTURE. ROBERT R. MILES, Los Angeles, Calif. Filed July 6, 1926. Serial No. 120,703. 7 Claims. (Cl. 20—52.1.)

1. In combination with a wall having an opening therethrough, and having recesses in one face thereof on opposite sides of said opening, a frame fitted into said opening and having pockets each of the same depth as said recesses and seated in said recesses, and closures for said opening slidable in said frame into and out of said pockets, each of said pockets having one face only in contact with the recessed face of said wall.

1,636,009. TORQUE TRANSMISSION MECHANISM. RAYMOND S. MILLER, Detroit, Mich. Filed Aug. 16, 1924. Serial No. 732,537. 3 Claims. (Cl. 192—56.)

1. A torque transmission mechanism comprising driving and driven shafts, one being provided with a longitudinal groove and the other with a spiral groove, a sleeve surrounding said shafts having a spline engaging said longitudinal groove, and a radially extending pin engaging said spiral groove, a collar on said driving shaft, a spring sleeved on said shaft intermediate said collar and said sleeve, a clutch having driving and driven elements, the latter elements being connected to said driving shaft,



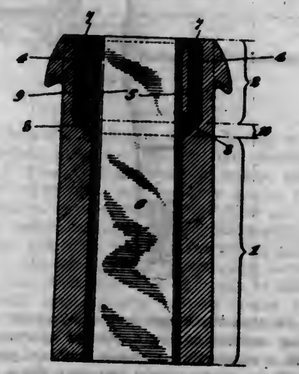
and a release lever for said clutch actuated by a predetermined longitudinal movement of said sleeve against the tension of said spring.

1,636,010. BOOTJACK. WILLIAM G. MOLAND, Philadelphia, Pa. Filed Apr. 23, 1926. Serial No. 104,004. 10 Claims. (Cl. 132—6.)

1. A boot jack comprising a body portion provided with a heel engaging recess in the forward end thereof, said body portion having recesses in the under side and means adapted to be positioned within said recesses and to be extended therefrom to a fixed position to support the body portion in an inclined position.

1,636,011. HANDLE ASSEMBLY. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 7, 1924. Serial No. 704,897. 5 Claims. (Cl. 29—148.)

1. In a handle assembly, the combination with a handle comprising a tubular member having spaced end portions extending toward each other, and a second member telescopically engaging said end portions and cooperating therewith to form shoulders, of a support for said handle engaging one of said members and also engageable with said shoulders to limit the relative movement of said handle and support.



4. In the manufacture of a handle assembly, the curving of tubing to shape and inturning of its end portions toward each other, the insertion of the ends of a rod within the inturned end portions of the tubing and securing of the rod to the inturned end portions, and the mounting of a clip upon the rod and between the ends of the inturned end portions.

1,636,012. PISTON RING. JOHN A. OLSON and ERNEST R. HELLMAN, Detroit, Mich. Filed May 17, 1926. Serial No. 109,741. 15 Claims. (Cl. 74—109.)

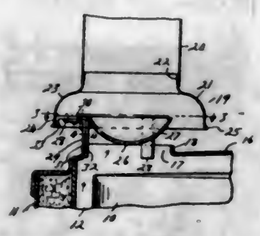
1. A piston ring provided with a sharp annular lower edge adapted to contact with the cylinder wall, a series of slots extending through the ring between the outer and inner surfaces thereof and a drilled hole extending from a point adjacent said edge to one of said slots.

1,636,013. PERMANENT HOT-TOP MOLD. JOHN E. PERRY, Sharon, Pa. Filed Jan. 22, 1926. Serial No. 82,892. 6 Claims. (Cl. 22—139.)

1. As an article of manufacture, an ingot mold comprising a body portion having heat absorbing walls over the major length thereof, with an end portion provided with a heat insulation zone, and a graduated heat absorbing zone between the full chill portion of the mold and the full heat insulated portion thereof.

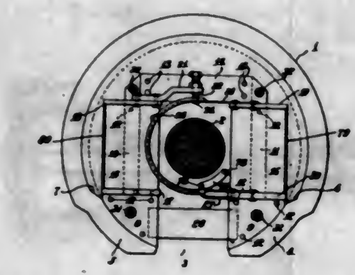
1,636,014. COMPENSATOR FOR CARTON CONVEYERS. GEORGE A. ROBINSON, Battle Creek, Mich., assignor to Pneumatic Scale Corporation, Ltd., Norfolk Downs, Mass., a Corporation of Massachusetts. Original application filed Oct. 16, 1922, Serial No. 594,796. Divided and this application filed Jan. 9, 1926. Serial No. 80,254. 15 Claims. (Cl. 271—62.)

1. In a feed for carton blanks or the like, a transfer mechanism, and a conveyer delivering thereto under pressure, a pawl and ratchet drive for the conveyer, means



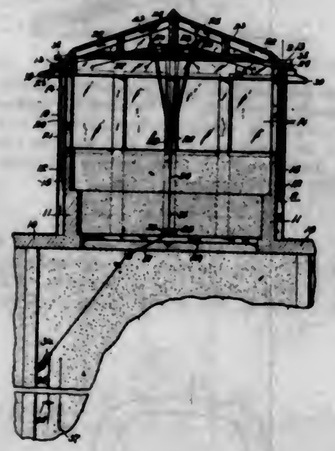
for actuating the drive at predetermined pressure, and means for resetting the pawl to maintain the delivery pressure constant after reduction through transfer.

1,636,015. ELECTRON-DISCHARGE DEVICE. VICTOR L. RONCI, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1923. Serial No. 634,978. 3 Claims. (Cl. 250—27.5.)



1. In an electron discharge device, a metallic standard, an insulating member having a pair of apertures carried thereby and a supporting member bent to provide two parallel portions, each of said portions lying in one of said apertures, a head on one of said portions engaging said insulating member whereby movement of the supporting member relative to the insulating member is prevented, and an electrode supported by said member.

1,636,016. DRAFT HOOD FOR HOT-WATER HEATERS. FRANK W. SHUELL, ELMER E. LEDBETTER, and THOMAS J. TOBEY, Detroit, Mich., assignors to Everhot Heater Company, Detroit, Mich., a Corporation of Michigan. Filed July 12, 1926. Serial No. 121,920. 10 Claims. (Cl. 126—299.)



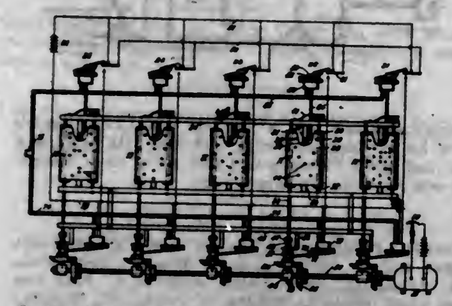
1. The combination with a heater having an exhaust opening for the products of combustion, of a draft hood above said opening having an outlet opening as great in area as said exhaust opening, and a downwardly rounded baffle within said hood spaced from said exhaust opening and in alignment therewith, said hood having a flaring portion surrounding said baffle and spaced therefrom to form a passageway as great in area as said outlet opening, and said flaring portion terminating in a portion spaced from said heater to provide an opening as great in area as the combined areas of said outlet opening and said exhaust opening.

1,636,017. MAGNETO. WILLIAM F. SMITH, Poughkeepsie, N. Y., assignor of one-half to Herman A. Schatz, Poughkeepsie, N. Y. Filed Dec. 5, 1924. Serial No. 754,114. 18 Claims. (Cl. 123—149.)

1. In a magneto, a shaft, means for rotating said shaft at varying speeds, a magnet carried by said shaft, a stationary armature, contacts in the armature circuit, and means comprising a gear and pinion responsive to the speed at which said shaft rotates for opening said contacts in different rotary positions of said shaft.

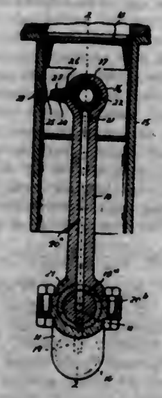
1,636,018. SKYLIGHT. IRVING C. STEINBERG, Newark, N. J., assignor to J. Steinberg & Sons, Newark, N. J. Filed May 4, 1922, Serial No. 558,407. Renewed Apr. 7, 1927. 2 Claims. (Cl. 108—16.)

2. A skylight comprising a curb and a housing extending above it, the curb and housing being of substantially the same height, the housing having openings therein, frames extending on the outside of the curb and the housing, curtains slidable in the frames and adapted when raised to close the openings in the housing and also adapted when lowered to lie against the outside of the curb, and fusible means for holding the raised curtains against descent by gravity.



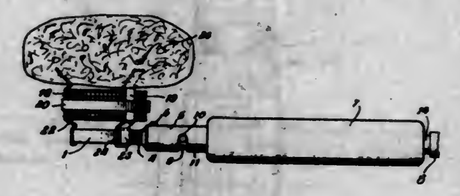
1,636,019. HINGE FOR BAG FRAMES. FRANK T. STUART, Maplewood, N. J., assignor to The R. Neumann Hardware Co., a Corporation of New Jersey. Filed Dec. 8, 1925. Serial No. 73,985. 2 Claims. (Cl. 16—142.)

1. A hinge for the frame-sections of a bag-frame, comprising a pair of hinge-plates, fingers extending from an end-portion of each hinge-plate, one of the fingers of each hinge-plate being of greater length than its adjacent finger, said longer fingers being provided with pintle-receiving eyes, and each pair of fingers having a space between them, a stay-member having portions arranged in



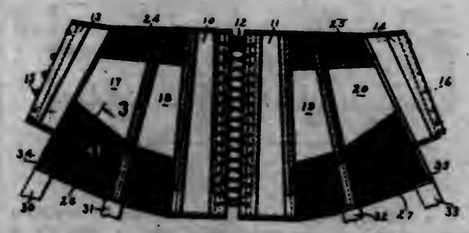
said spaces, said stay-member being provided with a perforation, and a pintle arranged in the eyes of the fingers of the respective hinge-plates and in the perforation of said stay-member.

1,636,020. SYNCHRONIZING MECHANISM. ALBERT D. TRENOR, Gloucester, Mass., assignor to John Hayes Hammond, jr., Gloucester, Mass. Filed Aug. 22, 1922. Serial No. 583,597. 8 Claims. (Cl. 84—119.)



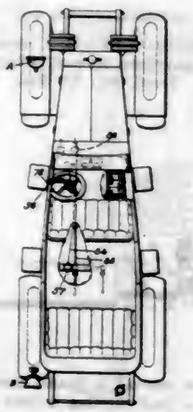
3. An automatic musical instrument comprising player actions for controlling portions of the instrument simultaneously, a common drive therefor, a friction clutch operatively interposed between the drive and each of the actions and normally connecting the drive to the respective action, an electro-magnet for declutching each of the clutches, and a control device periodically controlled by each of the actions and arranged to actuate the respective clutch provided that at least one other control device is inactive.

1,636,021. LUBRICATING MEANS FOR MOTOR-CAR PISTONS. CORNELIUS W. VAN RANST, Detroit, Mich. Filed Apr. 27, 1925. Serial No. 26,263. 14 Claims. (Cl. 74—108.)



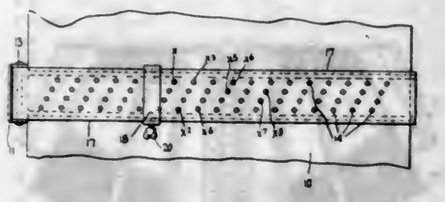
1. The combination with an internal combustion engine comprising a piston, a crank shaft and connecting rod, of a source of lubricant under pressure, said piston having an opening, a discharge nozzle within the piston and spaced from the bounding walls of said piston opening, said nozzle being directed toward said opening, and means for conducting the lubricant from said source through the crank shaft and connecting rod for discharge through said piston opening to lubricate the cylinder wall.

1,636,022. WASHING DEVICE. HUBERT VAN ZANDT, Hinsdale, and BRADFORD EYMAN, Winnetka, Ill. Filed Aug. 6, 1924. Serial No. 730,394. 5 Claims. (Cl. 15—129.)



1. In a fountain washer, a handle having a water connection thereto, a head forming a rigid discharge nozzle on the end of said handle, washing means, an attaching device for supporting said washing means in position on said head, in open spaced relation from one side thereof, so that water discharged from said head will be supplied to the object to which the washing means is applied, said attaching device comprising members supported on said head, means on the ends of said members for detachably gripping said washing means, and a soap box in the form of a wire cage removably held in place by said members, in open spaced relation between said head or nozzle and said washing means, whereby to soap the water supplied to said washing means.

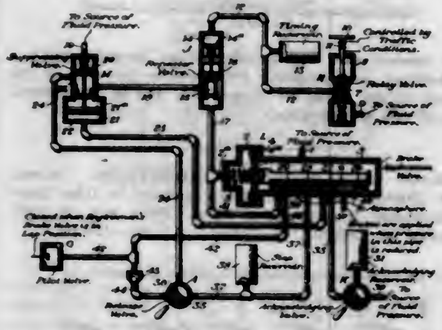
1,636,023. CORSET. IRVING R. VERSOY, New Haven, Conn., assignor to The Berger Brothers Company, New Haven, Conn. Filed June 30, 1925. Serial No. 40,653. 7 Claims. (Cl. 2—48.)



4. A corset comprising front and rear stay sections, a body encircling girdle portion of substantial width constructed of inelastic material and connected to said stay sections, and upper and lower elastic sections adjoining respectively the upper and lower edges of said girdle portion and secured thereto, the upper elastic section being substantially narrower than the lower elastic section, and the latter in turn being substantially narrower at the rear of the corset than the girdle portion, said girdle portion tapering toward the front of the garment so as to be narrower at the front than at the back, and said lower elastic section being wider at the front of the garment than at the back, said front stay sections being substantially shorter than the rear stay sections and extending downwardly to a less degree.

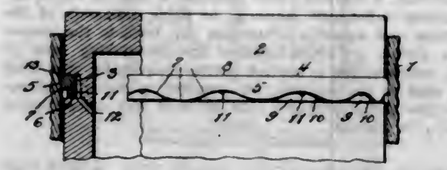
1,636,024. SIGNAL APPARATUS FOR AUTOMOBILES. EDWIN W. VOSE, Beverly, Mass. Filed July 12, 1922. Serial No. 574,475. 7 Claims. (Cl. 177—329.)

1. In a signal device for automobiles, a casing having a lamp compartment therein, an electric lamp in said compartment, said casing having an open front, and light emitting means for closing said front including a part having an arrow therein arranged to be illuminated by said lamp, said arrow having a large head and a relatively small tapered shaft separated from the head by a substantial distance with the small end of the shaft adjacent to the head.



1,636,025. SHEET-METAL-LAYOUT TOOL. GEORGE F. WAELDE, Hillsdale, N. J. Filed Apr. 15, 1926. Serial No. 102,355. 4 Claims. (Cl. 33—189.)

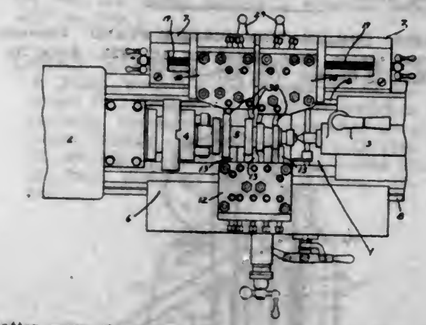
1. A tool of the class described comprising an elongated body provided on one face thereof with a plurality of staggeredly arranged apertures adapted to receive marking elements, marking elements adapted to be arranged in a predetermined number of the apertures of said body to produce a predetermined layout on a workpiece, and a gage device adjustably mounted on said body and adapted to be retained in predetermined position with reference to at least one of the apertures in said body.



1,636,026. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch and Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 24, 1925. Serial No. 58,308. 15 Claims. (Cl. 303—18.)

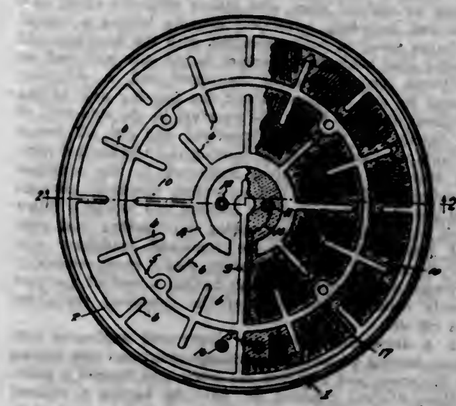
3. Railway traffic controlling apparatus comprising a brake application valve having a chamber constantly supplied with fluid pressure through a restricted orifice, a normally closed port arranged to be opened when the pressure in said chamber is reduced, a pipe, means responsive to traffic conditions for at times connecting said

chamber with said pipe, a reservoir, a manually operable valve for at times connecting said pipe with said reservoir, and means including said port for at times connecting said reservoir with atmosphere.



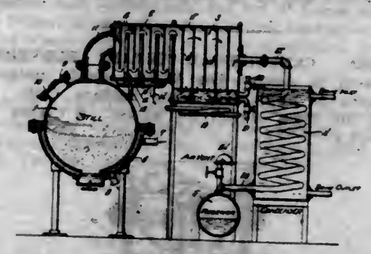
1,636,027. PISTON RING. FRANK H. WALTER, St. Louis, Mo., assignor to Unico Motor Products Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 16, 1923. Serial No. 657,734. 1 Claim. (Cl. 74—109.)

A split resilient piston-ring having an outer peripheral cylinder-wall engaging face and formed at its lower axial end with a circumferential series of contiguous outer peripheral recesses opening both to said peripheral face and to the lower end face of the ring, the upper wall of said series of recesses terminating in approximately the plane of said peripheral face in a circumferentially continuous cylinder-wall scraping edge sinuous in shape circumferentially of the ring disposed obliquely to the line of normal piston travel, portions of said scraping edge being coincident with and in the plane of the lower end face of the ring and the ring being transversely provided at said recesses with ducts opening both to said recesses and to the inner peripheral face of the ring.



1,636,028. LATHE. WENDELL E. WHIPP, Sidney, Ohio, assignor to The Monarch Machine Tool Company, Sidney, Ohio, a Corporation of Ohio. Filed Jan. 21, 1926. Serial No. 82,675. 4 Claims. (Cl. 82—25.)

1. In a lathe, a carriage, rear wings on said carriage, a cross feed screw on the latter, a front tool rest on said carriage for movement in either direction by the cross feed screw, an auxiliary feed screw having a right thread on one rear wing of the carriage, and an auxiliary feed screw having a left thread on the other wing of said carriage, a rear tool rest connected to each auxiliary feed screw for movement thereby along its rear carriage wing, and a power transmitting connection between the cross feed screw and the auxiliary feed screws to turn the

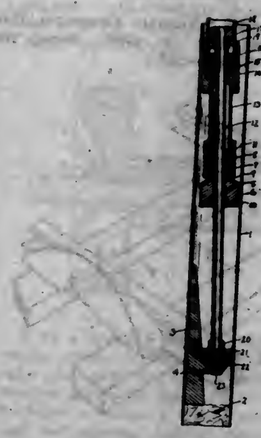


latter move the rear tool rests toward the work when the cross feed screw is turned to move the front tool rest toward said work.

1,636,029. ELECTRICAL HEATING DEVICE. EDWIN L. WIEGAND, Dormont Borough, Pa. Filed Feb. 1, 1923. Serial No. 616,445. 3 Claims. (Cl. 201—64.)

3. An electrical heating unit of the character set forth comprising a base having an annular peripheral flange enclosing a recess, a wall extending radially inwardly from said flange toward the center of the recess, a second annular flange spaced inwardly from the peripheral flange and substantially concentric therewith and dividing the recess into an annular outer portion and a circular inner portion, a third annular flange spaced inwardly from the second flange and concentric therewith, the third flange being interrupted in its circumference and having its ends spaced in opposite directions from said radial wall, ribs extending inwardly from the peripheral flange, ribs extending outwardly from the third flange, and ribs extending inwardly and outwardly from the second flange thereby to divide the annular and circular portions of the recess into a plurality of cells, a body of embedding material occupying each portion of the recess, a pair of terminals embedded within the material occupying the outer portion of the recess and situated one on each side of and adjacent to the radial wall, a resistor element of serpentine shape extending from one of the terminals in a tortuous course throughout the outer portion of the recess to the other terminal, a pair of terminals situated one on each side of the radial wall within the space enclosed by the third flange, and a resistor element extending from one of said terminals through the space between the second and third flanges to the other terminal.

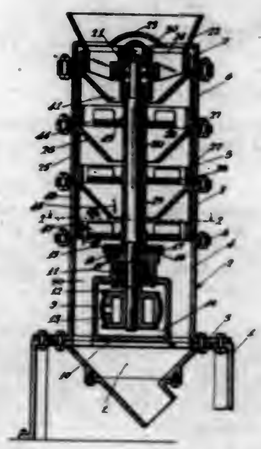
1,636,030. MANUFACTURE OF FURANE. WILLIAM COURTNEY WILSON, Chicago, Ill., assignor to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Nov. 28, 1924. Serial No. 752,530. 13 Claims. (Cl. 260—54.)



1. A process for the production of furane which comprises heating furoic acid at substantially atmospheric pressure.

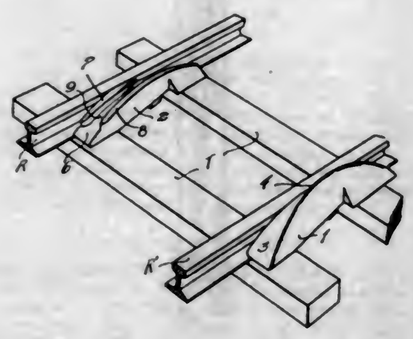
1,636,031. VOICE-OPERATED RELAY EQUIPMENT. SUMNER B. WRIGHT, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 6, 1925. Serial No. 67,400. 5 Claims. (Cl. 178—44.)

1. In a voice-operated relay circuit, a path over which voice currents and steady alternating currents may be transmitted, branches for said path, means in each branch for translating alternating voice currents into one-way pulsating currents, a relay having windings differentially associated with said translating means, and means to delay the transmission of currents to the translating means in one branch as compared with the other.



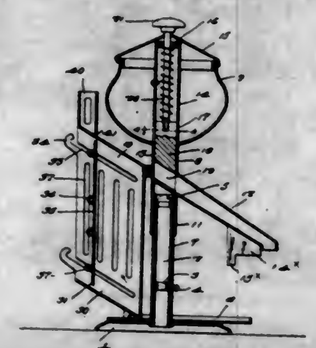
1,636,032. MILLING TOOL. EVERETT W. ABBOTT, Houston, Tex. Filed Feb. 28, 1927. Serial No. 171,592. 8 Claims. (Cl. 255—1.)

1. In a milling tool for use in well drilling, a milling cutter having a central longitudinal opening therein, a drill stem, a collar thereon having a bearing opening



therethrough, means connecting said collar with said milling cutter, a guide barrel extending longitudinally through said collar and said milling cutter and projecting forwardly beyond said milling cutter, and means on said guide barrel to anchor said barrel in an inclined position in a well for the purpose described.

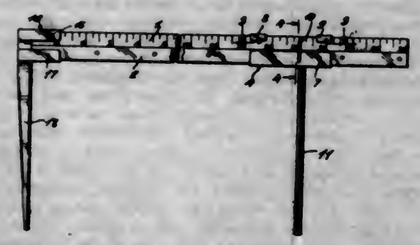
1,636,033. CENTRIFUGAL IMPACT PULVERIZER. FRANCIS E. AGNEW, Los Angeles, Calif., assignor to Minerva A. Brotherton, Santa Barbara, Calif. Filed Mar. 10, 1926. Serial No. 93,600. 2 Claims. (Cl. 83—11.)



1. In a centrifugal pulverizer, a stationary cylindrical breaker ring, a vertical shaft centrally positioned therein, a horizontal impeller disc mounted thereon, impeller blades attached to the upper surface of the impeller disc adjacent its periphery, said blades having vertical block supports with wearing blades surrounding said supports, wedges between the ends of the supports and the surrounding wearing blades, and screws extending through the impeller disc and engaging the wedges to adjust the position of the wedges and hence the wearing blades radially.

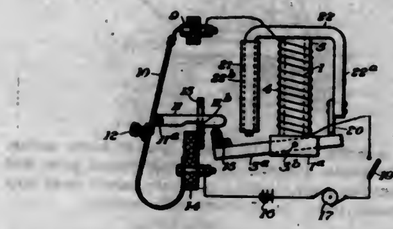
1,636,034. CAR REPLACER. VIRGILIO AMBROGINI, Harrington, Wash. Filed July 19, 1926. Serial No. 123,359. 1 Claim. (Cl. 104—265.)

A car replacer comprising a pair of transferable, outer and inner frog blocks having longitudinally extending flanges conforming to the track rails, and means for clamping said frog blocks at the sides of said rails comprising a draw bar having a socket, a detachable bearing block having a stud in the socket, and a bolt in said bearing block.



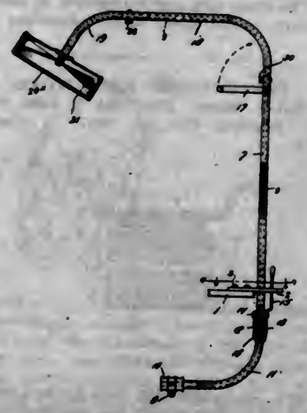
1,636,035. COMBINATION SERVICE STAND. LEONARD AGNES, Quincy, Mass. Filed Nov. 12, 1925. Serial No. 68,626. 2 Claims. (Cl. 221—104.)

1. The combination in a dispensing device, of a base having an upright stem, and means revoluble about said stem and including a vertical housing having a lateral discharge spout in communication with the housing, said housing also having an aperture in its side wall and an apertured closure adjacent its upper end, a container carried by and arranged about the housing and having a bottom disposed below the aperture in the side wall of the housing, a combined transferer and cut off means movable rectilinearly in the housing and held against turning about its axis, a stem connected to the combined transferer and cut off and extending upwardly through said apertured closure of the housing and having a finger piece at its upper end, a spring surrounding said stem and interposed between the combined transferer and cut off and said apertured closure, and a cover removably arranged on the container and having a central aperture loosely receiving the stem of the combined transferer and cut off.



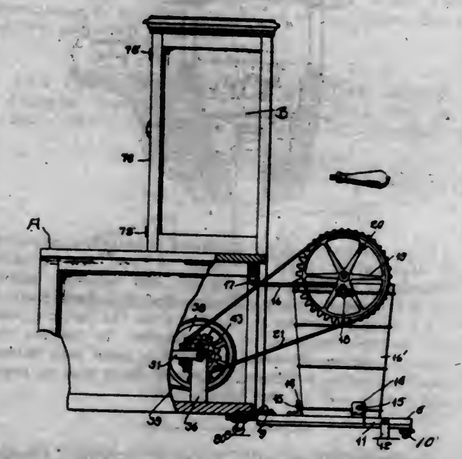
2. A dispensing device for sugar and analogous substance having an inclined discharge spout and also having on the spout and adjacent the lower end thereof a longitudinal vertical pendent fin, said fin having a reduced depending rear portion and being relatively arranged to prevent the immersion of the lower end of the spout in coffee in a cup.

1,636,036. MEASURING DEVICE. WILLIAM O. BARTLETT, Denver, Colo. Filed Aug. 20, 1926. Serial No. 130,465. 1 Claim. (Cl. 33—143.)



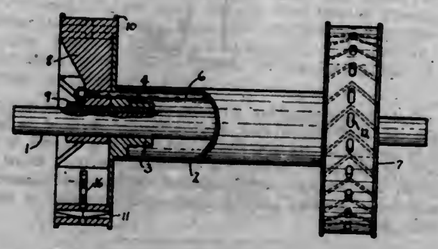
A measuring device comprising, in combination, a wooden bar of rectangular cross-section having a metal strip (3) secured to one side said strip being of the same width as the bar, a narrow metal strip (2) secured to the other side, a cap (12) removably secured to one end of the bar, a rod (18) secured to the cap and extending at right angles to the bar, a slide (4) secured to the bar and movable therealong, a pointer (10) secured to the slide, a rod (11) also secured to the slide and extending parallel with the rod (18) and a spring (10) secured to the slide and having one end in frictional engagement with the strip 2.

1,636,037. OVERLOAD CIRCUIT BREAKER. CHARLES R. BEALL, Swissvale, and ROBERT M. GILSON, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Nov. 12, 1919, Serial No. 337,449. Divided and this application filed Oct. 20, 1923. Serial No. 669,725. 1 Claim. (Cl. 175—336.)



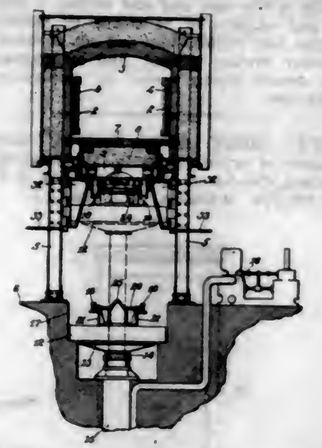
An electromagnetic structure comprising a magnetizable core provided with a sleeve of electro-conductive material and also with a winding, a U-shaped member of magnetisable material attached to one end of said core and having two legs parallel with said core and on opposite sides thereof, an armature pivotally mounted at the other end of said core and co-operating with both of said legs and biased to a position remote from the end of the first of said legs, the air gap between the armature and said first leg then being less than the air gap between the armature and the second leg so that a steady current above a given value in said winding will move the armature towards the first leg, and a sleeve of electro-conductive material around said first leg whereby the greater part of a surge of flux due to a surge of current above said given value will traverse the second leg and the armature and so will tend to hold the armature in its biased position.

1,636,038. FAN INSTALLATION. SAMUEL BOLOZKY, West New York, N. J., and SAMUEL PEARL, Brooklyn, N. Y. Filed Mar. 18, 1926. Serial No. 95,674. 3 Claims. (Cl. 64—30.)



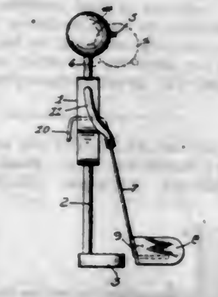
1. In combination, a rotary driving element, an appropriately supported swingable tube, a tube section having a bifurcated portion the arms of which are disposed at opposite sides of and are pivotally connected to the first-named tube, and also having one of said arms merged into a hand lever, said lever of flexible or resilient character, a flexible shaft extending through and rotatable in the tube and said section, a pulley on said shaft and adapted to be moved by movement of the swingable tube sections into and out of engagement with the rotary driving element, and an appropriately supported element having a rack for cooperation with said resilient lever.

1,636,039. CHURN. DELOSS BOSLAND, Charleston, Miss., assignor of seven-eighths to Abe Isenberg and Myer Isenberg, Charleston, Miss. Filed Sept. 5, 1924. Serial No. 736,120. 3 Claims. (Cl. 259—1.)



1. In a device of the class described, a cabinet, a platform door hinged at its bottom to the bottom of the cabinet, said door provided in its side edges with notches, legs pivotally mounted in said notches, means for supporting and holding an agitator device on the platform door, a shaft rotatably mounted on the cabinet, means in the cabinet for operating the shaft, and a chain operable by the shaft for operating the agitator device.

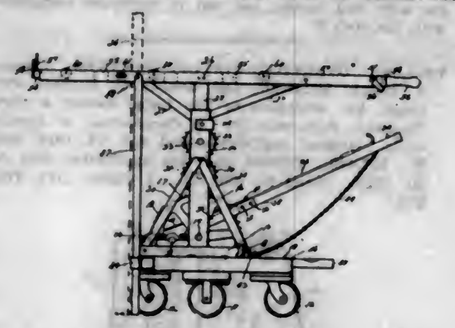
1,636,040. AIR-COOLED HOISTING REEL. BURWELL BOYKIN, Jr., Beaumont, Tex. Filed Mar. 19, 1927. Serial No. 176,674. 4 Claims. (Cl. 188—264.)



3. In a hoisting device, a frame, a reel mounted to rotate therein, a brake drum on said reel including an outer rim, said rim having lateral air openings therein directed forwardly from the center line thereof in the direction of rotation, there being outlet openings from said air openings leading outwardly, openings of comparatively larger diameter directed inwardly, and a brake band on said drum having openings therethrough to allow passage of air.

1,636,041. ELECTRIC FURNACE. HARRY O. BERGERE, Winthrop, Mass. Filed Feb. 9, 1923. Serial No. 618,149. 11 Claims. (Cl. 204—64.)

1. An apparatus of the character described, comprising, in combination, parts arranged to form an enclosure adapted to confine a body of gas, said enclosure including a furnace having walls supported in a fixed position and a bottom movable to open or close the furnace, electric resistors mounted in said furnace for heating the furnace, and an elevator arranged to raise said bottom into cooperative relationship to said walls and to lower said bottom out of such relationship.

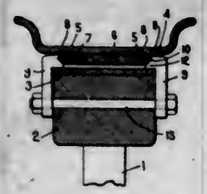


1,636,042. FIGURE TOY. FRANK E. BUCKBERG, Chicago, Ill. Filed June 21, 1926. Serial No. 117,521. 3 Claims. (Cl. 46—40.)

2. A toy, comprising a body portion, a head portion and leg portions, a golf stick pivotally secured to said body portion at its upper end and having a handle in the rear of the body portion for swinging the stick about its pivot, and flexible arms attached to said body portion and being secured to said stick and arranged to move with it.

1,636,043. HAND TRUCK. JOSEPH CHVOJKA, Philadelphia, Pa. Filed Oct. 5, 1925. Serial No. 60,471. 3 Claims. (Cl. 254—3.)

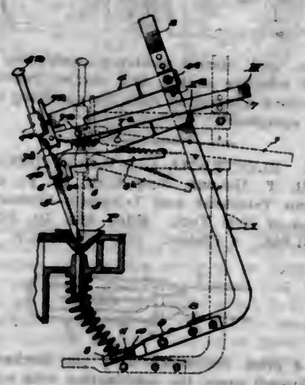
1. A hand truck including a wheel supported body, uprights on said body, a platform swingingly mounted between the uprights and a train of gears for transmitting motion to the platform, one of said gears including ratchet teeth sections, in combination with an operating lever pivotally mounted on the body and including a yoke, a spring actuated pawl for coaction with one of the ratchet teeth sections, means carried by the operating lever for moving the pawl against the action of the spring, another spring actuating pawl located between the



body for coaction with the other ratchet teeth section and flexible means attached to the last named pawl and to the operating lever whereby said last named pawl may be disengaged from its ratchet teeth section.

1,636,044. OUTSOLE FOR SHOES. EDWARD R. CONNELLY, Boston, Mass. Continuation of application filed Nov. 4, 1921, Serial No. 512,711. This application filed Oct. 2, 1925. Serial No. 60,100. 3 Claims. (Cl. 36—71.)

1. As an article of manufacture, an outsole for a shoe provided with a dome-like integral protuberance projecting upwardly from and above the upper surface thereof at the widest portion of the sole to furnish support for the anterior arch of the foot of the wearer and extending lengthwise of said outsole for a relatively short distance with its front and rear extremities in substantially close proximity to the center of said dome-like protuberance.

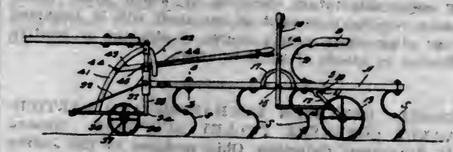


1,636,045. DEMOUNTABLE RIM. WALTER E. COPITHORN, Natick, Mass. Filed Oct. 2, 1920, Serial No. 414,308. Renewed Feb. 15, 1927. 1 Claim. (Cl. 301—20.)

In a wheel, the combination with a wheel body having a felly-band, of a demountable rim provided on its inner face adjacent each edge with a locking rib having a rounded side face, locking means on each side of the wheel body to co-operate with the corresponding rib,

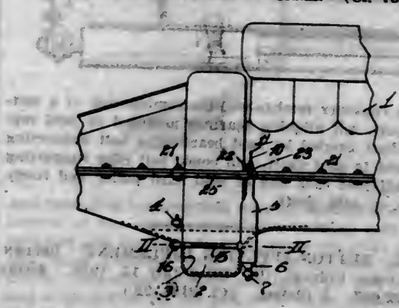
each locking means including a member having two jaws with inclined faces, the face of one jaw engaging its rib at a point outside the median line of the rib, the inclined face of the other jaw engaging the rib at another point inside its median line, said latter jaw of one member at least resting against the outer peripheral face of the felly-band, said member thereby having three points of engagement, two with the rib, and one with the felly-band.

1,636,046. VALVE-SPRING REMOVING AND REPLACING TOOL. CHARLES E. DANIELS, Atchison, Kans. Filed Oct. 15, 1925. Serial No. 62,601. 8 Claims. (Cl. 29—96.3.)



7. A valve-spring removing and replacing tool comprising in combination, a main frame, a bracket adjustable on the main frame, and a rack adjustable in the bracket, adapted to cooperate with a valve-seat protecting plug having a recess for receiving the end of the rack-bar thereby to assist in replacing the spring in position after the valve has been ground.

1,636,047. CALF WEANER. ELISHA R. DAVIS, Hazard, Nebr. Filed May 28, 1925. Serial No. 33,531. 7 Claims. (Cl. 119—132.)



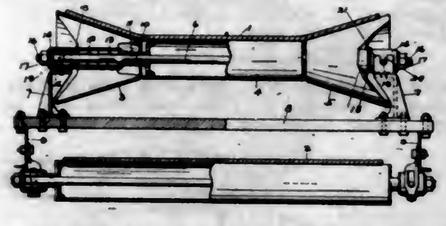
1. A device of the character described comprising side bars, a nose-engaging member connected to the inner ends of the side bars, the outer ends of the side bars being turned back upon themselves and directed inwardly terminating in nostril engaging knobs, a plate embracing the outer ends of the side bars and portions of the said turned back portions, wire rings secured to said plate, and waterproof mesh material suspended from the side bars, and from the rings of said plate and the connection between the side bars and nose-engaging member.

1,636,048. QUACK-GRASS DIGGER. WILLIAM DREFKE, Kensal, N. Dak. Filed Mar. 29, 1926. Serial No. 98,261. 1 Claim. (Cl. 55—36.)

A digging element of the class described including a shank having an ogee shaped body terminating at its upper end in a curved extension lying alongside of and concentric with the upper portion of the shank and terminating in an offset end slotted to receive the intermediate portion of the shank.

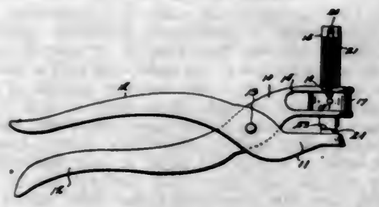
1,636,049. OIL INDICATOR FOR GAS MOTORS. CHARLES FORSBERG, St. Louis, Mo. Filed Mar. 24, 1921. Serial No. 455,064. 1 Claim. (Cl. 73—32.)

In an internal combustion motor the combination of a crank case having a horizontally extending apertured flange formed integral therewith, a cylinder arranged vertically and provided at its upper end with a bushing smaller in diameter than the adjacent portion of said end and extending through the aperture in said flange, securing means mounted on the upper end of said bushing for securing said cylinder to said flange, a float mounted in said cylinder, a gage rod borne by said float and extending through and above said bushing, and a tube extending from said crank case to the lower end of said cylinder.



1,636,050. DEVICE FOR DAMPING THE OSCILLATIONS OF MULTIPLE CRANK SHAFTS. HERMANN FÖTTINGER, Zoppot, near Danzig, Free City of Danzig. Filed June 24, 1920, Serial No. 391,518, and in Germany Feb. 8, 1915. 2 Claims. (Cl. 60—54.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

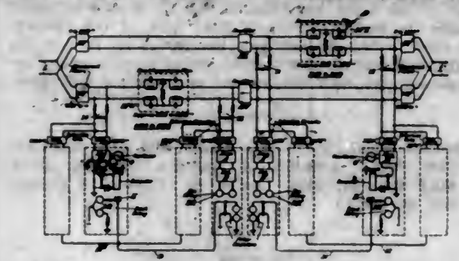
1. A device for damping the oscillations of crankshafts, comprising in combination with a plurality of engines operated at relatively different speeds, a coupling interconnected between opposing ends of aligned shafts of engines adjacently arranged, said coupling comprising a rotary element having enlarged radially disposed blades secured on the end of one engine shaft and a cooperable rotary element providing an enclosing casing for said first rotary element having radially disposed ribs or blades conforming to or complementary overextending the



blades of the first rotary element and secured on the opposing end of an adjacent engine shaft, together with means for admitting a fluid into the casing formed by said cooperable rotary elements, by which power under greater velocity movement of one shaft will be imparted to the other shaft with a degree of slippage or relative difference in speeds of shaft rotation.

1,636,051. CONVEYER MECHANISM AND PARTICULARLY CONVEYER PULLEY SUPPORTS. GEORGE D. FRANCISCO, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 26, 1922. Serial No. 597,189. 2 Claims. (Cl. 198—192.)

1. In a conveyer mechanism, the combination of a suitable support, self aligning bearings mounted on said support, a shaft carried by said bearings, a belt supporting pulley fixed to said shaft, and coned belt edge supporting pulleys adjacent each end of said fixed pulley and freely rotatable on said shaft.

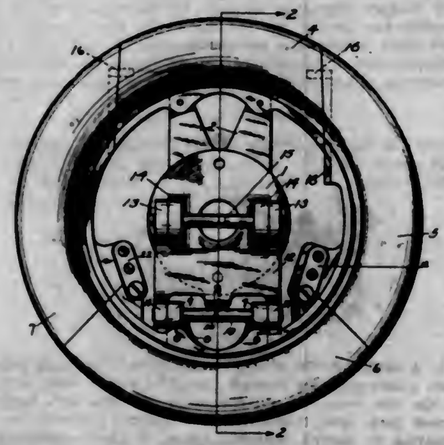


1,636,052. BUTTON-APPLYING IMPLEMENT. BELDEN D. GILLIAM, Chicago, Ill. Filed July 15, 1926. Serial No. 122,667. 3 Claims. (Cl. 218—22.)

1. A button applying implement of the character described comprising opposed jaws having crossed, pivoted handles, one of said jaws being formed with an anvil and the opposite jaw being bifurcated at right angles to the plane of movement of the jaw, a collar disposed in said bifurcation, a plunger slindingly mounted in the collar, the plunger having a longitudinally extending slot, a pin passing through the collar and through said slot, and coiled contractile springs operatively engaged with the collar and with the outer end of the plunger and urging the plunger inward to the extent permitted by said slot, the inner end of the plunger being so formed as to support the button to be applied.

1,636,053. CARRIER-TELEGRAPH REPEATER CIRCUITS. BAXTER P. HAMILTON, River Edge, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 24, 1925. Serial No. 64,685. 10 Claims. (Cl. 178—51.)

1. In a signaling system, a pair of transmission lines interconnected through a common amplifier, so that a plurality of carrier frequencies transmitted from one line to the other in the same direction are amplified by said common amplifier, means for obtaining an intermediate subscriber's drop at the repeater station comprising a bridged circuit associated with the amplifier path, a selective device connected with said circuit for selecting from said amplifier path a carrier frequency incoming from one of said lines without interfering with the transmission of other carrier frequencies over the amplifier path to the

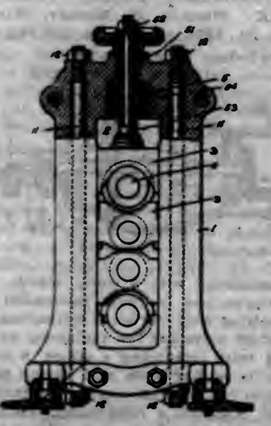


other line, and carrier receiving equipment associated with said selective device, said carrier receiving equipment including a receiving relay for operating local Morse receiving equipment.

1,636,054. ELECTRICAL DISCHARGE DEVICE. WILLIAM H. T. HOLDEN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 10, 1922. Serial No. 551,343. 4 Claims. (Cl. 176—122.)

1. In a lamp characterized by the discharge of electricity through gases, the combination with a transparent gas-tight envelope filled with inert gas and having an active gas also present, of a plurality of normally cold electrodes, and means affixed to one of the said electrodes and activated by the discharge between the said electrodes to change the said active gas to inactive chemical combinations, one of the said electrodes substantially surrounding the other electrode to substantially prevent discoloration of the transparent envelope by the said chemical combinations.

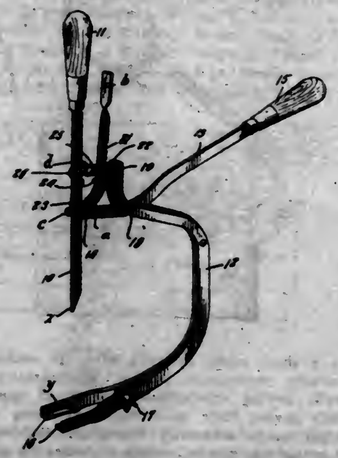
1,636,055. COLLAPSIBLE TIRE-BUILDING FORM. FRANK L. JOHNSON, Akron, Ohio. Filed Aug. 15, 1924. Serial No. 732,285. 19 Claims. (Cl. 154—9.)



1. A collapsible form for use in building pneumatic tires, comprising a key section held at a fixed distance from the axis of the core and a plurality of hinged sections, the hinged sections being bodily movable as a group to remove the tire from the key section.

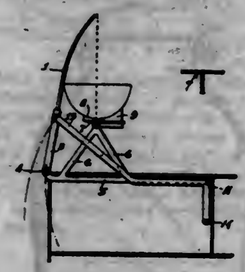
1,636,056. COLLAPSIBLE TIRE-BUILDING FORM. FRANK L. JOHNSON, Akron, Ohio. Filed Mar. 30, 1927. Serial No. 179,516. 6 Claims. (Cl. 154—9.)

1. A collapsible tire building form, comprising a plurality of sections, one of said sections being stationary, a carrier, means to hold the carrier in its outermost position and permit its movement toward and from the core axis, a guide for the carrier in which it is movable, movable sections supported by the carrier, and connections to the movable sections adapted to move them inwardly upon movement of the carrier toward the axis of the form.



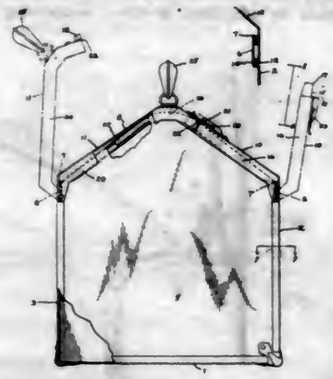
1,636,057. ROLLING MILL. LLOYD JONES, Freeport, N. Y. Filed Apr. 21, 1926. Serial No. 103,526. 3 Claims. (Cl. 80—55.)

1. In a rolling mill a housing provided with an eye, the housing being integral throughout the extent of such eye, and a pair of rolls journalled each at one of its ends within such eye, the housing being reenforced with a pair of tension bolts shrunk to place and extending one on each side of such eye.



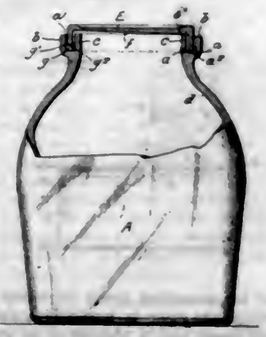
1,636,058. VALVE LIFTER. HUGH I. JORDAN, Staunton, Va. Filed Sept. 19, 1925. Serial No. 57,320. 2 Claims. (Cl. 29—56.8.)

1. In a valve lifter, a support member adapted to engage the head of a valve, in the form of a bar, a spring compressing member in the form of a curved bar, a lever pivotally connected with both of said members having an upward extension from the pivotal connection of the spring compressing member therewith, a link between such extension and said support member forming a pivotal connection between them, and a latch device for maintaining the valve-engaging and the spring-compressing member in adjusting position, comprising a lever



arm extending between said support member and said extension of the spring-compressing member, and crossing said link and having a free end above the link, said lever arm being provided with teeth on its side nearer the pivotal connection between the link and said extension, and a projection on the link with which said teeth may engage.

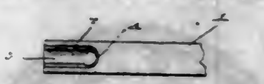
1,636,059. DEVICE FOR LAUNCHING BOATS ON BOARD OF VESSELS. NICOLAAS VAN WIJCK JURRIAANSE, Baarn, Netherlands. Filed Sept. 23, 1924. Serial No. 739,406, and in the Netherlands July 30, 1924. 11 Claims. (Cl. 9—22.)



1. A device for launching boats on board a vessel of the type wherein the boat is normally arranged within the side of the vessel and is adapted to be swung beyond the side of the vessel, including a supporting structure positioned longitudinally of the vessel and adapted for vertical swinging movement, davit sockets pivotally mounted on the outer ends of the supporting structure, davit arms rotatable in said sockets and between which the boat is suspended, and movable connecting means between a stationary part of the vessel and the supporting structure for permitting the supporting structure when released to swing downwardly thereby causing the davit sockets to move and the davit arms to rotate outwardly under the influence of the weight of the boat.

1,636,060. TRAVELING BAG. HOWARD L. KENNEDY, Van Wert, Ohio, assignor to Kennedy Manufacturing Company, Van Wert, Ohio, a Corporation of Indiana. Filed Mar. 11, 1926. Serial No. 93,898. 6 Claims. (Cl. 190—41.)

1. In a sheet metal carrying case, in combination, a substantially rectangular bottom, substantially vertical side walls having substantially horizontal upper edges, end walls having their upper edges extending above the side walls in substantially triangular fashion, and a pair of covers adapted to provide a closure for said carrying case, one of said covers being connected in hinged relation to one of said side walls and extending when in closed position toward the tops of said end walls, said cover having an inwardly offset portion extending throughout its length adjacent to its upper meeting edge, the second cover being connected in hinged relation to the opposed side wall and extending when in closed position over the tops of said end walls and over the inwardly offset portion of the first cover, whereby the meeting edges of the two covers are in substantially flush relation when said covers are in closed position.

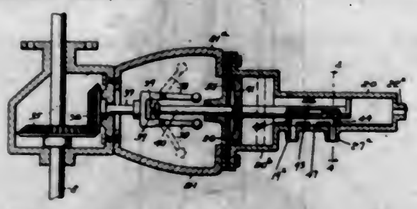


1,636,061. PRESERVING APPARATUS. CARL CHRISTOPH EMIL KERSTEN, Columbus, Ga. Filed July 12, 1924. Serial No. 725,630. 15 Claims. (Cl. 215—56.)

1. A receptacle cover provided with a depending flange, said flange being provided with a substantially triangular notch, the apex of said notch being upwardly and outwardly inclined.

1,636,062. SCALPEL. ALBERT MACLURE, Woonsocket, R. I. Filed Dec. 14, 1926. Serial No. 154,781. 1 Claim. (Cl. 30—9.)

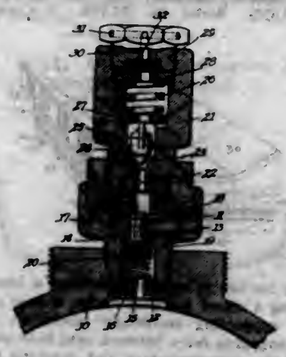
A scalpel for surgical use comprising a handle having a main groove and countergroove formed at one end and in one side, a cutting blade having a cutting edge, a small point, a reduced centralized shank having a rounded head, said shank being fitted into said countergroove and said countergroove being shaped to conform



to said shank and head, the opposite longitudinal edges of said main groove being undercut, and a retaining plate fitted slidably into said main groove and having beveled edges cooperating with the undercut portions of the groove.

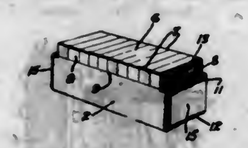
1,636,063. DISPENSING RECEPTACLE. ALBERT MOSHEIM, East Orange, N. J. Filed July 11, 1925. Serial No. 42,976. 2 Claims. (Cl. 132—83.)

1. A dispensing receptacle of the character described comprising a body having a cover pivotally connected thereto, said body having a contracted upper edge, a chamber arranged within said body having an inverted U-shaped marginal flanged upper edge engaging the contracted upper edge of said body, a head having an upstanding marginal flange frictionally engaging the inverted U-shaped flange of said chamber and inner wall of said contracted portion of said body, said head being provided with a central depression, the vertical walls of said depressions being provided with openings.



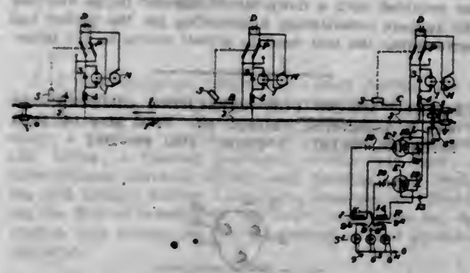
1,636,064. AUTOMATIC CONTROLLING MECHANISM FOR AUTOMOBILES, TRUCKS, TRAILERS, AND THE LIKE. WILLIAM M. MOXLEY, Marceline, Mo. Filed July 30, 1926. Serial No. 125,982. 3 Claims. (Cl. 188—181.)

1. The combination with a motor vehicle, its internal combustion engine and its brake mechanism of a brake cylinder associated with the brake mechanism, a pressure operated shut-off valve for the carburetor of the engine, a controlling valve comprising a casing, a valve in said casing, conduits leading from said casing to the brake cylinder and to the pressure operated carburetor shut-off valve, a fluid reservoir, a compressing means driven by the motor, connected with the reservoir, a conduit leading from the reservoir to the valve casing, a governor, means for driving said governor from the mechanism of the motor vehicle and a connection between the governor and valve whereby the valve moves under the influence of the governor.



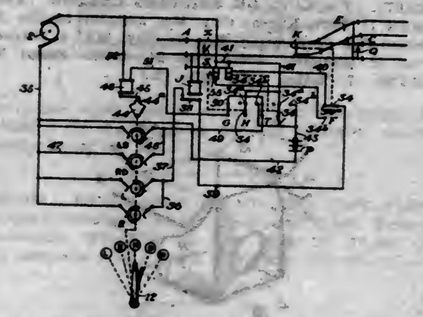
1,636,065. HIGH-PRESSURE GAS VALVE AND SHIPPING PLUG. PHILIP MUELLER, Decatur, Ill., and CHARLES A. HILL, Port Huron, Mich., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Jan. 16, 1922. Serial No. 529,798. 9 Claims. (Cl. 137—53.)

3. In a device of the class described, a part having a passage therethrough, a pressure seated valve in said passage, destructible means normally preventing flow past said valve, a second valve controlling the flow past said



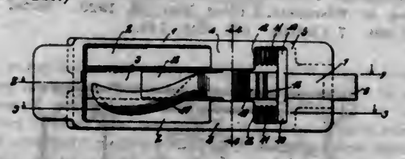
first named valve, means normally closing said second valve, and means destructible under emergency conditions normally preventing flow past said second valve.

1,636,066. ADVERTISING AND DISPLAY CARTON. ARCHIBALD S. NAPIER, St. Paul, Minn., assignor to J. N. Collins Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 12, 1925. Serial No. 36,624. 5 Claims. (Cl. 40—126.)



3. A display carton comprising a bottom and side panels, a top panel fashioned to represent a row of articles to be displayed and projecting above said side panels, and end panels on a level substantially with said side panels and having gaps formed between them and the ends of the top panel for the purpose specified.

1,636,067. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LEWIS L. NETTLETON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1926. Serial No. 143,378. 15 Claims. (Cl. 246—63.)



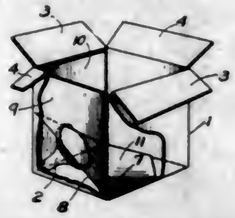
1. In combination, a section of railway track, a source of direct current reversibly connected with the rails of said section, means for periodically interrupting the supply of current from said source to the track rails, a train carried circuit receiving energy inductively from the track rails, two electron tubes having their grid circuits reversely connected with said receiving circuit, two coils supplied with energy by the plate circuits of said two tubes respectively, and governing mechanism on the train controlled by said two coils.

1,636,068. RAILWAY POINT, SIGNAL, AND THE LIKE. JOHN HEDLEY NICHOLSON, Dublin, Ireland, and WALTER SYDNEY-ROBERTS, Ormskirk, England, assignors of one-third to The Railway Signal Company Limited, London, England, a British Company. Filed July 21, 1924, Serial No. 727,245, and in Great Britain July 23, 1923. 10 Claims. (Cl. 246—135.)

1. In combination, a railway traffic controlling device, a manually operable generator, contact mechanism for at times connecting said generator with said device, and means in circuit with the device and controlled in accordance with the speed of the generator for maintaining substantially constant the current supplied to said device.

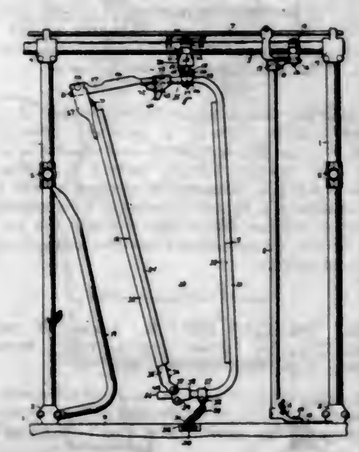
1,636,069. LATCH. EMANUEL J. PERRY, New Bedford, Mass., assignor to Perry Laundry Machinery Company, Fairhaven, Mass., a Corporation of Massachusetts. Filed Sept. 5, 1925. Serial No. 54,706. 3 Claims. (Cl. 292—140.)

1. A latching device comprising a housing, a pair of separated chamber therein, a guideway between said chambers, springs disposed within said chambers, a reciprocating bolt in said housing having a locking head normally urged into an operative position by the springs in said chambers, a handle disposed in said housing, and a connection between said handle and said bolt for drawing the bolt to an inoperative position against the tension of said springs.



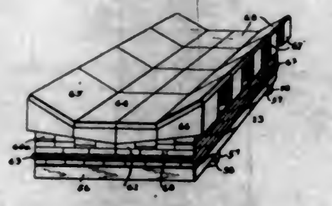
1,636,070. SPRAYING DEVICE. ARCHIE B. PICKELL, Kansas City, Mo. Filed Aug. 9, 1926. Serial No. 128,030. 3 Claims. (Cl. 299—96.)

1. In a spraying device of the kind described, the combination with a container adapted to hold liquid and adapted to hold air under pressure above the liquid and



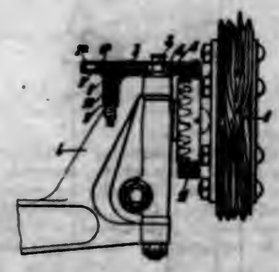
having an air inlet, and a discharge pipe extending into the container and adapted to have its inlet end below the level of said liquid, of an air compressing cylinder having an outlet and provided with a by-pass, a tube communicating with said air inlet and said air outlet, and a piston having a piston head reciprocative in said cylinder and adapted to compress air in said cylinder and to force the compressed air through said air outlet, the ends of said by-pass being disposed in the cylinder at opposite ends respectively of said piston head when the latter is at the limit of its compression stroke.

1,636,071. PACKING OR SHIPPING CARTON. FREDERICK D. PITT, Kansas City, Mo., assignor to The Anderson-Pitt Corporation, Kansas City, Mo., a Corporation of Missouri. Filed Jan. 21, 1926. Serial No. 82,729. 7 Claims. (Cl. 229—15.)



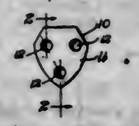
1. In a carton, a partition comprising a triangular wall member arranged at an incline in one corner of the carton, with its side edges in contact with two adjacent side walls of the carton and its base edge extended diagonally between other corners of the carton, said base edge having a part for extension toward the other corner of said carton.

1,636,072. STANCHION. ALFRED QUADE and ARTHUR H. KLUMB, West Bend, Wis., assignors to West Bend Equipment Corporation, West Bend, Wis., a Corporation of Wisconsin. Filed May 28, 1925. Serial No. 33,360. 7 Claims. (Cl. 119—149.)



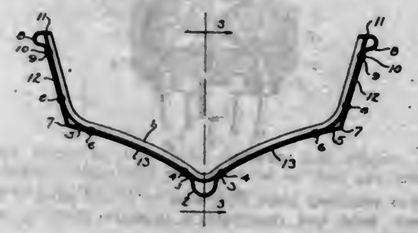
1. The combination with a stanchion, of a plurality of coacting members for suspending the stanchion and permitting rotational movements thereof, and a vertically movable, non-rotatable member, independent of the stanchion but adapted to coact therewith to prevent rotational movement of the stanchion.

1,636,073. KILN TRUCK. HARRY M. ROBERTSON, Lakewood, Ohio. Original application filed June 20, 1925, Serial No. 38,589. Divided and this application filed Sept. 21, 1925. Serial No. 57,758. 5 Claims. (Cl. 25—142.)



1. A truck for use in apparatus having a heated chamber comprising a wheel mounted frame, a base portion on said frame, supporting refractory blocks on said base portion, the engaging faces between said base portion and said blocks being complementary and co-acting to prevent outward movement of said blocks, and refractory walls resting on said blocks and arranged to form a holder for material.

1,636,074. MECHANISM FOR CONTROLLING SPEED INDICATORS OR THE LIKE. CHARLES HILAIRE HENRI RODANET, Levallois-Perret, France, assignor to Société Anonyme des Etablissements Ed. Jaeger, Paris, France. Filed Oct. 7, 1924, Serial No. 742,264, and in France July 19, 1924. 5 Claims. (Cl. 74—7.)



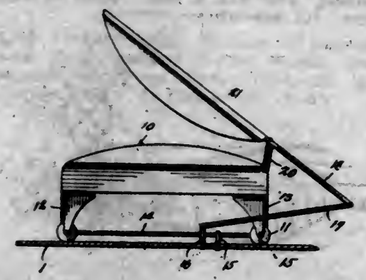
1. In combination, a road wheel, a steering knuckle including a heavy bolt, a gear coaxially positioned on the road wheel, a support secured under the head of said bolt, a pinion meshing with the gear, and means coacting with the support to rotatably mount the pinion in the plane of the bolt head, said mounting means including a member provided with a down-turned annular flange abutting the support constituting a mounting for the pinion and surrounding the bolt head to permit access to the latter.

1,636,075. MEANS FOR ATTACHING OBJECTS. IRWIN L. ROSENBERG, Chicago, Ill. Filed May 14, 1925. Serial No. 30,167. 1 Claim. (Cl. 40—20.)

The combination with a flat surface, of a monogram having the back thereof disposed adjacent said surface in contacting relation therewith, there being indentures in said back, and an adhesive film on the monogram back filling said indentures to securely retain said monogram on said flat surface, said indentures comprising spaced spheroidal pockets.

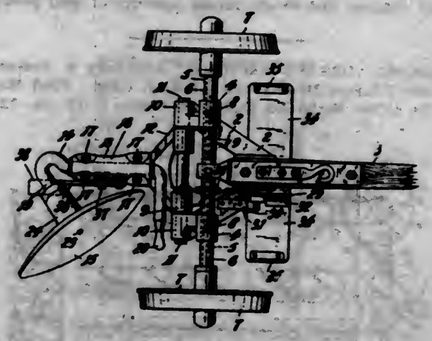
1,636,076. BOAT. LOUIS R. RUTHENBURG, East Moline, Ill. Filed July 22, 1926. Serial No. 124,209. 5 Claims. (Cl. 9—6.)

1. In a boat body, the combination of a plurality of angular ribs, a continuous keel member attached thereto, continuous chine members attached thereto, and continuous longitudinally extending body plate members located therebetween and on the sides thereof.



1,636,077. PRESSURE GAUGE. ALVA L. RYAN, Pittsburgh, Pa., assignor of one-half to William J. Artz, Pittsburgh, Pa. Filed May 25, 1926. Serial No. 111,511. 7 Claims. (Cl. 50—8.)

1. A pressure gauge comprising a body portion and a base therefor; inlet and outlet connections; an adjustable sleeve longitudinally movable within said gauge-body; a pressure indicator movable within said adjustable sleeve; a bushing positioned within said base; a valve-plunger movable within said bushing, said bushing and plunger having cooperating passages for directing the flow of pressure to the outlet, and means for operating said plunger by the movements of said pressure indicator.

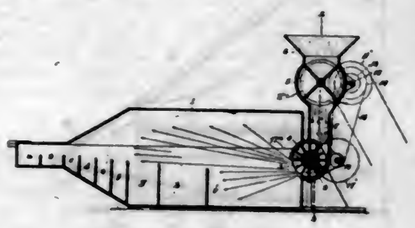


1,636,078. MOVABLE SEAT. FREDERICK T. SCHREINER, Ocala, Fla. Filed Aug. 18, 1925. Serial No. 50,994. 1 Claim. (Cl. 155—14.)

In a device of the class described, a seat, means for holding the seat positively for right-line backward and forward sliding movement, a lever, means for fulcruming the lever intermediate its ends on the seat, to define upper and lower portions in the lever, a back rest carried by the upper portion of the lever, a link pivoted at one

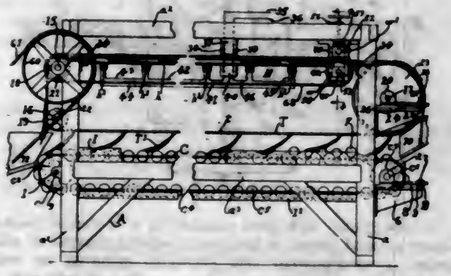
end to the lower portion of the lever, and means for anchoring the other end of the link pivotally, and independently of the seat.

1,636,079. REVERSIBLE STUMP-JUMP DISK PLOW. GEORGE FREDERICK SHAVE, Lyndhurst South, Victoria, Australia. Filed Feb. 25, 1925, Serial No. 11,544, and in Australia May 8, 1924. 1 Claim. (Cl. 97—31.)



A stump-jump disk plow comprising a V-shaped frame, bosses on said frame, a horizontal spindle carried in said bosses, a stump-pump arm pivotally mounted on said spindle between said bosses, a long bearing on said arm, a stem rotatably mounted in said bearing, an axle member at one end of said stem, a cutting disk on said axle member, a handle at the other end of said stem for reversing said disk, an adjustable skid carried by the rear end of the stump-jump arm, a hand lever on the frame, an extension on the stump-jump arm and a connection between said extension and said hand lever for raising and lowering the cutting disk.

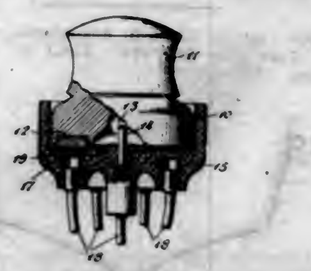
1,636,080. TOY BUILDING BLOCK. FRED W. SHAW, Cumberland Center, Me. Filed May 8, 1925. Serial No. 28,948. 2 Claims. (Cl. 46—35.)



1. A toy building block having a mortar-representing border along two contiguous edges of one side face and extended along the contiguous edge of one end face, and a similar border along two contiguous edges of the second end face and extended along the contiguous edge of the remaining side face.

1,636,081. METHOD AND APPARATUS FOR MIXING, GRADING, AND SORTING GRANULAR AND PULVERULENT MATERIAL. EMILE SPRENGER, Goldach, Switzerland. Filed Dec. 8, 1921. Serial No. 520,820. 2 Claims. (Cl. 209—120.)

1. Apparatus for mixing and grading granular materials, comprising in combination a horizontal grading chamber having an outlet aperture at one end thereof, a centrifugal distributor, a casing for said distributor having a delivery aperture facing a portion of the distributor circumference and opening into said chamber, a feed aperture facing another portion of the distributor circumference, and an intake aperture facing one side of the distributor, and a box open to the outlet aperture of said chamber and to the intake aperture of said casing.



1,636,082. DRYING MACHINE. AUGUSTUS R. STEVENS and FRANCIS M. STEVENS, Lindsay, Calif. Filed Mar. 10, 1926. Serial No. 93,642. 9 Claims. (Cl. 34—12.)

1. In a drying machine, a conveyor on which the articles to be dried are placed, and towel means for wiping the articles as they are conveyed through the machine; there being means for heating said towel means before wiping the articles.

1,636,083. CLEANING DEVICE FOR DISTRIBUTOR HEADS. JOHN STEWART, New York, N. Y. Filed Apr. 6, 1926. Serial No. 100,123. 1 Claim. (Cl. 51—205.)

A cleaning and smooth device for distributors of the type having fixed contact points arranged on the bottom of a recessed body and having a movable contact point projecting above the bottom of the recess and the fixed contact points at the central point thereof, comprising a cylindrical rigid body dimensioned to snugly and rotatably fit within the recess of the distributor so as to be guided in its rotary movement by the side walls of the recess of said body and having a free end face, a cleaning element formed of abrasive material mounted on said body and projecting axially beyond said face for rubbing engagement with said fixed contact points, an upstanding flange on the free face of the body for positioning the cleaning element on said face, the central part of said body being recessed for receiving the movable contact point of the distributor when the cleaning element is in engagement with the contact points, and a handle for manipulating said device, said handle being of relatively large proportions to facilitate manual rotation of said body and said cleaning element and having an end

face of relatively large dimension to fit the palm of the human hand and constitute a pressure receiving rest therefor.

1,636,084. CORE BARREL. WALTER N. THOMPSON, Taft, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed July 28, 1925. Serial No. 46,631. 5 Claims. (Cl. 255—72.)

1. A core drill adapted to be secured to a section of rotary drill pipe, said core barrel comprising an outer tubular member having a key extending into the inner bore thereof, an inner tubular member situated concentrically within the bore of said outer member and having a longitudinal keyway in the outer surface thereof adapted to receive the key attached to said outer member, means to prevent said outer barrel becoming detached from said inner barrel, a core cutting bit comprising a tube having one end chamfered to a cutting edge and the other end provided with a passageway adapted to provide an exit from the interior of said punch member, and means to rigidly connect said inner member with said punch member.

1,636,085. COMBINATION SCAFFOLD AND STEP-LADDER. HERMANN WITTEK, Itzehoe-Sude, Holstein, Germany, assignor to Pauline Stock, Elkhart, Ind. Filed July 15, 1926, Serial No. 122,579, and in Germany July 22, 1925. 5 Claims. (Cl. 304—8.)

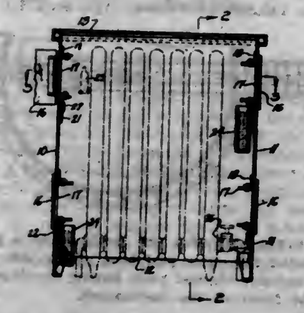
1. In a device of the character described the combination of two ladder elements, a platform comprising two sections pivotally secured together and pivotally secured with respective ladder elements at upwardly disposed

points on the ladder elements and adapted to fold downwardly therefrom, and folding bracing means pivotally secured with said ladder elements at downwardly disposed points on the ladder elements and adapted for releasably maintaining said platform sections and ladder elements in the form of a scaffold.

1,636,086. GOLF STANCE-STEADYING DEVICE. RICHARD WOLFE, Kenilworth, Ill. Filed May 25, 1927. Serial No. 193,957. 10 Claims. (Cl. 273—35.)

1. A golf stance steadying device comprising a body adapted to be held in frictional contact with the neck of a player whereby the player is made conscious of a movement of the head relative to the shoulders.

1,636,087. POWER TAKE-OFF FOR AUTOMOBILES. WILLIAM E. WUELKER, Los Angeles, Calif. Filed Mar. 7, 1923. Serial No. 623,449. 1 Claim. (Cl. 180—53.)

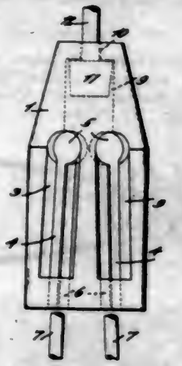


In a cleaning and polishing apparatus, the combination of a bearing, a rigid shaft journaled in the bearing, an L shaped arm integral with the bearing, a thumb screw threaded into said arm and adapted to be tightened against a thimble into which the bearing projects when associated with an automobile provided with said thimble, means for connecting said rigid shaft to the motor shaft, a flexible shaft connected with the rigid shaft, a bushing to journal the flexible shaft, means detachably connecting the bushing to the supporting means, and a flexible sheath for the flexible shaft connected with the bushing.

1,636,088. HAND TOOL. WILLIAM A. BERNARD, New Haven, Conn., assignor to The William Schollhorn Company, New Haven, Conn. Filed July 29, 1925. Serial No. 46,911. 15 Claims. (Cl. 7—8.)

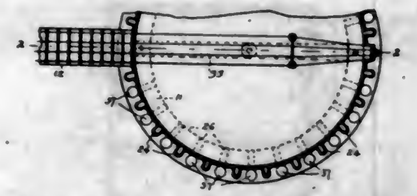
1. In a hand tool a pair of members, each being formed from a strip of sheet-metal and each comprising a handle portion U-shaped in cross-section at one end thereof, a bifurcated joint portion intermediate the ends thereof, and a laminated jaw portion at the other end thereof.

1,636,089. RADIATOR COVER. ALBERT EDGAR BLACKMAN, Mount Vernon, N. Y. Filed Dec. 10, 1925. Serial No. 74,564. 4 Claims. (Cl. 257—138.)



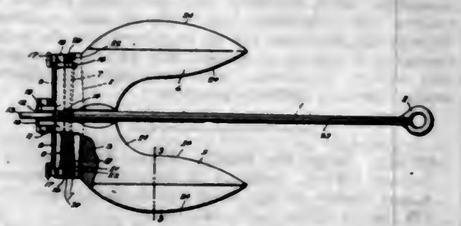
3. A radiator cover having a plurality of openings, a humidifier for moistening the heated air arising from said radiator, said openings being provided for obtaining access to the radiator valves and for the introduction of the humidifier within the cover, said cover being adapted to support the humidifier near each of said openings, whereby the humidifier can be introduced into the cover through one opening or another into its supported position without interference with the valves of radiators having valves in different positions.

1,636,090. LOGGING HOOK. ERICK ERICKSON, Port Orchard, Wash., assignor to George F. Niegemann, Kitsap County, Wash. Filed Jan. 3, 1927. Serial No. 158,754. 1 Claim. (Cl. 24—128.)



A bull hook comprising a body portion formed with a vertical slot which extends transversely through said body portion and opens at the bottom thereof, a foot at the bottom of the body portion, said foot closing said vertical slot on one side of the bottom thereof, opposite vertical flanges formed in the vertical slot to form an enlarged vertical guideway and a restricted vertical guideway, said flanges extending from the horizontal plane of the top of the foot to a point sufficient distance from the upper wall of the vertical slot to form a top horizontal bore equal in diameter to the width of the enlarged vertical guideway, said vertical slot being restricted at the bottom of the body portion by opposite flanges extending from the vertical flanges to the foot, whereby the head on the end of the cable can be inserted

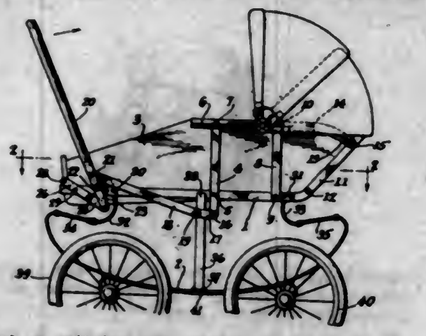
through the horizontal bore in registry with the vertical enlarged guideway and the cable moved down and turned



in alignment with the body portion and the head supported on the foot and the upper edges of the walls forming the restricted lower portion of the vertical slot.

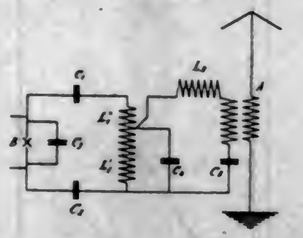
1,636,091. BANJO CONSTRUCTION. ALBERT D. GROVER, Long Island City, N. Y. Filed Oct. 25, 1924. Serial No. 745,855. 5 Claims. (Cl. 8—271.)

1. In a banjo, a wooden rim section, and a protecting ring embracing the outer periphery of the rim and comprising an annular channel piece having openings directed towards the front of the instrument.



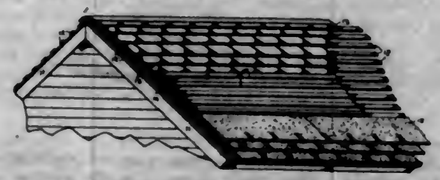
1,636,092. ANCHOR. MILAN W. HALL, New Rochelle, N. Y. Filed Feb. 2, 1924. Serial No. 690,111. 2 Claims. (Cl. 114—208.)

1. The combination, in an anchor, of a shank that is relatively broad in height and narrow in width throughout its length, said shank being tapered to cutting edges at both sides of its height, and flukes pivoted to said shank at opposite sides thereof.



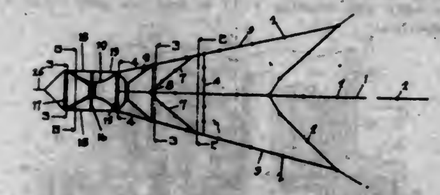
1,636,093. COLLAPSIBLE BABY CARRIAGE. MAX HARTENSTEIN, New York, N. Y. Filed Mar. 12, 1925. Serial No. 15,062. 2 Claims. (Cl. 280—47.)

1. In a collapsible baby carriage, a main frame having a projection at one end thereof, a pivot on the main frame, a handle mounted on said pivot, a link pivotally attached to the handle and above the first mentioned pivot and operatively connected to a collapsible body, an apertured bar pivotally attached to the handle below the first mentioned pivot, a notched plate pivotally



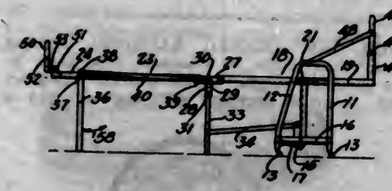
mounted on said bar and adapted to engage the projection on the frame after it has been passed through the aperture in the bar.

1,636,094. ARC GENERATOR. ROBERT HERSOG, Berlin, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Dec. 28, 1925, Serial No. 77,985, and in Germany Feb. 13, 1925. 6 Claims. (Cl. 250—36.)



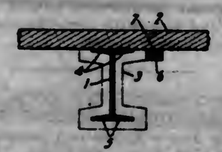
1. In an arc generator, an oscillatory circuit tuned to the frequency of the oscillations to be produced and with the arc, a shunt circuit which does not oscillate independently of the oscillatory circuit, said shunt circuit being situated on the high-frequency side of said arc between the arc and said oscillatory circuit, a self-inductance included in said shunt circuit, a second self-inductance coupled with said first self-inductance in such a manner that the effect of said first self-inductance upon the oscillatory circuit is entirely or substantially neutralized, and a capacity connected across said first self-inductance.

1,636,095. ROOFING-SUPPORTING STRIP. HENRY GOWER HOSE, Brooklyn, N. Y., and WILLIAM E. RAMSDELL, Bridgeton, N. J. Filed Oct. 19, 1925. Serial No. 63,329. 4 Claims. (Cl. 108—9.)



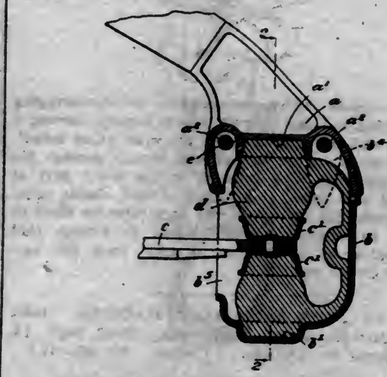
1. A roof structure for buildings adapted to lie over a pre-existing roof, comprising in combination the following elements and parts; a pre-formed filling-in member composed of moldable material and adapted to create a plane surface by filling in irregularities in said pre-existing roof, and a roofing laid over said plane surface.

1,636,096. FISH NET. STEPHEN HOSKO, Bono, Ohio. Filed Feb. 8, 1926. Serial No. 86,758. 1 Claim. (Cl. 43—100.)



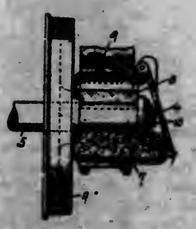
In a fish net, a lead net, a crib, a pair of converging side nets located on opposite sides of the end of the lead net and terminating at the crib, roof and floor nets extending between the end portions of the upper and lower edges of the side nets and extending from the end of the lead net and terminating with the side nets at the crib, the portion of the lead net located between the side nets being equal to substantially one half of the length of the side nets, the crib having a funnel trap for the admission of the fish from the space between the side, floor and roof nets, the side of the mouth portion of the funnel contracted at a sharper angle to the horizontal than the side of the body portion of the funnel and stay ropes connected to the upper side of the crib for turning the axis of the mouth portion upward.

1,636,097. FOLDING PORTABLE BED. FRANCIS S. INCO, Los Angeles, Calif. Filed May 24, 1922. Serial No. 563,241. 2 Claims. (Cl. 5—155.)



1. In a folding bed of the class described, the combination of: a carriage; a head section pivoted upon said carriage in such manner as to project beyond the same when extended; a foot section; links pivotally connecting said foot section to said head section by separate pivots at the respective ends thereof; foot legs pivoted to said foot section; spacer means extending between said section connecting links; intermediate legs pivoted to said spacer means; links extending between said foot legs and said connecting links for retracting said foot legs as said foot section is raised; and links extending between said intermediate legs and said carriage for retracting said intermediate legs as said head section is raised and for holding said legs always dependent.

1,636,098. MEANS FOR AND METHOD OF ATTACHING SHOOTING STRIPS. WILLIS LERICHE, Allentown, Pa., assignor to Cement Gun Contracting Company, Allentown, Pa., a Corporation of Delaware. Filed Sept. 2, 1926. Serial No. 133,176. 7 Claims. (Cl. 25—131.5.)

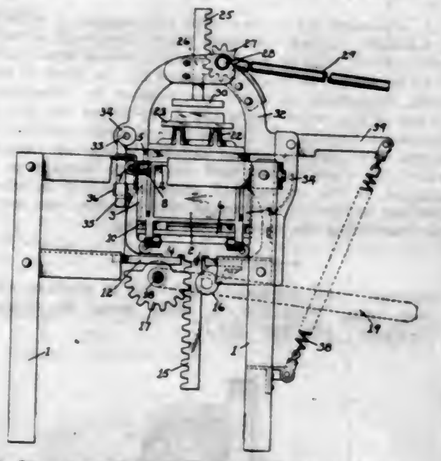


1. Means for shaping cementitious material around the flanges at the upper edge of a beam in contact with the lower surface of a floor, comprising a shooting strip adjacent the edge of one of the flanges at the upper edge of said beam, and strip supporting means attached to said strip and adhering to the lower surface of the floor.

1,636,099. CUSHION CONNECTION FOR VEHICLE CONSTRUCTION. FRED L. LIPCOT, New York, N. Y., assignor to The Rubber Shock Insulator Company, Inc., New York, N. Y., a Corporation of Delaware. Filed May 4, 1925. Serial No. 27,725. 2 Claims. (Cl. 267—30.)

1. A housing for a connection and support of yielding non-metallic material adapted to be interposed between two metallic parts of a motor vehicle, one of which parts is to be connected to and supported by the other of said parts, comprising an upper seat member for attachment to one of the vehicle parts and a cup-shaped cap portion forming a housing and formed with a lower seat for the non-metallic material and an opening in one side through which the other vehicle part enters the housing to be engaged by the non-metallic material, means to secure the cap member to the upper seat member and means for reinforcing the sides of the housing.

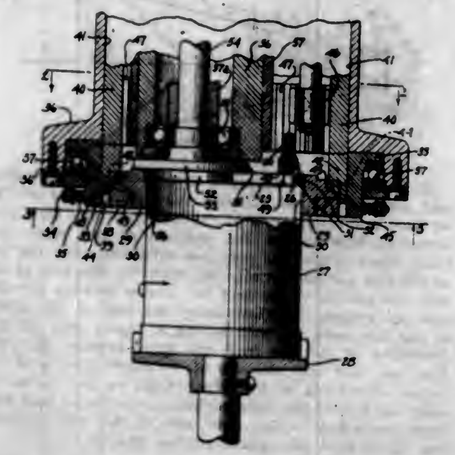
1,636,100. CAR JOURNAL. CHALLEN R. MCCUNE, Clinton, Iowa. Filed Feb. 14, 1923. Serial No. 618,914. 1 Claim. (Cl. 308—237.)



In combination, a car axle, a journal bearing for said axle, a flange on said axle, a bearing sleeve having flanges at opposite ends thereof and having an opening therethrough for receiving the end of said car axle, one of the flanges on said sleeve having a projection thereon for engaging the flange on said axle to prevent rotation of said sleeve about said axle when said sleeve is fitted over the end of said axle, the flanges on said sleeve being spaced to engage opposite ends of said journal bearing, a nut for engaging the projecting end of said axle when said sleeve is in position thereon, and means for locking said nut against rotation, said sleeve and axle being made of similar quality steel to insure the same coefficient of expansion for said parts.

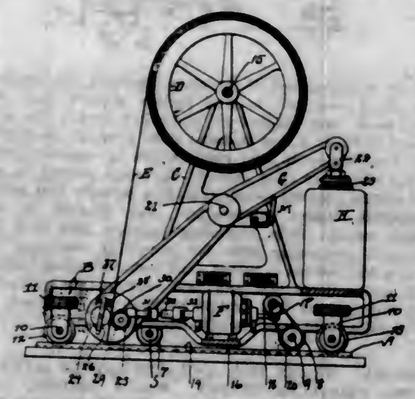
1,636,101. CORRECTIVE DEVICE. ROB ROY MCLALLEN, Oak Park, Ill. Filed Mar. 9, 1927. Serial No. 173,931. 1 Claim. (Cl. 128—133.)

In a corrective device for infants, for discouraging thumb sucking and the like, an elastic member having a loop at one end for attachment to the wrist of an infant, and means at the other end of said elastic member for attaching the same to a garment on the lower part of the body of said infant, the length of said elastic member being such that the infant can only raise its hand to its mouth by exerting physical effort to stretch said elastic member, or by moving its head from the normally comfortable position.



1,636,102. CONCRETE-BLOCK MACHINE. JOHN HENRY MILLER, Rising Sun, Ohio. Filed Sept. 15, 1924. Serial No. 737,685. 7 Claims. (Cl. 25—41.)

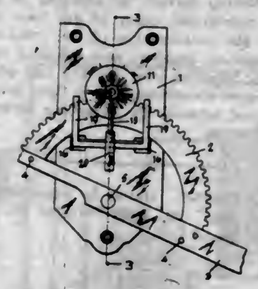
1. In a concrete block machine, a mold, a plurality of partitioning plates, a plurality of compression members for compressing the concrete between the partitioning plates to form the blocks and having a pressure surface substantially equal to the area between the partition plates, said mold having sides pivoted to the remainder of the mold at their bottom edges, rollers revolving on fixed axes and engaging the sides in lowered position of the mold, said sides being disengaged from said rollers in raised position of the mold, and means to raise and lower the mold.



1,636,103. PROCESS OF AND APPARATUS FOR MAKING SANITARY METAL CANS. ARLINGTON MOORE, New York, N. Y., assignor to Moore Inventions Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 15, 1922, Serial No. 553,213. Renewed Dec. 21, 1926. 12 Claims. (Cl. 113—25.)

2. The process of securing heads to bodies of sanitary metal cans, which comprises providing a can body having an expanded end portion extending radially outward beyond the main part of the can body and a shoulder where said end portion joins the main part of the can body, supporting said can body by shouldered supporting means adapted to engage the shouldered portions of the can body, and seaming a lid to said can body while so supported.

4. Apparatus for seaming heads to bodies of sanitary cans which comprises a roller extending across the edge of the can body, the roller axis forming a chord of the circle defined by the end of the can body, and means for rotating the can body with respect to the roller.

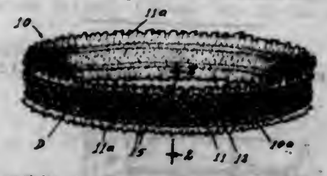


1,636,104. ARC-WELDING MACHINE. THOMAS E. MURRAY and HARRY R. WOODROW, New York, N. Y.; said Woodrow assignor to said Murray. Filed Oct. 25, 1919. Serial No. 333,332. 9 Claims. (Cl. 219—8.)

1. An arc welding machine, comprising a portable carriage, trucks beneath said carriage and supporting the same upon the surface above which said carriage travels therefor, and, disposed on said carriage, a metal wire electrode, means for continuously feeding said wire to the welding joint, and means for simultaneously driving said trucks and said feeding means.

1,636,105. AUTOMATIC GEAR LOCK FOR WINDOW REGULATORS. HUBERT A. MYERS, Toledo, Ohio, assignor to The Myers Regulator Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 27, 1926. Serial No. 144,464. 4 Claims. (Cl. 192—8.)

4. In a window regulator, a pinion, a shaft connected to the pinion, a rack, means interconnecting the rack and the window for raising and lowering the window upon movement of the rack, a dog having a pair of engaging noses for engaging the rack on opposite sides of



the point of engagement between the pinion and the rack, a cam located on the shaft for operating the dog to release the rack as the pinion teeth actuate the rack.

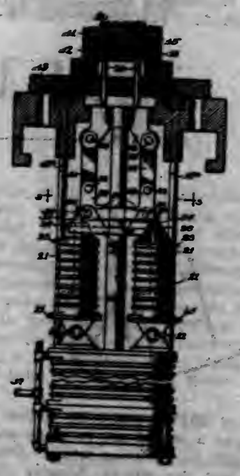
1,636,106. METHOD OF PRODUCING ALKALI-METAL SULPHYDRATES. ERNEST EUGENE NAEF, Paris, France, assignor to Tubize Artificial Silk Company of America, a Corporation of Delaware. Filed Jan. 26, 1924, Serial No. 688,842, and in Great Britain Jan. 31, 1923. 3 Claims. (Cl. 23—137.)

1. The method of producing alkali metal sulphydrates which consists in heating an alkali metal sulphoxy compound with hydrocarbon oils and sulphur in quantity sufficient to effect the reduction.

1,636,107. GARTER. CHARLES B. NAMIOT, New York, N. Y. Filed Aug. 24, 1925. Serial No. 51,911. 7 Claims. (Cl. 241—5.)

1. An article of manufacture comprising a garter having a body portion formed to include an elastic member interposed between a shirred backing strip and front layer and a trimming consisting of a thread, and beads strung on the thread, said beads being secured to the front layer, said thread having a slack portion between adjacent beads to permit unrestricted extension of the body portion.

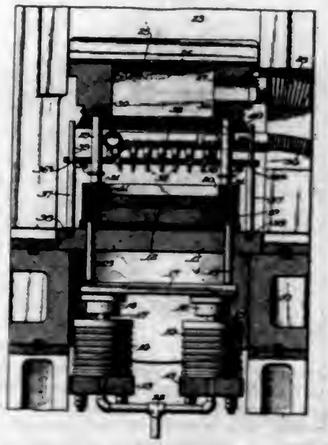
1,636,108. DISPLAY SIGN. JAMES PARKINSON, Toronto, Ontario, Canada. Filed Jan. 31, 1927. Serial No. 164,918. 1 Claim. (Cl. 40—136.)



A display sign comprising a plate formed of bright metal having a dulled surface and grooves having side walls extending perpendicularly to the face of the sign, and a bottom wall extending from the bottom of the side wall to the face of the sign at the opposite side of the groove and formed by cutting into the metal of the plate to outline a letter, character or figure and to expose the bright metal to contrast with the dull surface formed by the letter, character or figure.

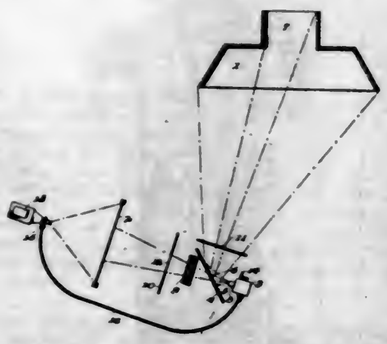
1,636,109. ATTACHING DEVICE. HENDRIK PLOMP, Amersfoort, Netherlands. Filed Sept. 16, 1926, Serial No. 135,953, and in the Netherlands Sept. 11, 1925. 7 Claims. (Cl. 280—156.)

1. An attaching device, comprising a casing, a corrugated central member disposed within and secured to the casing, a correspondingly corrugated tongue entering into the casing and bearing against one side of the central member, a correspondingly corrugated tongue entering into the casing and bearing against the other side of the central member, and means within the casing for clamping the two tongues against the central member.



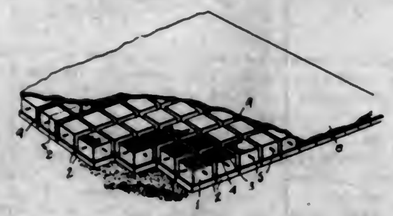
1,636,110. PRESSURE CUSHION. FREDRICH J. RODE, Chicago, Ill., assignor to Marquette Tool & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 27, 1925. Serial No. 33,295. 16 Claims. (Cl. 113—46.)

1. In combination, a plunger, a work holding element co-operating therewith, a plurality of separate cushioning means for the work holding element, means for re-



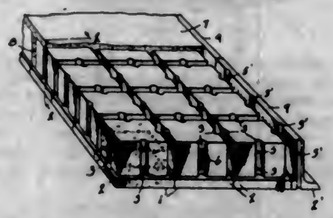
straining one of said cushioning means against operation during a portion of the operation of the other of the said cushioning means, and means for releasing the said restrained cushioning means to render the latter active.

1,636,111. DRAWING PRESS FOR HEATING AND DRAWING SHEET METAL. FREDRICH J. RODE, Chicago, Ill., assignor to Marquette Tool & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1926. Serial No. 155,394. 17 Claims. (Cl. 113—46.)



1. A sheet metal drawing press embodying blank holding means, a reciprocable member with which the blank holding means co-operates to grip the work, a burner associated with the press for applying heat to the work, and means responsive to the operation of the press for controlling the operation of the flame from the burner upon the work.

1,636,112. SYSTEM OF TAKING PHOTOGRAPHIC AND CINEMATOGRAPHIC PICTURES. EUGEN SCHUFFTAN, Hollywood, Calif. Filed Aug. 9, 1926. Serial No. 128,152. 12 Claims. (Cl. 88—16.)

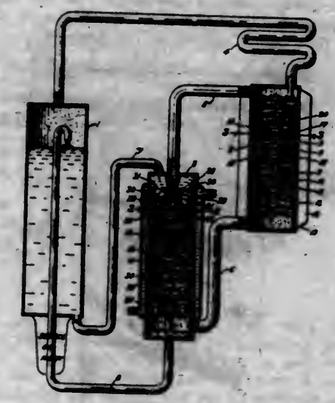


1. The art of making composite motion pictures of a set or scene and a second set or scene which comprises arranging a light transmitting member between the first set or scene and the camera, forming an image of a portion of the first set or scene directly through the light transmitting member on a frame of the camera, simultaneously forming an image of the second set or scene on the same frame by a reflecting surface on the light transmitting member and at the same time causing overlapping of the adjacent portions of the images in a zone of mergence, said light transmitting member extending beyond the reflecting surface for blending in the zone of mergence the overlapped edges of the two images into each other by the coordination of the reflecting surface and the transparent member, and bringing out the distinctness of the blending zone for the full width thereof by a lens disposed transversely of a light cone from one of the scenes and between the reflecting surface and the last mentioned scene.

1,636,113. PAVEMENT. HENRY D. STREATOR, Galesburg, Mich. Filed Sept. 22, 1925. Serial No. 57,854. 2 Claims. (Cl. 94—6.)

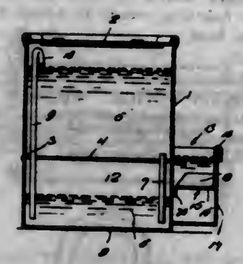
1. In a pavement the combination of a foundation made up of spaced cubical blocks with flanged bases and dovetailed grooves at the top, cross bar reinforcements in said blocks, the ends of which reinforcements project and extend substantially from one block to another and form diagonal splices, a retaining clip embracing the ends of the reinforcements, and asphaltic topping with extensions into the spaces between said blocks embracing the said clips and reinforcements, coacting as specified.

1,636,114. PAVEMENT. HENRY D. STREATOR, Galesburg, Mich. Filed May 24, 1926. Serial No. 111,288. 4 Claims. (Cl. 94—13.)



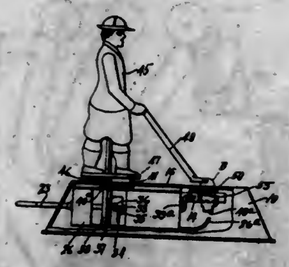
1. In a pavement, the combination of a foundation made up of spaced cubical blocks with flanged bases and vertically notched at the sides, rectangular bar reinforcements in said blocks exposed at and extended across the notches at the sides, a retaining hairpin tie between said blocks embracing the exposed part of the reinforcements in said notches on adjacent blocks, and an asphaltic topping with extensions into the spaces between said blocks embracing the said tie, coacting as specified.

1,636,115. REFRIGERATING APPARATUS OF THE ABSORPTION TYPE. BALTZAR CARL VON PLATEN, Ystad, and CARL GEORG MUNTERS, Dala-Jarna, Sweden, assignors, by mesne assignments, to Electrolux Servel Corporation, a Corporation of Delaware. Filed Mar. 20, 1925, Serial No. 17,035, and in Sweden Mar. 29, 1924. 5 Claims. (Cl. 62—119.)



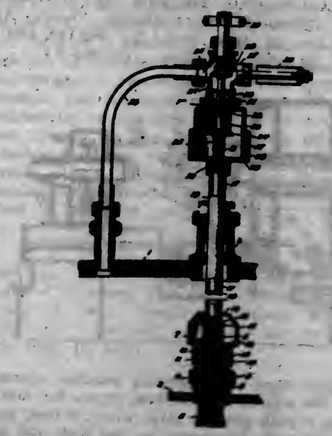
1. A refrigerator comprising a generator, a condenser, an evaporator and an absorber connected to form a system in which a cooling agent and an auxiliary agent

circulate through the evaporator, said evaporator containing a plurality of superimposed spaced metal plates having holes in the same, some of the holes forming a



straight vertically extending passageway for flow of gas and other holes being out of alignment with respect to each other to form a tortuous line of flow for liquid.

1,636,116. COMBINED TEST BATH, SAMPLE WARMER, AND HOT-WATER RESERVOIR. CLINE W. WARNOCK, Bucyrus, Ohio. Filed May 22, 1926. Serial No. 111,082. 1 Claim. (Cl. 23—258.)

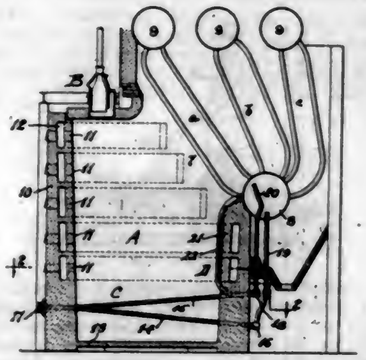


A water reservoir comprising a cylindrical receptacle open at its top, a hinged cover provided therefor, said receptacle having an annular groove formed therein adjacent the bottom thereof, a partition arranged in said groove for dividing the receptacle into an enlarged upper cold water compartment, and a relatively small hot water compartment, a supply pipe extending through the partition for feeding the cold water to the lower compartment, the upper end of the supply pipe extending above the partition, the lower end of the supply pipe being spaced from the bottom of the receptacle, a vapor tube extending upwardly through the partition at a point diametrically opposite the supply pipe, the lower end of said vapor tube terminating in spaced relation with the bottom of the receptacle, the upper end of the vapor tube having a downwardly disposed bend formed therein whereby the vapors formed in the lower compartment will be delivered to the cold water in the upper compartment for initially warming the same, a faucet for drawing off the hot water in the lower compartment, the space between the water level in the lower compartment and said partition forming an insulation when the water level is at a predetermined height.

1,636,117. MECHANICAL GOLF PLAYING TOY. THOMAS R. ARDEN, Forest Hills, N. Y., assignor to The Ferdinand Strauss Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 27, 1926. Serial No. 137,864. 10 Claims. (Cl. 46—40.)

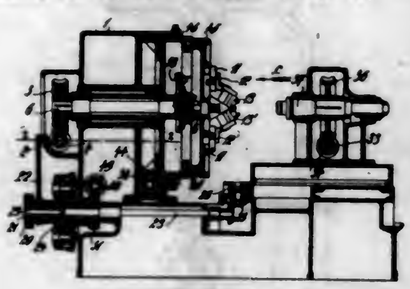
8. A golf playing device, comprising a rotatable support, a figure mounted thereon to rotate therewith, a motor, a cam having a plurality of camming portions mounted on the motor, connecting means in operative engagement with the cam and the support to impart to the figure a series of initial ball gaging movements and a final striking movement, and spring means for maintaining said connecting means in operative engagement with said cam.

1,636,118. LOW-WATER ALARM. NORMAN M. BARKER, Cleveland, Ohio. Filed Oct. 22, 1924. Serial No. 745,242. 13 Claims. (Cl. 122—504.2.)



1. In a device of the character described, a heat conducting member, means for supporting said member in the crown sheet of a boiler, a heat responsive device carried by the upper end of the heat conducting member and wholly disposed at a distance above the crown sheet of the boiler comparable to the predetermined water level at which the device shall operate, the said heat responsive device being in heat conducting relation with the surrounding water, the portion of the heat conducting member below the said responsive device being substantially heat insulated from the surrounding water.

1,636,119. FURNACE APPARATUS. JOHN E. BELL, Brooklyn, N. Y., assignor to Combustion Engineering Corporation, a Corporation of New York. Filed Sept. 16, 1922. Serial No. 588,566. 8 Claims. (Cl. 122—235.)



1. In combination with a furnace and its boiler, a combustion chamber; a cooling screen exposed to radiant

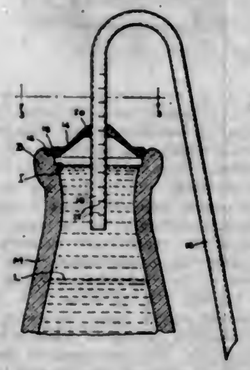
heat in the lower portion of the combustion chamber comprising two sets of tubes, a header with which both sets are connected at one end, and a header for the other end of each set; means connecting the last mentioned two

headers into the circulation of the boiler; and a cooling screen exposed to radiant heat adjacent a vertical wall of the combustion chamber connected with one of the headers and with the boiler.

1,636,120. SHAPING OR PLANING MACHINE FOR WORM OR SCREW SHAPED BEVEL WHEEL OPERATING ACCORDING TO THE DEVELOPMENT METHOD. HEINRICH BRANDENBERGER, Vienna, Austria. Filed Dec. 21, 1923, Serial No. 682,110, and in Austria Dec. 23, 1922. 4 Claims. (Cl. 90—9.)

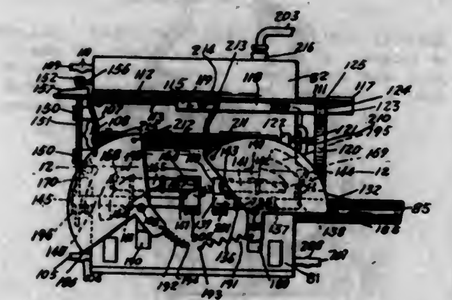
1. In a spiral bevel wheel planing machine operating according to the development method, means for continuously rotating a work piece, a plane wheel, a tool, means for giving additional movement to the tool, the additional movement of the tool caused by the movement of the plane wheel being so compensated that the combined or interconnected movements of the work piece and of the work tool are changed in their respective relation according to rotation of the plane wheel.

1,636,121. LOOP OR RING FASTENER FOR BAGS AND THE LIKE. WILLIAM BRAUNS and WILLIAM J. WALKER, Newark, N. J., assignors to Rosenband Mfg. Co., Inc., a Corporation of New Jersey. Filed Aug. 20, 1921. Serial No. 493,978. 2 Claims. (Cl. 24—265.)



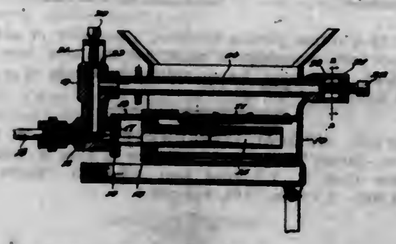
1. A loop or ring-fastener comprising a pair of plate-members, a ring or loop-receiving element connected with said plate-members, and marginal fastening prongs connected with and extending from one of said plate-members, said prongs being adapted to be bent over the other plate-like member and brought in securing engagement with the other plate-member for securing the loop or ring-fastener to an article, said latter plate-member being provided with prong-receiving depressions for the reception of said prongs in said receiving depressions, to thereby provide a flush upper surface of the fastener.

1,636,122. HOOD APRON. ISAAC BROWN, New York, N. Y. Filed May 7, 1926. Serial No. 107,324. 4 Claims. (Cl. 2—48.)



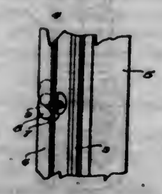
1. A hood-apron comprising a flexible member having means to encircle the neck of a person permitting one end thereof to rest over the front of his clothing, while the other end reaches behind his neck and is folded about his head, and fastening means to secure the hood over the back of his head.

1,636,123. SIPHON DEVICE. WALTER F. BROWN, Minneapolis, Minn., assignor of one-half to Antoine A. Laurent, Minneapolis, Minn. Filed Oct. 4, 1926. Serial No. 139,391. 3 Claims. (Cl. 137—20.)



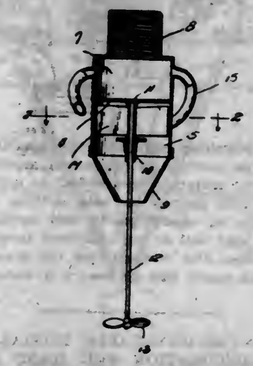
1. A siphon device comprising a flexible diaphragm whose margin is adapted to engage the mouth of a container, said diaphragm having a central opening, and a siphon tube whose short leg passes through said opening, the upper side of said diaphragm adjacent said opening being recessed to constitute an air vent when said diaphragm is depressed.

1,636,124. COMPRESSOR FOR GAS ENGINES. WILLIAM HOWARD BUNKER, Lisle, Ontario, Canada. Filed Oct. 7, 1920. Serial No. 415,337. 5 Claims. (Cl. 230—27.)



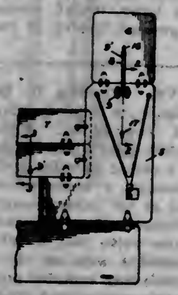
1. A gas compressor comprising a main gas compressing cylinder and a piston reciprocating within the cylinder, a gas inlet, a gas reservoir, a gas outlet connecting the main cylinder and reservoir, a non-return valve from the gas outlet, and means actuated by the reciprocation of the piston within the main cylinder for producing a constant air pressure against the charge of gas within the reservoir.

1,636,125. CLOSURE FOR CLEAN-OUT OPENINGS. CHARLES E. CHAPMAN, Fort Edward, N. Y., assignor, by mesne assignments, of one-half to Robert C. Carter and George S. Jamison, Glens Falls, N. Y. Original application filed Oct. 16, 1923, Serial No. 668,833. Divided and this application filed Oct. 16, 1925, Serial No. 62,852. Renewed May 25, 1927. 8 Claims. (Cl. 251—160.)



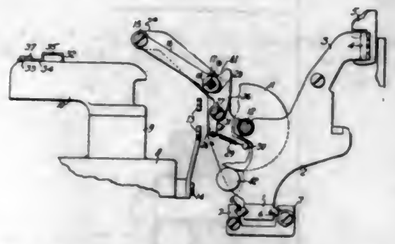
1. In a burner, the combination with an element provided with a passage having a clean out opening, a flexible plate overlying said opening, and means pressing the plate into the opening to seal said opening.

1,636,126. FENCEPOST. CHARLES E. CHRISTENSEN, Viborg, S. Dak. Filed Apr. 9, 1926. Serial No. 100,955. 2 Claims. (Cl. 256—58.)



1. A fence post comprising an elongated body provided with a forwardly extending web having a longitudinally extending head at its outer end projecting from opposite sides thereof, said web being formed with openings spaced longitudinally of the web adjacent the head and said head having diagonally disposed transverse slots extending through the head and communicating with said openings intermediate the upper and lower ends thereof.

1,636,127. MIXING DEVICE. GERALD FICKLE, Glenwood, Iowa. Filed Oct. 12, 1925. Serial No. 62,034. 1 Claim. (Cl. 253—130.)



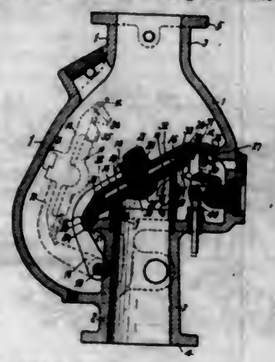
In a turbine for a mixing device of the class described, a cylindrical casing, a wall arranged horizontally within the intermediate portion of the casing for dividing the same into an upper pressure chamber and a lower turbine chamber, an inlet nozzle provided at the top of the pressure chamber, a discharge nozzle arranged on the lower open end of the casing and communicating with the turbine chamber, a turbine wheel operable within the turbine chamber, and a pair of curved fluid jet pipes arranged tangentially on opposite sides of the casing, the upper ends of said jet pipe communicating with the pressure chamber, the lower ends thereof communicating with the turbine chamber whereby the fluid from the pressure chamber will be directed against the blades of the turbine wheel to effect the rotation thereof.

1,636,128. FASTENING DEVICE FOR SHIELDS. ELMER C. GOEBERT, U. S. Army, Philadelphia, Pa. Filed Jan. 15, 1927. Serial No. 161,406. 3 Claims. (Cl. 89—36.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

3. A fastening device including a pair of clamping members arranged for longitudinal and rotatable movement with respect to each other, a spring for moving the members together and said members provided with complemental means for holding them against relative rotation.

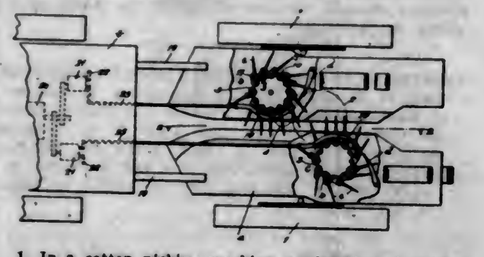
1,636,129. TYPEWRITING MACHINE. GEORGE G. GOING, Middletown, Conn., assignor to Remington-Noiseless Typewriter Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 14, 1925. Serial No. 2,422. 11 Claims. (Cl. 197—138.)

1. In a typewriting machine, the combination of a platen, a platen carriage, a paper bail mounted thereon, latch devices for maintaining said bail as a whole in normal position, and springs for said devices, said devices being releasable in opposition to said springs to afford movement of said bail to an abnormal inoperative position, said devices also transmitting the pressure of said springs to said paper bail to render it operative on the platen.



1,636,130. INTERCHANGEABLE INITIAL OR ORNAMENTAL DECORATION FOR HAND BAGS AND OTHER ARTICLES. NATHAN GREENBAUM, New York, N. Y., and ALBERT ROSENBAND, Newark, N. J. Filed July 10, 1925. Serial No. 42,719. 1 Claim. (Cl. 40—20.)

In a bag or the like, in combination with a portion of the bag, a letter, initial, monogram, or insignia-bearing means, comprising a base-plate, means for securing said base-plate to the bag, an interchangeable letter, initial, monogram, or insignia-bearing plate, and means for separably connecting said latter plate to said base-plate consisting of a spring-post or stud adapted to be forced into a receiving socket with which the base-plate is provided for frictional and separable engagement of the letter, initial, monogram, or insignia-bearing plate with base plate, associated with an alining pin extending rearwardly from said letter, initial, monogram, or insignia-bearing plate to prevent turning of the latter upon said base-plate.



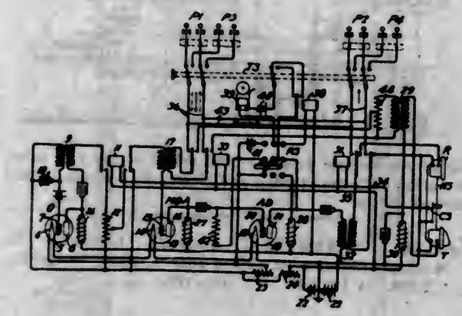
1,636,131. VALVE. WILLIAM B. GRIFFITH, Philadelphia, Pa., assignor to Star Sprinkler Corporation, a Corporation of New Jersey. Filed June 19, 1922. Serial No. 569,349. 4 Claims. (Cl. 169—22.)

1. In a valve, a casing provided with an inlet passage, and an outlet passage, a water valve seat surrounding the discharge end of the inlet passage and an air valve seat of larger diameter than the water valve seat surrounding the water valve seat, a valve member pivoted to the casing provided with an air valve head and a bearing part, a valve ring mounted upon the periphery of said head adapted to engage said air valve seat, a valve clapper adapted to engage said water valve seat, said valve clapper having an outwardly extending annular flange upon its periphery and a centrally located socket into which said bearing part extends, a clamp ring secured to said head, said clamp ring positioned upon said head between said valve clapper and said valve ring, said clamp ring having a clamping surface formed upon the outer periphery thereof adapted to engage said valve ring, and said clamp ring having an inner edge portion

adapted to loosely engage the periphery of said valve clapper for limiting the movement of the clapper relatively to said head.

1,636,132. COTTON-PICKING MACHINE. WILLIAM T. HOOFNAGLE, Glen Ridge, N. J. Filed July 14, 1925. Serial No. 43,505. 6 Claims. (Cl. 56—11.)

1. In a cotton picking machine, a plurality of picking fingers each comprising a metal rod insulated from the machine, and means for connecting said rods to a current source.



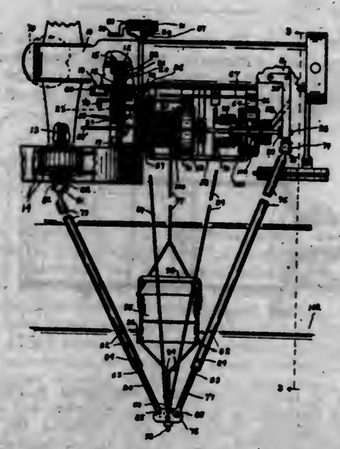
1,636,133. MUSICAL INSTRUMENT. GEORGE W. HORTON, Queens Village, N. Y., assignor to John W. Bunker, New York, N. Y. Filed Sept. 23, 1925. Serial No. 58,006. 1 Claim. (Cl. 84—267.)

A musical instrument having a string and an elongated slotted neck, a roller in said slot a flexible rod carried by said roller and overlying said string, said rod being

capable of being moved longitudinally of said neck to touch the string at different points when pressed down to produce various notes thereof when said string is twanged.

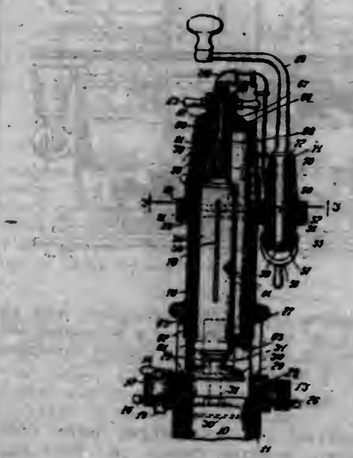
1,636,134. CARRIER-WAVE SIGNALING SYSTEM. JOSEPH W. HORTON, Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1923. Serial No. 610,975. 10 Claims. (Cl. 179—15.)

1. A carrier telephone terminal apparatus comprising an electron discharge device adapted to produce oscillations, a second electron discharge device adapted to receive modulated carrier oscillations and to translate said oscillation into signals, a microphone, and switching means for causing the first device to produce oscillations and to impress them upon the second device, to adapt said microphone to also impress signals on said second device, and to connect the output of said second device to a carrier transmission line.



1,636,135. BOILER PLUG. BEN H. HUGHES, East Cleveland, Ohio. Filed June 27, 1925. Serial No. 40,084. 1 Claim. (Cl. 137—99.)

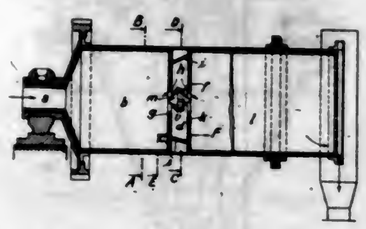
As a new article of manufacture, a boiler plug comprising a member having one end portion formed like an arrowhead terminating in a sharp point and having a plurality of separated barbs projecting in a direction away from said point, another portion being fashioned with screw-threads and a nut cooperating with the latter and adapted to draw said barbs against the interior surface of a boiler.



1,636,136. DITCH MAINTAINER. GEORGE E. KERNES, Omaha, Nebr. Filed Jan. 2, 1926. Serial No. 78,842. 2 Claims. (Cl. 37—144.)

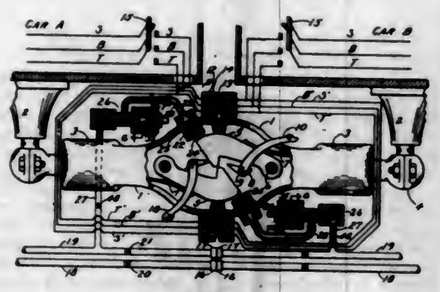
1. A ditch maintaining attachment for tractors comprising a relatively long narrow lateral frame, means for securing the frame against one side of the tractor inwardly of the adjacent side wheels thereof, hoisting means mounted on the frame and including cables, a boom for the tractor including a pair of arms, a universal socket for one arm and mounted on the hub of the rear

wheel of the tractor, and a second universal socket mounted on the forward end of said lateral frame for supporting the other arm of the boom.



1,636,137. INTERNAL GRINDER. OWEN D. KINSEY, Wauwatosa, Wis. Filed June 20, 1925. Serial No. 38,413. 8 Claims. (Cl. 51—43.)

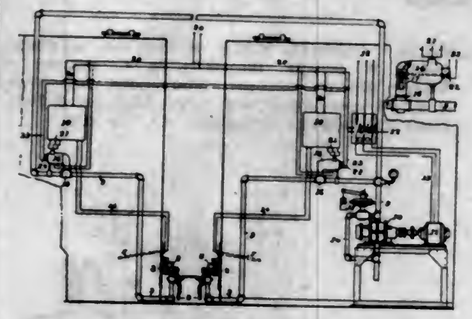
1. A grinder of the character described, comprising a main housing, a main cylinder longitudinally and rotatably movable in said housing, said cylinder being externally threaded, a second cylinder mounted in the main cylinder, closure means for the ends of the main cylinder whereby the position of the second cylinder relative to the longitudinal axis of the main cylinder is maintained, means whereby said position of the second cylinder may be regulated, intermeshing gear mechanism operatively connected with said main cylinder with a portion of said



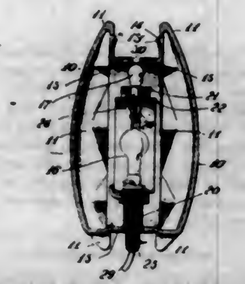
gear mechanism slidably connected to said second cylinder, whereby either longitudinal movement or longitudinal and rotatable movement of said cylinder may be obtained, and means for controlling said gear mechanism.

1,636,138. BALL OR TUBE MILL. WILHELM KÖPPEN, Beckum, and CHRISTIAN PFEIFFER, Neubeckum, Germany. Filed Dec. 8, 1926, Serial No. 153,420, and in Germany Dec. 8, 1925. 9 Claims. (Cl. 83—9.)

1. In a ball- or tube-mill containing a preliminary grinding chamber, a fine grinding chamber and an intermediate chamber, concentric rings forming the wall of said intermediate chamber facing the preliminary grinding-chamber, said rings having on their entire periphery a free cross-section for the passage of the material to be ground.



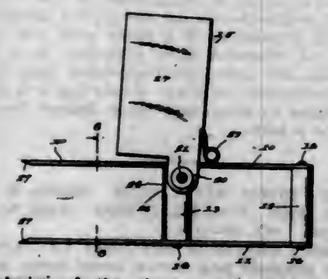
1,636,139. CAR, AIR, AND ELECTRIC COUPLING SYSTEM. ERNST A. LARSSON, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 19, 1924. Serial No. 738,591. 25 Claims. (Cl. 213—76.)



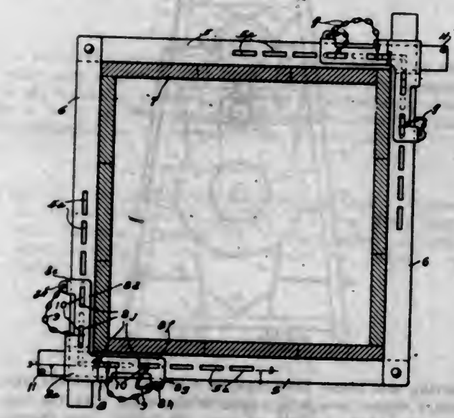
1. In a coupling system, the combination with an electric coupler and an air coupler of a car coupler and pneumatic means to prevent the car couplers uncoupling while the electric couplers are energized.

1,636,140. DRYING AND ENAMELING OVEN CONTROL. ARTHUR MAEHLER, Chicago, Ill. Filed Aug. 5, 1926. Serial No. 127,277. 3 Claims. (Cl. 158—99.)

1. In an automatic control for drying and enameling oven of the indirectly heated gaseous fuel type, the combination with the oven housing and indirect heating unit in same, of a gaseous fuel supply pipe connected to the burner of said heating unit, an electric motor-pump supplying gaseous fuel under pressure to said supply pipe, an automatic shut-off value in said fuel supply pipe, a pilot light having a separate fuel supply to that of the aforesaid burner, a thermo-couple potentiometer having its thermo-couple arranged in the heat zone of the pilot light and having controlling connection with the automatic mechanism of shut-off valve aforesaid, an electric switch operatively associated with the mechanism of the shut-off valve and adapted to effect a closing and opening of the electric supply to the motor of the fuel pump in unison with the opening and closing movements of said shut-off valves.

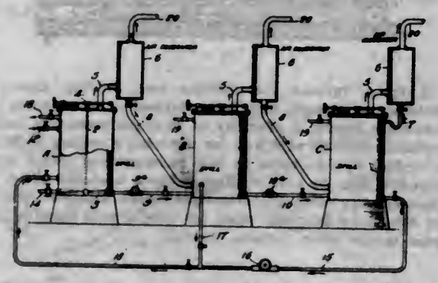


1,636,141. ORNAMENTAL LIGHT. LAWRENCE W. MAMMEN, Chicago, Ill. Filed June 1, 1926. Serial No. 112,805. 4 Claims. (Cl. 40—126.)



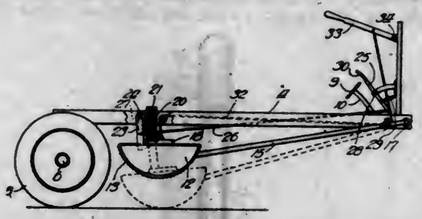
1. An ornamental light in the nature of an illuminated star composed of a pair of complementary star shaped members of translucent material formed at the points with double walls in spaced relation, the inner walls of both members at the base of the points each having a laterally disposed annular flange, a band encircling the flanges for holding the members together in spaced relation, said band being provided with an electric plug and lamp holding socket.

1,636,142. ICE-CREAM CUTTER. GERARDO MARANDINO, Brooklyn, N. Y. Filed Mar. 29, 1926. Serial No. 98,195. 6 Claims. (Cl. 107—48.)



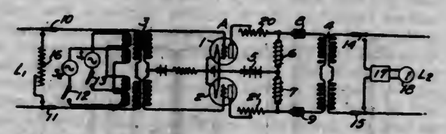
1. A device of the character described comprising spaced members, a pair of filler pieces connecting said members, one of said filler pieces being located intermediate the ends of said members, the other filler piece being located at one end of said members to make a handle therefor, and means adapted to embrace the loose end of said members, pivoted to the intermediate filler piece and comprising a top and side walls and cooperating with said members to define an open-end material-receiving chamber.

1,636,143. COLUMN CLAMP WITH CASTINGS. HOWARD O. MCMILLAN, Minneapolis, Minn. Filed June 1, 1926. Serial No. 112,752. 12 Claims. (Cl. 144—291.)



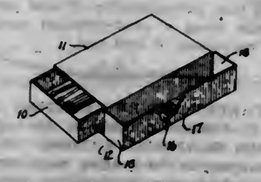
1. A clamp for a column form comprising two pairs of bars, the bars of each pair being pivoted together at one end, the pivoted ends of said bars being adapted to be disposed at opposite corners of said form with the bars extending along adjacent sides thereof, one bar of each pair overlapping a bar of the other pair at the other corners of said form, a member at each of said last mentioned corners having arms extending along the sides of the form embracing said overlapped bars and means acting on said arms and bars and disposed along the sides of said form for progressively drawing said bars toward said member and holding the same in clamping position.

1,636,144. DISTILLING WITH ALUMINUM CHLORIDE. ALMER MCDUFFIE MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed July 20, 1925. Serial No. 44,797. 4 Claims. (Cl. 196—54.)



1. In the production of lower boiling oils from higher boiling oils with the aid of aluminum chloride, the process which comprises preliminarily subjecting the oil to be distilled with aluminum chloride to a purifying distillation with exhausted aluminum chloride sludge and thereafter again distilling the oil with fresh aluminum chloride.

1,636,145. BRAKE MECHANISM AND THE LIKE. JOHN A. MILLER, Chicago, Ill. Filed May 15, 1926. Serial No. 109,334. 2 Claims. (Cl. 280—160.)

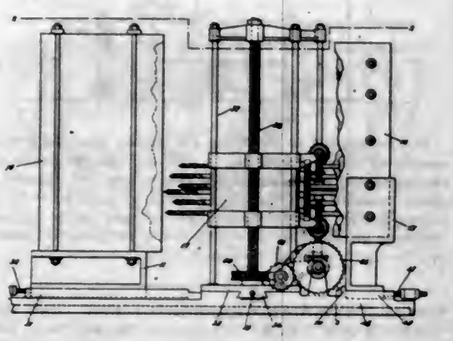


1. The combination with the rear wheels and brake mechanism of an automotive vehicle including the brake pedal for operating the brake mechanism, of a pair of vertically movable road cleaning devices in advance of the wheels, links connected to said road cleaning devices, pivotal connections between said links and the vehicle at a position in advance of said road cleaning devices, permitting said devices to be swung down into contact with the pavement directly in advance of the wheels, spring means tending to force the road cleaning devices downward against the pavement, a latch for normally sustaining the devices in a raised position, means convenient to the operator for raising the road cleaning devices to engage the latch, and means in proximity to the brake pedal aforesaid for disengaging the latch by the use of the foot which operates the pedal, to thereby allow the road cleaning devices to be lowered into operative position substantially as described.

1,636,146. CONTROL OF ELECTRIC WAVES. FRANKLIN MOHR, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 12, 1922. Serial No. 574,374. 7 Claims. (Cl. 178—44.)

1. The method of purifying the output wave of a wave combining circuit employing a pair of balanced space discharge tubes, which comprises controlling the amount of ohmic resistance in the output path of said wave in relation to the internal impedance of said tubes to neutralize in said output path any wave components present due to slight unbalance of said tubes.

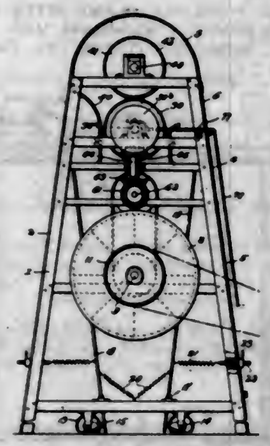
1,636,147. COMBINED EMERGENCY ASH TRAY AND MATCH-BOX LOCK. ARLINGTON MOORE, New York, N. Y., assignor to Moore Inventions Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed May 18, 1921, Serial No. 469,166. Renewed Jan. 7, 1927. 3 Claims. (Cl. 206—38.)



1. A match box having a tray hinged thereto, the end walls of the tray being adapted to grip the box when turned on its hinge.

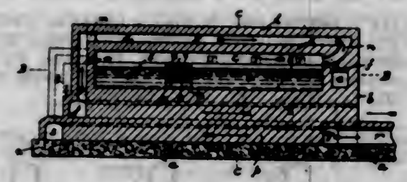
1,636,148. CUTICLE STICK. AGNES PROVOST, Milwaukee, Wis. Filed Sept. 25, 1925. Serial No. 58,568. 1 Claim. (Cl. 132—73.)

In a manicuring implement, a barrel, a tubular carrier detachably mounted in one end of the barrel, an operating element, means for holding the operating element in one end of the carrier, a gasket in the opposite end of the carrier, a reservoir extended into the barrel and having its inner end received in the gasket, and a suction and discharge means on the outer end of the reservoir.



1,636,149. METHOD OF AND APPARATUS FOR MAKING SCULPTURES. MARIO SCHIESARI, New York, N. Y. Filed Feb. 5, 1924. Serial No. 690,776. 31 Claims. (Cl. 125—2.)

16. In a machine of the class described, the combination, with an axially movable carving tool, and a traveling carrier therefor, of means controlling the axial movement of said tool, independently of said carrier, as said carrier travels along a predetermined path, transverse to the axial movement of said tool.

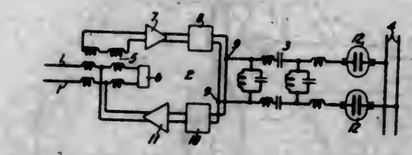


1,636,150. CARPET AND RUG BEATING APPARATUS. HERMAN L. SCHNEIDER, Chicago, Ill. Filed June 3, 1926. Serial No. 113,451. 3 Claims. (Cl. 15—12.)

1. In an apparatus for beating rugs, carpets and the like, and in combination, a frame, a casing carried by the frame and having sides spaced apart and also having a top, side doors, a roller mounted in the frame and adapted to move a carpet, rug or the like, fed thereover, a gravitational roller mounted above the first-named roller and adapted to press a carpet, rug or the like against the latter, guide shoes at opposite sides of and spaced from the first named roller, means for rotating the first-named roller in opposite directions, said means controllable by an operative, sets of oscillatory beaters having beater arms and tappet arms, spring means associated with the beater arms and the frame for forcibly

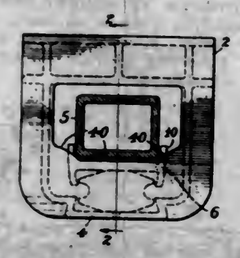
moving said beater arms against a carpet, rug or the like, rotary tappet means arranged to cooperate with the tappet arms of the beaters to move the beater arms thereof away from a rug, carpet or the like, means associated with the beater arms of the beater and the frame, whereby any one of the beater arms may be rendered idle, and a blower fan located at one end of the frame and adapted to force air longitudinally through the frame and alongside the beaters.

1,636,151. FURNACE FOR MELTING AND REFINING GLASS AND OTHER LIKE PURPOSES. JOHN SCHOFIELD SHAW, Leeds, England. Filed June 16, 1924, Serial No. 730,309, and in Great Britain Aug. 23, 1923. 6 Claims. (Cl. 49—54.)



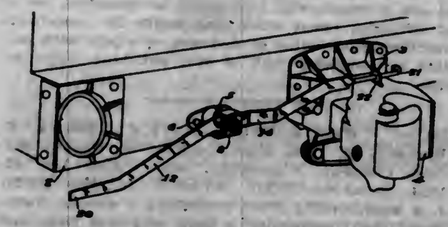
1. In a furnace for melting and refining glass, a dividing wall, said wall being formed of a plurality of renewable blocks, a plurality of passages extending longitudinally through said wall for receiving a cooling medium, a central wall provided by said passages and cooled upon opposite sides by said cooling medium, a second series of passages extending transversely through said wall whereby the molten material upon one side of said furnace may pass to the other division thereof.

1,636,152. WAVE FILTER. TIMOTHY E. SHEA, Rutherford, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1925. Serial No. 51,361. 7 Claims. (Cl. 178—44.)



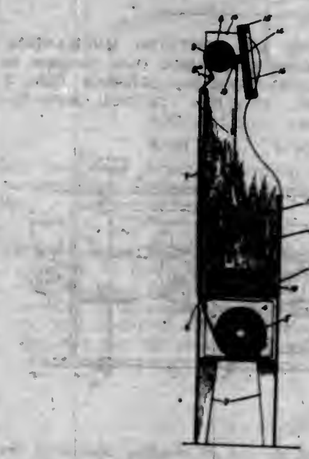
1. A frequency selective wave transmission system comprising a wave filter having two pairs of terminals

and having transmission devices representing terminal impedances connected to said pairs of terminals, said filter being so proportioned that the image impedance at one pair at least of its terminals is greatly different from



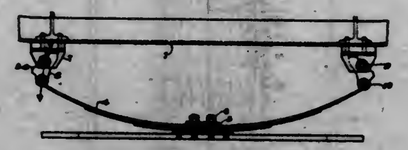
the terminal impedence connected thereto throughout the major part of the range of free transmission and is equal to the connected terminal impedance at a frequency close to a limit of free transmission whereby reflection loss is eliminated in the neighborhood of said limit.

1,636,153. COUPLER-POSITIONING DEVICE. VINTON E. SISSON, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 19, 1926. Serial No. 102,977. 6 Claims. (Cl. 213—21.)



1. In a railway car; the combination of a laterally movable coupler, a single eccentric roller which raises the coupler upon lateral movement thereof, and a member positioned below the coupler with its upper surface substantially parallel to the path described by the coupler upon lateral movement.

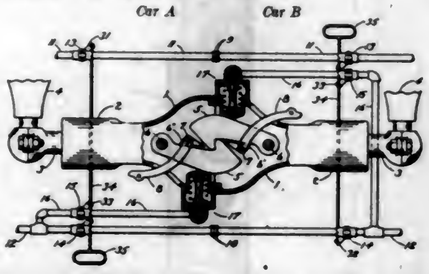
1,636,154. UNCOUPLING DEVICE FOR CAR COUPLERS. ARTHUR E. SMALL, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed June 4, 1923. Serial No. 643,278. 29 Claims. (Cl. 213—164.)



1. In an uncoupling device for a railway car a fulcrum having a journal, an operating lever mounted directly upon said journal, a pin lifting lever mounted directly upon said journal, and a separate connector for said levers mounted on said journal.

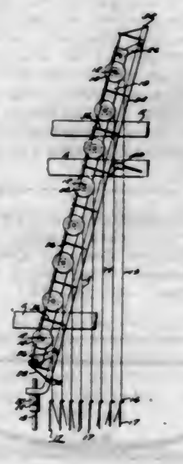
1,636,155. TOWEL CABINET. FRANK M. STEINER and GOTTFRID OLSON, Minneapolis, Minn., assignors, by mesne assignments, to Steiner Sales Company, Salt Lake City, Utah, a Corporation of Utah. Filed Sept. 17, 1921. Serial No. 501,291. 1 Claim. (Cl. 45—32.)

A towel cabinet comprising a casing having a chamber in its lower portion adapted to receive a supply of clean towel and a rear opening through which the web of clean towel is stretched upwardly, a roll in the upper part of the cabinet over which the clean web is passed forwardly to the user, said roll having a roughened surface for frictional contact with the web, to be revolved when the loose depending web end is pulled by the user, the front of the casing having an opening and the loose depending web end being positioned by said roll close to said opening to be conveniently grasped by the user, said web contacting with a greater portion of the peripheral surface of said roll to insure its movement, a stop mounted on said roll, a second fixed stop mounted on the cabinet in front of said roll in the path of said first mounted stop between which stops the web of towel is gripped and for limiting the rotation of said roll and the feed of the towel when the user pulls on the clean towel, the stop on said roll moving from a point adjacent said second stop on one side thereof to an adjacent point on the other side in the rotation of said roll, and means for automatically returning said roll to its normal position with both stops in a towel gripping position when the pull on the towel is released.



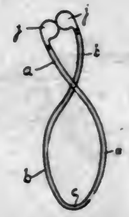
1,636,156. DIAPHRAGM BUFFER MECHANISM. NICHOLAS C. THALHEIMER, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 8, 1924. Serial No. 754,593. 8 Claims. (Cl. 105—14.)

1. The combination with the end wall and diaphragm face plate of a railway car, of shackles pivotally connected at one end to said end wall, a semi-elliptical spring having its middle portion secured to said face plate and having its extremities pivotally connected to the other ends of said shackles, and means to limit the swinging movement of said shackles toward the center



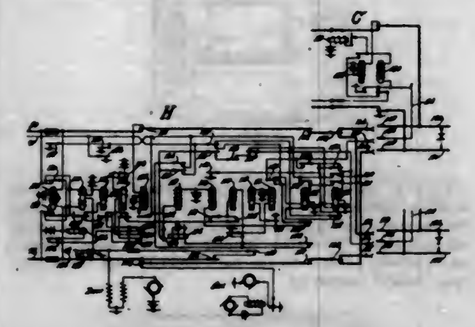
of the car, the minimum possible distance between the ends of the shackles to which the spring is attached being greater than the normal distance between the extremities of the spring, whereby the spring must be compressed before it can be attached to the shackles.

1,636,157. CAR AND AIR COUPLING MECHANISM. CHARLES H. TOMLINSON, Mansfield, Ohio, assignor to The Tomlinson Coupler Company, Mansfield, Ohio, a Corporation of Ohio. Filed Sept. 25, 1924. Serial No. 739,813. 16 Claims. (Cl. 213—76.)



1. In a system of car and air coupling devices on two cars, the combination therewith of a source of fluid pressure, valves controlling the flow of fluid pressure to the air coupling devices, pneumatic operated means to prevent the car coupling devices uncoupling when the controlling valves are open and means to automatically supply air pressure to pneumatic means when the controlling valves are open and the car couplers thus prevented from uncoupling.

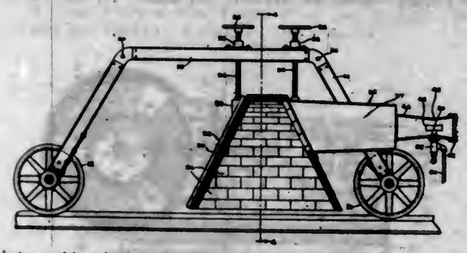
1,636,158. BOBBIN-BRAKING MECHANISM. HENRY J. TYNAN, Ridgewood, N. J. Filed Sept. 2, 1924. Serial No. 735,294. 4 Claims. (Cl. 242—131.)



1. In thread working apparatus equipped with stop mechanism, a creel, a plurality of bobbins thereon from which threads are drawn, a single flexible brake member applied to all the bobbins in the series, and means coming into action upon operation of the stop mechanism for applying tension to the flexible braking member adjacent to each bobbin.

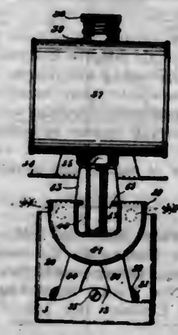
1,636,159. MASSAGING APPARATUS. ERNST UNNÉ, Harrogate, England. Filed Dec. 13, 1920, Serial No. 430,564, and in Great Britain June 9, 1920. 1 Claim. (Cl. 128—59.)

A dental massaging device comprising a pair of cross arms yieldably connected at one end to permit movement towards and from one another, the free ends of the arms being normally urged towards one another and adapted to be opened upon application of pressure adjacent the connected ends of the arms, and yieldable gum and teeth treating instrumentalities carried by the free ends of each of the arms, said instrumentalities being curved and normally contacting with each other.



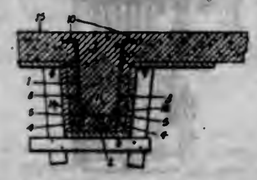
1,636,160. AUTOMATIC TELEPHONE SYSTEM. JOHN WICKS, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 10, 1921. Serial No. 499,742. 16 Claims. (Cl. 179—18.)

9. In a telephone system, a rotary connector switch having directively controlled primary and secondary movements and automatic secondary movement, means for operating said switch in its several movements as set forth, two sets of wipers and two wiper switching relays for said switch, means for operatively connecting up one of said sets of wipers with said switch by energizing one of said switching relays alone, and means for operatively connecting up the other of said sets of wipers with said switch by energizing both of said switching relays together.



1,636,161. WEED-BURNING DEVICE. HORACE E. WOOLERY, St. Paul, Minn., assignor to Woolery Machine Company, Minneapolis, Minn. Filed Dec. 27, 1924. Serial No. 758,343. 3 Claims. (Cl. 126—271.2.)

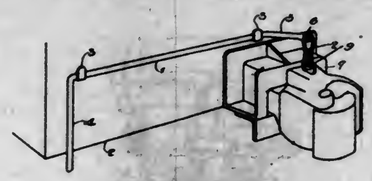
1. A weed burning device comprising a wheeled frame, a metal shell constituting a hood supported from said frame and having an open bottom in proximity to the ground, a refractory lining for the top and sides of said metal shell extending to the bottom of the latter, the front wall of said hood having a single large opening thru the metal and refractory lining, a tubular member connected with said opening, said tubular member constituting a mixing chamber, a blower, a delivery tube extending from said blower for delivering a blast of air



into said mixing chamber, and a supply pipe for delivering liquid fuel into position to be picked up by said blast of air.

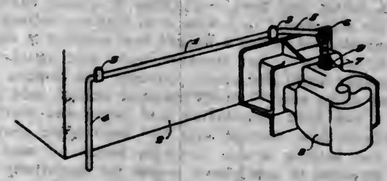
1,636,162. SELF-HEATING SADIRON. CHARLES E. ADAMSON, Muncie, Ind., assignor of one-half to James S. Renner, Huntington, Ind. Filed Feb. 5, 1925. Serial No. 7,003. 9 Claims. (Cl. 158—23.2.)

1. In a self heating iron of the class described, parallel twin burners forming a part of the iron body, parallel gas producing tubes communicating with the burners, a fuel supply tank and a fuel trap attached to the gas tubes and communicating with the tank at a point from below the said tubes.



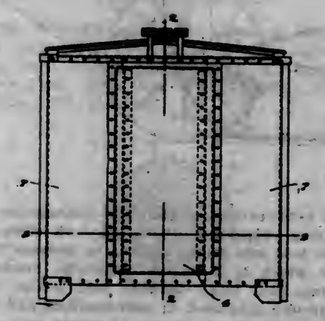
1,636,163. STRUCTURAL UNIT. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Nov. 6, 1925. Serial No. 67,256. 7 Claims. (Cl. 72—110.)

7. A structural unit comprising a plurality of upright upwardly facing U-shaped elements disposed in spaced relation, and longitudinal rods secured to said elements for supporting them in upright relatively fixed spaced relation, one or more of said elements being provided with form spacing means.



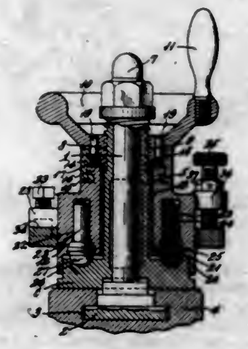
1,636,164. DEVICE FOR OPERATING CAR COUPLERS. CHARLES D. BONSALL, New Kensington, Pa., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 24, 1924. Serial No. 745,635. 11 Claims. (Cl. 213—166.)

1. A connector for a railway car coupler and its operating rod comprising two pairs of complementary members, each pair of complementary members pivotally connected to move opposite each other to form a closed eye,



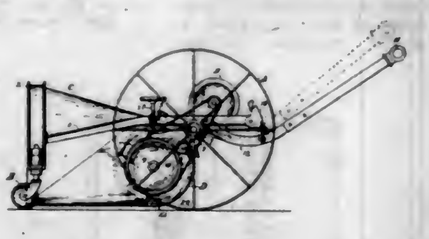
and means for detachably securing each pair of said complementary members in the position forming a closed eye.

1,636,165. DEVICE FOR OPERATING CAR COUPLERS. CHARLES D. BONSALL, New Kensington, Pa., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Original application filed Oct. 24, 1924, Serial No. 745,635. Divided and this application filed Sept. 28, 1925. Serial No. 59,088. 4 Claims. (Cl. 213—166.)



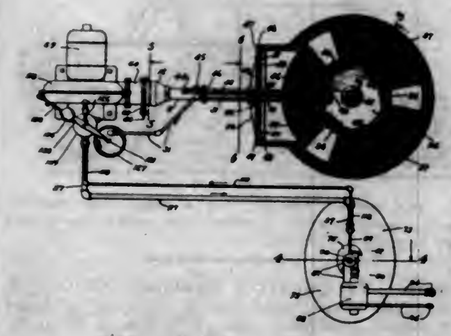
1. A connector for a railway car coupler and its operating rod comprising two pairs of complementary members, each pair of complementary members pivotally connected by a pin to move opposite each other to form a closed eye, said pin also pivotally connecting said pairs of members together, and means for detachably securing each pair of said complementary members in the position of a closed eye, said members each provided with a plurality of holes arranged to be aligned with the holes in the other members to accommodate the pin so as to vary the length of the connector.

1,636,166. END WALL FOR RAILWAY CARS. CHARLES DAVID BONSALL, New Kensington, Pa., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 12, 1926. Serial No. 141,200. 5 Claims. (Cl. 105—410.)



1. An end wall for a railway car comprising two metallic plates, each formed with a body, a web, and a flange, the flange of each plate secured to the body of the other plate with a space between said webs.

1,636,167. TURRET TOOL POST. MILAN BOZSIN, Cleveland, Ohio. Filed June 15, 1923. Serial No. 645,588. 2 Claims. (Cl. 29—49.)

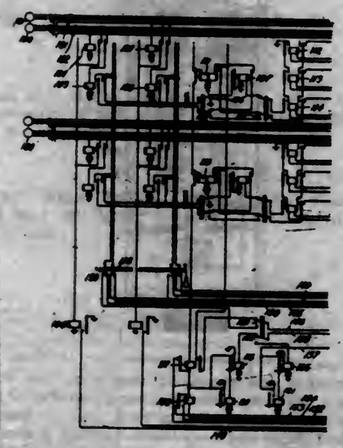


1. A turret tool post, comprising a spindle having a head for attachment to a lathe rest, a sleeve surrounding said spindle and having a flanged base adapted to engage said lathe rest, a nut threaded upon said spindle for engagement with said sleeve, whereby the flanged base of said sleeve may be firmly clamped against said lathe rest, a tool head surrounding said sleeve and overlying the flanged base thereof, said tool head being provided with tool holding means, operating means for said tool head threaded to said sleeve, means for operatively connecting said tool head with said operating means, whereby rotary movement of said operating means relative to said sleeve effects longitudinal movement of said tool head relative to said sleeve, said connecting means being provided with flanges for interlocking engagement with a flange of said tool head and a flange of said operating means, the flanged base of said sleeve being provided with a series of recesses, and spring pressed members associated with said tool head and adapted for cooperation with the recesses of the flanged base of said sleeve.

1,636,168. SAND-CUTTING MACHINE. OSCAR A. BUTTERFIELD, Battle Creek, Mich. Filed Feb. 9, 1925. Serial No. 7,974. 11 Claims. (Cl. 259—144.)

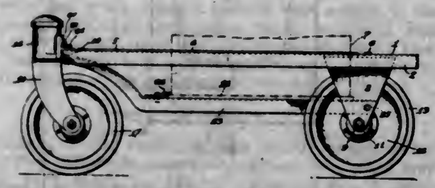
1. In a sand-cutting machine, the combination with a frame having supporting wheels on both sides thereof adapted to hold said frame uniform in distance from the path over which it is moved, adjustable brackets suspended from said frame between said wheels, a sand-cutting cylinder journaled in said brackets and between the axes of said wheels, means to rotate said cylinder, means to guide the movements of said machine, a hood carrier by said frame over said cylinder adapted to gather the sand into a sloping-sided ridge at the rear of the machine as said machine is moved over a floor of sand.

1,636,169. LIQUID-FUEL HEATING APPARATUS. CHARLES H. CHALMERS, Minneapolis, Minn. Filed Aug. 4, 1922. Serial No. 579,671. 3 Claims. (Cl. 158—28.)



1. In a liquid fuel heating apparatus, the combination of a fuel-spraying nozzle adapted upwardly to spray liquid fuel, a drip-pan surrounding said nozzle, a target adapted to be supported above said spray nozzle whereby the fuel may be sprayed upwardly thereagainst, a demountable auxiliary drip-collecting means extending upwardly and outwardly beyond the periphery of the drip-pan, and means demountably to secure said auxiliary means to the drip-pan.

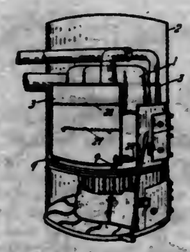
1,636,170. STEPPING MECHANISM. MERLE PEABODY CHAPLIN, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 5, 1924. Serial No. 730,178. 6 Claims. (Cl. 179—27.5.)



1. In a stepping mechanism, a device responsive to impulses, a driven member operated thereby, a stepping magnet, a driven member operated thereby, means for mechanically inter-relating the two driven members aforesaid, means for supplying impulses to the impulse responsive device whereby it is operated and its driven member is set, means responsive to the movement of the driven member last mentioned, whereby the stepping magnet is operated and its driven member is caused to be stepped until the inter-relation between the driven members is once more resumed.

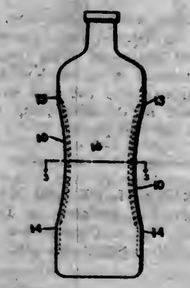
1,636,171. TELEPHONE-EXCHANGE SYSTEM. EDGAR H. CLARK, Richmond Hill, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1923. Serial No. 678,115. 5 Claims. (Cl. 179—18.)

1. In combination, a selective switch, a non-interfering master control circuit for controlling the operation of said selective switch, means for taking said master circuit out of service, and means for automatically operating the switch thereafter without the use of any non-interfering master circuit.



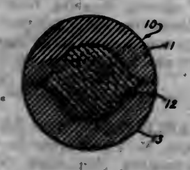
1,636,172. TRUCK. JOHN W. COATES, Detroit, Mich. Filed Oct. 5, 1925. Serial No. 60,470. 4 Claims. (Cl. 280—49.)

4. A set of rear wheels, a single front swivel wheel, a platform of greater width than the rear set of wheels and supported in a plane above all of said wheels, said platform having an opening, and supports converging from the rear wheels to the front wheel, said supports being in a plane between said platform and a plane passing through the axes of all of said wheels.



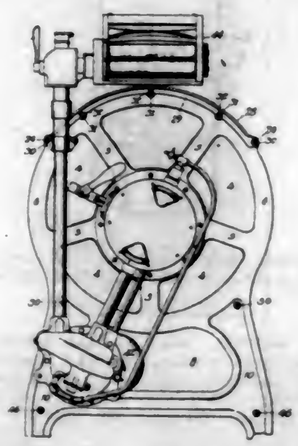
1,636,173. AUXILIARY HEATER FOR FURNACES. ERNST F. DIEHM, Akron, Ohio, assignor to XXth Century Heating and Ventilating Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 6, 1925. Serial No. 67,281. 4 Claims. (Cl. 126—116.)

1. An auxiliary gas heater for coal furnaces, which is arcuately shaped to fit between the main furnace and the casing, said heater comprising side and end walls, and a combined burner and base plate, the side walls converging upwardly, a baffle plate and a perforated



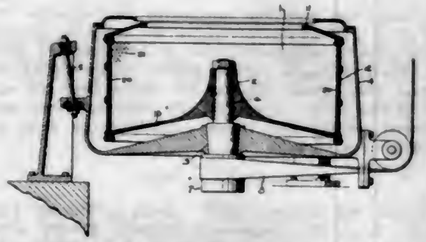
spreader located within the heater, and means to discharge the products of combustion from the top of the heater.

1,636,174. BOTTLE. JOHN R. DOLAN, Mount Vernon, N. Y., and JOHN P. SHEA, Greenwich, Conn., assignors to United Ammonia Company, Inc., Port Chester, N. Y., a Corporation of Delaware. Filed July 31, 1924. Serial No. 729,208. 1 Claim. (Cl. 215—1.)



A bottle for household use having two opposite concave sides and two substantially flat sides for pasting labels thereon, depressed areas in the concaved sides and closely arranged vertical parallel ridges within the concave sides whose tops are not higher than the surface of the bottle surrounding the depressed area, said concaved portion and ridges cooperating to form an antislipping hand hold.

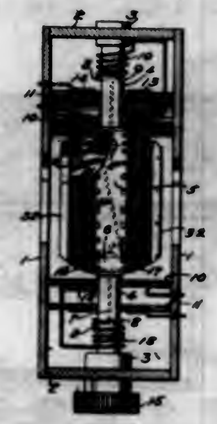
1,636,175. SOLDERING UNIT. JOSEPH WILLIAM FAY, Villa Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1924. Serial No. 731,179. 1 Claim. (Cl. 113—110.)



A spherical soldering pellet comprising a substantially spherical core of fluxing material, and a spherical shell of solder completely sealing the core of fluxing material therein and presenting a smooth outer surface.

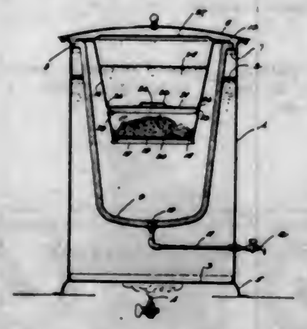
1,636,176. WASHING-MACHINE CASING. ALVA J. FISHER, Evanston, Ill., assignor to Hurley Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 17, 1919. Serial No. 338,511. 17 Claims. (Cl. 220—4.)

1. A stamped metal washing machine casing comprising a substantially cylindrical tub composed of a curved body plate and end plates of sheet metal, end frames of sheet metal detachably interlocked with the end plates and adapted to support said tub and means cooperating with the end frames for holding them in position and in connection with the end plates.



1,636,177. CENTRIFUGAL DRYING MACHINE. JOHN S. GAGE, Chicago, Ill., assignor to Tolhurst Machine Works, Troy, N. Y., a Corporation of New York. Filed Feb. 28, 1920. Serial No. 362,108. 8 Claims. (Cl. 210—76.)

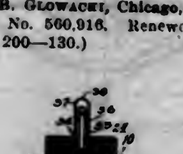
3. A centrifugal drying machine including in combination a rotating basket having a perforate vertical wall and a screen sheet therewithin of vulcanized material having perforations therethrough and projections on the back side thereof spacing it away from the basket wall and providing a circulating space for fluid passing through the perforations in the screen sheet and thence through the perforations in the basket wall.



1,636,178. VARIABLE INDUCTIVE DEVICE. JOHN O. GARGAN, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 23, 1921. Serial No. 524,370. 19 Claims. (Cl. 175—359.)

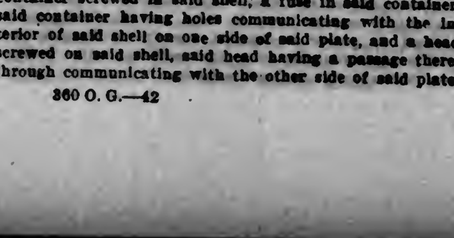
1. A method of making a support for the movable coil of an inductive device from a cylinder of insulating material which comprises slotting the end portions of the cylinder, deforming the end sections to constitute spaces for coil windings having ventilating openings, and maintaining the end portions deformed.

12. A support and a winding thereupon, said support comprising a cylindrical body portion, a plurality of finger-like projections extending from each edge of said body portion, said finger-like projections forming a somewhat rounded frusto-conical surface connected to each edge, said winding having turns wound upon said surface.



1,636,179. COFFEE URN. RICHARD S. GEHLERT, Detroit, Mich. Filed Apr. 4, 1925. Serial No. 20,668. 1 Claim. (Cl. 53—3.)

A coffee urn comprising a receptacle adapted to contain heated water, a vitreous coffee container suspended in said receptacle, a coffee holder suspended in said container, a strainer forming the bottom of said holder, a peripheral bead struck inwardly from the wall of said holder, spaced lugs formed on the inner wall of said holder and above said bead, a perforated partition adapted to rest on said bead, said partition having marginal notches adapted to pass said lugs.



1,636,180. POSITIONING DEVICE FOR RAILWAY-CAR COUPLERS. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 19, 1926. Serial No. 103,049. 3 Claims. (Cl. 213—21.)

1. In a railway car; the combination of a coupler support, a coupler carriage having means to restrict the lateral movement of the coupler relative thereto, a pair of rollers interposed therebetween having curved surfaces engaging, respectively said support and said carriage, the radius of each surface being greater than half the depth of the rollers, said support and said carriage, respectively,

provided with means which engage the rollers upon lateral movement of the coupler, and a link connecting the rollers for simultaneous movement.

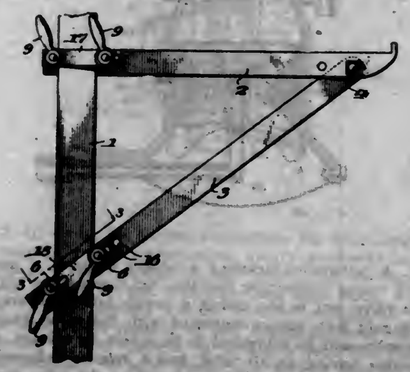
1,636,181. VISE. THOMAS GLASSEY, Red Bank, N. J. Filed Sept. 20, 1926. Serial No. 136,558. 5 Claims. (Cl. 81—36.)

1. A vise comprising a casing open at its top, a cover therefor, a stationary jaw at the forward end of the casing, a coacting movable jaw, a block slidably arranged within the casing, a rotatable shaft extending through the forward end of the casing, the inner end of the shaft extending through the block, means for securing the block against sliding movement on the shaft, the outer end of the shaft extending through the movable jaw, means for preventing the sliding movement of the last mentioned jaw on the shaft, a handle secured on the outer end of the shaft for actuating the same, ratchet teeth arranged on the bottom of the cover, a pawl carried by the block and cooperating with the ratchet teeth for securing the movable jaw in its adjusted position with respect to the stationary jaw, and cooperating means associated with the shaft and the pawl for disengaging the pawl from the ratchet teeth to permit the sliding movement of the shaft and the block, and movable jaw carried thereby.

1,636,182. FUSE PLUG, SCREW TYPE, WITH INDICATOR. JOHN B. GLOWACKI, Chicago, Ill. Filed May 15, 1922, Serial No. 560,916. Renewed Dec. 8, 1926. 4 Claims. (Cl. 200—130.)

1. A screw-threaded shell, a dished plate secured in one end thereof, said plate having holes therethrough, a fuse container screwed in said shell, a fuse in said container, said container having holes communicating with the interior of said shell on one side of said plate, and a head screwed on said shell, said head having a passage therethrough communicating with the other side of said plate.

1,636,183. VANITY BOX. FREDERICK GOERTZ, Newark, N. J., assignor to August Goertz & Co., a Corporation of New Jersey. Filed July 8, 1924. Serial No. 724,780. 5 Claims. (Cl. 132—83.)



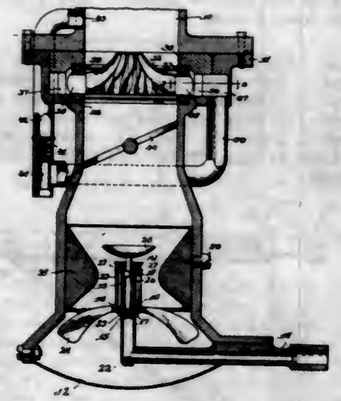
1. A vanity case comprising a partition-member, a band marginally encircling said member, a hinge-member secured to said band, and a pair of cover-members pivotally connected with said hinge-member, said cover-members being provided with right-angled closing flanges adapted to enter into closing engagement with the inner surface-portions of said band.

1,636,184. RECEPTACLE. FREDERICK GOERTZ, Maplewood, and WILLIAM E. WACKER, Newark, N. J., assignors to August Goertz and Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Oct. 8, 1925. Serial No. 61,208. 7 Claims. (Cl. 132—83.)

1. A receptacle comprising a pair of opposed concavo-convex container bodies, an intermediate member, means for interhinging said bodies and member together so that the former respectively close telescopically over the opposite sides of the latter, said intermediate member having an external annular bead upon opposite sides of which said containers are stopped when closed, and one container body having a catch element movable across the outer periphery of said intermediate member into engaged relation to the opposite container body to retain said parts in closed relation.

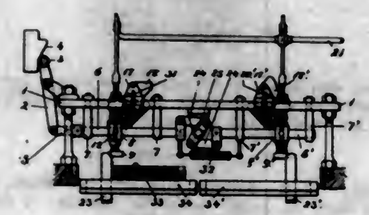
1,636,185. ADJUSTABLE POST BRACKET. JAMES R. GOODWIN, Evansville, Ind.; Percy E. Goodwin and Walter C. Goodwin, administrators of said James R. Goodwin, deceased, assignors to The Steel Scaffolding Company, Evansville, Ind., a Corporation of Indiana. Filed Feb. 13, 1924. Serial No. 692,574. 1 Claim. (Cl. 304—33.)

In a post bracket, the combination with an arm of angle-iron, of a brace therefor which is of angle-iron, and means for independently securing the arm and the brace



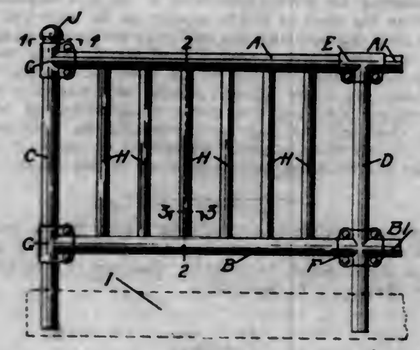
to a post, comprising in one instance J-shaped screw bolts whose shanks pass through one web of the brace and in the other instance J-shaped screw bolts whose shanks pass through one web of the arm, said screw bolts each having a hook at one end and a nut at the other end, the hooks snugly embracing a web of arm and brace and the shanks lying against the webs embraced by the hooks, and clamp plates through which the nut-carrying ends of the bolts pass.

1,636,186. COLLAPSIBLE RECEPTACLE. CHARLES A. HICKSON, Westfield, Mass., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 7, 1923. Serial No. 630,492. 4 Claims. (Cl. 150—49.)



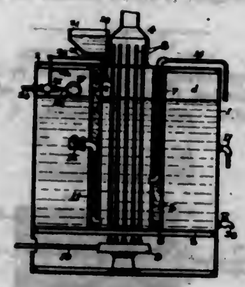
1. A collapsible receptacle composed of flexible material, pockets in the top and bottom edges of the receptacle, each pocket having an opening thereinto, a frame located in each of said pockets, each frame being composed of two members one of which is adapted to be slid into the pocket in one direction and the other is adapted to be slid into the pocket in another direction, and means for securing the adjacent ends of said members together after being slid within the pockets.

1,636,187. CARBURETOR. JOHANNES B. KESSEL, Chicago, Ill. Filed May 2, 1925. Serial No. 27,382. 3 Claims. (Cl. 261—89.)



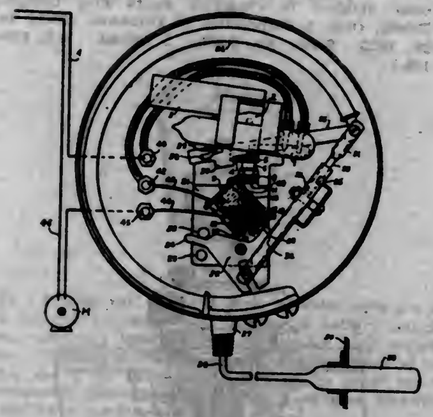
1. A carburetor including a mixing chamber, a needle valve casing discharging fuel into the chamber, an adjustable valve seat in the casing, a needle valve co-operating with said seat, means connected with the valve whereby the valve will be controlled in its action by suction, said chamber having an air inlet, and a spinner independent of the valve and rotatably supported by the valve casing, said spinner being operable by suction independently of the valve for causing a mixture of the air and fuel in the said chamber.

1,636,188. PRESS FEEDING. PATRIK WALDEMAR LARSSON and OSKAR EDVIN FORSBERG, Gottenborg, Sweden, assignors to Aktiebolaget Princeps, Gottenborg, Sweden, a Corporation of Sweden. Filed Jan. 5, 1925, Serial No. 477, and in Sweden July 7, 1924. 9 Claims. (Cl. 271—59.)



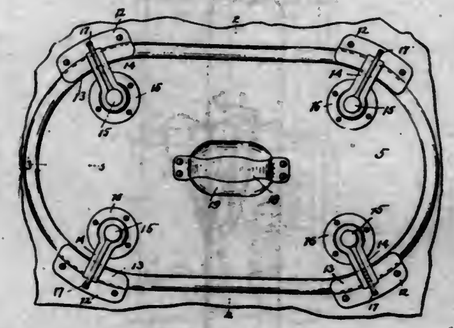
1. In automatic feeding apparatus for printing presses, a device for the lateral registering of the sheets consisting of a suction-foot in communication with a suction apparatus and mounted in a carrier on a longitudinally movable sliding bar adapted to be reciprocated by means operated from the driving mechanism of the press, a stop arranged in the path of the suction-foot so as to move same in the carrier transversely to the bar, and stationary rule at one end of the sheet.

1,636,189. PANEL FOR ANIMAL PENS. ROBERT B. LOUDEN, Fairfield, Iowa, assignor to The Louden Machinery Company, Fairfield, Iowa, a Corporation of Iowa. Filed Oct. 17, 1924. Serial No. 744,142. 3 Claims. (Cl. 256—24.)



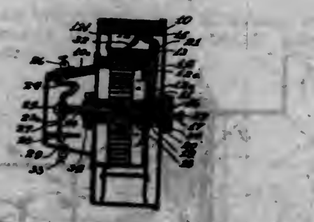
1. In ready made panels for animal pens, the combination of a pair of spaced apart longitudinally disposed tubular members having corresponding holes in the walls of their adjacent sides and a series of spaced apart transversely disposed fillers corresponding to the number of holes in the members, said fillers being of a diameter to tightly fill the holes in the members, the extreme ends of the fillers being tapered or beveled for easy initial entrance into the holes, and then being tightly pressed by power mechanism therein until their ends will be approximately in contact with the outer walls of said horizontally disposed members.

1,636,190. APPARATUS FOR WASHING VEHICLES. FRANK D. MAHONEY, San Anselmo, Calif. Filed July 30, 1925. Serial No. 47,019. 15 Claims. (Cl. 299—84.)



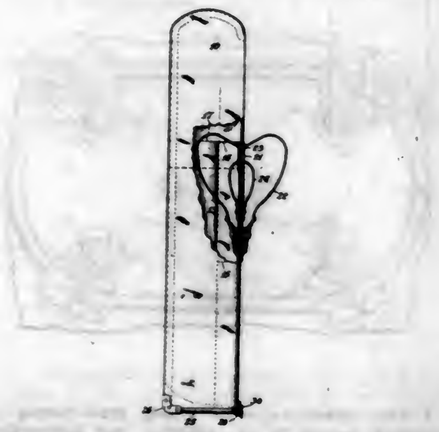
1. An apparatus for washing vehicles comprising, a plurality of liquid containers, a pump connected to the containers whereby liquid may be withdrawn from any or all of the containers and ejected under pressure, means connecting the containers whereby the same liquid levels may be maintained in all of the containers and means for automatically delivering a cleansing material to one of the containers.

1,636,191. PRESSURE-ACTUATED ELECTRIC CONTROL DEVICE. IRA E. MCCABE, Chicago, Ill. Filed Nov. 9, 1925. Serial No. 67,796. 5 Claims. (Cl. 200—122.)



1. In a pressure actuated electric control, an electric switch, means normally acting to hold the switch in open position, detachable means for holding the switch in closed position, an operating member therefor in circuit with the switch and operable by variations in current passing therethrough to release said switch holding means, an expansible and contractable member, means actuated thereby to cause variations in the current passing through the operating member of the switch holding means, and additional means operable thereby to mechanically detach said switch holding means.

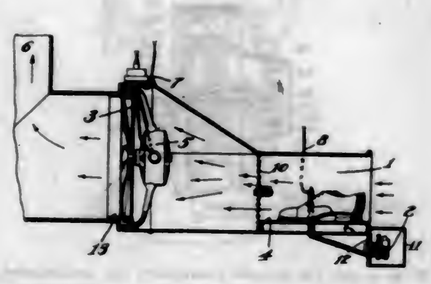
1,636,192. FLUID-TIGHT CLOSURE MEMBER FOR WASHER DRUMS. HARRY W. MITCHELL, Cleveland, Ohio, assignor to G. F. Mitchell & Son, a Partnership composed of George F. Mitchell, George R. Mitchell, and Harry W. Mitchell, Cleveland, Ohio. Filed June 11, 1924. Serial No. 719,290. 8 Claims. (Cl. 220—55.)



1. The combination of a washer drum having an elongated opening in its cylindrical wall intermediate the ends thereof, of a unitary closure member having a body portion adapted to fit in the opening and having a curvature corresponding to the curvature of the cylindrical wall, said cover having an inwardly offset marginal portion adapted to engage the interior of the drum around the edge of the opening, and a plurality of clamping members, each pivoted upon the outer side of the closure member adjacent the edge thereof and movable into and out of engagement with the wall of the drum adjacent the opening.

1,636,193. REEL FOR ELECTRIC CONDUCTORS. ALBERT E. F. MOORE, Chicago, Ill., assignor of one-third to J. M. Coughlin, Chicago, Ill. Filed Dec. 14, 1923. Serial No. 680,634. 20 Claims. (Cl. 200—153.)

3. In a reel for electric conductors, the combination of a support, a shaft mounted for rotary movement in said support, a reel carried by said shaft, two electric contacts carried by and insulated from said shaft, a first one of said contacts having threaded engagement with said shaft to be engaged by and disengaged from the second one of said contacts by motion of said first contact longitudinally of said shaft, and devices between said first contact and said support preventing rotary movement of said first contact, the second one of said contacts having a yielding element for engaging the first one of said contacts.

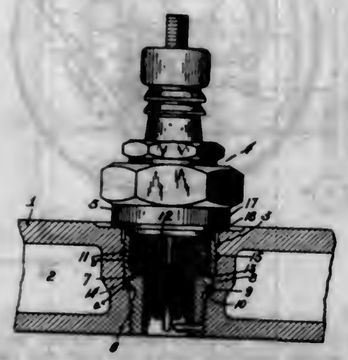


1,636,194. GOLF BAG. ROBERT THOMAS MULLINS, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed June 2, 1926. Serial No. 113,117. 9 Claims. (Cl. 150—1.5.)

1. A bag comprising a reversible body of flexible material and a slide actuated interlocking fastener adapted to secure edges of the body together in either position of the body.

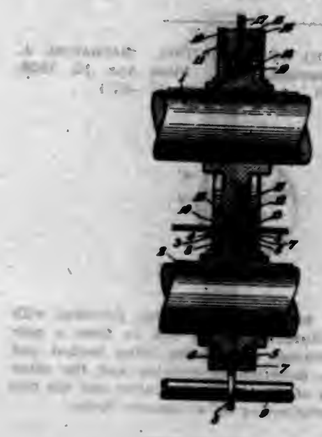
5. A bag comprising a reversible body of flexible material, a handle passing through a slot in the body and attached to antipodal parts of the body, and a shoulder strap passing through a slot in the body and attached to opposite parts of the body and surrounding the handle.

1,636,195. APPARATUS FOR DRYING SHOES. JOHN WILLIAM QUINN, Hull, Mass. Filed June 25, 1925. Serial No. 39,601. 1 Claim. (Cl. 34—26.)



An apparatus for drying shoes coated with a liquid, comprising a chamber adapted to receive the shoes, said chamber being opened at one end and communicating directly with the outer atmosphere, a screen at the other end of the shoe receiving chamber, a perforated support in said chamber for holding the shoe in spaced relation to the bottom of the chamber, an electric heating means mounted outside of the shoe chamber below the perforated shoe support and adjacent the opening to the chamber, a second chamber having one end communicating with the shoe chamber through the screen and the other end opening to the atmosphere and a suction fan in said second chamber whereby the air preheated outside the first chamber is drawn through the shoe chamber.

1,636,196. STEEL-WOOL BUFFER. WILLIAM H. ROBBINS, Springfield, Ohio, assignor to The Williams Company, London, Ohio, a Corporation of Ohio. Filed Mar. 25, 1926. Serial No. 97,429. 5 Claims. (Cl. 15—230.)



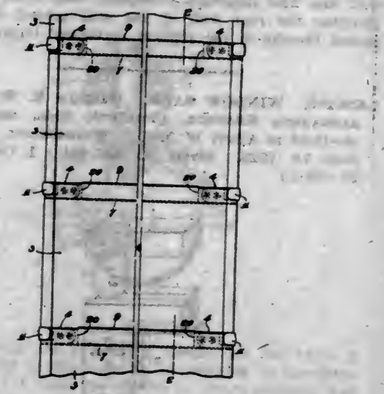
4. In combination, a buffer consisting of a layer of steel wool, a layer of retaining material, stitching to retain said wool and material to each other, said layers of retaining material and steel wool being wound into a roll, and stitching to prevent said roll from unwinding, said latter stitching being spaced at intervals throughout the roll and securing the layers of one winding to the layers of another winding, of means to support and actuate said buffer, means on said support to engage said buffer at one end, and means to adjustably mount said engaging means on said supporting means.

1,636,197. SPARK PLUG. OTTO C. ROHDE, Toledo, Ohio, assignor to Champion Spark Plug Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1925. Serial No. 5,355. 2 Claims. (Cl. 123—169.)

1. In combination a cylinder having a spark plug receiving opening therein with two longitudinally spaced gasket seats, and a spark plug for mounting in said opening having two seats complemental to the cylinder opening seats and either or both adapted to have gasket seating contact with the corresponding seat of the opening.

1,636,198. SLOTTING AND SCORING MACHINE. LOUIS H. SCHROEDER, Woodhaven, N. Y., assignor to Progressive Corrugated Paper Machinery Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 5, 1926. Serial No. 146,310. 11 Claims. (Cl. 93—58.)

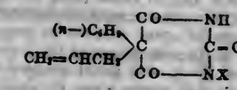
6. A rotary male slotting head having a sectional scoring member and supporting means for the sections permitting relative angular adjustment therebetween, and slotting blades overlying the scoring member which are respectively fixed to the respective sections as regards angular movement.



1,636,199. SANITARY MILK-PAIL COVER. CHARLES M. STEMEN, Johnstown, Ohio. Filed Dec. 30, 1925. Serial No. 78,285. 1 Claim. (Cl. 31—51.)

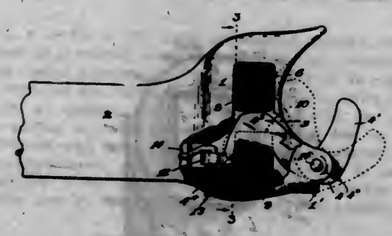
In a milking pail having a cover provided with a convex top and the usual inlet opening, a unitary attachment removably mounted in said opening, said attachment comprising a collar to fit said opening having at its upper end a lip and a shield, and at its lower end a downwardly dished annulus having a strainer attached to the lower end thereof.

1,636,200. SHUTTER OR DOOR. HENRY M. VETTERLEIN, Philadelphia, Pa., assignor of one-half to Henry Penn Burke, Philadelphia, Pa. Filed Aug. 30, 1926. Serial No. 132,429. 9 Claims. (Cl. 189—60.)



1. In a shutter or door, a plate having a down turned flange on its upper end providing a hook, a second plate having an upturned flange on its lower end providing a hook adapted to be raised into and lowered from the hook to the first named plate, and connecting blocks secured to the respective sides of the second named plate and having horizontally disposed hooks embracing the lateral edge portions of the first named plate, said blocks having parts extending in spaced relation to the body of the second named plate and providing cavities between

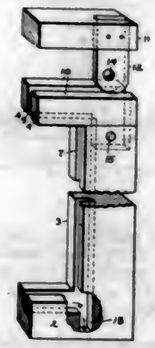
them and the second named plate, and a third plate having parts providing horizontally disposed hooks embracing the lateral edge portions of the second named plate and being constructed to enter said cavities when the second named plate is raised.



1,636,201. BARBITURIC-ACID DERIVATIVE. ERNEST H. VOLWILER, Highland Park, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a Corporation of Illinois. Filed July 16, 1926. Serial No. 123,011. 2 Claims. (Cl. 260—33.)

1. As new articles of manufacture, the barbituric acid derivatives

where X represents hydrogen, a metallic element, or an organic base.



1,636,202. CAR COUPLING. JOHN H. TAYLOR, Peoria, Ill. Filed May 15, 1925. Serial No. 30,413. 2 Claims. (Cl. 213—122.)

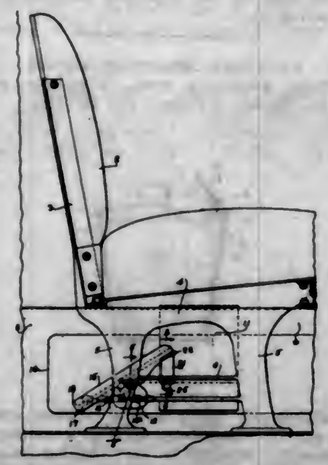
1. In a coupler, a coupler-head including its usual open front cavity, there being a second cavity extending down through the top of the coupler-head opening into the first said cavity, a knuckle mounted in the head whose tail is adapted to swing through the said first cavity into the second said cavity, an inverted substantially flat U-shaped locking member rigid throughout slidable vertically in the said second cavity, the vertical walls of the

latter engaging one of the extensions of the member at its front and rear sides, the tail of the knuckle adapted to engage behind part of the rear surface of the said extension, the other of the extensions engaging behind the tail of the knuckle at the guard arm side of the knuckle holding the same in the described engagement with the first described extension, said other extension abutting the rear wall of the said second cavity and guided thereby in the vertical movement imparted to it.

1,636,203. WINDOW SASH. WILLIAM R. WILKES and ALEXANDER KENNEDY, Cleveland, Ohio, assignors of one-third to Albert W. McCoy, Williamsport, Pa. Filed June 14, 1923. Serial No. 645,424. 1 Claim. (Cl. 20—56.2.)

A window sash, comprising a grooved frame having a slotted cross piece at its top, adapted to removably receive and seat a sheet of glass, the upper ends of said side pieces of said frame being slotted additionally to a greater depth, a detachable reenforcing and covering guard rail for said slotted cross piece having depending metal tongues at its opposite ends corresponding in thickness to said sheet of glass adapted to extend into the slots in the top of the side pieces of the frame and below said slotted cross piece, said metal tongues forming continuations of said side pieces when in place, and screws extending horizontally through the slotted ends of said side pieces in detachable connection with said tongues.

1,636,204. FRUIT PRESS. ARTHUR WURDACK, Normandy, Mo. Filed July 1, 1925. Serial No. 40,812. 5 Claims. (Cl. 210—149.)



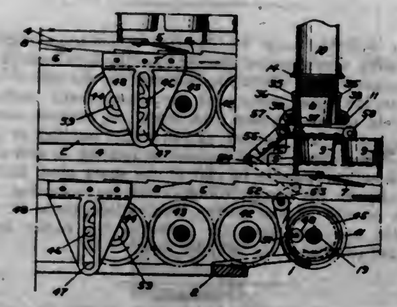
1. A machine of the character described comprising an enclosing receptacle, a rotary shaft extending longitudinally through the receptacle having a perforated side wall portion, a chamber attached to said shaft and arranged to contain the material from which juices are to be removed and having perforated side walls, a rubber in said receptacle and rotated with said chamber for agitating the materials passing from said chamber into said receptacle and arranged to scrape over said perforated wall portion, and springs pressing said rubbers toward the wall of said receptacle.

1,636,205. METHOD OF DREDGING. NATHANIEL A. YUILLE, San Francisco, Calif. Filed Apr. 12, 1926. Serial No. 101,231. 1 Claim. (Cl. 37—67.)

A rotary cutter for a suction dredge provided with fixed arms each bifurcated at its end to form a pair of sharp cutting blades, said blades being hooked and arched, one in the direction of rotation and the other in reverse direction of rotation of the cutter and the tips of the blades all terminating on a common circle.

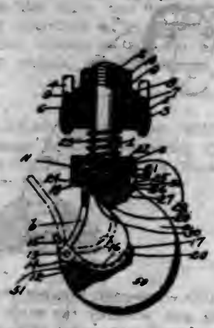
1,636,206. FOOT REST. FREDERIC W. BACON, New York, N. Y. Filed Oct. 23, 1926. Serial No. 143,584. 3 Claims. (Cl. 155—165.)

2. In a foot rest, an angle bar, supporting members adjacent said angle bar, a plate constituting the foot rest proper, trunnions carried by said plate and removably mounted in said supporting members, and a hinge connecting said plate to said angle bar.



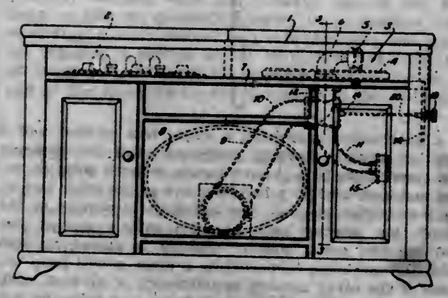
1,636,207. WRITING INSTRUMENT. ALBERT B. W. BARTHOLOMEW, Montreal, Quebec, Canada. Filed June 16, 1923. Serial No. 645,890. 9 Claims. (Cl. 120—18.)

1. In a mechanical pencil having a passageway for leads, a longitudinally movable element for propelling leads in said passageway, and rotary means operatively connected to the said element, said rotary means being constructed and arranged to be rotated in one direction and when so rotated to successively move the said element towards and away from the writing point without the aid of extraneous means.



7. In a mechanical pencil, a cylindrical magazine divided longitudinally into a plurality of pockets each adapted to contain a marking unit and each having a discharge opening, and resilient means for exerting pressure upon each unit towards the discharge opening of its respective pocket independently of the other units.

1,636,208. RECEPTACLE-DEPOSITING MECHANISM. CHRISTIAN N. BERGMANN, Pittsburgh, Pa., assignor to Bergmann Packaging Machine Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 29, 1923. Serial No. 665,604. 8 Claims. (Cl. 226—95.)

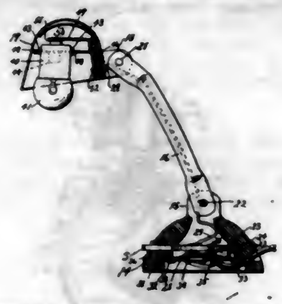


2. In apparatus for charging receptacles into carrying trays, the combination of a supporting frame having a trackway, a receptacle tray having longitudinally spaced pockets, means for intermittently moving the tray one space, a superimposed receptacle reservoir, means for detaching a receptacle therefrom for deposit in a registering pocket, and means controlled by the tray for actuating the detaching means.

1,636,209. HOOK. JOHN BERGSTEN, Redondo Beach, Calif., assignor, by mesne assignments, to Standard Machine Company, a Corporation of California. Filed Jan. 22, 1923, Serial No. 614,084. Renewed Nov. 22, 1924. 3 Claims. (Cl. 24—233.)

1. In combination, a hook, a closure for the hook, a member carried by the hook to be movable to operative position where it holds the closure in closed position, and a spring actuated plunger operating to hold the member in an inoperative position when the closure is open.

1,636,210. COMBINED PHONOGRAPH AND RADIO RECEIVING APPARATUS. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed June 30, 1924. Serial No. 723,116. 6 Claims. (Cl. 179—100.1.)



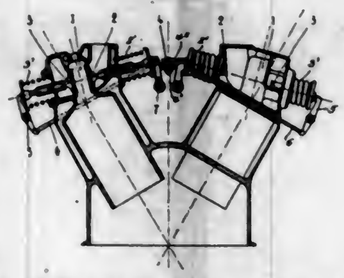
1. In a device of the class described, a tubular sleeve mounted in a cabinet, a phonograph tone arm connected to said sleeve, a neck connecting said sleeve to an amplifying horn, an arm connecting said sleeve to a radio loud speaker, a tubular valve revolubly mounted in said sleeve having a circular opening in one end and in one side thereof, and means connected to the closed end of said valve whereby said valve may be revolved to make the opening in the side coincide with either the arm or the tone arm to complete a passage to said amplifying horn.

1,636,211. ELECTRIC LAMP FOR RADIOS. CARL BRAMMING, Chicago, Ill., assignor to Accessories Manufacturing Company, a Corporation of Illinois. Filed July 30, 1925. Serial No. 46,936. 4 Claims. (Cl. 240—4.)

1. In an electric lamp, a base, an electric switch in said base for opening and closing the circuit to said lamp, a rigid arm pivoted to said base, a hood pivoted to

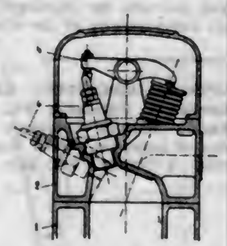
said arm, a lamp socket in said hood, said socket being provided with two contact members, a conductor leading from said base through said arm to one of said contact

members, a metallic connection between the other contact member and said arm whereby the same will constitute a return conductor from said socket to said switch.



1,636,212. MARCEL HAIR WAVER. HUGO BROWNE, Los Angeles, Calif. Filed Feb. 14, 1923. Serial No. 619,066. 1 Claim. (Cl. 132—32.)

A hair waver comprising a single tine member and a two-tine member pivotally connected, each tine tapering and terminating in a sharp laterally directed point at one end and connected to a handle shank at the other end by an intermediate portion, the intermediate portion of the single tine member being provided with a slanted slot and the two prong member adapted to extend through said slot and being connected by a pivot spaced from the tines of the other member one-sixteenth of an inch, each tine being one-fourth inch in diameter and being formed of lateral curves consisting of concave and convex bends or sections merged into each other; and the convex and concave curves or bends merging into each other, the sides of the two outer tines terminating in parallel planes and the single or inner tine when viewed from its edge appearing to be between two parallel flat planes, the members being so constructed and pivoted together that when the waver is closed the single tine extends between and projects beyond the plane of the two tines and is oblique to such plane so that when the single tine is inserted between the scalp and the hair to be waved, and the waver is closed upon the hair raised by the single tine, the waved edges of the two tines bend the hair over and upon the waved edges of the single tine.



1,636,213. VALVE GEAR FOR EXPLOSION ENGINES. GIULIO CESARE CAPPA, Turin, Italy. Filed Feb. 13, 1925, Serial No. 8,904, and in Italy Feb. 23, 1924. 1 Claim. (Cl. 123—55.)

An internal combustion engine of the V-type comprising oppositely inclined cylinders arranged in pairs each having a combustion chamber forming a head extension thereof that with respect to the cylinder axis is less inclined than the corresponding cylinder, oppositely arranged suction and outlet valves opening into each combustion chamber at right-angles to the axis of the latter and alined with regard to each other so that the axes of the valves of each pair of cylinders meet in a plane of symmetry, a cam shaft adjacent said plane, a cam on the

shaft for directly engaging the stems of the valves situated on the inner side of each pair of cylinders, rocker arms on the outer side of said cylinders engaging the stems of the valves on said outer side, push rods passing through the cylinder heads operatively connected to the rocker arms, tappets connected to the inner ends of said rods, and a cam on said shaft adapted to actuate the tappets.

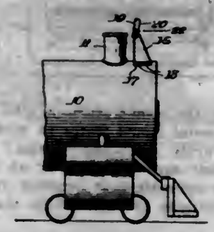
1,636,214. HEAD FOR EXPLOSION ENGINES. GIULIO CESARE CAPPA, Turin, Italy. Filed Apr. 22, 1925, Serial No. 25,079, and in Italy May 20, 1924. 2 Claims. (Cl. 123—191.)

1. A cylinder head for internal combustion engines comprising a combustion chamber having a substantially pentagonal form, a spark-plug mounted on one side of the head in the upper portion of the chamber and inclined relatively to the cylinder axis, inlet and exhaust valves in the top of the chamber and arranged parallel to one another in a single plane, inclined in relation to said axis in a direction opposite to that of the spark plug, and in proximity to the latter, rocker arms for actuating the valves pivoted in the middle longitudinal plane of the cylinder, and push rods for actuating the rocker arms arranged parallel to the cylinder axis.

1,636,215. DISPENSING CAP FOR BOTTLES. CONWAY W. COOKE, Washington, D. C., assignor of one-half to Walter M. MacNichol, Washington, D. C. Filed Aug. 6, 1926. Serial No. 127,636. 1 Claim. (Cl. 215—38.)

A cap for charged-beverage bottles of the type having a top peripheral bead, said cap comprising depending opposed gripping means, said gripping means being engageable under opposite portions of said bead upon forced movement of said cap substantially parallel to the bead, whereby said cap is retainable in operative relation to

said bottom against the force of pressure developed therein, an apertured compressible washer in said cap compressed upon application of the cap to the bottle to form an air-tight joint between the two, and manually operable valved dispensing means in connection with said

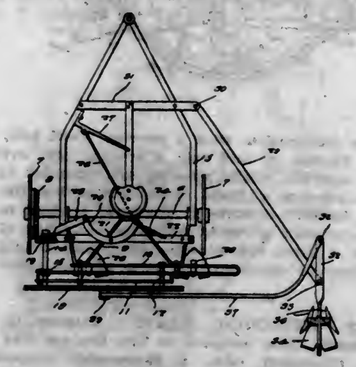


cap and adapted to communicate with the interior of the bottle through said apertured washer, said gripping means releasing said bead and said cap being entirely separable from the bottle upon a forced movement similar to said engaging movement.

1,636,216. PUZZLE. GEORGE VAN DUYN CORNELL, Boundbrook, N. J. Filed Aug. 3, 1926. Serial No. 126,768. 3 Claims. (Cl. 273—153.)

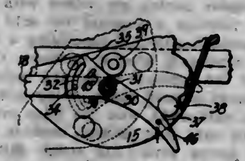
1. A puzzle device comprising a cup-shaped casing of unitary construction, the upper ends of the walls of the casing having a beaded rim, a transparent panel secured within the rim of said casing, a tubular member provided at one end with projecting prongs adapted to be passed through apertures in the bottom of the casing, and crimped onto the lower face of said bottom to couple said tubular member with the casing and support the same within the chamber thereof, and a plurality of members movably disposed in the chamber of the casing and adapted to be placed in said tubular member in the solution of the puzzle.

1,636,217. SMOKE DEFLECTOR. WILLIAM C. CRIST, Blue Island, Ill. Filed Mar. 5, 1927. Serial No. 173,150. 9 Claims. (Cl. 110—145.)



1. A smoke deflector comprising in combination, a stationary plate and means for securing the plate to a locomotive in front of the smoke stack, the said member having wings formed at each side thereof whereby a channel is formed at the front of the smoke deflector.

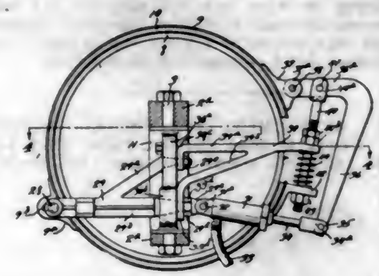
1,636,218. METHOD OF TREATING VENEERS. ALFRED A. DENNIS, Grand Rapids, Mich. Filed Apr. 6, 1925. Serial No. 21,212. 9 Claims. (Cl. 144—309.)



1. The method of treating veneers which consists in gluing together a commercially dry face and backing veneer, drying the same, and then subjecting the same to a redrying operation to thereby completely contract and shrink said veneers to a point beyond which they cannot further shrink, substantially as described.

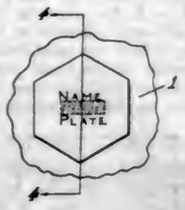
1,636,219. ATTACHMENT FOR SHOVEL CULTIVATORS. PIERRE E. DION, Gardena, Calif. Filed Aug. 30, 1926. Serial No. 132,604. 3 Claims. (Cl. 97—44.)

1. An attachment of the class described, including a beam, a cultivator implement on one end of the beam, a second beam having one end thereof pivotally engaged with an intermediate portion of the first beam, a link pivotally engaged with the forward end of the first beam, a pair of sprockets adapted to be mounted on a cultivator, a chain trained over said sprockets, and means for engaging a portion of the chain with the other end of the link, and means for imparting rotary motion to one of the sprockets on the movement of the cultivator.



1,636,220. SELECTIVE DUMPING DEVICE FOR BUCKET CONVEYERS. WILLIAM R. EDDINGTON, Morgan, Utah, assignor of one-half to The Morgan Canning Company, Morgan, Utah, a Corporation of Utah. Filed Aug. 5, 1924. Serial No. 730,279. 12 Claims. (Cl. 198—140.)

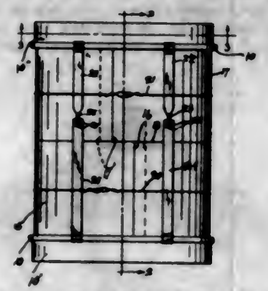
2. In combination with a traveling conveyer having carrying units arranged to engage a spilling device, an oscillating cam positioned along the path of said units, means for actuating said cam by a passing unit, and means whereby the said actuation of the cam shall cause said units to engage the said spilling mechanism.



11. A traveling conveyer, having swinging buckets, an oscillating cam arranged in proximity to the path of the buckets, means for limiting the extent of oscillation of the cam, and means for placing the cam normally in any one of several positions to cause any one of the effects named following: to tilt every bucket passing a certain point, to tilt every other bucket passing a certain point, to tilt none of the buckets passing a certain point.

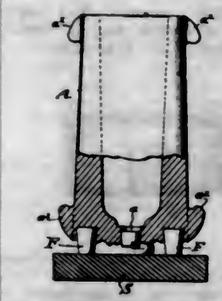
1,636,221. BRAKE SUPPORTING AND OPERATING MECHANISM. ALVIN S. FISHEL, Cleveland, Ohio. Filed Dec. 5, 1923. Serial No. 678,665. 7 Claims. (Cl. 188—152.)

1. The combination, with a steering wheel axle, of a steering knuckle on said axle, a steering arm having a pair of branches, means securing said branches to said steering knuckle, a brake drum surrounding the said steering knuckle, a brake in operative relation to said drum, a cylinder pivotally supported from one of said branches, a piston rod extending from said cylinder, and connections for operating said brake by said piston rod.



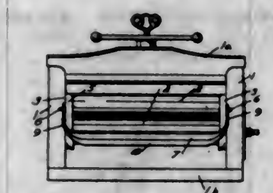
1,636,222. ATTACHING MEANS. MILROAD G. FOX, Cincinnati, Ohio, assignor to The Gustave Fox Company, Cincinnati, Ohio, a Partnership composed of Leonard J. Fox and Milford G. Fox, Cincinnati, Ohio. Filed Nov. 9, 1926. Serial No. 147,333. 2 Claims. (Cl. 40—20.)

1. An attaching device for a member to be attached to another member having an orifice with two lateral opposed walls forming a support for said first named member, said attaching device comprising a coiled spring having loops of slightly greater diameter than the distance apart of the opposed walls, the outer peripheral edges of the loops of said spring being adapted to frictionally engage said walls, and the loops being individually secured to said first named member whereby insertion of the spring within the orifice will tension the loops out of round, which will form a firm frictional engagement regardless of longitudinal compression of said spring.



1,636,223. COLLAPSIBLE PACKING CASE. BERTRAND B. FREEMAN, Pontiac, Mich. Filed Aug. 9, 1924. Serial No. 731,107. 3 Claims. (Cl. 229—47.)

1. A container of the class described comprising a pair of heads and body forming portions adapted for loose engagement in said heads, the edges of said body forming portions being overlapped, said heads being provided with a circumferentially formed groove for the reception of the end of each of said body forming portions, said groove being enlarged at the point of overlapping of said edges; a filler adapted for engagement in said body forming portions, the end edges of said filler being adapted for normally engaging the inner surface of said heads,



and means for connecting said heads together for retaining said body forming portions and said filler in operative relation.

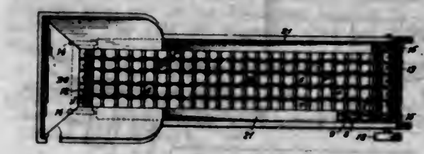
1,636,224. INGOT MOLD. EMIL GATHMANN, Baltimore, Md. Filed Mar. 5, 1926. Serial No. 92,498. 1 Claim. (Cl. 22—139.)

An ingot mold having supporting feet projecting from the lower portion of the mold and the upper portions of which extend into the bottom of the mold and are held therein by the metal of the mold which is cast around their upper ends.

1,636,225. WRINGER. VINCENT GEHRLEIN, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1926. Serial No. 141,279. 2 Claims. (Cl. 68—32.)

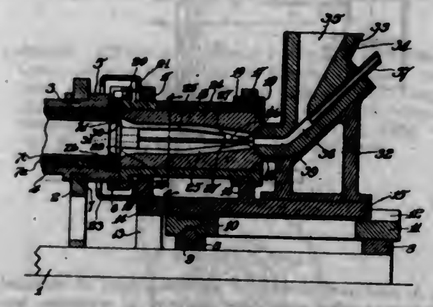
1. In a wringer, the combination of side stiles; rolls mounted therein; metal guard plates at each end of the rolls having outwardly extending pintles; and a rest plate having resilient ends extending at an angle to the rest plate and in approximately parallel relation, said ends having perforations through which the pintles extend.

1,636,226. WRINGER. VINCENT GEHRLEIN, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1926. Serial No. 141,281. 3 Claims. (Cl. 68—32.)



1. In a wringer, the combination of a frame comprising side stiles and a base, said base having slotted openings;

rolls in the frame; a drip board with feet on the base and having slots registering with the slots in the base;

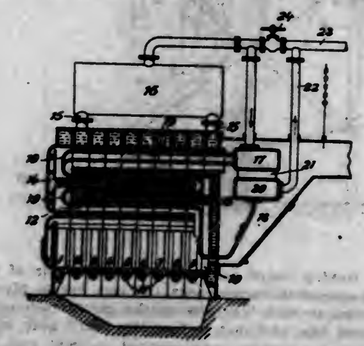


bolts having heads insertable through the slots in the base and movable into the slots in the feet; and nuts on the bolts adapted to clamp the feet on the base.

1,636,227. SIZING MACHINE FOR FRUITS AND VEGETABLES. JOHN D. GRABILL, Woodstock, Va. Filed Sept. 13, 1926. Serial No. 135,164. 5 Claims. (Cl. 209—400.)

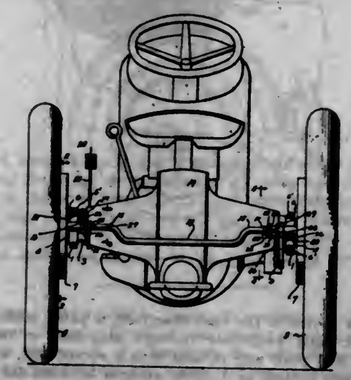
1. In a fruit and vegetable sizing machine, an endless sizing chain, a pair of supporting rolls for the chain, each roll having a pair of sprocket wheels fixedly secured thereto at the ends thereof, and the roll at the delivery end of the chain having a substantially smooth outer face, said chain comprising rigid transverse rod members, series of intermediate longitudinal link members pivotally connected therewith and spaced to provide grading openings of similar size, and a set of outer longitudinal link members pivotally connected with the outer end portions of the transverse rod members at either end thereof, said outer longitudinal link members being spaced from the outermost of the first mentioned series of longitudinal link members to cooperate therewith and with the end portions of said transverse rod members to constitute side sprocket chain portions to engage the said pairs of sprocket wheels.

1,636,228. CENTRIFUGAL CASTING OR COATING SYSTEM. ARTHUR W. GRAY, Milford, Del. Filed June 6, 1925. Serial No. 35,301. 29 Claims. (Cl. 22—65.)



25. Centrifugal casting apparatus comprising a rotating mold, a rotating conduit whose interior surface forms a path diverging and then converging in one direction, means for passing molten material through said conduit in said one direction, and means in the region of said diverging-converging passage of the conduit for preventing passage of impurities into said mold.

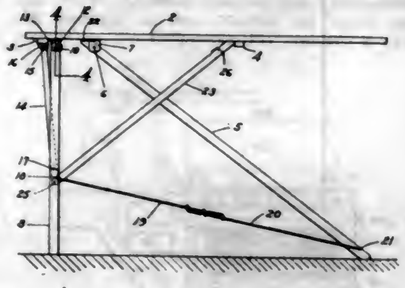
1,636,229. MANUFACTURE OF ALKALI METAL XANTHATES. WILHELM HIRSCHKIND, Antioch, Calif., assignor to Great Western Electro Chemical Company, San Francisco, Calif., a Corporation of California. Filed Nov. 3, 1925. Serial No. 66,686. 7 Claims. (Cl. 260—106.)



1. A process for producing alkali metal xanthates which comprises reacting alcohol, carbon bisulphide, and an alkali metal hydroxide in the presence of a chlorinated hydrocarbon in a catalytic amount.

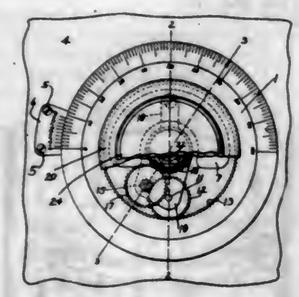
1,636,230. STEAM SUPERHEATER OF LOW-PRESSURE SECTIONAL BOILERS. WALTER HÖNTSCH, Niedersedlitz, near Dresden, Germany. Filed May 12, 1926, Serial No. 108,477, and in Germany May 5, 1924. 2 Claims. (Cl. 122—460.)

1. In a low pressure sectional boiler having a steam collector and a zig-zag gas pass communicating at one end with the flue and at the other end with the combustion chamber, a steam superheater comprising correspondingly shaped zig-zag tubes extending longitudinally in the gas pass and connected at their ends adjacent the flue with said steam collector and communicating at their other ends with a steam delivery pipe, whereby the flow of steam in said superheater is counter to the flow of heating gases.



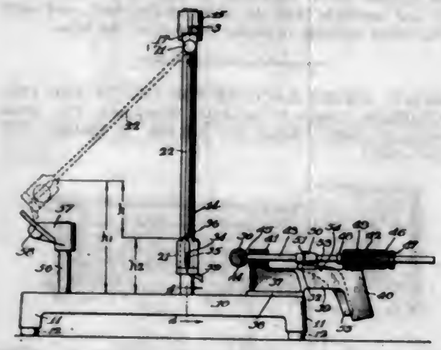
1,636,231. BRAKE ATTACHMENT FOR TRACTORS. IRVING H. JUDD, Detroit, Mich., assignor to Whitehead & Kales Company, Detroit, Mich., a Corporation of Michigan. Filed June 18, 1923. Serial No. 646,217. 5 Claims. (Cl. 188—78.)

5. The combination with a pair of axially aligned vehicle wheels, of brake drums carried by said wheels, an axle housing arranged between said wheels, a detach-



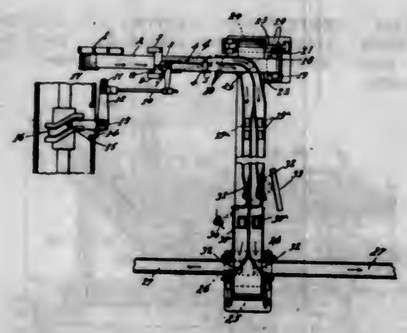
able member surrounding said axle having a rearwardly extending projection, braking elements frictionally engageable with said drums, a rock shaft journalled in said projection exercising control of both of said braking elements, and means for rocking said shaft including a lever having a portion extending beneath said axle housing and operatively connected to said shaft.

1,636,232. IRONING BOARD. JOHN E. KALGREN, Minneapolis, Minn., assignor to J. R. Clark Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 5, 1922. Serial No. 566,028. 3 Claims. (Cl. 68—10.)



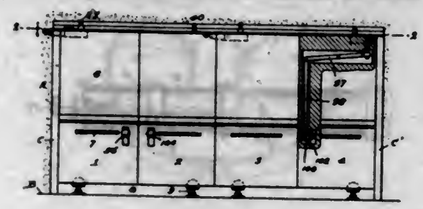
1. An ironing board comprising a top, a pair of legs pivotally connected thereto near one end, braces pivotally connected to said top between the pivotal connection of said end legs and that end of the board near which said legs are connected and secured to said end legs at points remote from their pivotal connections, and having offset end portions near their connections with said end legs, a center leg pivotally connected at one end to said top, means connecting the offset end portions of said braces with the lower end of said center leg, brace bars having pivotal connections with the offset end portions of said braces and having at their upper ends a bearing on the under side of said top.

1,636,233. VERNIER DIAL. HENRY J. KASCH, Dayton, Ohio, assignor to The Kura-Kasch Company, South Broadway, near Dayton, Ohio, a Corporation of Ohio. Filed Jan. 26, 1925. Serial No. 4,789. 4 Claims. (Cl. 74—7.)



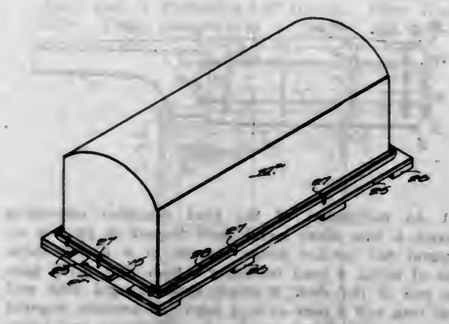
1. In a device of the type described, a panel containing a hole, a shaft projecting through said hole, a dial secured to said shaft and formed with a curved slot, a knob free to turn around said shaft, an arm between the knob and dial, means projecting loosely through the curved slot in the dial for securing one end of the arm to said panel, said dial having an offset toothed annular portion and the knob an outer toothed periphery, and a gear-train secured to the free end of said arm for operative connection between the toothed portions of the knob and dial, to turn the latter and through it the shaft when the knob is rotated.

1,636,234. EDUCATIONAL APPARATUS. PAUL E. KLOPSTEG, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1926. Serial No. 107,213. 9 Claims. (Cl. 35—16.)



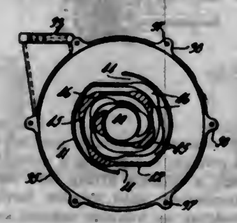
1. In apparatus of the class described, a ballistic pendulum including a massive bob suspended by a light rod having opposed tapered bearing sockets, a support, adjustable pivot bearings carried by the support and cooperating with the tapered bearing sockets, and a stop for limiting the adjustment of one of said pivot bearings.

1,636,235. SYSTEM FOR CONVEYING AND INSPECTING SOAP. HARVEY C. KNOWLES, Cincinnati, Ohio, assignor to The Procter and Gamble Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 17, 1925. Serial No. 16,237. 3 Claims. (Cl. 198—33.)



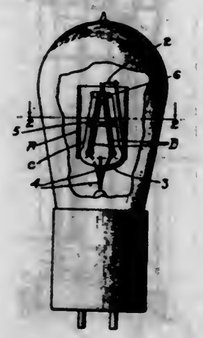
1. A conveyor system for conveying bars of stamped soap from a soap press to a plurality of wrapping machines comprising a movable endless belt adapted to receive the stamped bars from the press and a diverting device to separate the bars on the endless belt into a plurality of lines of bars on the belt and means of conveying each of the lines of bars to a wrapping machine and a mirror adapted to reflect the image of the opposite faces of the bars in the plurality of lines from one side of the belt.

1,636,236. WARDROBE. CHARLES H. KRAFT, Kansas City, Mo. Filed Mar. 10, 1926. Serial No. 93,654. 4 Claims. (Cl. 268—61.)



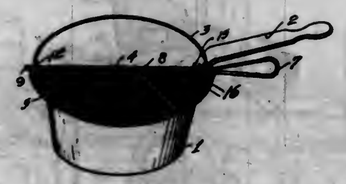
1. A wardrobe, a pair of doors thereto, manually controlled mechanism for swinging said doors in opposite directions when opening or closing the same, a keeper secured to the wardrobe, and a manually controlled bolt mounted upon one of the doors and adapted to engage said keeper and hold the doors in open and closed positions.

1,636,237. BURIAL CASKET. CECIL MASSEY, Litchfield, Ill. Filed July 2, 1925. Serial No. 41,190. 4 Claims. (Cl. 27—6.)



1. The combination with a body-receiving casket having side walls, a bottom, and reinforcing channel bars extending across the underside of the bottom, of a hood for enclosing the side walls, and latches for securing the hood in place, said latches having portions housed in the ends of the channel bars.

1,636,238. SILENCER. HIRAM PERCY MAXIM, Hartford, Conn., assignor to The Maxim Silencer Company, Hartford, Conn., a Corporation of Connecticut. Original application filed Mar. 23, 1922, Serial No. 546,126. Divided and this application filed Oct. 1, 1926. Serial No. 138,996. 4 Claims. (Cl. 137—160.)

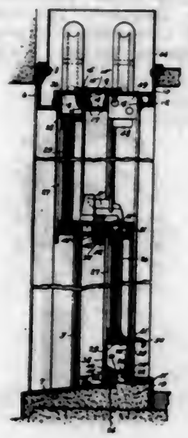


1. A silencer comprising, a cylindrical casing having a peripheral and an axial opening therein, a silencing conduit of spiral form within said casing extending between said openings, said conduit having a succession of contracting and expanding sections distributed throughout its length to form a series of Venturi-like passageways therein.

1,636,239. VACUUM TUBE. HERBERT E. METCALF, San Leandro, Calif., assignor to The Magnavox Company, Oakland, Calif., a Corporation of Arizona. Filed Oct. 13, 1924. Serial No. 734,389. 1 Claim. (Cl. 250—27.5.)

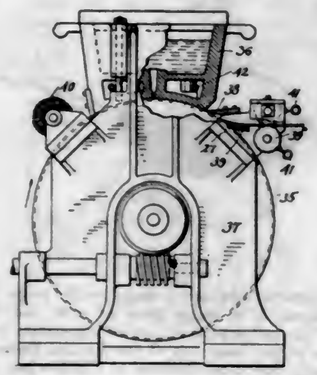
A radio vacuum tube of the character described having a plurality of electrodes therein, a V-shaped filament adjacent one of the electrodes, and a pair of elements extending between and dampening vibration of the two legs of the filament by touching the same between the ends thereof, one of the elements being adjacent the apex of the filament and touching one side of each leg thereof, and the other element being spaced therefrom and touching another side of each leg.

1,636,240. STRAINER. ESTHER E. PARTRIDGE, Spokane, Wash. Filed Dec. 4, 1926. Serial No. 152,593. 2 Claims. (Cl. 55—8.)



1. A reversible strainer of semi-circular shape having a binding frame of a single piece of wire and fashioned with an integral handle, a pair of oppositely projecting guide lugs at the outer end of the binding frame adapted for alternate use with the edge of a sauce pan, and one of said lugs being formed as the terminus of the wire.

1,636,241. WINDOW. JOHN POLACHEK, New York, JULIUS JAFFEE, Brooklyn, and EDMUND PREMMI, Elmhurst Manor, N. Y., assignors to John Polachek, doing business under the name of John Polachek Bronze & Iron Co., Long Island City, N. Y. Filed June 22, 1926. Serial No. 38,905. 16 Claims. (Cl. 189—72.)

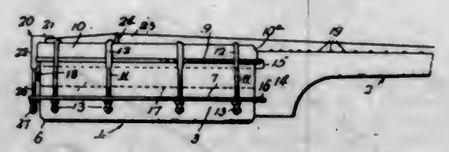


1. In a window construction, a window frame having side and top sections each including outer, intermediate

and inner members, said intermediate members being formed with a parting strip and a flange arranged along each side of said parting strip, and window sashes each

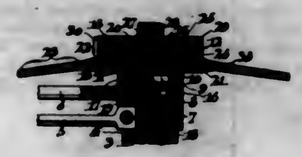
having flanges combining to form a groove for receiving one of the first named flanges, one of the flanges of each sash contacting a side of said parting strip.

1,636,242. APPARATUS FOR AND METHOD OF FORMING STORAGE-BATTERY GRIDS. JOHN PRACHAR, Cleveland, Ohio, assignor to The Haslett Storage Battery Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 3, 1921. Serial No. 434,495. 8 Claims. (Cl. 207—13.)



1. In an apparatus for forming storage battery grids, a rotary cylinder with the grid forming molds formed by grooves in its cylindrical surface, a stationary member having a cylindrical surface arranged adjacent to the cylindrical surface of the cylinder, means for supplying molten metal between the two cylindrical surfaces and into the molds, and means independent of the molds for stripping the molded grids from the cylinder.

1,636,243. PIPELAYING IMPLEMENT. ALBERT E. RASMUSSEN, Yakima, Wash., assignor of one-half to Arthur B. Fosseen, Spokane, Wash. Filed July 19, 1926. Serial No. 123,425. 6 Claims. (Cl. 25—1.)

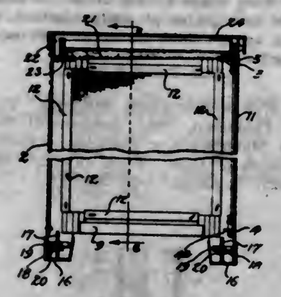


1. In an implement as described, a core having a pneumatic tube and inflating means therefor, and an expansible cushioning pad surrounding said core and tube.

1,636,244. BANJO AND THE LIKE. CARL H. RICHTER, Chicago, Ill., assignor to Richter Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1925. Serial No. 74,966. 6 Claims. (Cl. 84—269.)

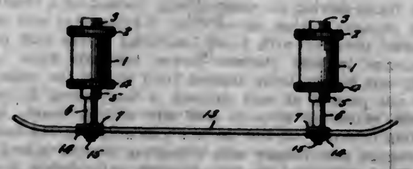
1. An instrument of the kind described embodying therein a thin sheet metal shell formed to provide an integral flat bracket flange thereon of a double thickness of metal, a head including a flesh ring, fitted upon one end of the shell, a strain hoop engaged with said flesh ring and a part of said head and brackets engaged with said strain hoop and flange respectively and means to adjusting said brackets.

1,636,245. CIRCUIT-CLOSING DEVICE. SAMUEL DAVIS ROBINS, Stamford, Conn. Filed Nov. 30, 1921. Serial No. 518,814. 6 Claims. (Cl. 200—59.)



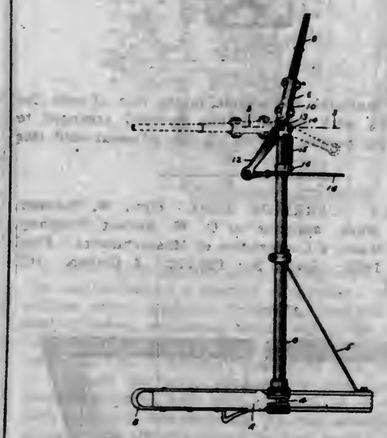
1. A circuit controlling device, for use with a steering wheel and its column, comprising a metallic sleeve having a lateral flange, a thimble fitting said sleeve with interposition of insulation, said thimble having an insulate core and embodying an annular contact surface, an actuating element including a cap piece and an annulus for cooperation with the underside of the lateral flange aforesaid, and a helical spring interposed between the insulate core and an axial offset of the cap piece.

1,636,246. NECKBAND SHAPER. ROCCO SACROMONE, Brooklyn, N. Y. Filed Feb. 23, 1926. Serial No. 89,957. 3 Claims. (Cl. 68—1.)



1. In a shirt ironing and shaping device, a curved resilient strip adapted to be sprung into the closed neck band of a shirt and to hold said neck band and adjacent portions of the shirt in position for ironing, said resilient strip having finger pieces to be grasped to contract the curved strip for insertion into or removal from the neck band and being twisted at the shoulder portions to shape the neck band to better effect.

1,636,247. KNOCKDOWN RADIATOR COVER. PAUL E. SCHLEICHER, Chicago, Ill., assignor to Schleicher, Inc., Gary, Ind., a Corporation of Illinois. Filed June 28, 1924. Serial No. 722,974. 3 Claims. (Cl. 237—79.)



1. In a radiator hood comprising a frame having a rear metal wall and a front strip having a supporting flange, U-shaped brackets supported from the back, a swingable suppert upon each bracket, and a water pan supported on said flange and said supports, said brackets spacing the water pan from the back to allow for air currents.

1,636,248. VEHICLE BUMPER. HENRY JOHN SCHUETTE, Quincy, Ill. Filed Feb. 10, 1925, Serial No. 8,247. Renewed May 2, 1927. 1 Claim. (Cl. 293—55.)

A vehicle bumper comprising bumper bars attached to a plunger member, a cylinder, a piston in the cylinder actuated by said plunger member, and means in the cylinder abutting the piston for absorbing shocks to said bumper bars, plunger and piston, said means comprising a rubber pad having radial perforations and a central bore.

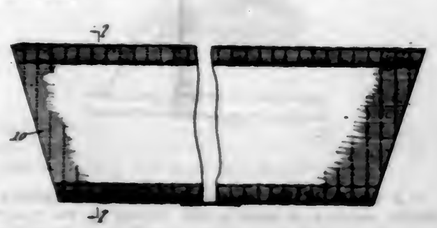
1,636,249. WHIP ACTUATOR. ELL SCOTT, Walnut Grove, Minn. Filed Jan. 7, 1927. Serial No. 159,608. 7 Claims. (Cl. 280—178.)

1. A device of the character described comprising a suitable support, a whip holder carried by the support, and cables for tilting and partly rotating the holder, said holder having downwardly projecting arms to which the cables are applied.

1,636,250. FIREPLACE DAMPER. JAMES SETCHFIELD, Portland, Oreg., assignor of one-half to Thomas J. Quirk, Portland, Oreg. Filed Feb. 26, 1927. Serial No. 171,191. 8 Claims. (Cl. 126—288.)

1. A fireplace damper comprising, a frame consisting of a basal web supporting a wall, said wall provided with a socket, a post adapted to be inserted in said socket, and a damper plate pivotally supported at its ends within the said wall.

1,636,251. RING BOX. JOHN M. SHIELDS, Chicago, Ill., assignor to F. H. Noble & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 2, 1925. Serial No. 66,160. 3 Claims. (Cl. 211—28.)

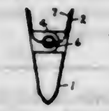


1. In a ring box, a support formed of sheet material fitting within the box body, the front edge of said support abutting the bottom of the front wall of the body

of the box and the rear wall abutting the bottom of the rear wall thereof and said support including inclined sections meeting at their top along a transverse line of

bend of the material, the section to the rear of said line being covered with textile lining material arranged to provide a ring pocket open at its top adjacent said line of bend.

1,636,252. CARRIAGE BODY. OTTO W. SIEBERT, Gardner, Mass., assignor to O. W. Siebert Company, Gardner, Mass., a Corporation of Massachusetts. Filed July 12, 1926. Serial No. 121,772. 4 Claims. (Cl. 296—31.)



1. An article of manufacture having a covering of woven fiber reed and comprising a frame member and a covering therefor formed from a single continuous sheet of woven fiber reed having one edge portion thereof secured to said frame member and having an opposite edge portion twice folded upon itself to conceal the unfinished edge of the fabric and to provide an entirely self-supporting edge structure effective to retain the adjacent portion of the covering in desired position.

1,636,253. PLASTIC-BLOCK-FORMING MACHINE. CHARLES K. SMITH, Fort Atkinson, Iowa. Filed Oct. 20, 1925. Serial No. 63,652. 2 Claims. (Cl. 25—41.)

2. A machine of the class described comprising a stand, a mold box mounted thereon, a core vertically movable through the bottom of said box adapted when raised therein to divide said box into two independent compartments and provided with a plurality of transverse slots for receiving tie rods, lifting handles connected to the ends of the core and arranged outwardly of the ends of the mold box, means to releasably retain the core in raised position, a carrier upon which the core is mounted having end extensions to which said handles are pivoted at their lower ends for lateral swinging movement, said core retaining means embodying members fixed to the ends of the stand and engageable by the handles when swung laterally after the core is raised, and channel guides for the ends of the core fixed to the ends of the stand beneath the mold box to guide the core when lowered, said guides having longitudinal elongated slots outwardly through which the end carrier extensions project and are vertically movable.

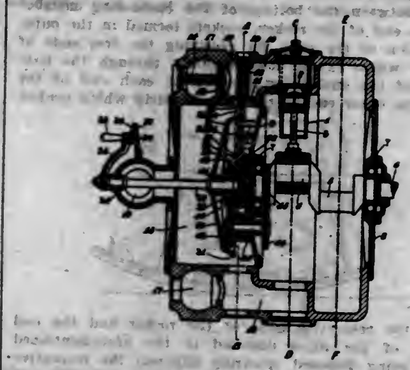
1,636,254. BILL CLASP. AMOS W. STANDING, Houston, Tex. Filed Feb. 8, 1927. Serial No. 166,650. 4 Claims. (Cl. 24—253.)

4. A clasp comprising opposed plates having adjacent ends curved slightly inward to form gripping jaws, inwardly turned ears on said plates adapted to interfit, and a spring of hoop shape having arms co-acting with said ears to hold said plates pivotally together, said spring also bearing against said plates to hold said jaws resiliently together.

1,636,255. WINDOW-SCREEN HOLDER. FREDERICK A. STICKLE, Cincinnati, Ohio, assignor to The National Screen & Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 21, 1924. Serial No. 721,427. 1 Claim. (Cl. 292—76.)

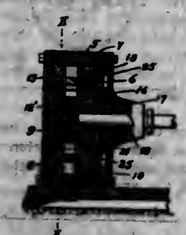
A frame having an external edge formed as a channel, said channel having an external bearing face and said channel provided with a slit extending across said face, a tongue in said channel turned inwardly from said face, said tongue being formed from one of the edges of the slit portion of said channel, a leaf spring for said screen extending through said slit with a tongue projecting inwardly beyond the slit and a slot in the spring to engage said tongue with a bearing for the spring on the first mentioned tongue to secure said spring to the inner face of said channel, said spring having a main bend, a slot in said channel and the end of the spring opposite the end adapted to be interengaged within the channel adapted to slide within said slot.

1,636,256. POURED-WALL FORM. GUSTAV STROM, Pontiac, Mich., assignor of forty one-hundredths to Peter D. Johnston, Pontiac, Mich. Filed July 23, 1923. Serial No. 653,230. 12 Claims. (Cl. 25—131.)



1. In a poured wall form, the combination with spaced side sections, of end sections movable between said side sections, each end section being provided with inclined transverse recesses in one of its faces.

1,636,257. INDICATOR ACTUATING AND CONTROLLING DEVICE FOR SCALES. CHARLES G. STRUBLER and GORDON L. STRUBLER, Chicago, Ill., assignors to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Sept. 17, 1925. Serial No. 56,814. 11 Claims. (Cl. 265—66.)

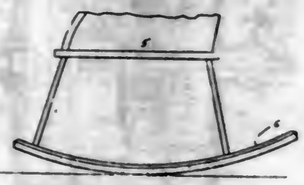


1. An indicator actuating and controlling mechanism for scales comprising, in combination with an indicator, a load transmitting member and connections between the load transmitting member and the indicator embracing a flexible band and a floating helical spring, the latter to be placed under stress by the weight of the load and to return the indicator to zero when the scale is without load.

1,636,258. MULTICYLINDER PLUNGER PUMP, COMPRESSOR, AND THE LIKE. JOSEF SVARTZ, Stockholm, Sweden. Filed July 24, 1924, Serial No. 727,909, and in Sweden Oct. 27, 1923. 5 Claims. (Cl. 103—40.)

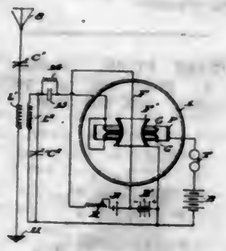
1. In a multi-cylinder pump, compressor and the like, the combination of a number of cylinders, each having a suction valve combined therewith, plungers movable in said cylinders, regulating means adjustable into different positions of regulation and adapted in such positions to cooperate with a different number of such suction valves to maintain the same permanently open, and governing means connected with said plungers so as to be driven with a speed corresponding to the movement of said plungers and adapted to actuate such suction valves which are not maintained permanently open by said regulating means in such manner that said suction valves are positively opened at the beginning of the suction strokes of the corresponding plungers.

1,636,259. ROTARY PUMP. ANDREW J. SWEENEY, Bayonne, N. J. Filed Aug. 24, 1926. Serial No. 131,174. 3 Claims. (Cl. 103—126.)



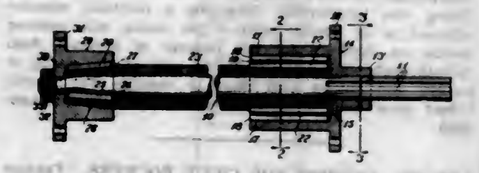
1. In a pump or motor mechanism, a casing having an intermediate dividing wall separating the interior of the casing into intersecting chambers, a rotatable member adjacent to an interior wall of the casing, said member having an aperture for the passage of pressure fluid therethrough, and a pocket in the wall of the casing to receive and entrap said fluid to equalize the lateral thrust upon said member resulting from the pressure fluid.

1,636,260. CUSHION FOR CHAIR ROCKERS. VERNON TUST, Tronsdale, Okla. Filed May 17, 1926. Serial No. 109,709. 3 Claims. (Cl. 45—137.)



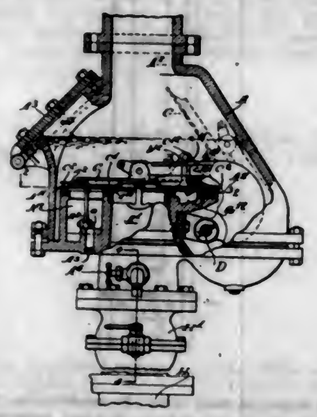
3. In a chair rocker cushion, a substantially U-shaped member of a length equivalent to the length of the rocker and in which the rocker is adapted to fit, a bead formed on each upper edge of the U-shaped member,

a wire extending longitudinally through each bead, additional wires exteading longitudinally through the base portion of the cushioning member, the ends of all said wires projecting beyond the ends of the cushioning member and the rocker, a strip of flexible material insertible between the bottom of the cushioning member and each end of the rocker, pockets formed in the outer end portion of the strip for receiving the free ends of the wire which extend longitudinally through the base portion of the cushioning member at each end of the rocker, the outer end portions of the strip which project



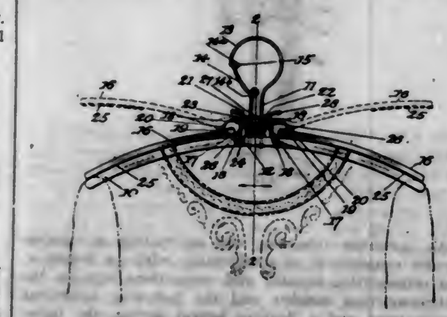
beyond the respective ends of the rocker and the end portions of the wires disposed in the aforementioned pockets being disposed upwardly adjacent the respective ends of the rocker, the ends of the wires which extend longitudinally through the beads being disposed transversely across the upwardly bent ends of the wires attached to the flexible member, the free ends of the transversely disposed wires being twisted together, the outer free end portions of the strips and the ends of the wires within said pockets being bent downwardly over transversely extending interconnected wires.

1,636,261. VACUUM OR THERMIONIC TUBE. ALBERT G. THOMAS, Lynchburg, Va. Filed Aug. 2, 1923. Serial No. 655,318. 6 Claims. (Cl. 250—27.5.)



6. In an electron discharge tube, a cathode having the external form of a figure of revolution generated by the revolution of an arc about a line in the plane of and on the convex side of the arc.

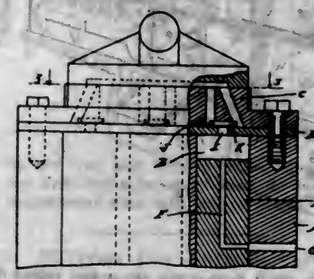
1,636,262. TORQUE-CUSHIONING MEANS. HARRY P. TROENDLY, Chicago, Ill. Filed Aug. 6, 1925. Serial No. 48,451. 5 Claims. (Cl. 64—29.)



1. Torque cushioning means, comprising a pair of shafts, one within the other, one end of the inner shaft being longitudinally grooved, a coupling member having splined relation with the grooved end of the inner shaft, a second member splined on the adjacent end of the outer shaft, means whereby operative relation between the two members is provided when the twist of the inner shaft reaches a predetermined degree and the torsional impulse is then transmitted to the outer shaft, and means whereby the opposite ends of the two shafts are operatively connected together.

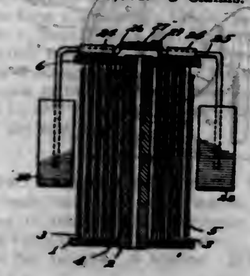
1,636,263. DRY-PIPE VALVE. EMIL TYDEN, Evanston, Ill. Filed July 14, 1923. Serial No. 651,472. 8 Claims. (Cl. 169—22.)

1. In a dry pipe valve having the main valve constructed for seating at two seats through one of which the water main pressure operates for opening said main valve, while through the other seat said main valve is normally exposed to atmospheric preasure, said main valve and its carrier being as unit proportioned with respect to the fulcrum of the carrier for being normally overbalanced in the direction for opening; a shut-off valve for controlling the admission of water from the water main to the main valve; the main valve body having a chamber back of the second mentioned seat which is accessible to water from the main and which has a drainage port deeply situated with respect to the level of the main valve seat for causing said port to be sealed by substantial depth of water above said port when said chamber is filled; a valve controlling said drainage port which is normally seated, and automatic means for setting said last mentioned valve at open position at the closed position of the main valve.



1,636,264. LOCKED SAFETY GARMENT HANGER. BENJAMIN WEISS, New York, N. Y. Filed June 2, 1926. Serial No. 113,275. 15 Claims. (Cl. 223—64.)

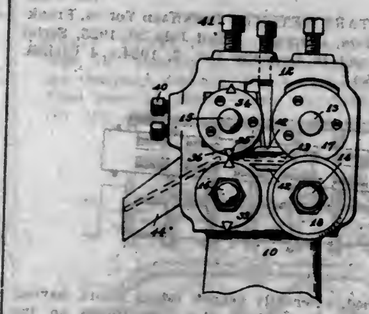
11. In a garment hanger, in combination, a yoke, arms pivoted in said yoke adapted to close on the garment on said yoke and prevent its slipping off therefrom,



a suspending hook with a shank secured to said yoke, said arms having extensions, and a coiled spring around said shank adapted to engage said extensions and normally keep said arms in a closed position.

1,636,265. PUMP. THOMAS C. WHITEHEAD, Detroit, Mich. Filed July 23, 1923. Serial No. 653,283. 2 Claims. (Cl. 230—190.)

1. A pump including an open ended cylinder having a gas inlet port in a side wall thereof, a head for the cylinder having a discharge passage therein, a plate between said head and cylinder having a port in communication with said passage constituting the sole outlet for gases from said cylinder, a normally seated noiseless valve in the head for controlling the flow of gases through said outlet port, and a piston in the cylinder adapted to compress the gases admitted through said inlet port and thereby cause said valve to be unseated, said piston being so constructed and arranged as to uncover said inlet port upon its suction stroke and cover the said port upon its compression stroke, thereby providing a noiseless control for said inlet port.

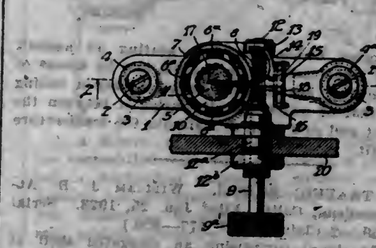


1,636,266. ELECTRIC WELDING APPLIANCE. JAMES W. WILKINSON, Kansas City, Kans. Filed May 4, 1925. Serial No. 27,762. 2 Claims. (Cl. 175—356.)

1. In a reactor, a plurality of insulated coils wound in succession on the same core, a transverse shaft mounted on the upper end of said reactor and having a central crank shaft, an armature plate attached to said crank shaft and adapted to be attracted and repulsed by the core, and agitators carried by the ends of said shaft for agitating the cooling media surrounding the reactor.

1,636,267. COMBINED ROTARY BEVEL SHEAR AND SCRAP CUTTER. LESTER WILLIAMS, Marshalltown, Iowa. Filed Nov. 30, 1925. Serial No. 72,378. 3 Claims. (Cl. 164—10.6.)

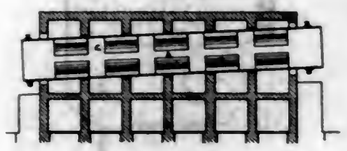
1. In a device of the class described, the combination of a frame, two parallel rotatable shafts mounted in the frame, a gear wheel fixed to each shaft, said gear wheels being in mesh with each other, a disk fixed to each shaft, said disks being slightly spaced apart from each other, a cutter member in each disk, said cutter members being so arranged that as the disks are rotated they will come together during each revolution of the disks for cutting off a piece of scrap inserted between them, an adjustable bearing for one of said shafts capable of adjusting said shaft laterally with respect to the other



shaft, and whereby the cutting member carried by the adjustable shaft may be advanced or retarded relative to the cutter carried by the other shaft, so that the cutting members may be made to accurately register relative to each other without disturbing the fixed connection between the disk and shaft.

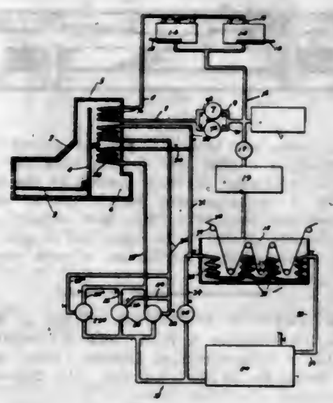
1,636,268. LOOSE-LEAF BINDER. WILLIAM DALE WINDERS, Columbus, Ohio. Filed Oct. 12, 1926. Serial No. 141,182. 4 Claims. (Cl. 129—18.)

1. In a loose leaf binder, a pair of spaced parallel binding heads, a binding post arising from one of said heads, a lever element pivotally carried by the other of said heads, a spring pressed bar carried by said last named head and engaged by said lever element and an operating handle pivoted to the upper end of said binding post and arranged upon oscillation to rock said lever element.



1,636,269. CRYSTAL DETECTOR. ELTON A. WRIGHT, Chicago, Ill., assignor to F. H. Noble & Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 22, 1925. Serial No. 51,765. 1 Claim. (Cl. 250—31.)

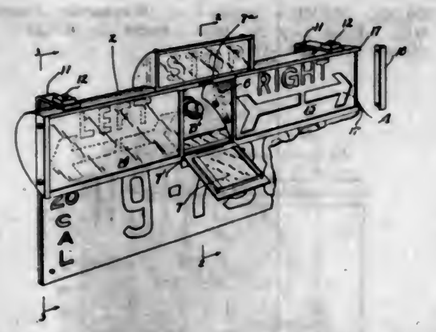
A crystal detector for radio apparatus comprising a frame, a rotatable crystal holder and crystal mounted therein, a non-axially arranged contact member insulated from said holder and arranged to complete the detector circuit through said crystal, and a manually operable rotatable shaft operatively connected with said holder to



rotate it, one bearing of said shaft being formed in a tubular block fixed to the frame and said block being equipped with a clamping nut, whereby the detector may be clamped to a supporting panel.

1,636,270. ROTARY RETORT. BERNHARD YOUNG, Frankfort-on-the-Main, Germany. Filed July 20, 1925, Serial No. 44,884, and in Germany Oct. 3, 1924. 4 Claims. (Cl. 202—15.)

1. An inclined, externally heated, rotary retort, having separate open-ended chambers along its length on its inner surface formed by walls or partitions running longitudinally of the retort and by an inner shell, the material passing through the retort between said shell and the retort wall, whereby undue agitation of the material is prevented and the material is maintained in contact with the retort wall.



1,636,271. PREPARATION OF SATURANTS. JOSEPH ZAVERTNIK, Jr., Chicago, Ill., assignor to The Barrett Company, a Corporation of New Jersey. Filed Jan. 7, 1924. Serial No. 684,914. 8 Claims. (Cl. 196—87.)

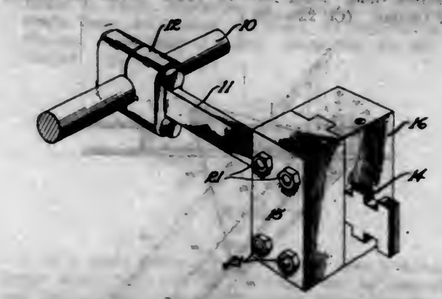
5. The process which comprises heating an asphalt saturant and transferring it to a tank, and by means of the same source of heat heating an oil having a boiling point above that of water and circulating it between the source of heat and said tank to maintain the temperature of said asphalt.

1,636,272. TRAFFIC SIGNAL. WILLIAM J. B. ALDRIDGE, Pasadena, Calif. Filed Jan. 25, 1923. Serial No. 614,759. 2 Claims. (Cl. 177—329.)

1. A traffic signal comprising an elongated shell of substantially parabolic cross section, forming a reflector, said shell having extreme ends at right angles to the axis of the shell, an electric lamp in the central portion of the reflector, a wall on each side of the central lamp cut away at their lower and rear edges, an intermediate partition extending from the lower edge of said walls on a downward inclination to the opposite square ends of the reflector, said partitions being inclined backwardly and downwardly, a window placed in the lower side of the reflector below the partitions, and extending the full

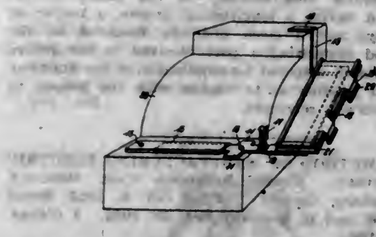
length of the shell so that the direct and reflected rays of light from the central lamp will pass through said window and illuminate the license plate.

1,636,273. PULLEY BLOCK. ARNOLD W. BAKER, Cooper Hill, Mo. Filed Jan. 15, 1927. Serial No. 161,426. 5 Claims. (Cl. 254—192.)



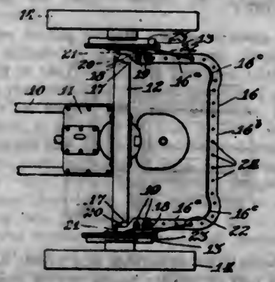
1. In combination, a sheave having a ratchet rack upon a side face thereof, a holding block having side walls forming a mounting for the pivot of the sheave and a connecting wall for said side walls opposing the periphery of the sheave, a pair of links mounted upon said pivot, a wedge block engaging the periphery of the sheave and to which the outer ends of the links are pivotally connected and a ratchet pawl carried by one of said links and coacting with the ratchet rack of the sheave and spring-pressed for engagement with said rack.

1,636,274. COUNTERBALANCE. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, a Corporation of California. Filed Oct. 12, 1926. Serial No. 141,210. 4 Claims. (Cl. 74—5.)



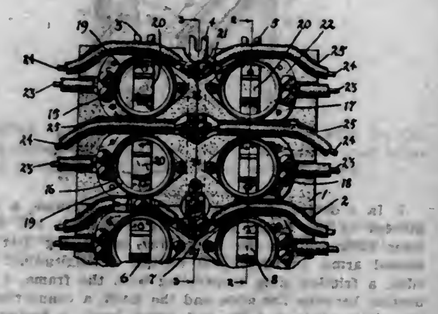
1. A counterbalancing device for well pumping apparatuses and the like comprising an arm adapted to be fixed at one end to the band wheel shaft of the apparatus and

extend radially of the shaft, a counterweight adapted to be arranged on the arm adjacent its outer end, keys



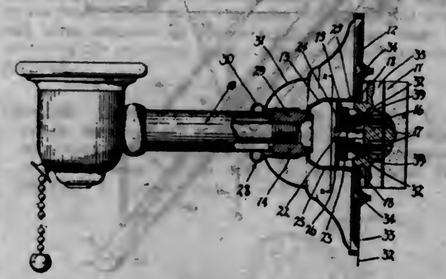
formed on the arm, said counterweight being recessed to receive the arm and keys, and means for retaining said arm in engagement with said counterweight.

1,636,275. SUPPORT FOR WRITING TABLETS AND THE LIKE. ROY H. BELL and FRED R. SEARLES, Great Falls, Mont. Filed Aug. 26, 1924. Serial No. 734,267. 3 Claims. (Cl. 45—82.)



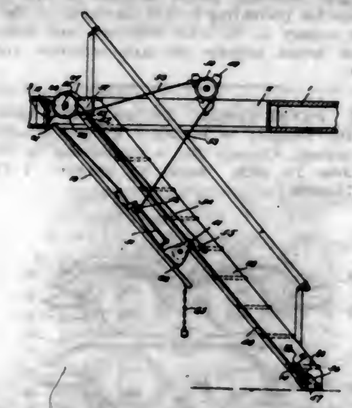
2. A device of the character described comprising a flat strip having a pair of arms extending laterally from one edge at opposite ends thereof to form a supporting bracket, one arm being extended upwardly and then laterally to form a supporting hanger having its end portion lying in a plane making an acute angle with the plane of the strip, the other arm having its end portion twisted to lie in a plane parallel to but below that in which the end portion of the first arm is disposed, an article holder secured to said strip, and a second holder hinged to the edge of the first holder.

1,636,276. TRACTOR DRAWBAR. BERT R. BENJAMIN, Oak Park, and CLEMMA R. RANEY, Riverside, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 9, 1924. Serial No. 705,204. 8 Claims. (Cl. 280—33.44.)



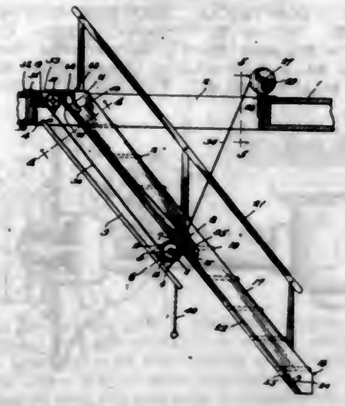
1. The combination with a tractor having an upright arched axle structure comprising an axle housing and depending gear housings at each end thereof and traction wheels mounted on the outer sides of said gear housings, of a rigid rearwardly extending U-shaped draw bar, the arms of which are pivotally connected to the inner sides of said gear housings, means included in said pivotal connections for preventing lateral movement of the draw bar with respect to the axle structure, and adjustable suspension means between the axle structure and the draw bar.

1,636,277. PANEL BOARD. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 14, 1920. Serial No. 388,830. 7 Claims. (Cl. 175—369.)



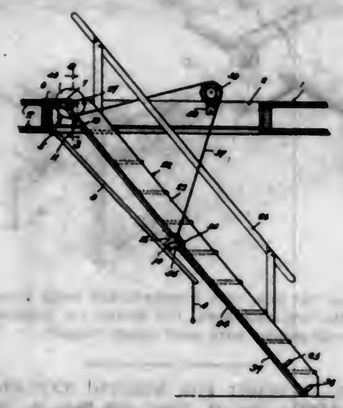
1. In a panel board, a base section having buses arranged thereupon in substantially parallel relation, means for connecting the outside buses to branch lines comprising receptacles having shell and center contacts and switches, said center contacts being formed integrally with one pole of said switches and said shell contacts embodying outwardly extending flanged portions, the other pole of said switches comprising integral conducting members connected to said outside buses, and means admitting of the connection of the branch lines to the central bus.

1,636,278. ELECTRICAL FIXTURES-SUPPORTING DEVICE. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 20, 1921. Serial No. 471,077. 6 Claims. (Cl. 173—338.)



1. A fixture, a receptacle, push-in electrical connector for cooperation with said receptacle, a supporting member, a mechanical connecting member, and canopy for housing said mechanical connecting member, said mechanical connecting member being carried by said fixture, said push-in connector having a swivel connection with said mechanical connecting member, said mechanical connecting member having a connection with said supporting member which is effected by a plurality of movements, including one of insertion and one of rotation, and means cooperating with said canopy for holding said mechanical connecting member in connected position.

1,636,279. MOVABLE-STAIRWAY LATCH. FRANK E. BESSLER, Akron, Ohio. Filed May 4, 1925. Serial No. 27,910. 3 Claims. (Cl. 228—50.)

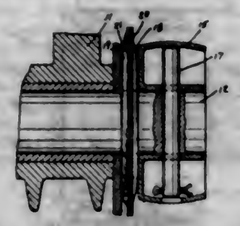


1. In a device of the class described, a frame, a latch pivoted to the frame and having a hook, a bell crank lever fulcrumed on the frame and comprising first and second arms, the first arm having a longitudinal cam edge, a friction slide cooperating with the frame, a connection between the slide and the latch, a connection between the slide and the bell crank lever, a keeper and means for supporting the keeper for engagement with the hook, the second arm of the bell crank and the keeper being relatively movable in one direction to cause engagement between the keeper and the second arm of the bell crank lever, and being relatively movable in an opposite direction to cause engagement between the longitudinal cam edge and the keeper.

1,636,280. MOVABLE STAIRWAY. FRANK E. BESSLER, Akron, Ohio. Filed Sept. 15, 1925. Serial No. 56,545. 1 Claim. (Cl. 228—50.)

In a device of the class described, a support, an upper pulley carried for rotation on the support, a panel hinged to the support for vertical swinging movement, a lower pulley journaled on the panel, a spring-actuated drum mounted on the support, a stairway, means for mounting the stairway for sliding movement longitudinally of the panel, and a flexible element wound about the drum, the flexible element being extended downwardly around the lower pulley, rearwardly along the panel, about the upper pulley, and downwardly and forwardly along the stairway, and means for connecting the forward end of the flexible element to the stairway.

1,636,281. MOVABLE STAIRWAY. FRANK E. BESSLER, Akron, Ohio. Filed Nov. 19, 1925. Serial No. 70,145. 4 Claims. (Cl. 228—50.)



4. In a device of the class described a support, a panel hinged to the support, a standard on the panel, a stairway slidable longitudinally of the panel on the standard and having a longitudinal groove, a keeper on the stairway, and a latch pivotally mounted on the standard and comprising a part received in the groove to hold the latch disposed longitudinally of the stairway and in such position as to engage with the keeper, to hold the stairway retracted.

1,636,282. METHOD OF MANUFACTURING ELECTRIC INSULATORS. EUGEN REINHOLD CARL BOELCKE, Charlottenburg, Germany. Filed Oct. 5, 1925, Serial No. 60,556, and in Germany Dec. 30, 1924. 4 Claims. (Cl. 25—156.)

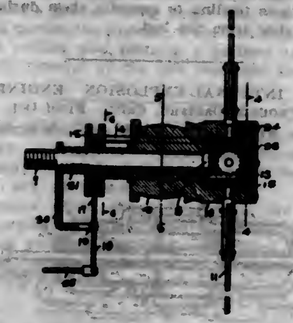
1. The herein described method of manufacturing electric insulators, which consists in moulding the insulator with a cavity, drying the insulator, putting into said cavity insulating matter which does not expand when being baked, and baking the insulator.

1,636,283. AUTOMATIC ADJUSTING END-THRUST BEARING. FREDDIE S. BUSSELL, Indianapolis, Ind. Filed Dec. 1, 1925. Serial No. 72,485. 3 Claims. (Cl. 308—167.)

1. An automatically adjustable end thrust bearing comprising but a pair of similar plates having complementary peripheral portions, one peripheral portion including an abutment, and the other peripheral portion including progressively deepening series of recesses.

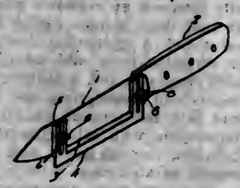
1,636,284. BRAKE MECHANISM FOR RAILWAY CARS. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Company, a Corporation of Illinois. Filed May 21, 1923. Serial No. 640,402. 9 Claims. (Cl. 254—149.)

1. In a brake mechanism for railway cars, a brake, a power device for operating the brake and an extensible and contractable connection between them including a rotatably mounted multiplying lever having two laterally spaced arms, one of said arms being in the form of a segment having a substantially radial leading face, means for connecting said segment to said power device, said means engaging said leading face during the initial movement of said power device, means for connecting the other arm to an anchorage and means including a pivot for rotatably mounting the lever and transmitting force therefrom to the brake.



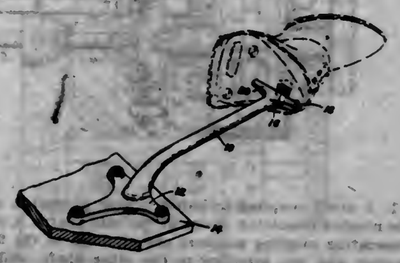
1,636,285. LIQUID FILTER. FREDERICK O. CATRON, Memphis, Tenn., assignor of one-half to Nettie P. Catron, Memphis, Tenn. Filed Jan. 11, 1926, Serial No. 80,574. Renewed Jan. 10, 1927. 5 Claims. (Cl. 210—165.)

1. In a filter having a fragile container; a liquid inlet passage, a liquid outlet passage, one of said passages including a tube in the container, and means normally in said container for coupling said tube of the one passage to the other passage in care of injury to the container.



1,636,286. FAN. CARL L. CHRISTENSEN, Dalton, Nebr. Filed Oct. 10, 1925. Serial No. 61,868. 1 Claim. (Cl. 170—163.)

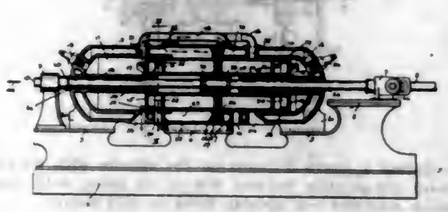
A fan for motor vehicle cooling systems including a stationary spindle, a pulley rotatably disposed on the forward end of the spindle and provided with a plurality of passages therethrough disposed about and parallel with said spindle, a hollow hub rigid with the forward side of said pulley, a plurality of rods slidable longitudinally in said passages and having their forward ends projecting into the hub forward ends of said rods being formed to set up rack teeth, radial blades having longitudinal pivot elements upon their inner ends journaled in and projecting into said hub, pinions fixed on the inner ends of said pivot elements within the hub and each meshing with the rack teeth of one of said rods, a collar rotatable about and slidable longitudinally of the spindle rearwardly of the pulley and having the rear ends of said rods fixed thereto, means to adjust the collar longitudinally of the spindle, said spindle having a head upon its forward end substantially engaging the forward side of the pulley within the rear end of the hub, and means to maintain the pulley substantially in engagement with said head



including a sleeve disposed on the spindle with its forward end abutting the rear side of the pulley, said collar being rotatably and slidably fitted on said sleeve.

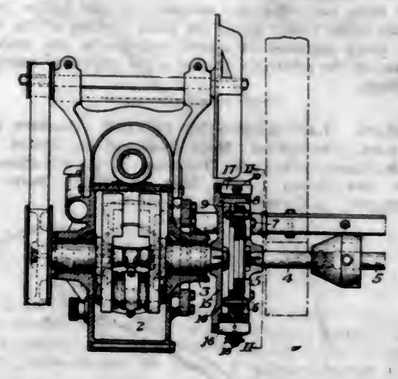
1,636,287. PARING KNIFE. WILLIAM CLAWSON, San Francisco, Calif. Filed May 11, 1925. Serial No. 29,305. 1 Claim. (Cl. 30—20.)

A paring knife comprising a knife blade having a cutting edge, a guard strip, extending in spaced parallel relation to one side of the blade adjacent the cutting edge and projecting forwardly from said edge, said strip having integral right angularly extending portions on the ends thereof, which portions are thicker than the strip and are bifurcated, screws carried by the knife blade and extended through the bifurcations of said portions and nuts turned on the screws adapted to engage the said portions to hold the guard in adjusted position, said strip extending for substantially the entire length of the blade except as to the point portion of the blade and being disposed in spaced relation to the blade by reason of the relatively thicker right angularly extending portions.



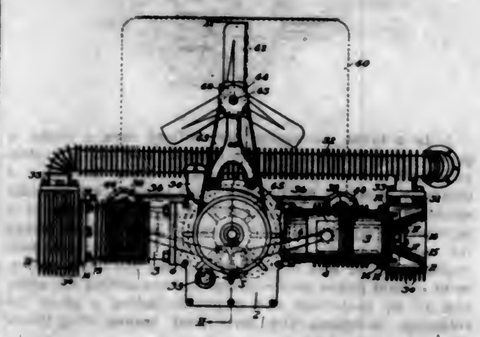
1,636,288. LAST-REMOVING DEVICE. GARRETT P. S. CROSS, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 19, 1922. Serial No. 562,171. 9 Claims. (Cl. 12—15.1.)

3. A last removing device comprising a base to be secured to a suitable support, a portion to be inserted into and to interlock with a last, and oppositely extending



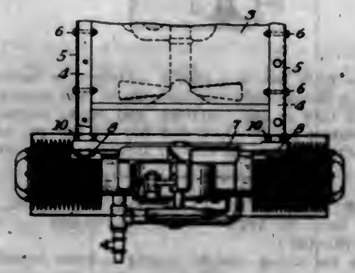
projections located adjacent to the interlocking portion of the device to bear against one end of the last to prevent relative movement of the device and the last in opposite directions tending to separate them during the removal of a shoe from the last.

1,636,289. INTERNAL-EXPLOSION ENGINE. WILLIAM F. CROUCH, Oakland, Calif. Filed Oct. 26, 1925. Serial No. 64,856. 13 Claims. (Cl. 123—62.)



7. In an internal explosion engine a pair of cylinder members and therebetween a third cylinder adapted to receive and initially compress an explosive mixture a piston in each cylinder said three pistons rigidly fixed together and mounted on a rod, a cylindrical bored opening extending in each direction from said mounting and concentric and spaced from said rod, a bushing fixed to each of the end cylinders and spaced from and symmetrically positioned around said rod forming an air space therebetween, and telescoping with said cylindrical openings, a piston rod extending through all of said cylinders and externally supported, packing rings between each bushing and the corresponding cylindrical opening.

1,636,290. SHAFT COUPLING. JAMES ABRAM DAVEY, Sound Beach, Conn., and PAUL H. DAVEY and CHARLES L. GAUGLER, Kent, Ohio; said Gaugler assignor of his entire right to The Davey Tree Expert Company, Kent, Ohio, a Corporation of Ohio. Filed Mar. 16, 1925. Serial No. 15,716. 9 Claims. (Cl. 64—96.)

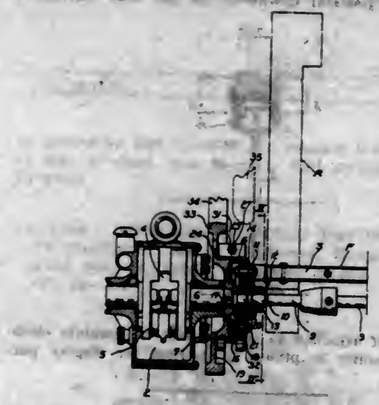


1. A shaft coupling including a pair of shafts, a flexible member connected to one of the said shafts, a pair of cooperating coupling members one attached to the flexible member and one attached to the other shaft, and positively-acting means for clamping the coupling members together to form a non-slipping driving connection, substantially as described.

1,636,291. AIR COMPRESSOR. JAMES ABRAM DAVEY, Sound Beach, Conn., and PAUL H. DAVEY and CHARLES L. GAUGLER, Kent, Ohio; said Gaugler assignor of his entire right to The Davey Tree Expert Company, Kent, Ohio, a Corporation of Ohio. Filed Mar. 16, 1925. Serial No. 15,717. 8 Claims. (Cl. 230—211.)

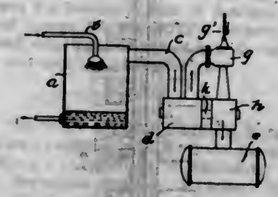
1. An air compressor including a cylinder, an end closure therefor, valves for passages in said end closure, and means providing a metallic path of high heat conducting quality and capacity from said valves to the exterior of the compressor.

1,636,292. POWER-APPLIANCE ATTACHMENT FOR AUTOMOTIVE VEHICLES. JAMES A. DAVEY, Sound Beach, Conn., and PAUL H. DAVEY and CHARLES L. GAUGLER, Kent, Ohio; said Gaugler assignor of all his right to The Davey Tree Expert Company, Kent, Ohio, a Corporation of Ohio. Original application filed Mar. 31, 1924, Serial No. 703,098. Divided and this application filed July 17, 1926. Serial No. 123,198. 8 Claims. (Cl. 180—53.)



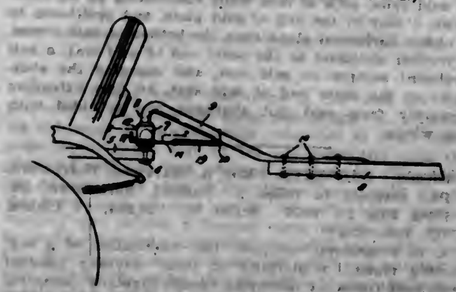
1. The combination of an automotive vehicle having an engine shaft and channeled frame members, a pair of bars fitting between vertically-spaced flanges of said frame members, means to prevent spreading of said flanges, a compressor supported solely by said bars close to the front of the vehicle, and means for driving the compressor from said engine shaft.

1,636,293. POWER CONNECTING DEVICE. PAUL H. DAVEY, Kent, Ohio, assignor of one-half to James A. G. Davey, Sound Beach, Conn. Filed June 21, 1926. Serial No. 117,649. 8 Claims. (Cl. 64—96.)



1. The combination of a driving shaft, a driven shaft normally alined therewith, a flexible torque-cushioning

disk permitting limited misalinement of said shafts, separate drums on said shafts, and a clamping band adapted

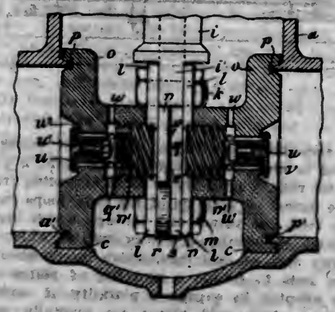


to encircle said drums said band tending to correct any misalinement of said drums and being movable out of operating contact with said drums.

1,636,294. REFRIGERATING MACHINE. ALBERT DELAS, Paris, France, assignor to Delas Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 24, 1920, Serial No. 353,865, and in France June 25, 1919. Renewed Oct. 23, 1926. 5 Claims. (Cl. 230—13.)

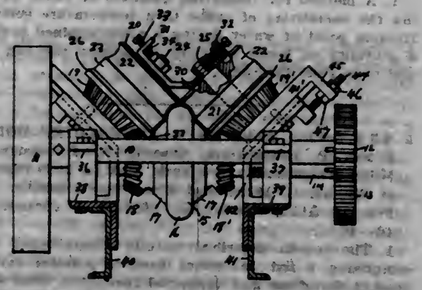
1. In combination, a pump, a motor for driving said pump, an ejector into which said pump discharges, means for supplying motive fluid to said ejector, and means for conducting the discharge of said ejector to said motor to drive the latter.

1,636,295. TRAILER COUPLER. THOMAS DEMPSEY, Proctor, Minn.; Fred C. Mitchell executor of said Thomas Dempsey, deceased. Filed May 3, 1926. Serial No. 106,451. 3 Claims. (Cl. 280—33.44.)



1. A trailer coupler of the class described including a ball, a rod adapted to be attached to a trailer pole, a socket on the rod for receiving the ball, means for attaching the ball to a vehicle, said socket provided with a slot, a lock plate including an elongated slot and having portions slidable in the slot of the socket, a portion of said lock plate slot being narrower than the diameter of the ball and a portion being larger than the diameter of the ball to permit the passage of the ball therethrough, a spring for holding said plate in a position to prevent the accidental removal of the ball from the socket.

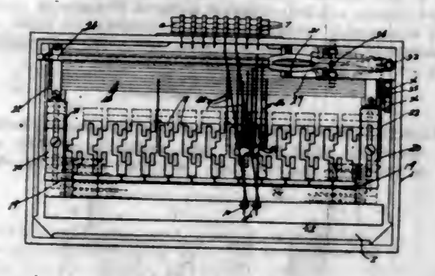
1,636,296. PROCESS OF OXIDIZING FERROUS SULPHATE IN SOLUTION. ALEXANDER ELLIOTT, Los Angeles, Calif. Filed Mar. 31, 1926. Serial No. 98,828. 2 Claims. (Cl. 23—126.)



2. The process which comprises passing air through hot ferrous sulphate solution under a pressure in excess of atmospheric pressure and at a temperature above atmospheric temperature but below 100 degrees centigrade to produce ferric sulphate in solution.

1,636,297. STOP VALVE. RICHARD FISCHBACH, Berlin, Germany. Filed Sept. 3, 1921, Serial No. 498,516, and in Germany Aug. 13, 1920. 6 Claims. (Cl. 257—60.)

1. A stop valve of the sliding gate or shutter type, comprising in combination a valve body having inlet and outlet ports, a valve seating at each of said ports inside the valve body, a shutter comprising two non-circular discs for closing said ports, said discs being adapted to co-operate with the valve body for preventing rotation of the discs, and screw gearing for moving said discs into and out of close contact with the said valve seatings, said screw gearing comprising two threaded spindles, the threads of which have the same hand and means for turning said spindles in opposite directions as set forth.



1,636,298. RIDGE-CAP-FORMING MACHINE. JESSE FULENWIDER, HARRY FULENWIDER, EDWARD W. ROBINSON, and HARRY S. NORRIS, Savannah, Ga., assignors to said Harry Fulenwider and Jesse Fulenwider. Filed June 28, 1926. Serial No. 119,144. 6 Claims. (Cl. 153—28.)

1. In a ridge cap forming machine, a plurality of rolls each provided with an annular channel and with plain

annular work engaging surfaces, these rolls being rotatable about axes inclined with reference to each other, and a third roll mounted between the rolls first named and having plain work engaging surface and a central circumferential convex portion spaced from the walls of the channels of the rolls first named.

1,636,299. ACCORDION PLATE. JOSEPH GALLEAZZI, San Francisco, Calif. Filed Oct. 24, 1925. Serial No. 64,584. 10 Claims. (Cl. 84—376.)

6. An accordion including a plurality of valves which are opened to play certain notes of the scale, a plurality of rotatable rods, a plurality of arms extending from and which are moved on rotation of the rods, loops extending upwardly from the valves and through which loops said arms extend, a plurality of levers each of which is connected with each of said rods, which levers when rocked cause the rods to rotate, a plurality of plates each of which is adapted to engage a plurality of said levers, means upon which said plates are pivotally mounted, which means is slidably mounted on the accordion, said plates being arranged to engage certain groups of levers when in one position and other groups of levers when in other positions, means for collectively shifting said plates into different positions and means for selectively rocking said plates on their pivots, which last named means comprises push button keys, rods extending from and which are actuated by said keys, bell cranks connected with and which are rocked by said rods, projections on the bell cranks adapted to engage and rock said plates, through which projections said arms extend and spring means normally holding said plates in one of its positions.

1,636,300. METHOD FOR IMPROVING THE QUALITIES OF COFFEE. OTTO GEWALT, Gottenborg, Sweden. Filed July 16, 1926. Serial No. 123,017. 4 Claims. (Cl. 99—11.)

1. A method for improving qualities of coffee comprising the submitting of coffee to a temperature below the freezing point of water during a predetermined period of a plurality of hours sufficient to remove the bad smell and taste from the coffee.

1,636,301. NOVELTY HANDKERCHIEF HOLDER. ELMER P. GOLDSMITH, Newark, N. J., assignor to Miller & Goldsmith, New York, N. Y., a Firm consisting of William G. Miller and Elmer P. Goldsmith. Filed Feb. 26, 1926. Serial No. 90,815. 2 Claims. (Cl. 46—40.)

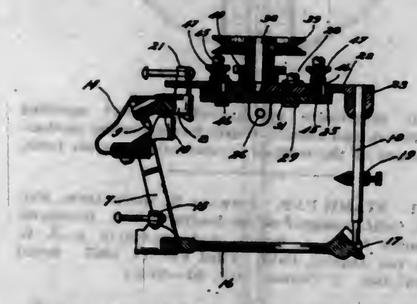
1. The herein described novelty handkerchief holder comprising a flat horizontal base, a pedestal extending upward therefrom and supported thereby, a head secured to the upper end of the pedestal, a head covering holding the head in proper position, and means including spirally arranged lacing to hold the head covering and the head in position upon the pedestal, said lacing extending around the pedestal downward to the base whereby a

handkerchief attached to the pedestal to simulate clothing may readily be pinned in position for display purposes.

1,636,302. PLATE AND BRACE FOR RAILROAD GUARD RAILS. HARRY GOODWIN, Waterville, Me. Filed Mar. 27, 1924. Serial No. 702,306. 1 Claim. (Cl. 238—20.)

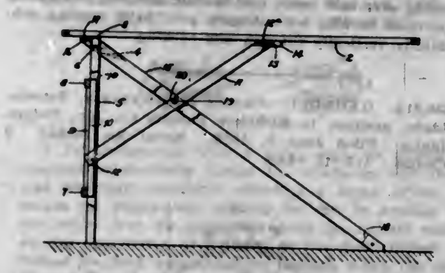
A guard rail chair including a plate of sufficient length to extend under both the guard rail and main rail, a recess in the upper face of said plate and having parallel side walls and adapted to receive the base flanges of said rails, each of said walls functioning as an abutment, a seat at the end of said plate, and positioned in a higher horizontal plane than the bottom of said recess, a vertical abutment at the outer end of said seat, a rail abutment secured on said seat, and engaging the abutment at the outer end of said seat, an arm extending upwardly from said rail abutment and provided with side wings.

1,636,303. CONVEYER. ROY A. HATFIELD, Norristown, Pa., assignor to Helen S. Hatfield, Norristown, Pa. Filed July 26, 1926. Serial No. 124,964. 3 Claims. (Cl. 198—220.)



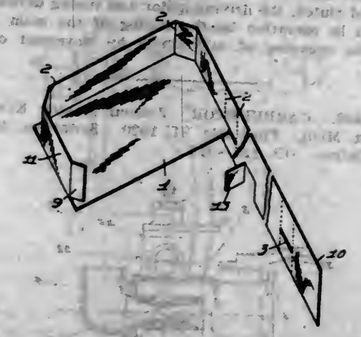
1. In a material conveyer, the combination of a supporting frame; a plurality of links pivotally pendant from said frame; a conveying trough pivotally connected to said links and provided with lugs; bumpers adjustably attached to said frame adapted for engagement with said lugs; a driving mechanism having a slotted fly-wheel; and a pitman rod adapted in one position of adjustment

relative to said trough, to be pulled by said fly wheel and released from the action of said fly-wheel, and, in a second position of adjustment relative to said trough to



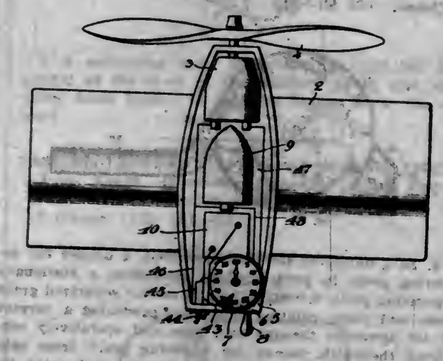
be pushed by said fly-wheel and released from the action of said fly-wheel, once in every half revolution of said fly-wheel.

1,636,304. OCCLUSAL GRINDING DEVICE FOR ARTICULATORS. MILUS M. HOUSE, Kansas City, Mo. Filed Nov. 16, 1925. Serial No. 69,374. 14 Claims. (Cl. 32—1.)



1. An occlusal grinding device comprising the combination of means for holding a pair of dentures in occluded relation, and means for imparting a translational movement of small amplitude to one of said dentures and confining said movement to a circular path.

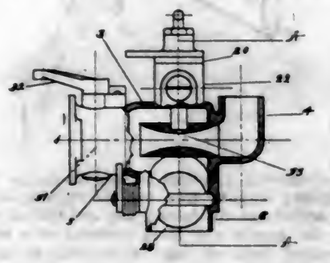
1,636,305. IRONING BOARD. JOHN E. KALGREN, Minneapolis, Minn., assignor to J. R. Clark Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 16, 1922. Serial No. 568,807. 4 Claims. (Cl. 68—10.)



1. An ironing board comprising a top, and end legs pivotally connected to the under side of the top, a middle leg composed of rails pivotally connected at their upper ends to the under side of the top concentric with the pivots of said end legs, yielding bearings for the middle leg on the under side of said top adjacent said pivots, the lower ends of said middle leg rails being secured together and having a bearing upon the floor, a brace pivotally connected at its lower end with the middle portion of said end legs and having its upper end adapted to bear against the under side of said top, and the middle of said brace and the corresponding portion of said middle leg having means for interlocking when the parts are in operative position and being separable by downward movement of the upper end of the brace.

1,636,306. BERRY BOX. HARRY FRANCIS KESLER, Jr., Longmont, Colo. Filed Sept. 20, 1926. Serial No. 136,643. 1 Claim. (Cl. 229—16.)

A box comprising a bottom portion having an integral strip extending laterally from one end thereof, said strip having a scored line for folding one end thereof at right angles to the bottom and being provided with slots disposed inwardly from one edge of the strip in alignment with said scored line and arranged to receive the corners of the box, said strip having L-shaped cuts extending inwardly from one edge thereof, and scored lines joining the extremities of said L-shaped cuts and the adjacent edge, the portion between the scored lines and the cuts being foldable underneath the bottom of the box and constituting brace members for the bottom.



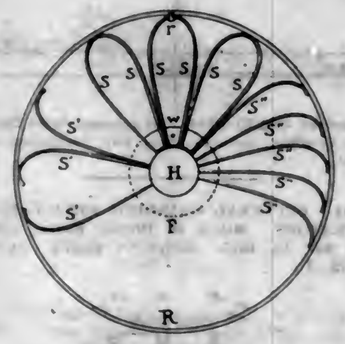
1,636,307. TORPEDO. CHARLES KESSEE, New York, N. Y. Original application filed Apr. 27, 1921, Serial No. 464,949. Divided and this application filed July 8, 1926. Serial No. 121,148. 1 Claim. (Cl. 244—1.)

In a flying torpedo, in combination, wings arranged on said torpedo, a propeller mounted to propel said torpedo, a motor arranged to drive said propeller, an explosive charge arranged in said torpedo, a source of electric power, a timing device for exploding said explosive at a predetermined time; said timing device consisting of a shaft, an arm rotatable with said shaft, a pivoted contact member in the path of said arm, said member having contact elements mounted on each side thereof, the contact elements on one side being normally closed and the contact elements on the other side being normally open; a main switch mounted on said torpedo, an electric circuit including the source of power, the main switch, the driving motor and the said contact elements which normally remain closed, a second circuit including the source of power, the main switch, the explosive charge

and the said contact elements which normally remain open; a clockwork for driving the said shaft of the timing device, a clutch interposed between said clock work and said shaft and a manually operated lever for engaging said clutch, the driving motor and timing device being started in operation by the closing of the main switch and the engaging of said clutch by movement of said lever.

1,636,308. CARBURETOR. JOSEPH MARION KING, Detroit, Mich. Filed Dec. 31, 1920. Serial No. 434,339. 6 Claims. (Cl. 123—119.)

1. A carbureting device for internal combustion engines comprising an outer and an inner conduit, a fuel source and a throttling valve, the outer conduit having an air inlet and a fuel-mixture outlet, the inner conduit having an exhaust-gases inlet, a fuel inlet, a fuel-exhaust-gases outlet and therein a venturi adapted to cause the flow and metering thereof of fuel from the said fuel source to the said fuel-mixture outlet when subjected to the influx of exhaust gases.

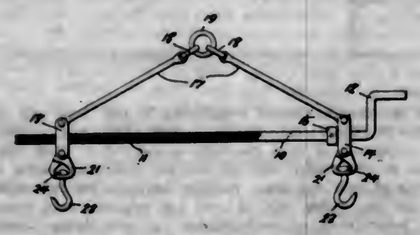


1,636,309. OAT HULLER. FREDERICK LAGE, Gladbrook, Iowa. Filed Apr. 7, 1924. Serial No. 704,706. 4 Claims. (Cl. 83—32.)

1. In a device of the class described, a hopper for delivering grain in predetermined quantities, a stationary separating plate, a vertical pipe to receive separated grain from said plate, rotating blades for producing a current of air upwardly through said pipe and operatively connected therewith, means for receiving grain from said hopper and delivering it to said blades, said grain being delivered from said blades in a tangent manner into perpendicular engagement with said plate.

1,636,310. WHEEL. DAVID H. LUDLOW, Easton, Pa. Filed Aug. 30, 1921. Serial No. 496,989. 2 Claims. (Cl. 152—50.)

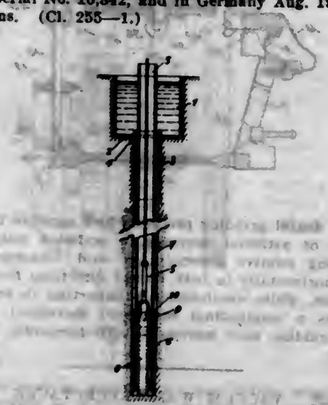
1. A wheel having resilient spokes each leaving rim with a gradual curvature tangent thereto and approaching the hub substantially radially, with the entire intervening portion between rim- and hub-attachments so curved in plane of wheel-rotation that the deviation from tangent at successive points shall be always on same side and free from sudden variation, adjacent convexities being mutually apposed and tangent to each other at point of emergence from hub-attachment with resulting slight divergence to permit maximum initial flexing attended by



immediate progressive mutual-contact-support opposing further flexure and simultaneously increasing the mechanical efficiency of the resilience, substantially as set forth.

1,636,311. STAMP PAD. STEWART B. MCCULLOCH, Fullerton, Calif., assignor of one-fourth to O. A. Burchard, one-fourth to C. A. Briggs, and one-fourth to J. B. Golke, Los Angeles, Calif. Filed Feb. 11, 1927. Serial No. 167,458. 3 Claims. (Cl. 91—54.5.)

1. In a stamp pad, an absorbent base, and a mohair covering over said base; said mohair covering comprising a pervious backing with Angora goat hairs passing substantially vertically through said backing.



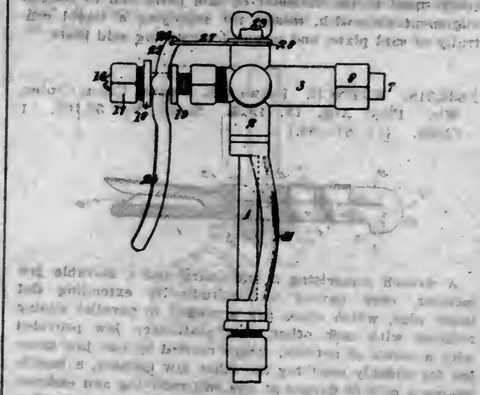
1,636,312. GAMBREL. CANUTE H. MICKELSEN, Tetonia, Idaho, assignor to Mickelsen Patents Co. Inc., Driggs, Idaho. Filed June 8, 1925. Serial No. 35,653. 2 Claims. (Cl. 17—44.)

1. A gambrel of the character described comprising a bar having a squared threaded portion upon one end and a smooth crank portion upon the opposite end, traveling and stationary blocks received on the squared threaded portion and smooth crank portion of the bar respectively, a collar fixed to the smooth crank portion of the bar for retaining the stationary block against sliding movement,

each of the blocks terminating in bifurcated and apertured end portions respectively, a pair of stirrups having their upper ends apertured and pivotally connected within the lower bifurcated ends of the blocks, a pair of hooks having their upper ends pivoted within the lower portion of the stirrups, a pair of rods having their lower ends pivoted within the bifurcated ends of the blocks, a pair of links connected to the upper free ends of the rods, and a common supporting ring receiving the links therein.

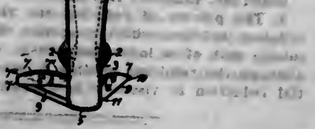
1,636,313. SINKING SHAFTS AND BOREHOLES. WILHELM G. MINUTH, Celle, Germany. Filed Mar. 18, 1925, Serial No. 16,342, and in Germany Aug. 19, 1924. 8 Claims. (Cl. 255—1.)

1. The method of sinking bore holes, pits, shafts and the like comprising boring into the rock, subdividing the bore hole thus obtained into a central space of cylindrical cross section and an outer space of annular cross section and forming in said outer space a stationary body of a non-solid mass.



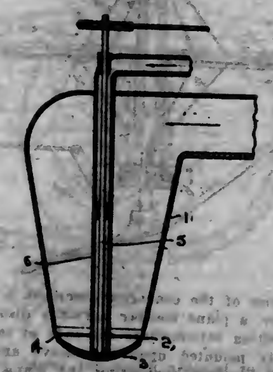
1,636,314. SPRAY NOZZLE AND TIP. JOHN D. MURRAY, San Francisco, Calif. Filed Nov. 12, 1925. Serial No. 68,657. 2 Claims. (Cl. 299—138.)

1. In combination with a spray pipe, an elastic disc disposed transversely across the discharge end thereof and centrally punctured affording a spray orifice, and means for peripherally holding the disc in position with its center free for distension from its normal position on the application of pressure to one face thereof, said means provided with an orifice through which the disc is distended, said orifice last mentioned controlling the contour of the distended portion of the disc.



1,636,315. AIR BRUSH. JOHN D. MURRAY, San Francisco, Calif. Filed May 3, 1926. Serial No. 106,356. 11 Claims. (Cl. 91—45.)

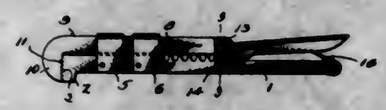
1. A spray gun comprising a substantially T-shaped structure, the top consisting of a tubular body and a stem, a tubular handle, a tubular discharge nozzle extended from one end of the body and linearly reciprocable longitudinally therein, said discharge nozzle provided at one end with a discharge tip and provided in its wall with ports for respectively admitting liquid and air under pressure thereinto, the liquid at a point intermediate the tip and the air supply, said body provided with liquid and air passages with which said ports are adapted to register on the lineal movement of said nozzle, means for normally maintaining said ports out of register with



said passages, and a trigger between said handle and said tip for operation to actuate said nozzle against the action of said means.

1,636,316. SWIMMING SHOE. GEORG NOSSKE, Berlin-Steglitz, Germany. Filed June 2, 1926, Serial No. 113,278, and in Germany June 9, 1925. 6 Claims. (Cl. 9—21.)

1. A swimming shoe, comprising a rigid leg frame jointed at the lever of the wearer's ankle, and arched valve floats hinged to said leg frame below the ankle joint.

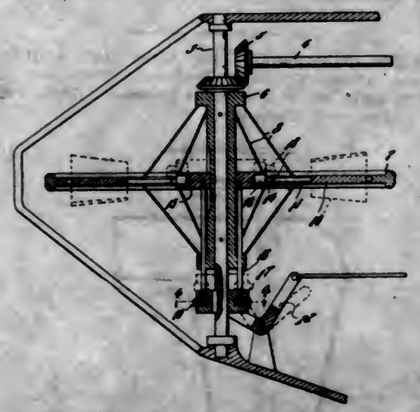


1,636,317. APPARATUS FOR ATOMIZING LIQUIDS. AAGE NYROP, Horsholm, Denmark. Filed July 25, 1925, Serial No. 46,170, and in Denmark July 25, 1924. 3 Claims. (Cl. 299—63.)

1. An apparatus for atomizing liquids, comprising in combination, a concave plate, means for supplying compressed air to said plate, said means comprising a

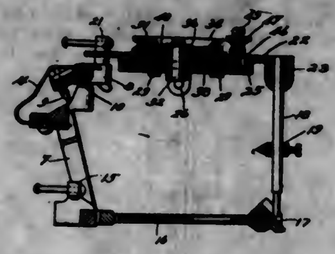
truncated conical conduit tapering toward said plate and terminating in proximity to said plate, the diameter of the end of said conduit adjacent the plate being substantially equal to the diameter of said plate and in coaxial alignment therewith, means for supplying a liquid centrally of said plate, and means for rotating said plate.

1,636,318. WRENCH. PATRICK E. OWENS, Union Center, Wis. Filed Aug. 13, 1925. Serial No. 50,107. 1 Claim. (Cl. 81—86.)



A wrench comprising a stationary and a movable jaw member, each having a longitudinally extending flat inner edge, which edges are arranged in parallel sliding relation with each other, said stationary jaw provided with a series of notches, straps carried by one jaw member for slidably receiving the other jaw member, a handle having a pair of flanges at one end receiving and embracing one end of the adjustable jaw members and further slidably embracing opposite sides of the stationary jaw member, a pivot connecting said flanges to the adjustable jaw member, and a rivet securing the flanges together and adapted to have adjustable engagement with said notches.

1,636,319. PROCESS OF REDUCING VISCOSITY OF NITROCELLULOSE SOLUTIONS AND PRODUCT THEREOF. EARLE C. PITMAN, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 11, 1921. Serial No. 491,596. 12 Claims. (Cl. 260—145.)

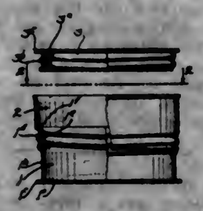


1. The process of reducing the viscosity of a nitrocellulose solution which comprises dissolving therein a soluble salt of a lower, monobasic, aliphatic acid, and allowing the resulting solution to stand until a substantial reduction in viscosity has occurred.

1,636,320. AEROPLANE. CARLOS MONTERO, Habana, Cuba. Filed Aug. 10, 1925. Serial No. 49,467. 2 Claims. (Cl. 244—19.)

1. In a device of the character described, a rotatably mounted sleeve, a plane member normally disposed in a horizontal position intermediate the ends of said sleeve, a hub slidably mounted upon the sleeve and secured thereto, brace members connecting the plane with the sleeve, an annular groove formed in the perimeter of the hub, said plane being formed with a plurality of circumferentially arranged openings, vanes movable in said openings, means forming connection between the hub and vanes for actuating said vanes upon movement of the hub relative to the sleeve, and manually operated means for imparting movement to said hub.

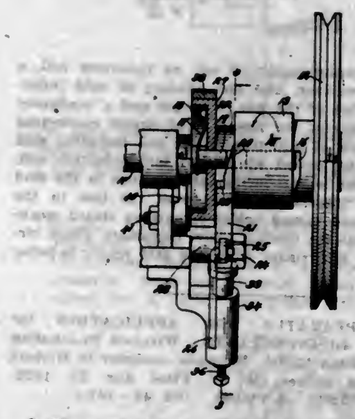
1,636,321. DENTAL GRINDING DEVICE AND PROCESS. JOHN W. NESBLES, Kansas City, Mo., assignor of one-half to Miles M. House, Kansas City, Mo. Filed Mar. 15, 1926. Serial No. 94,763. 6 Claims. (Cl. 32—1.)



1. A dental grinding process which consists in holding a pair of artificial dentures in occluded relation, and producing relative movement of said dentures substantially horizontally in both lateral directions from central occlusion, while simultaneously imparting to one of said dentures a longitudinal rectilinear movement and positively guiding said movement both forwardly and rearwardly.

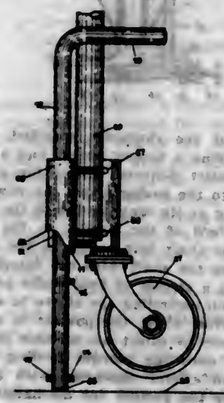
1,636,322. VACUUM WALL RECEPTACLE. WILLIAM C. O'LEARY, Washington, D. C., assignor of one-fourth to Joseph R. Pumphrey and one-eighth to Lucien George Berry, Washington, D. C. Filed Aug. 28, 1924. Serial No. 734,705. 3 Claims. (Cl. 220—9.)

1. In a receptacle, a vacuum chamber having one of its walls formed from an imperforate thin septum of low conductivity and providing an insulation, the said wall being materially less in thickness than any one of the other walls of said chamber.



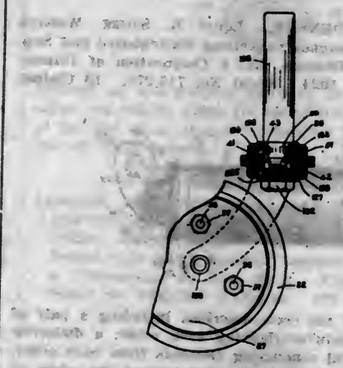
1,636,323. COLLAPSIBLE SHAVING CUP. CHARLES E. RAND, San Diego, Calif. Filed Dec. 30, 1925. Serial No. 78,435. 9 Claims. (Cl. 220—8.)

1. In a collapsible container, a base member having an upwardly extending container portion provided at its upper end with conforming inner and outer threads, an annular extension member positioned in telescopic relation to the container portion of said base member and provided with threads at its lower end adapted to engage the threads at one side of the upper end of said container portion for holding said extension member in extended relation therewith, and a cover provided with



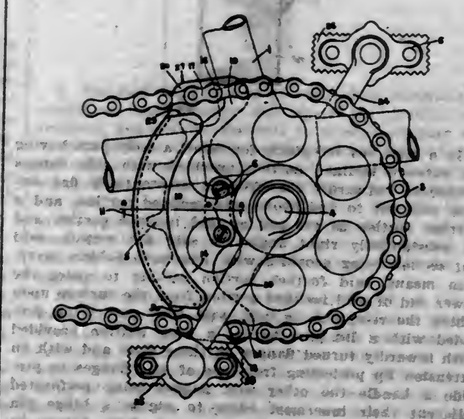
threads at its lower portion adapted to engage the threads at the other side of the upper end of the container portion when said extension member is collapsed relative to the container portion and form with the latter a tight container.

1,636,324. STOP MECHANISM. JAMES H. REED, Swampscott, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 14, 1922. Serial No. 594,458. 4 Claims. (Cl. 192—140.)



1. The combination with driving and driven members, of a bolt carried by said driven member for connecting the same with said driving member, a yieldingly mounted stop finger for withdrawing said bolt and stopping said driven member, and a brake for said driven member connected with said stop finger and operated by the yielding movement thereof.

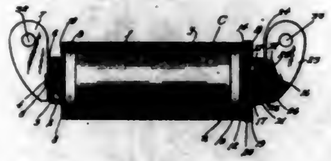
1,636,325. CASTER MECHANISM. MAYO E. ROE, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed Dec. 16, 1921. Serial No. 522,827. 9 Claims. (Cl. 16—33.)



1. The combination with a leg, of supporting mechanism therefor comprising a bracket formed with a pair of vertically extending sockets, means for securing said leg to said bracket, a caster wheel structure secured within one of the sockets in said bracket, an adjustable supporting rod carried by the other socket in said bracket, means for maintaining the lower end of said rod in a plane above or below said caster wheel.

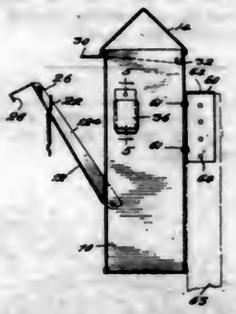
1,636,326. CASTER. MAYO E. ROE, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Original application filed Dec. 16, 1921, Serial No. 522,827. Divided and this application filed Mar. 8, 1926. Serial No. 93,052. 8 Claims. (Cl. 16—21.)

1. In a ball bearing caster, the combination with a caster fork having a horizontally disposed centrally perforated sheet metal yoke, of a pair of oppositely disposed sheet metal centrally perforated bearing cups rigidly mounted on the yoke co-axially with the perforation thereof and rigidly carried thereby, a caster stem, a pair of spaced opposed bearing cones carried by and secured to the stem, a portion of each bearing cone telescoped within one of the cups, bearing balls interposed between the telescoped end of each cone and the inner surfaces of the end and side walls of the enclosing cup, and securing means disposed between the arms of the fork to secure the cones on the stem to provide an anti-frictional bearing for the caster on the stem, the caster stem projecting by a reduced portion entirely through the aligned perforations of the yoke and cups.



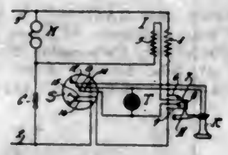
1,636,327. CYCLE. MAYO E. ROE, Elyria, Ohio, assignor to The Colson Company, Elyria, Ohio, a Corporation of Ohio. Filed May 12, 1926. Serial No. 108,500. 4 Claims. (Cl. 208—145.)

1. A safety device for cycles adapted to prevent extraneous objects from being drawn between the propelling cycle sprocket and its chain during rotation of the sprocket, comprising a one piece guard having a flattened



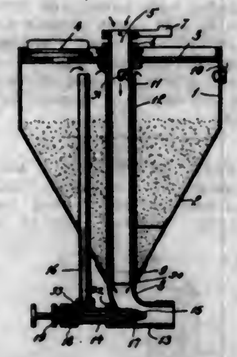
centrally disposed portion adapted to secure the guard to the frame on the inner side of the sprocket and having a portion overlying the periphery of the sprocket and extending from points closely adjacent the leaving and advancing chain portions with the sprocket.

1,636,328. CONDENSER. LOUIS B. SAUER, Western Springs, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1924. Serial No. 715,279. 19 Claims. (Cl. 175—41.)



1. A device of the class described including a pair of conducting elements overlapping each other, a dielectric for insulating said conducting elements from each other, said conducting elements extending beyond the edges of said dielectric, and individual disk terminal means for each of said conducting elements, each of said disk terminal means adapted to engage the extending edge of the particular conducting element associated with the said disk terminal means, and yielding means for maintaining said disk terminals in engagement with their respective conducting elements.

1,636,329. MAIL BOX. SOL C. SHERRY, Englewood, N. J. Filed Apr. 2, 1924. Serial No. 703,682. 1 Claim. (Cl. 232—33.)



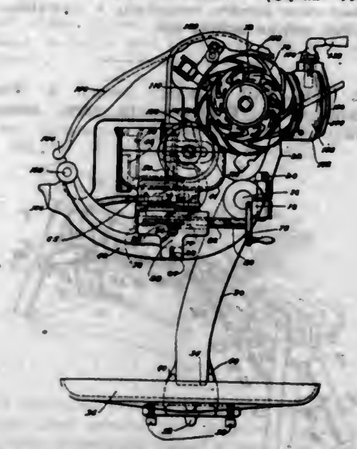
In a mail box receptacle for coins, a body part having an outward inclined portion provided with side flanges projecting outwardly therefrom, a substantially flat section adjacent to and above said inclined portion, and a further portion at the end of said inclined portion and at substantially right angles to said flat section, said flat section being provided with receptacle holders reception means, said further portion serving to space the lower end of said inclined portion from the surface upon which the receptacle is held, said body part being provided with a lid part having a body portion provided with inwardly turned flanges on three sides and with an extension lip projecting from one of said flanges to provide a handle the other said flanges being perforated adjacent their innermost edges to engage a hinge pin projecting through the outermost edges of the flanges on said body part so that the lid is normally held by its own weight over said body portion to form a complete coin receptacle which will discharge upon pulling said lid lip.

1,636,330. SUBSTATION TELEPHONE CIRCUIT. ARTHUR BESSEY SMITH, Evanston, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed May 22, 1922. Serial No. 562,633. 13 Claims. (Cl. 179—81.)

1. In a substation telephone set, an induction coil, a transmitter, a receiver, and one winding of said induction coil in bridge of the line, a ringer and a condenser in a second bridge of the line, a local circuit connecting the two terminals of said transmitter and including said condenser and the second winding of said induction coil, an impulse sender for producing interruptions in the said first bridge to transmit impulses over the line to the exchange, the said second bridge remaining closed meanwhile, and means for closing a low impedance shunt circuit around the said ringer while the said sender is being operated.

1,636,331. APPARATUS FOR APPLICATION OF POWDERED DISINFECTANTS. WILLIAM BLACKBURN SMITH, Hamilton Parish, Bermuda, assignor to Herbert Hice Whetzel, Ithaca, N. Y. Filed Apr. 22, 1922. Serial No. 555,963. 5 Claims. (Cl. 43—147.)

3. A device of the character specified, comprising a closed casing having a hopper outlet, and a feed chamber to which the outlet delivers, means for supplying fluid under pressure to the casing above the powder, a hollow shaft cooperating at its inner end with the hopper outlet to control the feed of the powder to the chamber, the outer end of the shaft being open to the atmosphere, a nozzle connecting the shaft with the interior of the casing for directing a stream of fluid under pressure toward the outlet, a shell encircling the sleeve in spaced relation and extending from above the powder to near the lower end of the sleeve to direct an annular stream of fluid under pressure onto the powder feeding into the feed chamber, and an ejector connected with the interior of the casing above the powder for discharging the powder from the feed chamber.



1,636,332. GUIDE TOOL. JOHN PEMBERTON SNAPP, Limestone, Tenn. Filed May 7, 1926. Serial No. 107,483. 3 Claims. (Cl. 140—123.)

1. In a device of the class described, a pair of jaws pivotally connected and channeled transversely, the channels being opposite each other, a third jaw movable about a pivotal point at an angle to the axis of movement of

the jaws first named, and an element mounted in the third jaw and movable thru this jaw in alinement with a bore formed by the channeled portions.

1,636,333. FINISHING MACHINE. JOHN F. STANDISH, Winthrop, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of Massachusetts. Filed Jan. 2, 1926, Serial No. 78,880. Renewed Oct. 8, 1926. 14 Claims. (Cl. 12—79.5.)

3. In a burnishing machine, a burnishing iron rotatably mounted in the machine, means for supplying wax to the periphery of said iron, means for spreading wax comprising a brush contacting with the iron at a point offset from the highest part thereof as the latter is moved in the machine, and means for heating the iron by combustion comprising a burner having its orifice disposed within the periphery of the iron at a point substantially diametrically opposite the point of application of the spreading brush.

1,636,334. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed July 3, 1922. Serial No. 572,435. 8 Claims. (Cl. 88—47.)

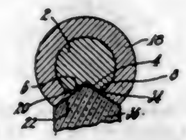
1. The method of making a non-metallic article of the class described that comprises cutting a longitudinal slot in a non-metallic rod, and cutting into a wall of the slot to increase the width of the slot.

7. An ophthalmic mounting having, in combination, an inner metal rim having an inner lens-receiving groove of narrower width than the largest cross-sectional width of the rim, the groove being joined to the portion of largest cross-sectional width by plane walls, the portion of largest cross-sectional width being curved in cross section, and the portions near the plane walls being of gradually decreasing radius, and a split outer rim con-

stituted of non-metallic material having an inner annular slot within which the metal rim is seated, the wall of the slot being shaped to conform to the exterior surface of the metal rim.

1,636,335. METHOD OF MAKING OPHTHALMIC MOUNTINGS. ARTHUR LEROY MCKINSTRY, Southbridge, Mass., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 27, 1928. Serial No. 628,180. 3 Claims. (Cl. 88—47.)

3. The method of making an ophthalmic mounting that comprises longitudinally slotting a rim constituted of resilient, non-metallic material to produce an annular wing on each side of the slot, beveling the outer portions of the wings along the walls of the slot, bending inward the beveled portions of the wings, and resiliently forcing a metal rim into the slot, the metal rim being shaped to conform to the slot and having a lens-receiving groove.



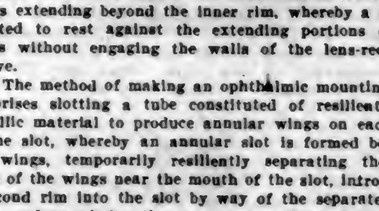
1,636,336. OPHTHALMIC MOUNTING AND METHOD. DANIEL PURSEL BERNHEIM, Southbridge, Mass., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 13, 1923. Serial No. 624,756. 15 Claims. (Cl. 88—47.)

8. The method of making an ophthalmic mounting that comprises longitudinally slotting a rod constituted of resilient, non-metallic material to produce annular wings on each side of the slot, bending inward the material of the rim near the mouth of the slot, temporarily resiliently separating the portions of the wings near the mouth of the slot, introducing a second rim into the slot by way of the opened-out portions, and permitting the opened-out portions of the wings to spring back into normal position to engage the second rim and hold the rims together.

10. An ophthalmic mounting constituted of two elements only, one a rim of substantially circular cross section, and the other a split rim having an annular slot extending substantially throughout its length within which the first-named rim is seated, the wall of the slot being of substantially circular cross section and shaped to conform to the surface of the first-named rim, one of the rims being constituted of resilient material and adapted to yield resiliently during the seating of the rim of substantially circular cross section within the annular slot of the slotted rim, whereby the rims are locked together substantially throughout their length.

1,636,337. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 9, 1921. Serial No. 459,940. 3 Claims. (Cl. 88—47.)

1. An ophthalmic mounting having, in combination, an inner rim having an inner lens-receiving groove, and an outer rim having wings forming between them an inner annular slot within which the inner rim is seated, the wings extending beyond the inner rim, whereby a lens is adapted to rest against the extending portions of the wings without engaging the walls of the lens-receiving groove.



3. The method of making an ophthalmic mounting that comprises slotting a tube constituted of resilient, non-metallic material to produce annular wings on each side of the slot, whereby an annular slot is formed between the wings, temporarily resiliently separating the portions of the wings near the mouth of the slot, introducing a second rim into the slot by way of the separated portions, and permitting the separated portions of the wings to spring back into normal position to engage the second rim and hold the rims together.

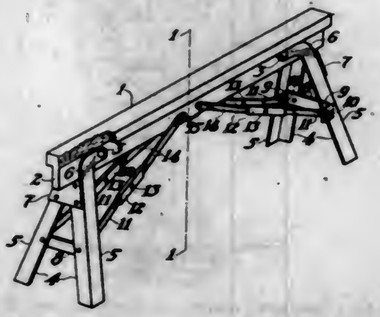
1,636,338. OPHTHALMIC MOUNTING. FREDERICK A. STEVENS and JAMES W. WELSH, Providence, R. I., assignors, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Original application filed June 13, 1921, Serial No. 477,146. Divided and this application filed Sept. 2, 1922. Serial No. 585,910. 2 Claims. (Cl. 88—42.)

1. Ophthalmic mounting comprising a non-metallic member having a lens-receiving groove, a member joined to the non-metallic member, and a split metal member for joining them together, the metal member being mounted in the non-metallic member and having the split parts diverging and extending into the groove and forced into the non-metallic material of the non-metallic member at the groove to conform to the shape of the groove.

1,636,339. OPHTHALMIC MOUNTING. JAMES W. WELSH, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 19, 1922. Serial No. 595,542. 3 Claims. (Cl. 88—43.)

1. A nose guard bent downward, upward, directly outward and forward.

1,636,340. SPECTACLE TEMPLE. JAMES W. WELSH, Providence, R. I., assignor, by mesne assignments, to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,125. 9 Claims. (Cl. 88—52.)

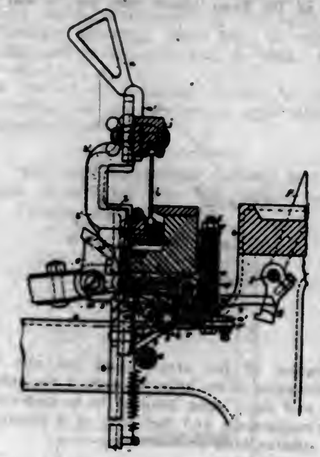


9. A spectacle temple comprising a metal core having a relatively straight shank portion and a flexible rear portion, and a non-metallic covering for the core covering the shank portion and the rear portion, the portion of the covering that covers the rear portion of the core comprising a tubular member that is cut into the form of a helix, whereby the helically cut portion of the tube is stiffened by the rear portion of the core but has substantially the same degree of flexibility as the said rear portion of the core.

1,636,341. HAIR DYE. MAUDE AGNES MINGUS WHEELER, Oakland, Calif. Filed Dec. 31, 1924. Serial No. 759,100. 4 Claims. (Cl. 167—5.)

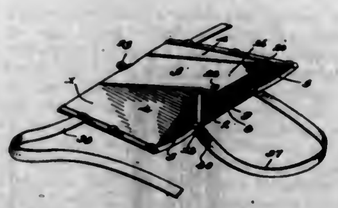
2. A hair rinse powder, comprising a crystalline mild organic acid, and an aniline dye.

1,636,342. FOLDING HORSE. JOSEPH A. WHELAN, Greenwich, Conn. Filed June 12, 1926. Serial No. 115,422. 1 Claim. (Cl. 304—5.)



In a mason's trestle having a trestle bar, a pair of divergent legs pivoted to the trestle bar and adapted to support said bar and jointed braces adapted to be positioned between said bar and said divergent legs, the combination comprising a cross piece rigidly connected to said legs medially thereof, each end of said cross piece having a right angularly extending finger, the said brace being formed in two sections, one section being pivotally connected at one end to one of the said right angularly extending fingers, and the other end pivotally connected to a U-shaped housing, the other section having one end pivotally connected to said bar and the other end rigidly connected to said U-shaped housing, said sleeve being also positioned in parallel alignment to said bar, for the purposes as described.

1,636,343. LOOM. WILLIAM S. WELLS, Bethlehem, Pa., assignor to Benjamin Eastwood Company, Paterson, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1924. Serial No. 699,391. 7 Claims. (Cl. 139—189.)



1. In combination, a batten including structure movable back and forth, a reed rearwardly movable therein, and

means to establish yielding resistance to the backward movement of the reed after said structure during each

forward stroke thereof has passed a given position and thereupon maintain said resistance until such stroke is completed.

1,636,344. INHALATION DEVICE. JOSIAH H. WILLIAMS, Baltimore, Md. Filed Apr. 10, 1923. Serial No. 631,218. 8 Claims. (Cl. 128—187.)

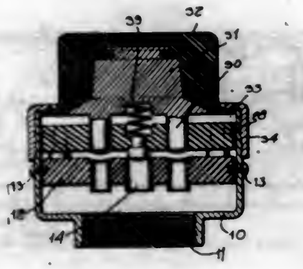
1. An inhalation device comprising a receptacle formed of flexible sheet material, said receptacle having top and bottom walls permanently joined at their rear longitudinal edges only and detachably connected at their side edges, one of said walls being provided at its front edge with front wall sections detachably connected with the other of said walls, said front wall section being spaced to provide a vapor outlet, and said top wall having a flap in line with said outlet, and a spreading device within the receptacle comprising resiliently connected top and bottom members, the top member having a forward portion projecting through the outlet beyond the front wall sections, said flap adapted to be folded under said forward portion of the top member and to be detachably connected at its free edge with the top wall of the receptacle, the construction being such that upon disconnecting said walls and flap at their points of detachable connection the receptacle may be outspread in the form of a substantially flat sheet.

1,636,345. ICE-CREAM MACHINE. RUSSELL A. WILLSON, Spokane, Wash., assignor of one-half to Fred N. Martin, Spokane, Wash.; Carrie Willson executrix of said Russell A. Willson, deceased. Filed Apr. 2, 1925. Serial No. 20,308. 5 Claims. (Cl. 62—114.)

1. In an ice cream apparatus the combination with a congealing chamber having an opening in its wall and refrigerating means for said chamber, of means for varying the venting capacity of said opening, an exterior spraying device having its nozzle in said opening, and

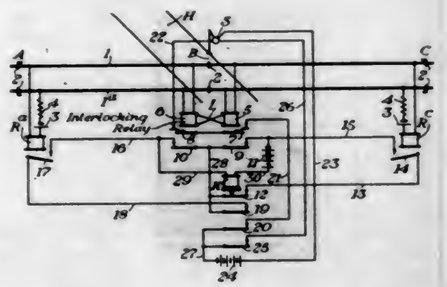
means for adjusting said nozzle with relation to the interior of the chamber and with relation to said second named means.

1,636,346. METHOD OF MAKING LATE-NEWS PRINTING PLATE AND MOLD THEREFOR. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 4, 1923, Serial No. 655,773. Renewed Dec. 27, 1926. 14 Claims. (Cl. 22—5.)



1. A convex core for a stereotype plate mold having detachably mounted on its convex surface a coring block for forming a late news cavity in the plate to be cast.

1,636,347. LIGHTING-SYSTEM SWITCH. WILLIAM W. WOODROOF, Pittsburgh, Pa. Filed Nov. 19, 1925. Serial No. 70,149. 2 Claims. (Cl. 200—6.)



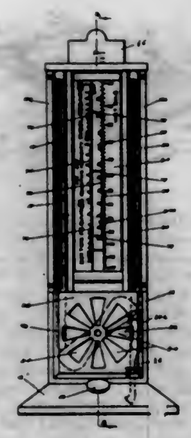
2. In combination, a shell having a fixed contact plate therein and provided with a central contact and a series of contacts arranged in spaced relation on an arc adjacent the periphery of said plate, a rotatable plate mounted in spaced relation to said fixed plate and having a central contact engaging the central contact of the fixed plate and a second contact electrically connected to its central contact and positioned to sweep over the arcuate series of contacts on the fixed plate, a button having a conductive body and an operating portion insulated from the body, a pair of prongs on said body, said second plate having openings in which said prongs slidably engage, a pair of arcuate contacts on opposite sides of the central

contact of the first plate and concentric therewith, said last contacts being positioned for engagement by said prongs in the various operative positions of the second

plate, and spring means normally holding said button away from said second plate and the prongs out of engagement with the arcuate contacts.

1,636,348. CONTROLLING APPARATUS FOR HIGHWAY-CROSSING SIGNALS. HENRY S. YOUNG, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 22, 1926. Serial No. 103,785. 6 Claims. (Cl. 246—130.)

1. In a highway crossing protecting apparatus, the combination with two adjacent track sections having an interlocking relay connected therewith and means for energizing said sections, of a plurality of other relays, one being connected to each of said sections, a signal, and means including a stick relay and controlled by said other relays for operating said signal when either of said track sections is de-energized.

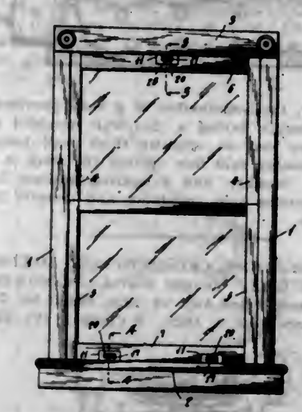


1,636,349. ROOFING SHINGLE. ROBERT B. ADAMS, Lonsdale, R. I. Filed Dec. 30, 1925. Serial No. 78,383. 1 Claim. (Cl. 108—7.)

A roofing shingle comprising a body formed from a rectangular sheet with triangular portions removed from diametrically opposed corners thereof to provide the shingle with straight parallel side edges adapted to abut similar edges of similar adjoining shingles, with a pair of similar notches formed in the lower edges of the sheet to provide transversely aligned right angular shoulders at the lower ends of said side edges, and with a further pair of notches formed in the lower edges of the sheet to form an arrow head tab of the lower corner portion of the shingle body having transversely aligned shoulders at its inner upper end, and a slat between

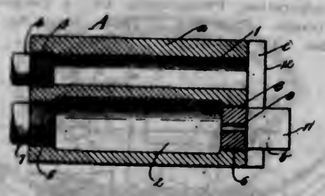
each shoulder of the arrow head tab and the right angular shoulder at the adjacent side of the shingle body, said tab and slats being adapted to be under-turned for the inter-engagement and fastening of a plurality of the shingles, substantially as described.

1,636,350. PORTABLE PSYCHROMETER. JOSEPH ARMSTRONG, Allston, Mass., assignor to American Moistening Company, Boston, Mass., a Corporation of Maine. Filed Aug. 31, 1926. Serial No. 132,688. 4 Claims. (Cl. 73—24.)



1. A psychrometer comprising, in combination, a casing having a reservoir for water in its base; a pair of thermometers mounted on the front wall of said casing; a wick extending from said reservoir around one of the thermometer bulbs; a fan arranged in said casing for blowing air to be tested past both bulbs; a handle on the back of said casing whereby the psychrometer can be held in the hand; a push rod arranged with respect to said handle to enable the rod to be actuated by the hand holding the psychrometer; and power transmitting connections between said rod and the fan for transforming the linear movement of said rod into rotative movement of the fan.

1,636,351. PROCESS FOR EXTRACTING FATS FROM TEXTILES. ALBERT BEIL, Hochst-on-the-Main, and WILHELM ADOLF MEYER, Hersfeld, Germany, assignors to A. Rechberg Gesellschaft mit beschränkter Haftung and Georg Braun Gesellschaft mit beschränkter Haftung, Hersfeld, Germany. Filed Mar. 11, 1926, Serial No. 94,095, and in Germany Mar. 18, 1925. 2 Claims. (Cl. 87—6.)

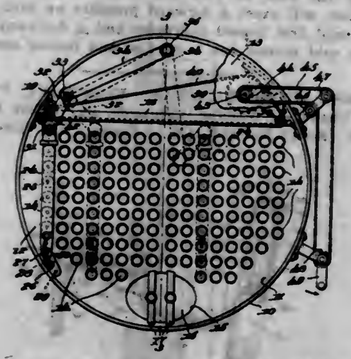


1. In a method of defatting textiles by means of volatile solvents, the step of treating such textiles with liquid methylenechloride.

1,636,352. WINDOW FASTENER. EDITH MAY BROWN, Pittsburgh, Pa. Filed Jan. 15, 1926. Serial No. 81,554. 1 Claim. (Cl. 292—128.)

In a window fastener, a sash rail having a recess therein, an open sided casing set into the recess with the open side thereof disposed adjacent the window frame, a latch keeper on the window frame in position to be enclosed by the casing when the sash is closed, a tensioned latch carried by the sash to automatically engage the keeper, the front wall of the casing being set flush with the front wall of the sash and having an opening therein, a handle for the latch extending through the wall opening, said latch being of plate formation and V-shaped in end elevation, one wall constituting the handle, a latch flange on the other wall, a shaft journaled at its opposite end in the casing to which the latch is rigidly secured, collars fixed to the shaft adjacent each end to engage the end walls of the casing to prevent axial movement of the shaft, and a coil spring on each end of the shaft between the latch and casing with its opposite ends engaged with the latch and casing to position the latch for automatic engagement with the keeper.

1,636,353. BURNER. STEVE BULLUM, Los Angeles, Calif. Filed Nov. 4, 1924. Serial No. 747,736. 2 Claims. (Cl. 158—75.)

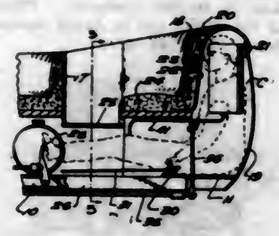


1. A device of the character disclosed, including a burner housing provided with two spaced bores; said burner housing at one end being provided with a channel with which such bores communicate, and a nozzle provided with two spaced wings extending from one of said bores and beyond the burner housing.

1,636,354. MOORING MAST AND MOORING GEAR FOR LIGHTER-THAN-AIR AIRCRAFT. CHARLES DENNISTON BURNEY, Westminster, London, England, assignor to Airship Guarantee Company, Limited, London, England, a British Company. Filed Feb. 11, 1925, Serial No. 8,400, and in Great Britain Feb. 19, 1924. 9 Claims. (Cl. 244—2.)

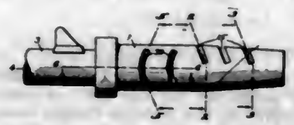
1. A mooring mast for lighter-than-air aircraft, in which anchor points for the side guys or cables which steady the airship as she is being hauled down to the mast are provided on laterally or radially projecting members or girders attached at or towards the top of the mooring mast.

1,636,355. BOILER-TUBE CLEANER. FRANK H. COLE, Chelsea, Mass. Filed Mar. 26, 1926. Serial No. 97,550. 4 Claims. (Cl. 122—391.)



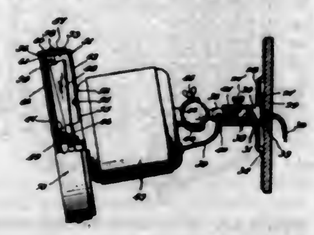
1. The combination of a boiler having tubes therein and a boiler tube cleaner comprising a traversing member arranged in said boiler and provided with a plurality of delivery outlets to register with the tubes of said boiler; means to supply steam to said traversing member; means to support said member with provision for movement, and means to impart movement to said member, said traversing member having a steam delivering end section normally in alignment with the body portion thereof but movable laterally relatively thereto at times.

1,636,356. AMUSEMENT DEVICE. GEORGE P. CUONIX, Erie, Pa. Filed Sept. 4, 1926. Serial No. 133,688. 3 Claims. (Cl. 180—1.)



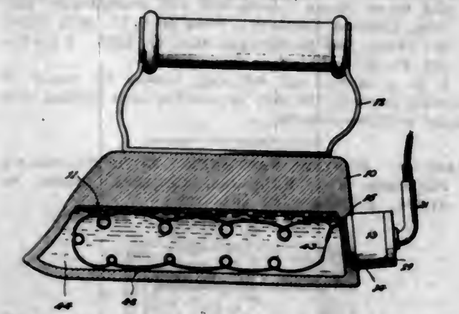
1. In combination with an automobile having the usual driver's and rear seats and deck, a compartment formed beneath the deck and extending partially behind

the rear seat for the accommodation of an operator, controls for the automobile likewise concealed beneath the deck and extending to said space and a dummy steering



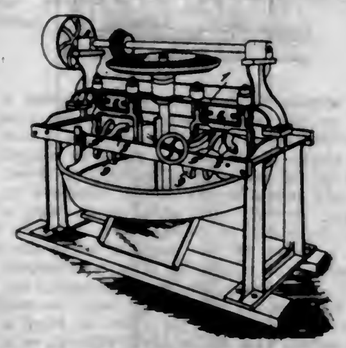
wheel occupying the position ordinarily occupied by the usual steering wheel of the vehicle, said dummy steering wheel being flexibly connected with the vehicle and shiftable to various parts thereof.

1,636,357. ANTICLIMB DEVICE. RICHARD M. CUTTS, Jr., Washington, D. C., assignor to Richard M. Cutts, sr., Washington, D. C. Filed May 22, 1926. Serial No. 110,983. 21 Claims. (Cl. 89—42.)



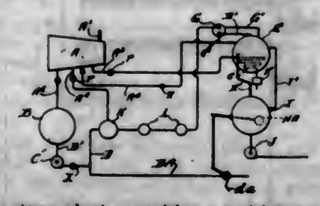
1. A firearm provided with a muzzle and a chamber associated therewith adapted to receive the gases of explosion, the walls of said chamber provided with a group of diametrically opposed apertures and another group of apertures disposed to one side of a plane passing through the axis of said chamber, whereby on firing, said gases will exert a forward pressure on said muzzle due to said first named apertures and a downward pressure on said muzzle due to said second named apertures.

1,636,358. AUTOMOBILE FAN. KNOWLTON C. FAIRMAN and FRANK N. WAGNER, Creekside, Pa. Filed Apr. 28, 1926. Serial No. 105,242. 1 Claim. (Cl. 230—273.)



In a device of the class dscribed, an attaching base, a socket projecting therefrom and having electrical contacts therein for the connection of conductor wires led through the base, a plug removably fitted into the socket and having a passage opening through the side and one end thereof for the reception of conductor wires, the plug having contacts at its said end for the connection of said wires and for engaging the contacts of the socket, means carried by the socket for engaging the plug to retain the same in the socket, an electric motor and fan driven thereby, the motor including a casing, and coacting ball and socket member upon the plug and the motor casing, the socket member having a set screw threaded through its wall for direct engagement with the ball member for holding the socket member in various positions of angular adjustment upon said ball member.

1,636,359. FLATIRON. ELMER GATES, Washington, D. C.; Donald E. Gates administrator of said Elmer Gates, deceased. Filed Dec. 15, 1921. Serial No. 522,552. 1 Claim. (Cl. 219—25.)

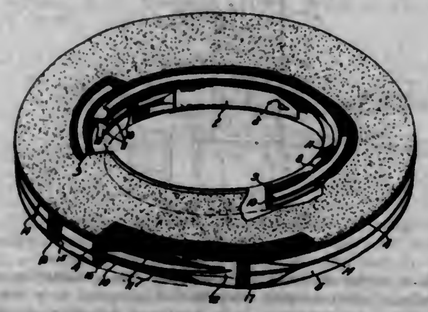


In a heater, the combination of a body provided with a heating chamber having a thin wall provided with a smoothing face and an opposite thick wall forming a weight for pressing said face against the work, a resistance in said chamber, and a heating medium in said chamber immersing said resistance and directly in contact therewith.

1,636,360. GRINDING, CRUSHING, AND MIXING MACHINE OR MILL. JOSEPH EMILE GERNELLE-DANLOY, Rouen, France. Filed Aug. 14, 1924, Serial No. 732,096, and in France Sept. 1, 1923. 5 Claims. (Cl. 83—11.)

1. A rotary element of a grinding machine made up of a series of arms disposed in the same circumferential plane and curving in the axial direction, said arms having grinding surfaces operating to increasingly compress the material on the cooperating grinding surfaces in the direction of grinding.

1,636,361. WATER HEATING AND DEAERATING. GEORGE H. GIBSON, Montclair, N. J., assignor to Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1923. Serial No. 672,906. 5 Claims. (Cl. 60—67.)

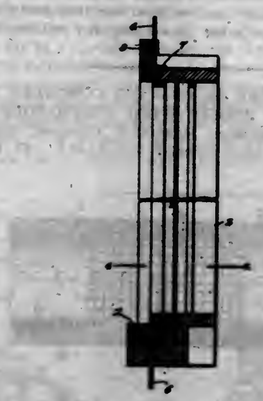


1. In a steam plant comprising a multistage steam turbine and a condenser receiving the main exhaust from said turbine, the combination therewith of feed water heating and deaerating apparatus comprising a chamber having an upper air and steam space and a lower water space, means for passing water of condensation from said condenser through said air and steam space in divided streams, a closed steam heater in the lower portion of said chamber, a connection for bleeding steam from an intermediate stage of said turbine into said heater, a connection for bleeding steam into the chamber above the water level therein from a stage of the turbine in which the steam is at a lower pressure than in the first mentioned stage, and means for discharging air from said air and steam space.

1,636,362. TELEPHONE RECEIVER WITH DETACHABLE SOUND AMPLIFIER. EDWARD ALFRED GRAHAM, Brockley, London, England; Maria Graham and Alfred Graham executors of said Edward Alfred Graham, deceased. Filed Feb. 12, 1926, Serial No. 87,899, and in Great Britain Sept. 11, 1925. 2 Claims. (Cl. 179—146.)

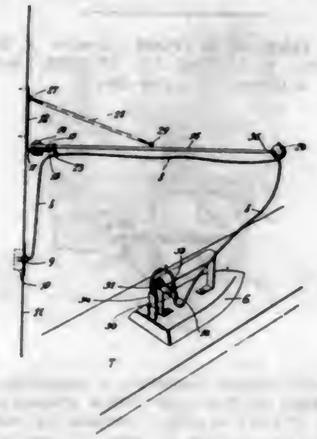
1. Sound amplifying means embodying a telephonic receiver, comprising a hollow base, a telephonic receiver having an externally screw threaded hollow stem extending through a hole in the top wall of said base and extending above said wall and a horn having its smaller inlet end fitted with a bushing of vibration deadening or non-sonorous material formed with an internal screw threaded companion to the external screw thread on the stem of the telephonic receiver and firmly engaged with such stem whereby the top wall of the base is firmly clamped between the upper end of the receiver and the smaller end of the horn in a readily detachable manner.

1,636,363. GASKET. JENNIE S. HETTINGER, Camden, N. J., assignor to United States Asbestos Co., Manheim, Pa. Filed June 19, 1925. Serial No. 38,213. 5 Claims. (Cl. 288—1.)



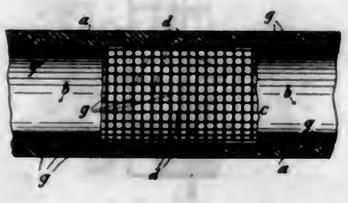
1. A gasket including a spirally wound strip of substantial T cross-section arranged with the shank of the T of one coil extending to but not substantially beyond the cross bars of the T of the adjacent coil, each half of the cross bar being curved toward the shank to form a semi-circular hook, and a filler between the coils.

1,636,364. FIXTURE SUPPORT. JOSEPH A. HOEGGER, Jersey City, N. J. Filed Feb. 17, 1923. Serial No. 619,549. 2 Claims. (Cl. 248—20.)



1. A fixture support comprising a supporting member having a rigid one-piece stem with a recessed part, the outer wall of which is inclined towards the base of the stem, means for attaching the stem to a support, a supported member having a socket which fits over the stem of the supporting member so that the stem substantially fills the socket transversely, and a fastening member carried by and adjustable in the supported member intersecting the socket and impinging on the outer inclined wall only of the recess of the stem thereby moving the supported member endwise towards its base.

1,636,365. WINDOW FLASHING. ALFRED HOKANSON, Westwood, N. J. Filed Dec. 6, 1926. Serial No. 152,973. 1 Claim. (Cl. 20—11.)

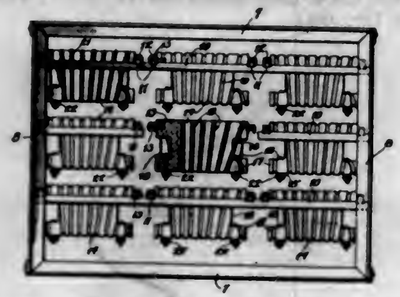


In a metal flashing structure for windows wherein the window frame is provided with an outer casing surrounding the window frame provided with longitudinal grooves on the inner side thereof, said flashing structure comprising the top strip and a pair of flanges provided with bent ribs formed intermediate their longitudinal edges for engagement in the longitudinal grooves of the window frame, the inner edges of said strips being bent at right angles to provide flanges for contact with the adjacent portions of said frame, the end portions of the side strips being in overlapping relation with the end portions of the top strips, the bottom strip, and vertical extensions at the ends of the bottom strip for disposition in overlapping relation with the lower portion of the side strips.

1,636,366. ELECTRIC-CORD-SUPPORTING DEVICE. JOSEPH F. HUBENER, Grantwood, N. J. Filed Mar. 25, 1926. Serial No. 97,172. 1 Claim. (Cl. 248—30.5.)

A cord supporting device of the character described comprising a bracket adapted to be secured to a wall and having a projecting horizontally disposed shelf portion, a bolt vertically supported in the latter, a rod bearing mounted on said bolt and adapted to rotate horizontally thereon, a rod pivoted on said bearing to swing in a vertical plane, said bracket shelf portion extending underneath and in the path of said rod to prevent movement thereof below the said shelf portion, means at the pivoted end of said rod for loosely securing a cord thereto, a ball at the outer end of said rod having means to securely grip a portion of the cord and a spring secured to said bracket and rod above the same tending to move the rod upwardly to keep the cord taut and to move the rod into vertical inactive position, and a washer on said bolt for preventing the rod from striking the wall.

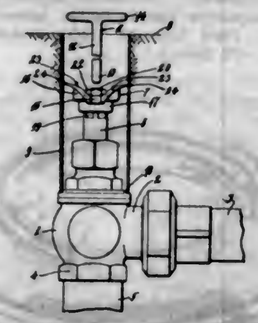
1,636,367. PROCESS OF COATING CONCRETE PIPES AND HOLLOW BODIES WITH BITUMINOUS COMPOSITIONS. ROBERT ILLEMANN, Glasgow, Scotland. Filed Jan. 15, 1926. Serial No. 81,473. 11 Claims. (Cl. 25—38.)



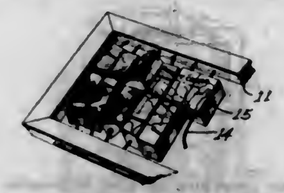
1. A process of making bituminously lined pipes or other hollow bodies of concrete consisting in spinning a mass of concrete to form the body, introducing a quantity of cold and aqueous liquid bituminous composition while the concrete is still wet, continuing the spinning of the body to distribute the bituminous composition over the interior surface of the body and thereafter allowing the concrete and bituminous composition to set simultaneously.

1,636,368. NECKTIE HOLDER. ARON E. JOHNSON, Seattle, Wash. Filed Mar. 28, 1927. Serial No. 179,007. 3 Claims. (Cl. 24—49.)

1. In a necktie holder of the class described, a body portion on which the bow of the tie is adapted to be formed, means at the upper edge of the body for detachable engagement over the upper edge of the collar to support the tie and the holder on the collar, said means comprising a pivoted hook arranged on the central portion of the body.

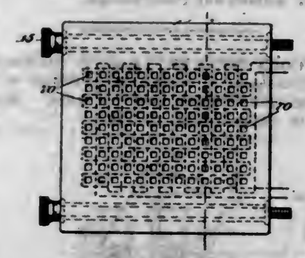


1,636,369. ELECTRIC HEATER. AXEL JOHNSON, Oakland, Calif. Filed July 29, 1925. Serial No. 46,705. 1 Claim. (Cl. 219—34.)



A heating unit comprising an open frame work having a plurality of parallel spaced horizontal bar members disposed in super-imposed pairs at opposite sides of the frame, pairs of parallel supporting bars removably resting in predetermined spaced relation at opposite ends on opposing bar members of the respective pairs, a plurality of elongated heating elements disposed in parallel spaced relation between said pairs of supporting bars and secured at their ends thereto forming with said supporting bars horizontal and vertical rows of batteries of heating units, each horizontal row being independently removable from said frame, the heating element between each adjacent pair of supporting bars being positioned in staggered relation with one another.

1,636,370. SPRINKLER-SYSTEM CONTROL VALVE. FREDERICK H. JOHNSON, Los Angeles, Calif. Filed Nov. 16, 1925. Serial No. 69,360. 1 Claim. (Cl. 137—139.)

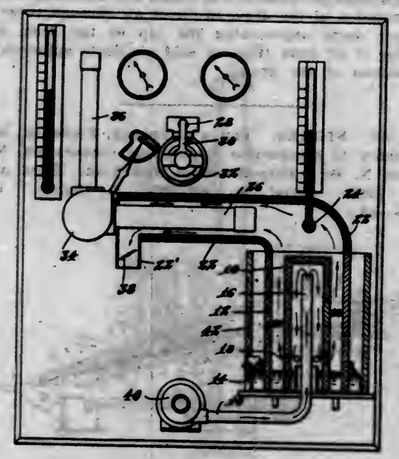


In a device of the class described, the combination of a valve control member adapted to be secured to a valve stem, and comprising a body having a flat disc portion said body being provided with a pair of spaced diametrically opposed slots extending to the said flat disc portion, and a pair of curved wings formed at diametrically opposed points of the said body and extending upwardly in curved relation from the said slots for guiding an actuating member into the said slots.

1,636,371. TOY. CHESTER A. KENNEY, Alameda, Calif. Filed June 7, 1926. Serial No. 114,352. 3 Claims. (Cl. 35—12.)

1. A toy of the character described comprising an open frame, a plurality of rows of blocks supported in the frame and rotatable therein, the sides of the blocks bearing parts of composite designs, and yieldable supporting means supporting the blocks within the frame and yieldably maintaining the sides of the blocks in intimate contact to present an unbroken field.

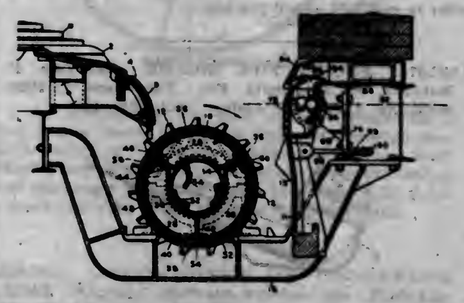
1,636,372. HEATING UNIT. MILTON M. KOHN, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,122. 6 Claims. (Cl. 201—64.)



6. A resistance material comprising a conductor embedded in a thin sheet of a mass consisting of 4 to 7 parts of silicon, 85 to 90 parts of carborundum, graphite 1 to 2 parts, and sodium silicate, the sheet being coated with zirconium silicate.

1,636,373. RAILROAD FROG. LAURIE M. LEEDOM, Trenton, N. J. Filed Oct. 4, 1926. Serial No. 139,455. 4 Claims. (Cl. 246—460.)

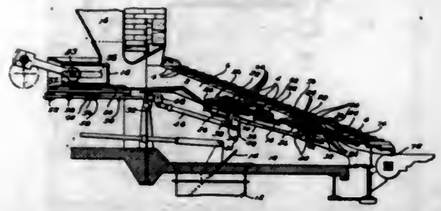
1. In a railroad frog, a point portion, a wing rail spaced from the point portion, and a stock rail forming a continuation of one side of the heel end of the point portion, said rails having alined flangeway-facing sides on a gauge line, and said point portion having a side facing said flangeway and positioned outwardly of and in spaced relation to said gauge line at the point end of said portion.



1,636,374. HYGROMETER, HUMIDITY REGULATOR, AND THE LIKE. ALBERT J. LOEPSINGER, Providence, R. I., assignor to General Fire Extinguisher Company, Providence, R. I., a Corporation of Delaware. Filed Aug. 22, 1924. Serial No. 733,537. 9 Claims. (Cl. 73—24.)

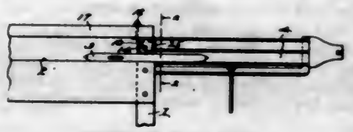
1. The method of producing a temperature approximating wet bulb temperature, in a thermally responsive element, comprising the causing of a stream of sample air to move over a supply of moisture, whence by evaporation the air picks up moisture and becomes cooled to the temperature corresponding to wet bulb depression, and then directing said air at said temperature over the said element thereby transmitting said temperature thereto; meanwhile maintaining said air free from sensible moisture.

5. Apparatus for producing wet bulb temperature in a thermally responsive element, comprising, said element, a tubular container having an evaporative wall; means for moving air in a current through the container; means for supplying moisture to said wall, whereby air that may be moved in a current along it contacts with the wall and the moisture therein and is thereby cooled to the temperature which corresponds to wet bulb depression; there being means for directing said cooled air at said temperature from the container upon the said element.



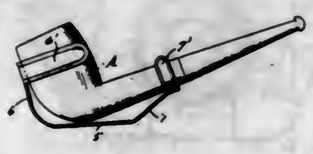
1,636,375. AUTOMATIC STOKER. EDWIN LUNDGREN, Frederick, Md., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed July 27, 1922. Serial No. 577,823. 12 Claims. (Cl. 110—44.)

1. A furnace having, in combination, means for supporting and feeding fuel while in the course of combustion and for delivering the refuse of the fuel therefrom,



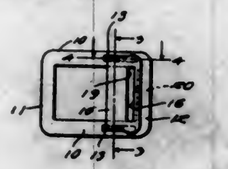
and refuse expelling means comprising a rotatable drum of hollow construction, having a substantially cylindrical refuse supporting surface having clinker crushing teeth thereon, arranged to act on the refuse as it leaves said supporting means and having air ducts leading out through its peripheral wall, and means acting automatically during each rotation of the drum to direct air through those of said air ducts approaching the top of the drum and shutting it off from those of said air ducts approaching the bottom of the drum.

1,636,376. STOKER. EDWIN LUNDGREN, Frederick, Md., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 30, 1923. Serial No. 660,095. 5 Claims. (Cl. 110—44.)



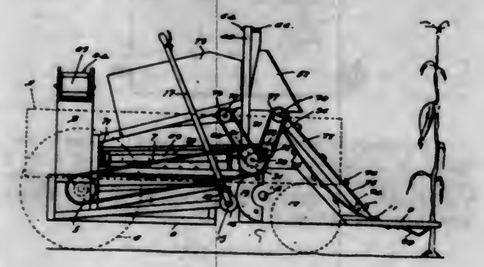
4. An underfeed stoker having, in combination, a retort, tuyère structures arranged at opposite sides of the retort, a plurality of fuel supporting air supplying structures mounted to slide longitudinally of the retort and arranged one behind the other at the bottom of the retort, and independently controllable means for admitting air to each of said structures.

1,636,377. SHUTTLE GUARD FOR LOOMS. JOSEPH MACCHIARELLA, Paterson, N. J. Filed Dec. 1, 1926. Serial No. 151,905. 5 Claims. (Cl. 139—193.)



1. In a device of the character described the combination of a yieldable roller adapted to frictionally engage a moving shuttle when in one position; hinged means to permit movement of said roller out of engagement with said shuttle; and spring clamping means to secure said roller in said last named position.

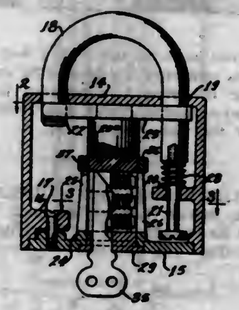
1,636,378. SMOKING-PIPE HOLDER. BENJAMIN F. MALLORY, St. Petersburg, Fla. Filed June 1, 1926. Serial No. 112,948. 3 Claims. (Cl. 131—12.)



1. As a new article of manufacture, a pipe holder comprising a base, tongues extending upwardly from the base at diametrically opposite points, and means associated with the free ends of the tongues for engagement with the bowl and stem respectively of the pipe for supporting the same above the base.

1,636,379. BELT BUCKLE. LOUIS MAURO, Beaver Falls, Pa. Filed Mar. 15, 1927. Serial No. 175,580. 1 Claim. (Cl. 24—194.)

A belt buckle comprising an open rectangular metallic frame the sides of which are provided adjacent one end of the frame with longitudinally extending slots, a cross bar slidably engaging the upper surface of the side members and having downturned portions projecting through said slots, means at the opposite face of the frame with which said downturned portions are engaged preventing withdrawal of the downturned portions from the slots and a belt receiving slot formed in said cross bar and in one position of the cross bar overlying the adjacent end member of the frame, the means preventing disengagement of the downturned portions from the slots comprising plates slidably engaging the side members of the frame at the opposite face thereof from said cross bar and through which said downturned portions extend, the downturned portions beneath said plates being upset to prevent their withdrawal therethrough.

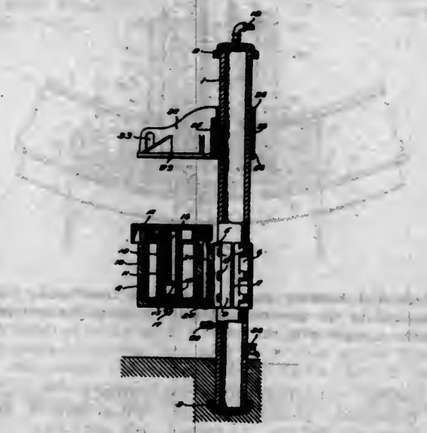


1,636,380. CORN HUSKER. EARL E. MCNEELY, Waldron, Ind., assignor of one-fourth to Everet W. Crosby, Greensburg, Ind. Filed Feb. 26, 1926. Serial No. 90,826. 11 Claims. (Cl. 56—66.)

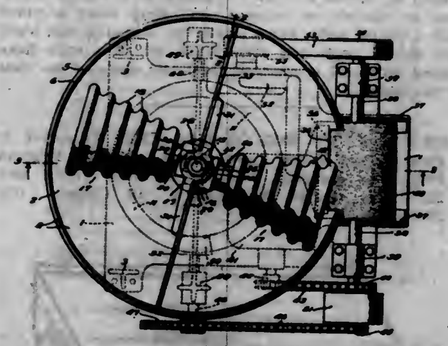
1. A harvester of the class described including, in combination, a frame, a pair of parallel spaced forwardly extending guide and gathering members pivoted to the frame, means for swinging said members, a plurality of bars having their upper ends pivotally mounted on the frame and their lower ends slidably resting on the members, and endless drag means operable in orbits about said bars.

1,636,381. LOCK. JESSE J. MEOIR and FREDERICK V. PEPPER, Los Angeles, Calif. Filed Jan. 28, 1926. Serial No. 84,278. 3 Claims. (Cl. 70—108.)

1. A shackle lock having imperforate side and end walls and a pierced top wall and a removable bottom wall, having a slotted annular projecting lug, means within the walls to secure the bottom wall detachably to the other walls, said securing means being accessible only through the top wall; a shackle mounted in said case for rotary and longitudinal movement, said shackle being composed of a longer and a shorter leg, said shorter leg having notches in the sides thereof; a U-shaped spring within and adjacent to the top wall, the free ends of which engage in the notches of the shorter leg of the shackle when the lock is locked; a tumbler projecting within said walls, said tumbler having a circular outline except the inner end which terminates in a parallelogram which lies between the members of the spring, said tumbler having a chamber therein provided with oppositely disposed openings through the end walls of the chamber, and a key opening in the bottom thereof; and spring operated fingers in said tumbler, said fingers being adapted to have the ends held projecting into the groove in the lug of the bottom wall when the lock is locked, said fingers having lugs adapted to be engaged by a key to retract the ends from the groove in the lug of the bottom wall.



1,636,382. FIREPUMP. FRITZ NEUMANN, Nuremberg, Germany, assignor to Armaturen- & Maschinenfabrik A.-G. vorm. J. A. Hilpert, Nuremberg, Germany. Filed June 27, 1924, Serial No. 722,751, and in Germany June 30, 1923. 1 Claim. (Cl. 103—108.)



A centrifugal pump used for fire extinguishing purposes comprising in combination a pump casing constructed as a zigzag pipe cooler, two end plates of said casing having each an annular chamber, radial ribs in said annular chambers subdividing said chambers into separated ring segments said pump casing having transverse channels connecting the several segments of the two opposite annular chambers and serving as passages for the cooling water to re-cool the same, and tie bolts in said channels of the pump casing connecting said end plates.

1,636,383. MOLDING MACHINE. WILLIAM H. NICHOLLS, Brooklyn, N. Y. Filed June 20, 1925. Serial No. 38,501. 8 Claims. (Cl. 22—45.)

1. A molding machine comprising a vertical, cylindrical tubular standard forming an air reservoir, a mold jolting and squeezing mechanism vertically and rotatively adjustable on said standard, an air control valve carried by said jolting and squeezing mechanism and controlling the supply of air to said mechanism, an upper pressure head rotatively mounted on the said standard above the jolting and squeezing mechanism, vertically adjustable means for sustaining said upper pressure head on said standard, said sustaining means being rotatively adjustable on said standard and carrying stop lugs adapted to be engaged by stop flanges on the pressure head to limit the rotative movement of the upper pressure head in both directions about the tubular standard, a main air supply pipe connected to the tubular standard, and an air pipe connected to the tubular standard and to the air control valve.

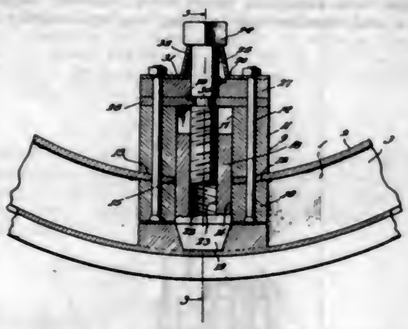
1,636,384. SAND MULLING AND AERATING MACHINE. WILLIAM H. NICHOLLS, Brooklyn, N. Y. Filed Nov. 9, 1925. Serial No. 67,920. 8 Claims. (Cl. 83—45.)

1. An apparatus of the class set forth comprising a sand mulling device adapted to mull and discharge sand continuously, in combination with power-driven sand-diffusing means disposed to directly receive the mulled sand discharged from said device and adapted to divide it finely and cast it out into the air continuously.

1,636,385. LOCKING DEVICE FOR DEMOUNTABLE RIMS. WALTER C. NIEWALD, Freedom, Mo. Filed Aug. 26, 1926. Serial No. 131,693. 3 Claims. (Cl. 301—28.)

3. In a locking device for demountable rims, in combination, a wheel felly, a rim having a boss provided with a socket, a housing upon the felly, a locking member ad-

justably slidable in the housing for interlocking engagement with the boss, an adjustable bolt having an annular groove, a cap plate, plates interposed between the cap



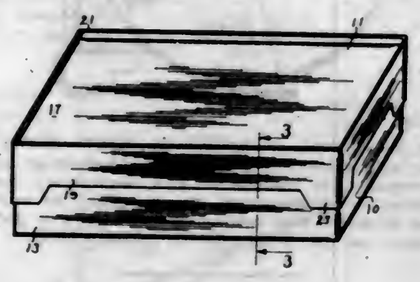


plate and housing and having their confronting edges engaged in the groove, and bolts to hold the associated parts engaged with the felly.

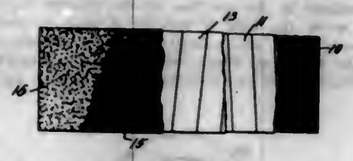
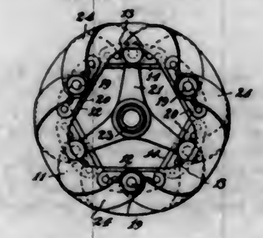
1,636,386. CUSHION REBOUND CHECK. LOUIE H. OBERRAICH, Indianapolis, Ind. Filed Mar. 5, 1924. Serial No. 697,126. 16 Claims. (Cl. 267—10.)



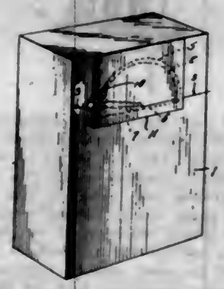
1. A cushion rebound check, comprising a strap arranged to extend between two parts of a vehicle which tend to separate on rebound, said strap being provided with a lateral bight, and a coil spring seated in said bight and having projecting arms which at their ends have sliding frictional engagement with the strap at the ends of the bight.

1,636,387. CANDY BOX OR THE LIKE. CLARENCE A. PEIRCE, New Haven, Conn., assignor to New England Paper Box Company, New Haven, Conn. Filed May 22, 1924. Serial No. 715,220. 16 Claims. (Cl. 206—44.)



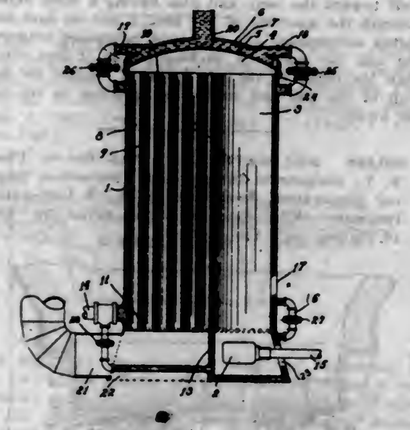
11. A cover for a box or a like container, comprising a lid having a surrounding flange to embrace the container when the lid is in place, and a band embracing said flange, said band being greater in width than the flange and projecting above the lid at its upper edge.

1,636,388. PROTECTED METAL ROOFING. THOMAS ROBINSON, New York, N. Y. Filed May 6, 1926. Serial No. 107,041. 11 Claims. (Cl. 154—51.)



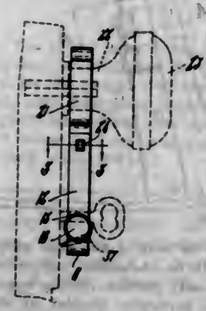
11. A prepared material for roofing and other similar purposes, which comprises a non-metallic core, a layer of metal encasing the core, a waterproof jacket encasing the metallic layer, and granular wear material covering one surface of the waterproof jacket.

1,636,389. FLEXIBLE ROTARY COUPLING. FREDERICK RICHARD SIMMS, London, England. Filed Feb. 5, 1926, Serial No. 86,351, and in Great Britain Nov. 16, 1925. 7 Claims. (Cl. 64—96.)



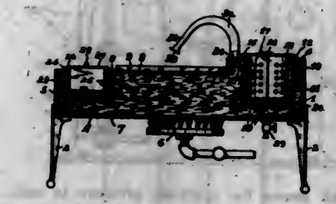
1. A flexible shaft-coupling for two substantially collinear shafts comprising a resilient device of U-shaped cross section connected on each side to one of said shafts and additional torque-transmitting means secured to said shafts and resting against the surface of said resilient device, said torque-transmitting means being bowed outwardly and adapted so as not to reduce unfavourably the flexibility of the coupling.

1,636,390. SANITARY SEALED CARTON. FRED A. SOLES, Platteville, Wis. Filed Jan. 26, 1926, Serial No. 83,921. Renewed June 4, 1927. 3 Claims. (Cl. 229—7.)



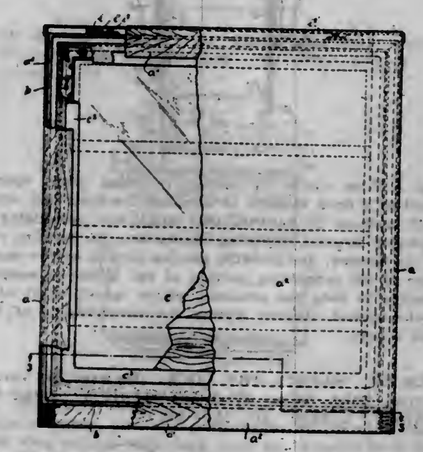
1. In a device of the class described, the combination with a carton having a semi-circular slit therein, a segment of sufficient area to completely close the aperture left by the flap formed by the slit, an arm affixed to the segment and protruding through the slit portion of the carton, means for pivotally attaching the segment and arm to the carton, and an easily severable seal initially covering the slit and forming an air-tight seal for the package which may readily be broken by swinging the arm through the slit.

1,636,391. BOILER. LOUIS D. SUMMERS, Springfield, Ill., assignor to Leader Iron Works, Decatur, Ill. Filed Nov. 12, 1925. Serial No. 68,516. 4 Claims. (Cl. 122—182.)



1. A boiler comprising a vertical cylindrical shell, a water inlet disposed at the lower end thereof, upper and lower tube sheets closing the ends of said shell, a fire box surrounded by a water leg located beneath a portion of the lower tube sheet, said water leg connected with the water inlet to the boiler, a combustion chamber disposed eccentrically within said shell and extending from the fire box to the upper tube sheet, a relatively thin water chamber connected to the upper portion of said shell and disposed directly above the upper tube sheet so as to form a passageway for the products of combustion between said chamber and said tube sheet, a hot water outlet from said chamber, said chamber being so situated relative to the combustion chamber as to be exposed to the products of combustion at their hottest point, a plurality of fire tubes, having a cross-sectional area in excess of the cross-sectional area of the combustion chamber extending from the upper tube sheet to the lower tube sheet and connecting said passageway with a smoke box adjacent said fire box, and a horizontal outlet for the waste gases from said smoke box.

1,636,392. KEY FASTENER. WILLIAM A. STUBBS, Sherbrooke, Quebec, Canada. Filed May 6, 1926. Serial No. 107,249. 6 Claims. (Cl. 70—65.)

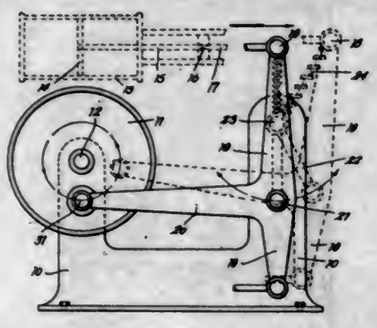


1. A key fastener comprising a U-shaped member having resilient arms formed with transverse complementary grooves adjacent to the bend of the U to receive and grip therebetween the stem of a door-key, adjustable extension members on said arms formed with grooves to receive the neck of a door knob therebetween, and clamping means mounted on said arms adjacent the grooves therein and actuable to press said grooved arms into gripping engagement with the stem of a door-key therebetween.

1,636,393. COOKING APPARATUS. ARIS THEOPHILEDES, Jeannette, Pa. Filed Feb. 25, 1927. Serial No. 171,028. 3 Claims. (Cl. 126—33.)

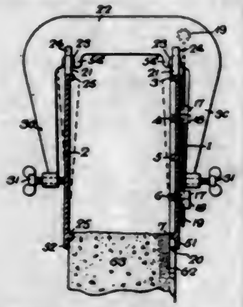
1. In combination, a cooking apparatus comprising a boiler containing water, a heating element for said boiler, said boiler provided with a flat cooking surface, cooking receptacles extending into said boiler and spaced from the side walls and bottom of the latter, and a distributor communicating with said boiler for diffusing the steam emanating from the latter over said cooking surface.

1,636,394. DISAPPEARING WINDOW FOR VEHICLES. ARTHUR A. TOWERS, Cleveland, Ohio. Filed June 23, 1925. Serial No. 39,007. 8 Claims. (Cl. 20—52.1.)



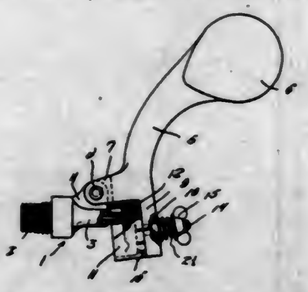
1. In a disappearing window, the combination with a window frame, of a slide substantially the height of the frame and adapted to accommodate the same, compression spring means associated with the slide adapted to be engaged by and effect the partial protrusion of the frame, and locking means for maintaining the frame within the slide against the tension of the compression spring, substantially as set forth.

1,636,395. DEAD-CENTER DEVICE. JOHN H. TOWERS, Balsam Lake, Wis. Filed May 15, 1926. Serial No. 109,401. 4 Claims. (Cl. 74—20.)



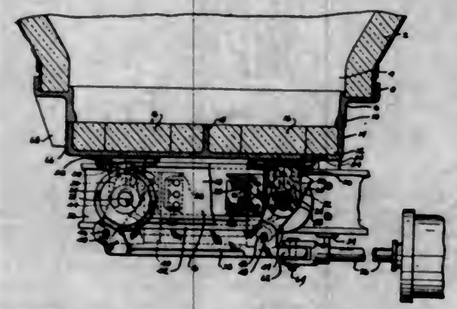
1. A device for overcoming dead centers comprising in combination with a fixed pivot, a rocker arm oscillating about said fixed pivot, a rigid right angle crank pivotally

connected to the oscillating end of the rocker arm, a rotary element connected to one end of said rigid crank, and a source of power operating another arm at an angle



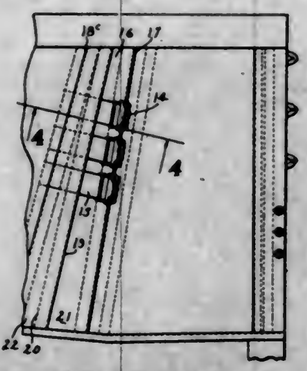
thereto, and means for applying pressure to said crank, the direction of pressure determining the direction of movement of the rotary element.

1,636,396. BUILDING FORM. WILLIAM E. URSCHEL, Valparaiso, Ind. Filed Mar. 2, 1922. Serial No. 540,428. 8 Claims. (Cl. 25—131.)



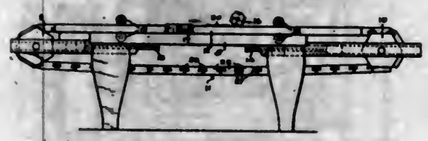
1. A form clamp for holding retaining plates spaced apart at a fixed distance to establish the inner and outer wall surfaces in perpendicular alignment comprising a U-shaped member, adjusting screws near the extreme end of the member, and pivoting notches formed on the under edge of the connecting portion of the U-shaped member adapted to hold the retaining plates spaced apart at a predetermined distance during the manipulation of the said screws.

1,636,397. SAFETY TRY COCK. RICHARD D. VALENTINE, Tulsa, Okla. Filed Aug. 20, 1925. Serial No. 51,412. 1 Claim. (Cl. 251—126.)



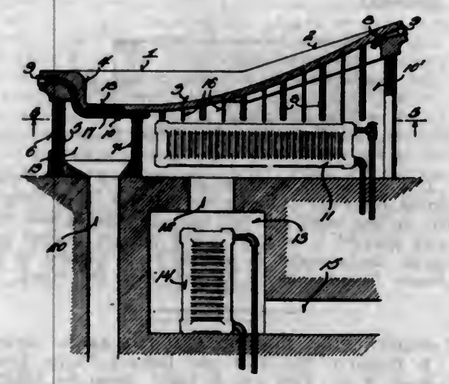
In a cock and in combination, a body having a passage and also having a nipple, a gravitational swingable member pivotally connected at an intermediate point in its length to the said body and having a weighted arm and also having an arm in opposed relation to the nipple, the latter arm being apertured, a cup arranged at the side of said arm adjacent to the nipple and having a bottom wall and a side wall extending from said bottom wall toward the body and also having a stem extending through the aperture of the arm, a nut on said stem, a spring surrounding the stem and interposed between the nut and the arm, and packing means of less thickness than the depth of the cup arranged against the bottom wall of the cup and in opposed relation to the end of the nipple.

1,636,398. ASH GATE. JOHN VAN BRUNT, Flushing, N. Y., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 5, 1924. Serial No. 736,016. 10 Claims. (Cl. 110—165.)



8. The combination of an ash pit having a discharge opening and means for closing said opening comprising a gate, means for moving the gate into and out of position beneath said opening, a stop for limiting the inward movement of the gate, and means acting automatically upon the gate reaching the limit of its inward movement to raise said gate toward said opening.

1,636,399. CORSET. IRVING R. VERSOY, New Haven, Conn., assignor to The Berger Brothers Company, New Haven, Conn. Filed Sept. 3, 1925. Serial No. 54,383. 4 Claims. (Cl. 2—27.)



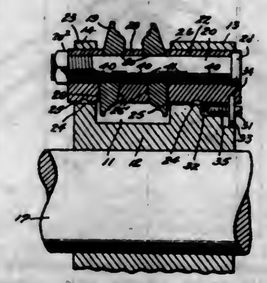
1. A corset or belt of the type adapted to be used in connection with an abdominal supporting pad or the like, comprising a body portion having spaced stays extending approximately vertically thereof at the respective sides of the body, the body portion of the corset between two of such stays at each side of the corset being divided into vertically extending sections, and the meeting edges of sad sections at each side portion of the corset being overlapped and stitched tgether to form a seam, straps passing through said seams between said sections and secured to the garment by the seams, and buckles mounted on said straps closely adjacent the outer ends thereof, the inner ends of each of said straps being continued rearwardly along the inner face of the corset body to one of said stays and being attached to the corset body adjacent said stay.

1,636,400. MOLDER OR STICKER DEVICE. AUGUST E. L. VON BORCKLIN and LEONARD M. LARSON, Tacoma, Wash., assignors to Washington Manufacturing Co., Tacoma, Wash., a Corporation of Washington. Filed June 2, 1925. Serial No. 34,348. 5 Claims. (Cl. 144—145.)

1. A device of the character described embodying a table; an endless pattern chain operatively mounted on said table; material feeding means independent of said chain and material cutting means, both of said means being operatively disposed with respect to said chain.

1,636,401. APPARATUS FOR GIVING MUD BATHS. JOHN NICHOLAS WEBER, Waukesha, Wis. Filed July 19, 1926. Serial No. 123,435. 5 Claims. (Cl. 4—163.)

1. An apparatus for giving mud baths, comprising a tub formed of rock-like material and having a rounded elongated depression for the reception of the mud and the body of the patient, said depression having a large discharge opening, a plate for closing such opening, a compartment positioned below said opening, and a discharge pipe leading from such compartment.

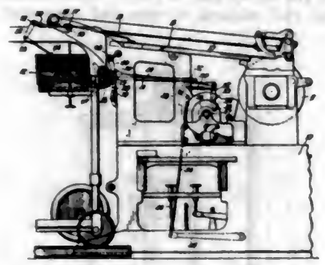


1,636,402. PRESSURE-OPERATED VALVE APPARATUS. RUDOLPH WELCKER, Springfield, Mass., assignor of one-fourth to Franklin G. Neal, Springfield, Mass. Filed Dec. 29, 1924. Serial No. 758,674. 22 Claims. (Cl. 4—30.)

1. A pressure operated valve apparatus comprising a tank, an outlet pipe extending through the bottom of the tank and with its upper end spaced a short distance from the top of the tank, a second pipe extending from the top of the tank and with its lower end spaced a short distance from the bottom of the tank, said second pipe being arranged concentrically with the outlet pipe and in spaced apart relation to form an annular passage from the bottom part of the tank up to the top opening in the outlet pipe, a piston valve mounted in the second pipe and adapted to open and close said opening

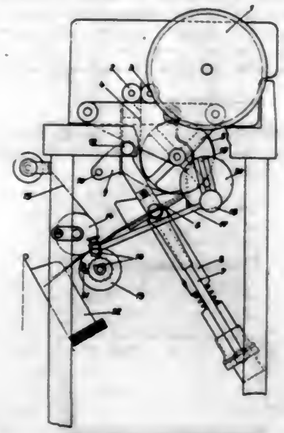
in the outlet pipe, and means to create a pressure in the top of said tank within and without said second pipe and means to release the pressure within said pipe above said piston valve to thereby open the valve and establish a siphonic action from the tank through said outlet pipe.

1,636,403. CUTTER HEAD. EDWARD E. BEATY, Seattle, Wash. Filed Oct. 7, 1926. Serial No. 140,038. 8 Claims. (Cl. 144—234.)



1. In a cutter head having two spaced apart peripheral flange elements provided with cylindrical bores having their axes aligned with each other and parallel with the axis of the head, an apertured cutter located between said flange elements, a bolt extending through the aperture of said cutter, bushings provided for said bolt within the respective flange bores, and means cooperating with the bolt for securing the bushing in operative relation with respect to said cutter.

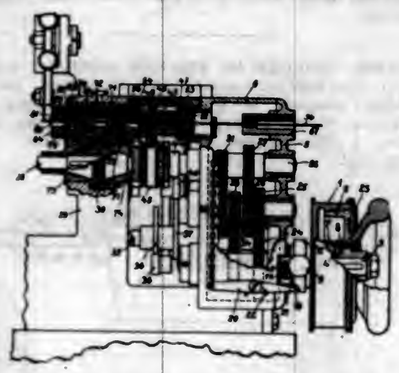
1,636,404. SHEET-CONTROL MECHANISM. JOSEPH R. BLAINE, Oak Park, Ill., assignor to Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1924. Serial No. 710,757. 3 Claims. (Cl. 271—56.)



1. In a printing press, the combination of a press tripping member, a sheet clamping member for preventing feeding of a sheet under abnormal sheet feeding conditions, a latch operatively connected to said press tripping

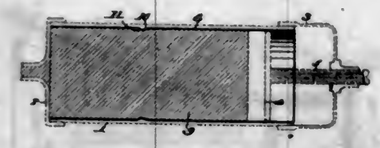
member and normally holding said sheet clamping member in an inoperative position, and plural sheet detector means operative upon said latch for permitting said

clamping member to exert a clamping action and for causing the tripping of the press upon the occurrence of such abnormal sheet feeding conditions.



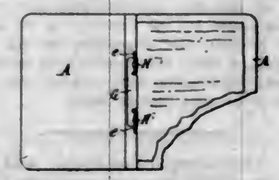
1,636,405. APPARATUS FOR MECHANICALLY COPYING ENTRIES FROM CARDS OR SHEETS OR THE LIKE ON A COLLECTIVE SHEET. MARTIN F. BRANDT, Berlin-Charlottenburg, Germany, assignor to The Tabulating Machine Company, New York, N. Y. Filed June 16, 1926, Serial No. 116,287, and in Germany May 19, 1924. 5 Claims. (Cl. 100—67.)

1. A copying device comprising in combination, a pair of intermittently driven copying rolls, means for intermittently revolving said copying rolls through fractions of a revolution, and a mechanism for transporting and guiding cards or the like to be copied to the said copying rolls, whilst the latter are at rest.



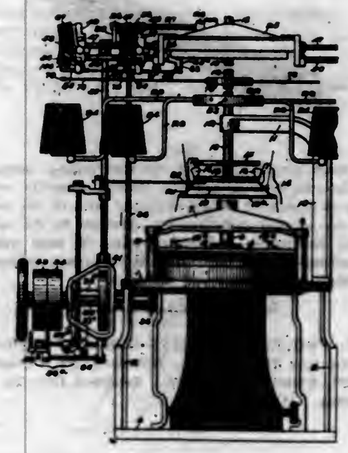
1,636,406. STOCK FEED. LORENZ KONRAD BRAREN, Munich, Germany, assignor to the Firm Friedrich Deckel Fabrik für Präzisionsmechanik und Maschinenbau, Munich, Germany. Original application filed Nov. 28, 1922, Serial No. 603,871, and in Germany Dec. 18, 1921. Divided and this application filed June 4, 1924. Serial No. 717,714. 9 Claims. (Cl. 29—62.)

1. In turning and screw cutting machines, a stock feed comprising a stationary automatic gripping device operated by the movement of the stock in one direction to grip and hold the same, and upon movement in the opposite direction to release the same, a movable automatic feeding mechanism including jaws frictionally engaging the stock and operated thereby during movement in one direction to grip and advance the stock, and adapted upon movement in the opposite direction to slide along the same and also including a reciprocally mounted non-rotatable tubular part encircling the jaws and serving to force the latter into frictional engagement with the



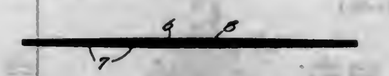
stock, and means for reciprocating said tubular part to feed the stock through said gripping device during movement in one direction, and arranged to move it idly along the stock during movement in the other direction while the stock is held by said gripping devices.

1,636,407. CARTRIDGE FOR GREASE GUNS. JOHN FREDERICK BROMMER, Richmond Hill, N. Y. Filed July 10, 1924. Serial No. 725,219. 6 Claims. (Cl. 206—56.)



1. A grease gun cartridge comprising a tubular shell having removable end caps and adapted to be inserted into the gun barrel with both end caps removed, said shell being adapted to slidably receive the gun plunger and having means located in position to be engaged in the plunger for withdrawing the shell from the barrel.

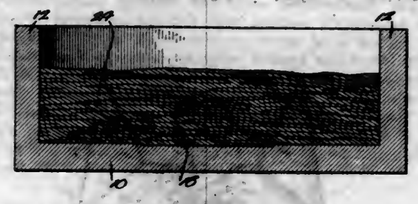
1,636,408. FILE, BINDER, AND THE LIKE. GEORGE E. DOUGHTY, New York, and HERMAN FORTH, Ridgewood, N. Y. Filed Jan. 5, 1927. Serial No. 159,073. 5 Claims. (Cl. 129—25.)



1. A file or binder for sheets of paper and the like comprising a cover having opposite leaves and a flexible back connected to said cover leaves by fillets, a flexible tongue attached to one fillet and a guard plate attached to the other fillet and formed with an opening slot adapted to laterally receive said flexible tongue, said guard plate having a metallic lip in spaced relation to the opening slot, said lip being adapted to receive and hold the tongue when it is bent down over said guard plate.

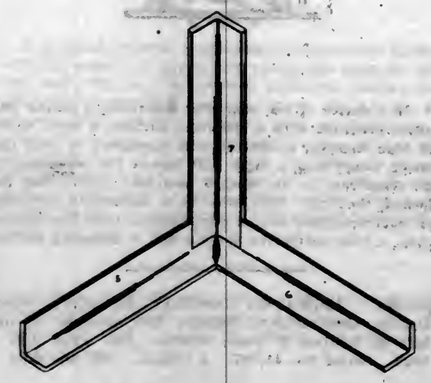
1,636,409. YARN-CONTROL MECHANISM. WILLIAM P. DRUMHELLER, Springfield, Mass., assignor to The William Carter Company, Needham Heights, Mass., a Corporation of Massachusetts. Filed Sept. 23, 1924. Serial No. 739,326. 11 Claims. (Cl. 66—132.)

1. In a knitting mechanism including one or more yarn packages corresponding in number to the number of yarns to be supplied, knitting instrumentalities to which the yarn or yarns are to be fed, and a stop motion for stopping the operation of the mechanism, the combination of sets of conical, longitudinally toothed or fluted feed wheels or rolls, one adjacent each yarn package, a movable finger in the path of each yarn intermediate its yarn package and the corresponding set of feed wheels or rolls, said finger operatively connected with said stop motion and normally maintained in inoperative position during proper feeding of the yarn but movable to initiate the action of said stop motion in response to failure of the yarn or breakage thereof at a point between the package and said feed wheels or rolls, and a normally stationary finger cooperating with said movable finger to guide the yarn to said feed wheels or rolls, the yarn guiding portions of said fingers being adjustable to vary the point of feed of the yarn with respect to said feed wheels or rolls thereby to vary the rate of yarn feed.



1,636,410. TELEPHONE DIAPHRAGM. LOUIS T. FREDERICK, Valparaiso, Ind., assignor to Fibroc Insulation Company, Valparaiso, Ind., a Corporation of Indiana. Filed Apr. 24, 1924. Serial No. 708,668. 2 Claims. (Cl. 179—181.)

1. In a telephone, a composite diaphragm composed of a thin sheet of metal and a layer of synthetic resin condensate rigidly secured thereto for reinforcing it, and electromagnetic means operable on said sheet for vibrating it.

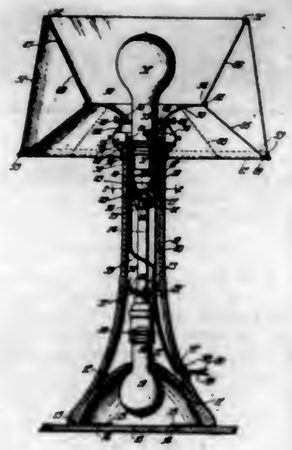


1,636,411. COMPOSITE GEAR AND METHOD OF MAKING SAME. LOUIS T. FREDERICK, Valparaiso, Ind., assignor to Fibroc Insulation Company, Valparaiso, Ind., a Corporation of Indiana. Filed Aug. 26, 1925. Serial No. 52,710. 9 Claims. (Cl. 154—2.)

1. The process of making gear blanks consisting in taking small particles of substantially dry, fibrous material impregnated with an uncured binder, pressing it into a self-sustaining element of the full diameter of the gear blank, the pressure and temperature being insufficient

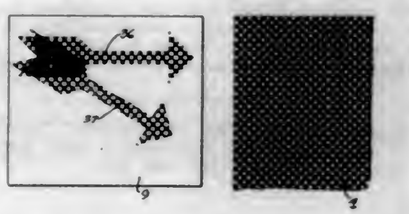
to cure the binder, releasing the pressure to admit of inspection, and subsequently submitting the article to sufficient heat and pressure to cure the binder.

1,636,412. METALLIC CORNER. GUSTAVE A. GALLOWITZ, New York, N. Y., assignor to Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Original application filed Oct. 4, 1924, Serial No. 741,747. Divided and this application filed Dec. 4, 1925. Serial No. 73,113. 3 Claims. (Cl. 189—36.)



1. A new product comprising a metallic welded corner being absolutely smooth inside and outside and composed of three angle irons positively interlocked from the apex of the corner, the angle iron at the apex of the corner being uncut and the strains radiating from said apex.

1,636,413. ELECTRICAL CONNECTER. WALTER P. GISSKE, Chicago, Ill. Filed June 2, 1922. Serial No. 565,439. 12 Claims. (Cl. 173—259.)

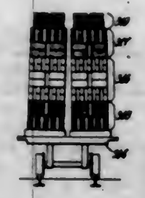


1. An electrical connecter comprising a resilient clip having a free end portion and a headed member mounted thereon, the free end portion of said clip having an opening therein aligning with said headed member, said member extending through said opening with the head thereon normally engaging with the edge of said clip at said opening to detachably hold the free end portion of said clip in engagement with said head.

1,636,414. LIGHTING FIXTURE. ROY M. GRAVES and EUGENE R. D'OLIVE, Chicago, Ill., assignors to Associated Engineers Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 24, 1925. Serial No. 25,576. 4 Claims. (Cl. 240—81.)

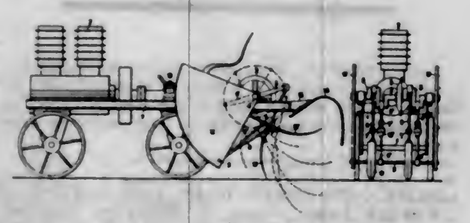
1. In a device of the character described, a hollow base member provided with a reflecting surface, a lamp within said base member, a lighting unit supported by said base member comprising a lamp and means for reflecting the light therefrom in an upward and lateral direction and diffusing the light therefrom in a downward direction, said last mentioned means comprising a bowl-like member having a color-corrective portion and a diffusing portion.

1,636,415. ANIMATED DISPLAY DEVICE. RALPH DANIEL GREENAWALT, Chicago, Ill., assignor of one-half to William T. Jane, Chicago, Ill. Filed July 6, 1925. Serial No. 41,727. 4 Claims. (Cl. 40—65.)



1. An animated picture display device comprising a frame, a display plate mounted therein having staggered rows of opaque and transparent squares, a carrier plate mounted in said frame, a composite checkered photograph supported on said carrier plate behind said display plate, ball bearing supports for said carrier plate, spring controlled means for resiliently holding said carrier plate in position within said frame, and driving means connected with said carrier plate for moving the same relative to said display plate to give the object on said composite photograph an animated appearance when viewed through the transparent squares of said display plate.

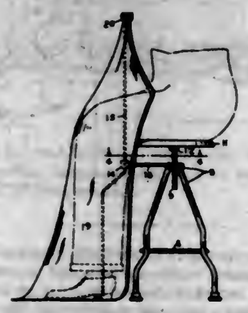
1,636,416. TRACK FOR TOY ELECTRIC TRAINS. L. GESSFORD HANDY, New York, N. Y. Filed Nov. 19, 1921. Serial No. 516,331. 5 Claims. (Cl. 246—81.)



2. A track section for toy electric trains comprising three rails and connecting ties, means whereby each of said rails is insulated from the other rails of the section, at least one of said rails having openings in its opposite ends, and insulating connecting pins in said openings and projecting beyond the rail ends to engage corresponding openings in adjacent rail sections.

1,636,417. PROCESS OF FIRING CERAMIC PRODUCTS. WILLIAM LEE HANLEY, Jr., Bradford, Pa. Filed Apr. 13, 1926. Serial No. 101,678. Renewed Dec. 22, 1926. 14 Claims. (Cl. 25—157.)

1. The herein described process of firing brick, which consists in supporting a plurality of layers of brick, placing in the lower layers bricks requiring relatively lower temperature to fire them and bring them into commercial condition, and placing in the superposed layers brick requiring a higher temperature to fire them and bring them into commercial condition, and subjecting said layers, in an enclosing chamber, to heat sufficient to properly fire the brick of the lower layers, whereby the bricks of the upper layers will be subjected to a higher temperature and economy of fuel is attained.

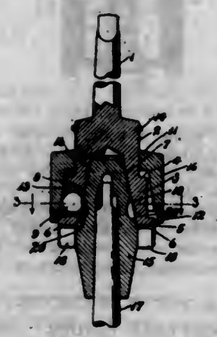


1,636,418. MOTOR SPADE. WENZEL HEJMA, Brno, Czechoslovakia. Filed July 19, 1923, Serial No. 652,502, and in Czechoslovakia July 22, 1922. 3 Claims. (Cl. 97—36.)

1. In a mechanical digger of the type described, a frame, a crank journaled in said frame, a spade pivoted to the crank pin, a segment oscillable about the crank

shaft, a link pivoted to said spade and to said segment, teeth on the arcuate periphery of said segment, gear means on said frame and in engagement with said teeth, and means for rotating said gear means.

1,636,419. FLUOROSCOPIC PROTECTOR. EDWARD HOLLANDER, New York, N. Y., assignor to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1926. Serial No. 95,022. 8 Claims. (Cl. 250—84.)



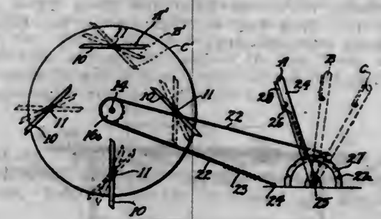
1. In a fluoroscopic protector the combination of supporting means for the operator to sit on and means supported by said supporting means for preventing the X rays from reaching the lower half of the body of said operator.

1,636,420. PROCESS FOR TREATING EGGS. MORRIS KASSER, San Francisco, Calif. Filed Mar. 11, 1925. Serial No. 14,784. 6 Claims. (Cl. 99—8.)

1. The process of treating eggs having a shiny and oily shell, which comprises treating the shell with a liquid compound that is both an oil solvent and volatile, for removing the shine, and is incapable of penetrating the egg shell and tissue to give taste and odor to the egg content.

6. A compound including a volatile solvent that will spread a sealing substance freely and leave no odor or taste in the egg.

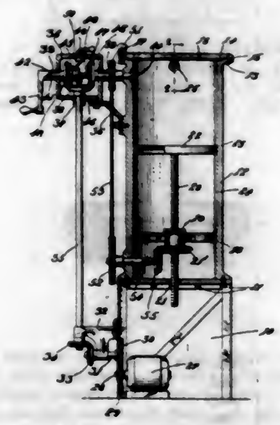
1,636,421. CHUCK. WARREN E. KNOTT, Grand Rapids, Mich. Filed Aug. 10, 1925. Serial No. 49,170. 1 Claim. (Cl. 279—75.)



A chuck comprising, a vertical inner member having an upwardly and inwardly extending axial tapered opening and a plurality of radial openings through the side of said member communicating with the axial opening, a ball located in each radial opening, a collet having a tapered upper portion to fit the tapered opening of said inner chuck member, said collet at the lower end of said tapered upper portion having a downwardly and inwardly extending annular face against which said balls may bear, the points of contact of the balls against said face being in a horizontal plane located above the centers of said balls, a second chuck member comprising, a vertically movable collar around the inner member and having an upwardly and inwardly tapered internal surface to bear against the outer portions of said balls, and co-acting driving means on said collet and inner chuck member.

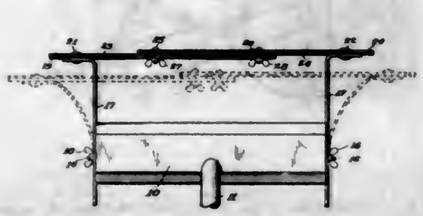
1,636,422. BOTTLE CLOSURE. WALTER G. LAIDLAW, Syracuse, N. Y., assignor to Kleen Kap Corporation, Syracuse, N. Y., a Corporation of New York. Filed Oct. 15, 1926. Serial No. 141,834. 2 Claims. Cl. 215—51.)

1. A bottle closure comprising a fibrous disk having an integral radial tab projecting outwardly from its periphery, said tab being of reduced thickness relative to the thickness of the disk and the upper face of the latter adjacent the tab being formed with a depression, the upper face of the depression forming a continuation of the upper face of the tab when the latter is extended, the tab being folded along a line substantially in register with the adjacent peripheral part of the disk and engaging in the depression so as to extend flush with the upper face of the disk.



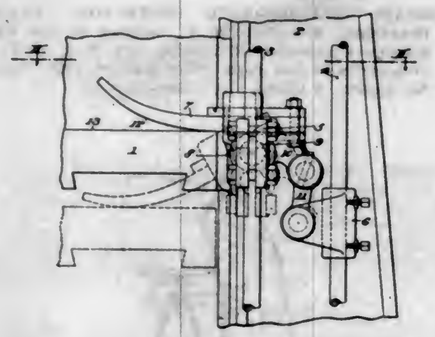
1,636,423. PLANETARY-GEAR-CONTROLLED PROPELLER. ALBERT LANGENBACH, Chicago, Ill. Filed Feb. 19, 1926. Serial No. 89,328. 2 Claims. (Cl. 170—150.)

1. In combination with a movable carrier, of a propeller mounted thereon to rotate on a horizontal axis, said propeller comprising a central horizontal shaft, blade supports fixed to said shaft adjacent its ends, a plurality of blades having their ends rotatably mounted in said blade supports with the blades extending between the blade supports, means for driving said horizontal shaft, means for positively rotating said blades between the blade supports embodying a sun gear and planetary gears, and regulating means for manually adjusting the angular position of said sun gear to alter the effective



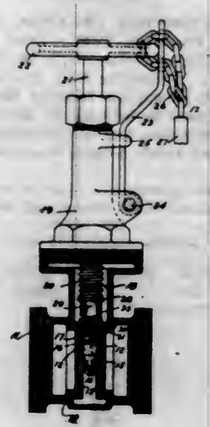
position of the blades and the angle of propulsion of the carrier, said regulating means embodying a lever, a flexible connection with the sun gear and a resilient means for returning the sun gear to its normal position.

1,636,424. SAUSAGE-STUFFING MACHINE. THOMAS LUTOSTANSKI, Wayland, Mich. Filed Mar. 11, 1926. Serial No. 93,855. 1 Claim. (Cl. 17—38.)



A sausage stuffing machine comprising a base, a unitary cylinder mounted on said base, a piston in said cylinder, means to prevent rotation of said piston, a gear box on said cylinder, facing bevel gears in said box, a clutch intermediate said gears, a motor in said base, connections between said motor and gear box and connections between said gear box and said piston.

1,636,425. COMBINED BRUSH AND SQUEEGEE. STANLEY G. MAYERS, Chicago, Ill., assignor of seven-twentieths to Charlie Karel and Helen Karel, Chicago, Ill. Filed July 30, 1926. Serial No. 125,866. 6 Claims. (Cl. 15—117.)

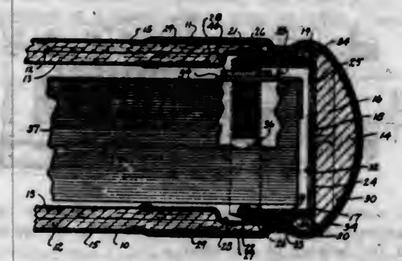


1. A device of the type described comprising an extensible frame formed of a plurality of plates each carrying a cleaning member, means for locking the plates in adjusted extended position, and a resilient supporting bracket member at each end of said frame to accommodate adjustments in the dimensions of the plates.

1,636,426. DROP HAMMER. WHITNEY MERRILL, Brooklyn, N. Y., assignor to Merrill Brothers, Maspeth, Long Island, N. Y., a Corporation of New York. Filed Oct. 16, 1926. Serial No. 142,010. 3 Claims. (Cl. 78—29.)

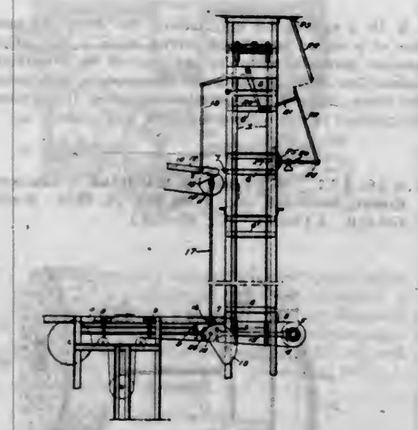
1. In a drop hammer, a vertically reciprocating ram having a horizontal upper surface and a roll releasing lever having a curved under surface for rocking engagement with said horizontal upper surface of the ram with a constant, vertical direction of force, to eliminate side thrust.

1,636,427. GATE VALVE. ANDREW M. MORRISON, Dubuque, Iowa. Filed Dec. 10, 1923. Serial No. 679,582. 3 Claims. (Cl. 251—69.)



1. In a gate valve, a body, a valve stem, a wedge having a lost motion connection to said valve stem, a spring surrounding said stem adapted to normally move the wedge to the limit of its lost motion connection, and valve discs, said wedge and the inner faces of said valve disks having directly engaging means supporting the disks on the wedge and providing for limited relative movement of the wedge with respect to the disks.

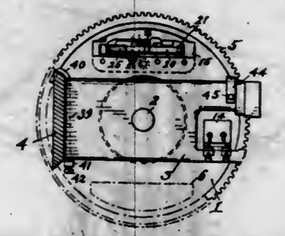
1,636,428. LOOSE-LEAF BINDER. CLAUDE ST. CLAIR MULLINS, Flushing, N. Y. Filed June 17, 1926. Serial No. 116,506. 8 Claims. (Cl. 129—4.)



2. A binder comprising a metal frame having two arms, means for detachably securing metal posts to said frame arms, an outer back rigidly secured to the frame and

covers each hinged to said back by flexible strips, one of said strips being secured to the cover and to the back on

the outside thereof, and the other strip being secured to the cover on the inside thereof, and to both sides of one of the arms of said frame.



1,636,429. AUTOMATIC TRANSFER MECHANISM FOR CONVEYERS. SAMUEL OLSON, Chicago, Ill., assignor to Samuel Olson & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1920. Serial No. 426,343. 8 Claims. (Cl. 198—24.)

1. The combination of a vertically traveling conveyer with load supporting means disposed at intervals thereon, a transversely traveling conveyer adjacent thereto and arranged for continuously advancing its load and means for moving said transverse conveyer for a limited distance in substantially vertical direction to maintain its registration with the load supporting means of the vertical conveyer during transfer of the load from one conveyer to the other.

1,636,430. POT-MOUTHPIECE WIPER FOR TYPE-CASTING MACHINES. GEORGE PANKUCH, Cleveland, Ohio. Filed July 24, 1926. Serial No. 124,735. 13 Claims. (Cl. 199—62.)

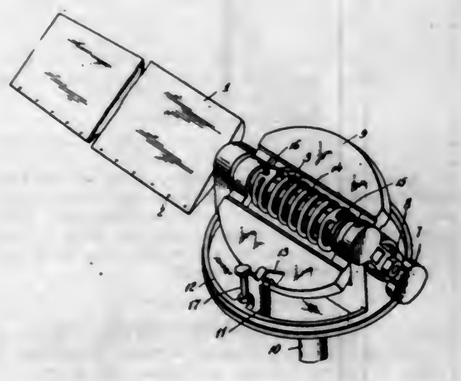
1. In a type casting machine, the combination with a molten metal pot having a mouthpiece and a member movable transversely of the mouthpiece and having a plurality of mold supporting portions, one of said mold supporting portions carrying a mold with which said mouthpiece intermittently engages, of a wiper attach-

ment having a frame adapted to be mounted on one of said mold supporting portions and a mouthpiece wiper yieldably mounted on said frame.

1,636,431. CLOTHES SUPPORT. CHARLES F. PARKS, Muncie, Ind. Filed Mar. 20, 1925. Serial No. 16,987. 3 Claims. (Cl. 248—41.)

1. A base structure for a support device of the kind described, comprising a foot block, angular in cross section, foot pieces secured to and projecting at a right angle from each of two sides of the foot block, a third foot piece hinged to one of said secured foot pieces and in horizontal alignment therewith.

1,636,432. LABEL-ATTACHING DEVICE. ALVIN S. PARTRIDGE, Richmond Highlands, Wash. Filed Nov. 4, 1926. Serial No. 146,190. 2 Claims. (Cl. 40—10.)

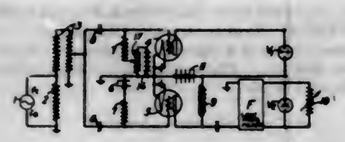


1. The combination with an article having parallel grooves therein, a label, and a label attaching device of substantially the shape of an inverted letter U in transverse section, the side arms of the device being folded upon themselves and adapted to be forced within said grooves into engaged relation with the article.

1,636,433. PUMPING EQUIPMENT. JOHN PENROD and ROBERT D. THOMPSON, Okmulgee, Okla. Filed Apr. 29, 1924. Serial No. 709,746. 10 Claims. (Cl. 103—225.)

1. In a pumping mechanism, the combination with a plunger, of an expansible sealing ring associated with the plunger, valves adjacent the ends of said plunger, and means whereby the valve at one end of said plunger may close prior to the closing of the valve at the opposite end of the plunger.

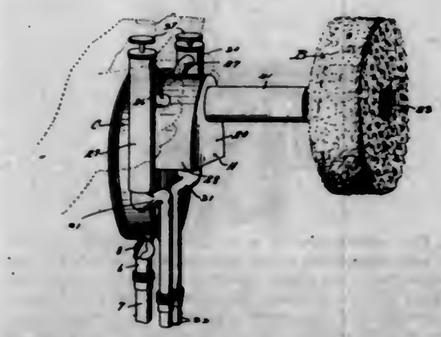
1,636,434. WIND MOTOR. JOHN ARCHIBALD PINAUD, Atlantic Highlands, N. J. Filed Jan. 25, 1923. Serial No. 615,458. 9 Claims. (Cl. 170—68.)



1. A motor of the type described, comprising a blade adapted to be rotated by the wind, yielding means operating continuously upon said blade to hold it at a certain angle to the wind, a weight yieldingly connected to said blade for increasing its angle to the wind as the speed of the blade increases.

1,636,435. FRICTION DRAFT GEAR. HERMAN C. PRIESE, Blue Island, Ill. Filed Mar. 9, 1926. Serial No. 93,413. 2 Claims. (Cl. 213—32.)

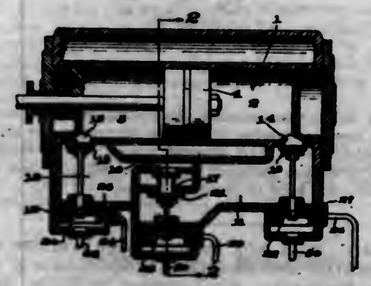
1. In a friction draft gear, a friction shell having inwardly projecting friction shoulders; a spring enclosed within the shell; and friction mechanism including friction shoes pressed upon by the spring and engaging the aforesaid shoulders, said shell having a separately formed wall portion covering a space through which said spring may be admitted to the shell, this wall portion and adjacent portions of the shell having intermeshing curled formations whereby said wall portion may be assembled with the balance of the shell.



1,636,436. SYSTEM FOR WAVE ANALYSIS. FRANCIS X. RETTENMEYER, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 7, 1925. Serial No. 67,649. 5 Claims. (Cl. 179—175.)

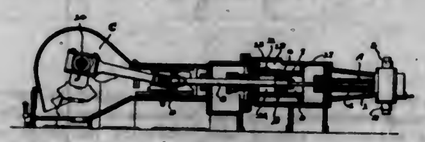
3. In a system for determining the degree of modulation of a signal modulated carrier wave, a pair of transmission channels, means in one channel for determining a summation effect of the wave components, and means in the other channel to determine an effect proportional to the product of the component wave amplitudes.

1,636,437. SCRUBBING MACHINE. AUGUSTUS I. RIEDEL, Savannah, Ga. Filed Nov. 23, 1926. Serial No. 150,310. 3 Claims. (Cl. 15—29.)



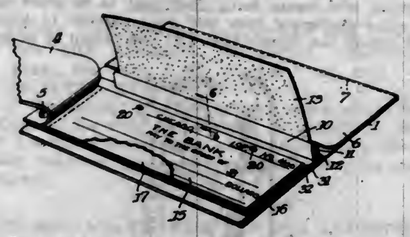
1. A machine of the class described comprising in combination, a supporting structure, a shaft rotatably supported thereby, a brush carried by the shaft, a pipe line extending lengthwise of the shaft and discharging upon the brush, cylinders carried by the supporting structure and constituting handles, pipe lines leading from said cylinders, one of said pipe lines being adapted for communication with a source of water supply and another with a source of detergent supply, pipe lines connecting the cylinders with the first named pipe line, and a valve in each of the cylinders for controlling the flow through the first named pipe lines, each of said valves being operable exteriorly of the cylinder.

1,636,438. CYLINDER AND PLUNGER ARRANGEMENT FOR HIGH-PRESSURE COMPRESSORS. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 19, 1926. Serial No. 130,129. 12 Claims. (Cl. 230—32.)



1. In an air or gas compressor, the combination, with a compressing piston, of a balancing cylinder, a balancing piston therein, said cylinder receiving fluid under different pressures for non-compressing action thereon by said balancing piston for balancing the action of said compressing piston.

1,636,439. VARIABLE-CAPACITY COMPRESSOR. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 10, 1926. Serial No. 147,540. 10 Claims. (Cl. 230—24.)



1. In a variable capacity compressor, the combination with a cylinder, of a plurality of clearance chambers, a by-pass port communicating with said clearance chambers and with the suction of the cylinder, and pressure operated means for partially unloading said cylinder by said clearance chambers and for wholly unloading the cylinder by said clearance chambers and by-pass.

1,636,440. COMPENSATING AIR COMPRESSOR. MICHAEL RIESNER, Cincinnati, Ohio, assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 16, 1927. Serial No. 175,710. 12 Claims. (Cl. 103—206.)

1. In an air or gas compressor, the combination with a compressing piston, of a balancing cylinder provided with a valved inlet and not having a discharge, and a balancing piston in said cylinder whereby air or gas in the cylinder will be compressed upon one stroke of the balancing piston and will exert its expanding force against the piston upon the other stroke.

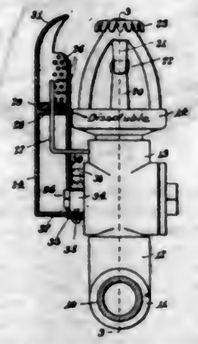
1,636,441. MEANS FOR KEEPING ACCOUNTS. WILLIAM ROTSTED, Chicago, Ill. Filed Dec. 26, 1922. Serial No. 609,075. 5 Claims. (Cl. 282—8.)

5. In a device of the class described, an element constituting a cover and adapted to be folded intermediate its length, a flap forming a pocket on one side of the line of fold of the cover, a holder for loose leaf insertions attached to the flap forming the pocket, and hinged means arranged along the line of fold and attached to the flap forming the pocket for receiving and retaining a carbon sheet for use with the loose leaf insertions, said means having a slot therein for receiving therethrough a bank deposit slip.

1,636,442. RAIL JOINT. RICHARD T. SCHOLES, Hinsdale, Ill. Filed Oct. 31, 1925. Serial No. 65,910. 6 Claims. (Cl. 238—210.)

1. A rail joint comprising a channel plate of a length adapted to bear at its two ends upon adjacent ties, the rail bearing top surface of the plate being cambered longitudinally, an apertured angle bar on each side of the web of the rail, bolts extending through said bars and the web of the rails to secure the ends of adjacent rails to said bars, and spike holes in the plate for securing the joint to the ties of the road bed.

1,636,443. GOGGLES. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 11, 1925. Serial No. 8,447. 5 Claims. (Cl. 2—14.)

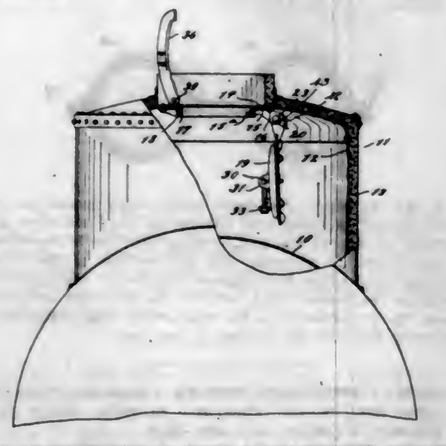


1. An eye cup, a perforated hollow bead formed in the wall thereof, a perforated reinforcing band mounted interiorly of the eye cup and forming with the hollow bead a peripheral air chamber, the perforations in the reinforcing band being in staggered relation to the perforations in the hollow bead, and the material cut away to form the perforations in the reinforcing band being bent laterally into the cup to form a lens seat.

1,636,444. SPRINKLER SYSTEM. MICHAEL F. SILVA, Hyde Park, Mass. Filed May 6, 1926. Serial No. 107,060. 5 Claims. (Cl. 169—19.)

1. The combination of a supply pipe; a sprinkler head therefor adapted to be opened at a predetermined heat; a valve interposed between said pipe and head and nor-

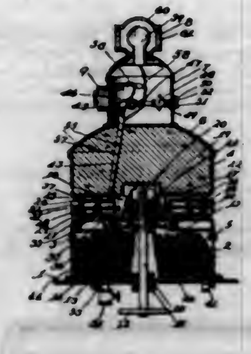
mally open; a weighted arm for moving said valve to close it and by its continued movement again open said valve; soluble means for retaining said arm in raised position, said means being positioned to be acted upon by water discharged from said head whereby to dissolve said means and release said arm and permit it to move



downwardly and close the valve; and a member to stop the downward movement of the arm when the valve has been closed, said member being removable from the path of said arm at a heat greater than that necessary to open the head thereby permitting further downward movement of said arm to reopen the valve.

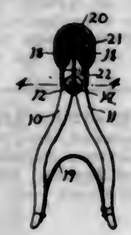
1,636,445. BACTERIUM SPECIFIC FOR RHEUMATIC FEVER AND METHOD OF UTILIZING THE SAME IN THE PREVENTION AND TREATMENT OF RHEUMATIC FEVER. JAMES CRAIG SMALL, Philadelphia, Pa. Filed Jan. 12, 1927. Serial No. 160,781. 8 Claims. (Cl. 167—7.)

1. The process which consists in isolating the *Streptococcus cardioarthritidis* and growing the same in suitable media for the purpose of producing antigens.



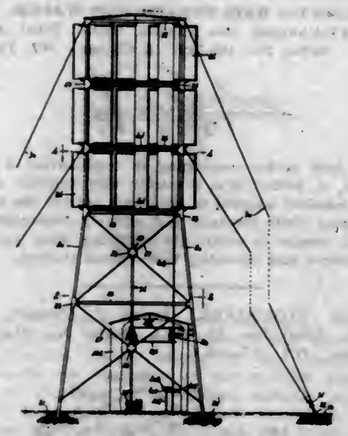
8. As a new product, a *Streptococcus cardioarthritidis* antiserum specific for rheumatic fever, its complications and sequela.

1,636,446. COVER FOR RECEPTACLES AND SUPPORT THEREFOR. ARTHUR B. SMILEY, New York, N. Y., assignor to Union Tank Car Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 16, 1924. Serial No. 686,481. 7 Claims. (Cl. 220—57.)



1. In combination, a receptacle provided with an opening, a cover for said opening removably mounted on the inner side of said receptacle, a member provided with a head connected to said cover, and a member adapted to bridge said opening on the outer side of said receptacle and provided with an opening through one portion of which the head of said member is free to pass and through another portion of which the member, but not the head, may pass.

1,636,447. SUBMARINE DETECTION FLOAT. THOMAS L. STANDISH, Los Angeles, Calif. Filed Mar. 30, 1926. Serial No. 98,485. 12 Claims. (Cl. 114—16.5.)

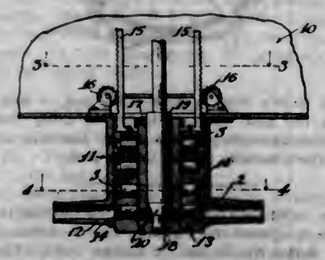


1. A submarine detection float comprising in combination a hose containing receptacle adapted to be attached to a submarine, a float adapted to rest on said receptacle, means to release the float from the receptacle, and means to rotate the float to uncoil the hose.

1,636,448. TOOL FOR REMOVING TRAVELERS FROM SPINNING AND TWISTING RINGS. AMOS E. WHIPPLE, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Feb. 4, 1927. Serial No. 165,831. 1 Claim. (Cl. 81—5.1.)

A tool for removing travelers from spinning and twisting rings comprising a pair of levers each having a forward and a rear arm, a joint connecting the levers located intermediate of the ends of the arms, a fulcrum for said levers on which the joint is swingable, coacting tapered jaws formed in the forward pair of arms, handles formed on the rear pair of arms for the manual actuation of said jaws, resilient means coacting between said handles to maintain said jaws in a closed relation with each other, a frame extending over the top of the jaws and rigidly fixed to one of them, and a perforated screen supported by said frame.

1,636,449. WIND MOTOR. OMER T. ADAMS, Los Angeles, Calif., assignor to Adams Multiple Air Turbine Corporation, Los Angeles, Calif., a Corporation of California. Filed June 3, 1926. Serial No. 113,511. 12 Claims. (Cl. 170—17.)

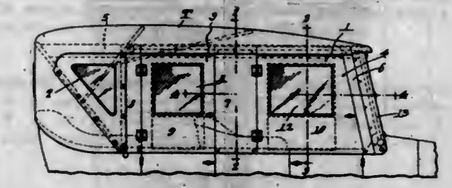


1. In a wind motor, a propeller, a governor controlling the flow of air to the propeller, and automatic means controlling the governor and operated by the propeller including provisions for releasing the governor from the propeller when the governor has been moved by the propeller.

1,636,450. OPTICAL AID TO THE VISUAL PERCEPTION OF DEPTH OR ROTUNDITY. ADELBERT AMES, Jr., Hanover, N. H. Filed May 26, 1924. Serial No. 715,821. 10 Claims. (Cl. 88—29.)

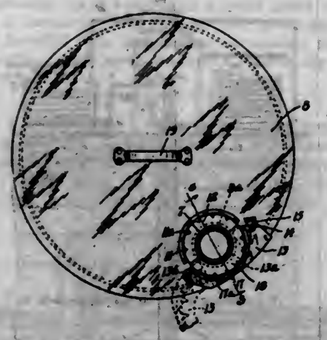
1. Apparatus for aiding the visual perception of depth comprising binocular refracting means, the optical system for one eye only being adapted to alter the normal mutual relations of convergence of the respective optical axes, and the system as a whole comprising devices for optical alteration of the visual constants of both eyes and being adapted to prevent perception of coincident normal binocular sense impressions and substitute a coincident impression free from true indications of depth.

1,636,451. BOMBING GUN FOR AIRCRAFT. GEORGE P. ANDRUS, Aberdeen, Wash. Filed Sept. 16, 1926. Serial No. 135,773. 8 Claims. (Cl. 89—1.)



1. A bombing gun for air craft comprising a cylinder adapted to be secured to the craft, a plurality of radially arranged barrels projecting from said cylinder, a magazine arranged for sliding movement through said cylinder and a plurality of rows of shell receiving chambers formed in said magazine.

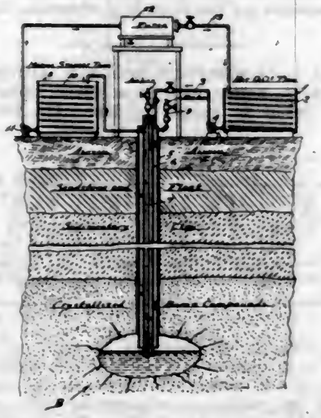
1,636,452. METHOD OF AND SPRAY FOR EXPEDITING THE RIPENING OF FRUIT. HAZELTON S. AVERY, San Juan, P. R. Filed Nov. 27, 1925. Serial No. 71,752. 5 Claims. (Cl. 47—58.)



1. The method of ripening fruit which comprises applying to the fruit just previous to maturity, a coating of a mixture including an oil emulsion and a lime sulphur compound for the purpose of hastening the ripening thereof.

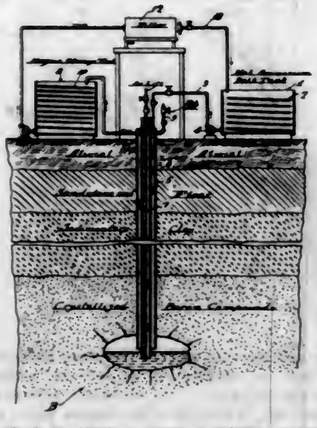
1,636,453. ALL-WEATHER TOP FOR AUTOMOBILES. GEORGE M. BAILEY, Gracemont, Okla. Filed Feb. 19, 1925. Serial No. 10,388. 1 Claim. (Cl. 296—45.)

In a device of the character described, an upper bar adapted to be secured to a motor vehicle adjacent to the top thereof and within the confines of the sides of the top, said bar having a substantially wide central cut out portion and having cut out portions disposed on opposite sides of the central cut out portion, uprights having their upper ends secured within the cut out portions, said bar having a longitudinal cut out portion formed along the lower edge, closures having slidable windows and having pockets to receive the windows, means for hingedly connecting the closures to the uprights, said closures being constructed so that the upper edges thereof will move into the longitudinal cut out portion, the lower ends of the closures and uprights overlying the upper edge of the body of the car to which the device is secured.



1,636,454. COVER FOR TANKS. OLE T. BEKKERUS, Hurdsfield, N. Dak. Filed Jan. 26, 1925. Serial No. 4,680. 3 Claims. (Cl. 220—24.)

1. In a container having an aperture therein through which a pipe is adapted to extend, an angular semi-circular flange secured to the container adjacent an edge of said aperture, a semi-circular closure plate pivoted to said container adjacent another edge of said aperture, an angular semi-circular flange mounted on said closure plate and a split ring of packing material secured to each of said flanges, said split rings of packing material being adapted to co-operate to clamp about a pipe extending through said aperture and form a fluid tight joint be-

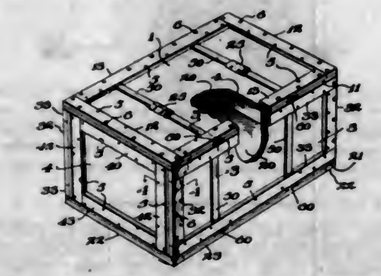


tween the container and the pipe when said closure plate is swung toward the flange secured to said container, said flanges having a plurality of inwardly extending pointed portions at their upper inner edges securing said split rings of packing material to said flanges.

1,636,455. PROCESS OF MINING INSOLUBLE BORON COMPOUNDS. HENRY BLUMENBERG, Jr., Moapa, Nev. Filed Mar. 23, 1927. Serial No. 177,520. 4 Claims. (Cl. 262—3.)

1. A method of mining water insoluble calcium boron compounds comprising introducing a hot calcium chloride solution to the calcium boron deposit, thereby disintegrating and dissolving a portion thereof, removing and cooling the resulting magma, thereby causing a portion of the dissolved calcium boron compounds to precipitate and remove the soluble part from the insoluble part of the magma, said soluble part containing calcium chloride and a small percentage of calcium boron compounds in solution.

1,636,456. PROCESS OF MINING INSOLUBLE BORON COMPOUNDS. HENRY BLUMENBERG, Jr., Moapa, Nev. Filed Mar. 23, 1927. Serial No. 177,521. 4 Claims. (Cl. 262—3.)



1. A method of mining water insoluble calcium boron compounds comprising introducing a hot ammonium chloride solution to the calcium boron deposit, thereby disintegrating and dissolving a portion thereof, removing and cooling the resulting magma, thereby causing a portion of the dissolved calcium boron compounds to precipitate and removing the soluble part from the insoluble part of the magma, said soluble part containing ammonium chloride and a small percentage of calcium boron compounds in solution.

1,636,457. HAIR CURLER AND WAVER. HENRY BRINKSCHNEIDER, Los Angeles, Calif. Filed Aug. 31, 1926. Serial No. 132,719. 9 Claims. (Cl. 132—33.)

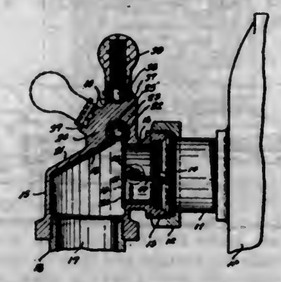
1. A hair curler comprising in combination a tubular mandrel, a holder arm pivotally and slidably mounted on the mandrel adapted to hold hair against the mandrel, a clamping blade pivotally and slidably connected to the mandrel, means to secure the clamping blade parallel to the mandrel and clamping hair wound thereon.

1,636,458. CONTAINER. FRANK P. CHENEY, Lowell, Mass. Filed Jan. 15, 1923. Serial No. 612,771. 3 Claims. (Cl. 217—66.)

1. A container having at one or more of the angles formed by meeting walls thereof the margin of one wall extended beyond the plane of the meeting wall, cleats applied to the said walls at opposite surfaces of the extended margin, and a reinforcing band encircling the box underneath the said cleats, with a notch or slot in the extended margin to let said band lie closely along the surface of the said meeting wall at and adjacent the angle.

1,636,459. SAFETY BELT. VERNON P. CHAPPEL, Iron Mountain, Mich. Filed Sept. 21, 1925. Serial No. 57,656. 3 Claims. (Cl. 227—8.)

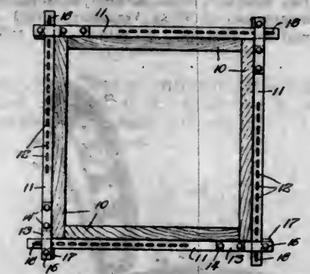
1. In a safety belt, a protecting pad, a belt member encircling the pad, means slidably securing the belt to the pad, shoulder straps connected to the belt, and means securing the shoulder straps to the pad.



1,636,460. PLURAL-FILAMENT ELECTRIC BULB. ELMER R. CLOWARD, Payson, Utah. Filed June 22, 1925. Serial No. 38,760. 2 Claims. (Cl. 176—27.)

1. A lamp of the class described, comprising an evacuated container, a base mounted on said container having a pair of contact terminals thereon, a sleeve member formed of insulating material mounted in said base, a plurality of metallic sleeves mounted in relative spaced relation within said insulating sleeve, a movable contact member for engaging said metallic sleeves in a predetermined manner, a plurality of filaments supported in said evacuated container, a common electrical connection between one of the terminals on said lamp base and one

end of each of said filaments, and independent circuit connections between the opposite ends of said filaments and predetermined contact sleeves in said insulating sleeve, whereby the operation of the movable contact members for engaging predetermined metallic sleeves will operate to interpose predetermined filaments in circuit between the opposite terminals on said lamp base in a predetermined manner.

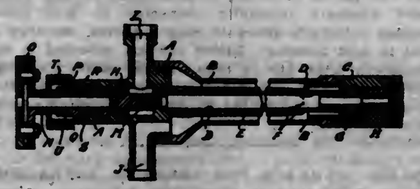


1,636,461. RADIATOR VALVE. WALTER A. COLBURN, Bridgeport, Conn. Filed Nov. 6, 1925. Serial No. 67,329. 8 Claims. (Cl. 251—10.)

1. In a radiator valve, a body member having a side outlet opening adapted to be connected to a radiator and a bottom inlet opening for connection to a supply pipe, said body member being provided with an upright seat in substantially a single plane about said outlet opening, and a valve pivoted in the body to swing about a horizontal axis above said outlet toward and from said seat, said valve being arranged when in open position close to the wall of the body over the inlet opening in an inclined position to deflect the flowing water toward the outlet and having a continuous surface adjacent its outer edge to engage the seat throughout its periphery when the valve is in closed position.

1,636,462. COLUMN-FORM CLAMP. EDWARD E. DAVIS, Chicago, Ill. Filed Feb. 15, 1926. Serial No. 88,321. 3 Claims. (Cl. 144—29.)

1. A form clamp comprising; a plurality of bars, each bar having a series of slots at intervals therein at one end and an elongated loop at the other end, said loop adapted to receive the slotted end of an adjacent bar; a wedge for each bar adapted to fit within a slot in the end of a bar projecting beyond the loop with one edge bearing against the outer end wall of the slot and its opposite edge bearing against the outer edge of said loop; and adjustable means for holding the end of a bar within

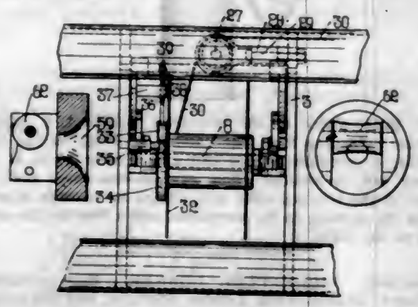


a loop at different distances from the end of said loop, said means comprising a spacing block provided with a plurality of differently spaced abutment faces.

1,636,463. OTOSCOPE. HENRY L. DE ZENG, Moorestown, N. J., assignor to De Zeng Standard Company, Camden, N. J., a Corporation of New Jersey. Filed Aug. 8, 1922. Serial No. 580,556. 6 Claims. (Cl. 128—9.)

1. In a device of the character described, a handle, a tube extending from the handle, a casing on the tube having a speculum at one end and a cover plate at the other end, a bevelled slide way on the cover plate, a slide in the bevelled slide way having an opening aligned with the opening in the speculum, and a lens in the opening in the slide.

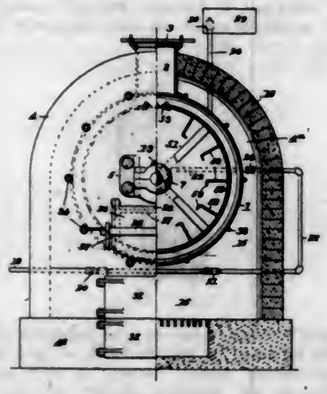
1,636,464. LIQUID-FUEL BURNER. ERIC SUMMERS DRAW, Regents Park, London, England, and ALEXANDER BANNATYNE STEWART LAIDLAW, Beechwood, Skelmorlie, Scotland. Filed July 24, 1926, Serial No. 124,727, and in Great Britain Aug. 4, 1925. 6 Claims. (Cl. 158—75.)



1. A burner comprising two coaxial passages, one for supplying oil and the other for supplying a combustion supporting agent in a helical path, and a hyperboloidal exit orifice whose bounding surfaces bear a definite relation to the pitch of said helical path.

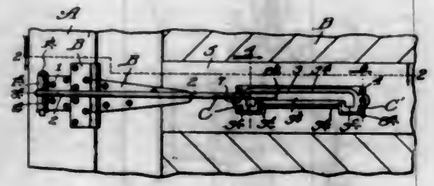
1,636,465. UPHOLSTERED FURNITURE AND METHOD OF PROTECTING SAME. EDWARD J. EDWARDS, Chicago, Ill., assignor to S. Karpen & Bros., Chicago, Ill., a Corporation of West Virginia. Filed Aug. 9, 1924. Serial No. 731,149. 2 Claims. (Cl. 155—184.)

1. An upholstered article of furniture comprising a frame, a spring-structure mounted thereon, a filling over the spring-structure, a fabric stretched over said filling and secured in position, a finish-fabric tacked to said frame, which finish-fabric commonly is subject to attack by moths, and a protective layer of unglazed cotton batting interposed between said fabrics.



1,636,466. APPARATUS FOR MAKING WIRE, HEMP, OR OTHER ROPES, CABLES, AND THE LIKE. EDWIN EDWARDS, CHARLES JONES, and ROBERT HANSON, Warrington, England. Filed June 28, 1926, Serial No. 119,097, and in Great Britain July 2, 1925. 5 Claims. (Cl. 117—46.)

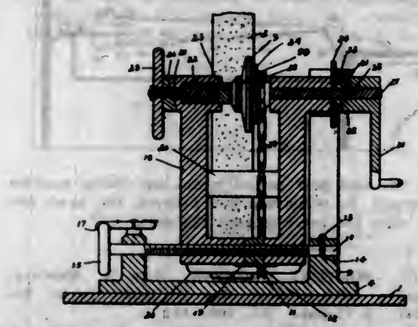
1. In a machine for making all kinds of ropes, a tubular frame adapted to carry bobbins comprising at least two plates extending longitudinally of said frame, spaced supports integrally connected to said plates, housings integrally fitted to said supports, bearings located in said housings, bobbin carriers mounted in said bearings, a pivot pin in each of said carriers at right angles to the axis of said tubular frame, a spindle pivoting on said pin and means to secure said spindle in operative position.



1,636,467. FURNACE FOR TREATING REFRACTORY ORES CONTAINING PRECIOUS METALS. GEORGE W. B. EVANS, Wilderness, Va., assignor to Evans Ore Reduction Company, Washington, D. C. Filed Aug. 13, 1926. Serial No. 128,989. 4 Claims. (Cl. 263—33.)

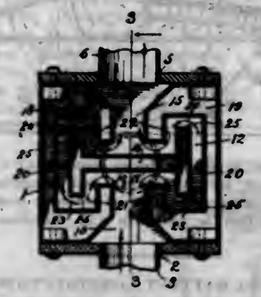
1. In a stationary furnace designed for the purpose of treating refractory ores containing precious metals, an airtight chamber, means for admitting hydrogen gas into said chamber, an inner rotating cylindrical chamber, means for admitting hydrogen gas into said inner

chamber, means for admitting ore into said inner rotating chamber, and means for extracting the treated ore from said chamber, substantially as shown.



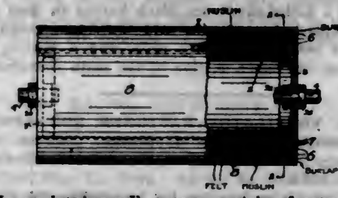
1,636,468. DOOR-HOLDING ATTACHMENT. HENRY L. FERRIS, Harvard, Ill., assignor to Hunt, Helm, Ferris & Company, Harvard, Ill., a Corporation of Illinois. Filed Aug. 14, 1926. Serial No. 129,229. 6 Claims. (Cl. 292—273.)

1. In combination with a door-support and a door hingedly connected therewith, a hinge-member secured to said door-support back of the pivot line of the door, a latch-rod pivotally connected at one end with said hinge-member and equipped at the other end with an inturned portion provided with a head, and an elongated keeper secured to said door, said keeper being provided with a guide having at opposite ends downwardly offset recesses affording latch-shoulders, the inturned portion of said latch-rod engaging said guide slot and being adapted to interlockingly engage the latch-shoulder at the remote end of said keeper when the door is in the open position while the latch-shoulder at the inner end of the keeper is so positioned that it cannot be engaged by the latch-rod when the door is in closed position.



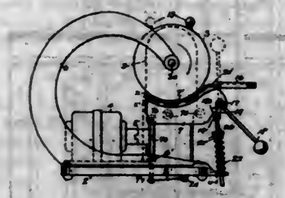
1,636,469. EDGING MACHINE. LYLE H. FISHER, Kansas City, Mo., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Oct. 30, 1922. Serial No. 597,879. 1 Claim. (Cl. 51—101.)

In a device of the character described, an attachment base plate adapted to be attached to the frame of a grindstone, a second plate pivoted to the first plate and adapted to be moved in an arc about its pivot on the first plate, a swinging lens clamp on the second plate, a former on the lens clamp, a contact for the former mounted upon the second plate, and means for moving



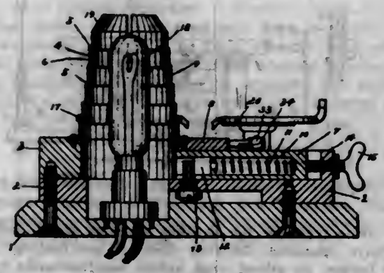
the face of the contact so that it will be parallel with the face of the grindstone in any position to which the pivoted plate is moved.

1,636,470. VAPORIZER FOR EXPLOSIVE ENGINES. JAMES C. FULKERSON, Kansas City, Mo. Filed Feb. 14, 1927. Serial No. 167,985. 3 Claims. (Cl. 257—241.)



1. In a vaporizer of the kind described, a casing having in opposite sides respectively an inlet and an outlet for mixture, and having a passage for mixture communicating with said inlet and said outlet, the casing having transversely through said mixture passage an exhaust passage, the walls of which form the inner walls of the mixture passage, the outer walls of the mixture passage forming two pairs of recesses disposed one pair above the other, the recesses of one pair facing oppositely to the faces of the other pair, the walls of said exhaust passage having lateral extensions which extend respectively into said recesses, the outer walls of said mixture passage, being extended between said lateral extensions.

1,636,471. IRONING ROLL. MEAD HEDGLON, Syracuse, N. Y. Filed Nov. 3, 1926. Serial No. 146,043. 7 Claims. (Cl. 68—9.)

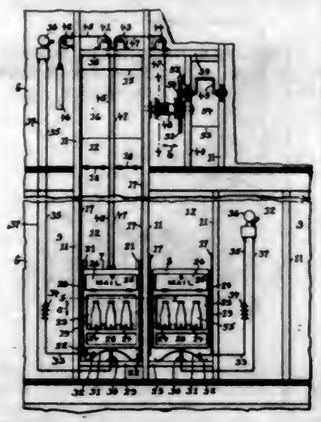


1. In an ironing roll, a core, a strip of coarsely woven material coiled about the core to provide a primary series of layers and having an extension, padding coiled with said extension of the strip about said primary layers to provide secondary alternate layers of said material and padding, the padding having an extension which latter is coiled about the secondary layers, and a layer of finishing material coiled about the padding.

1,636,472. PORTABLE IRONING MACHINE. MEAD HEDGLON, Syracuse, N. Y. Filed Nov. 3, 1926. Serial No. 146,044. 12 Claims. (Cl. 68—9.)

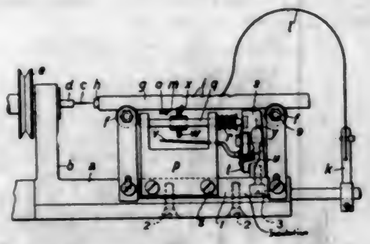
1. In a portable ironing machine, the combination with a driven padded roll supported by spaced frame sections, of a heated trough-like shoe normally disposed horizontally beneath said roll, a pair of links for supporting the rear side of the shoe, said links being loosely pivoted to the shoe and to said frame sections for enabling the shoe to twist in a horizontal plane, compression springs resiliently supporting the forward side of the shoe adapted to control the pressure of the shoe against the underside of the roll, and eccentric means for swinging the shoe downwardly and rearwardly, and for locking the shoe in the ironing position.

1,636,473. FRAME STRETCHER. WILLIAM J. KELLEY, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 18, 1922. Serial No. 607,615. 3 Claims. (Cl. 81—3.5.)



1. A device of the character described, including a stepped expansible mandrel and a table adjustably mounted adjacent the mandrel for cooperation with the various steps thereof.

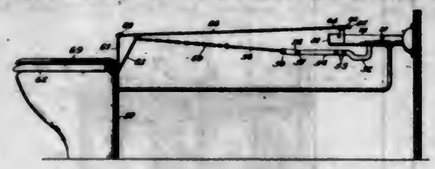
1,636,474. DEVICE FOR SANITARY HANDLING OF MILK. WILLIAM LAVALLEE, Central Falls, R. I. Filed Nov. 18, 1926. Serial No. 149,265. 3 Claims. (Cl. 187—3.)



3. In a device of the kind described, the combination of the following instrumentalities, a milk handling device 7 slidably secured in a vertical space in the wall of a house, said device having a milk bottle holding compartment 23, an upper mail box 25, a lower parcel compartment 28, an elevating device comprising a reel 48 rotatably supported in bearings, pulleys 43 and 44 rotatably supported on bearings, a rope 47 secured at its lower end

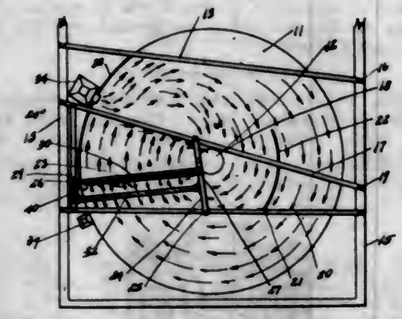
to the milk handling device 7, said rope going over the pulleys 43 and 44 and wound on the reel 48, a gear 51 fixed to the reel 48, a pawl 52 engaging the gear 51 and

a hand crank 49 rotatably supported in bearings and having a pinion 50 meshing with the gear 51, for the purpose as described.



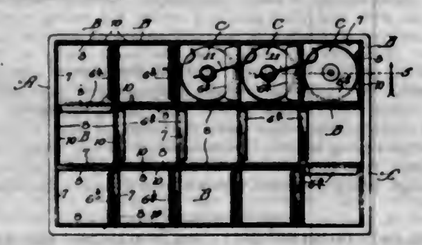
1,636,475. MACHINE FOR DRILLING DRAWING DIES OR STONES. SIEGMUND LOEWENHERZ, Berlin, Germany, assignor to Patent-Treuhand-Gesellschaft für Elektrische Glühlampen m. b. H., Berlin, Germany, a Corporation of Germany. Filed Aug. 20, 1925, Serial No. 51,433, and in Germany Sept. 10, 1924. 7 Claims. (Cl. 77—1.)

1. In a machine for drilling precious stones and particularly diamond drawing dies, a non-feeding rotary drill holder, an alined work holder longitudinally reciprocated, a spring urging the work holder and work against the drill, means for retracting the holder in rapid succession against the action of said spring, a stop on the holder, a rod arranged parallel to the work holder and a stop on the rod co-operating with the stop on the holder, one of which stops is adjustable and determines the limit of feed of the holder.



1,636,476. VENTILATING DEVICE FOR TOILETS. FRANK E. LUMLEY, Chicago, Ill. Filed Oct. 13, 1926. Serial No. 141,298. 6 Claims. (Cl. 4—216.)

1. In a ventilating device for toilets, the combination with a bowl, a seat therefor normally slightly spaced from the bowl, a cover for the seat, and a suction system communicating with the bowl; of means interposed in the system and connected with the seat for opening communication between the system and the bowl when the seat is moved to rest upon the bowl, and to close communication when the seat is in its normal spaced position, and other means connected with the cover for the seat and cooperative with said first named means for

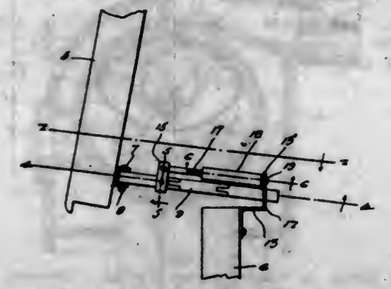


locking the said first named means in closing position with respect to communication between the bowl and system when the cover is upon the seat.

1,636,477. SORTING MACHINE. LEE A. MEDCALF, Fairgrove, Mich. Filed May 3, 1926. Serial No. 106,247. 8 Claims. (Cl. 209—112.)

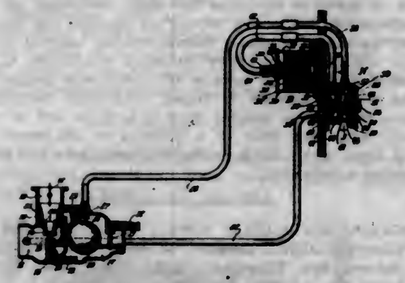
1. A frame, a sorting device comprising a flat disc, a roller mounted on the frame, and comprising a shaft having a plurality of individual sections loosely mounted thereon and free to move in any direction and riding on said disc.

1,636,478. DRY-BATTERY CONSTRUCTION. EDWIN E. MEISEKOTHEN, Madison, Wis., assignor to French Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Apr. 8, 1925. Serial No. 21,501. 4 Claims. (Cl. 136—108.)



1. A battery comprising a main container and individual rectangular cell-containers nested therein, each comprising a folded cardboard blank having an open upper end, unwrapped dry cells in said individual containers, connections between said dry cells, and a sealing compound filling the upper portion of the main container.

1,636,479. VENTILATOR FASTENER FOR AUTOMOBILE DOORS. ARTHUR T. MEYER, Carleton, Mich. Filed July 30, 1926. Serial No. 126,047. 2 Claims. (Cl. 292—262.)



1. In a ventilator fastener for automobile doors, a bar pivotally connected at one end to the inner side of the door adjacent its free edge, a laterally extending bracket

secured to the inner side of the door frame and having an opening for receiving said bar, said bar being formed at its under side with notches for engaging the edge of the opening for providing an interlocking connection between the bar and bracket, means for normally forcing the door in an outward direction whereby the bar will

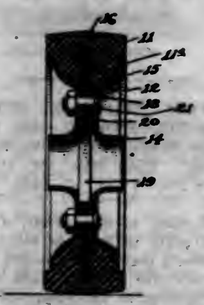
be maintained in frictional interlocked engagement with said bracket, said means consisting of a telescopic pin and cylinder, said pin being pivotally secured to said bar and said cylinder having means for attachment to the bracket, and an expansion spring arranged within the cylinder in back of said pin.

1,636,480. MIXTURE CONTROL FOR AIRPLANE CARBURETORS. FRANK C. MOCK, CHARLES J. GUSTAFSON, and MILTON E. CHANDLER, Chicago, Ill., assignors to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 10, 1918, Serial No. 244,231. Divided and this application filed Apr. 5, 1920. Serial No. 371,199. 1 Claim. (Cl. 261—72.)

In an altitude mixture control for airplane engines, in combination, a carburetor of the common type having a carbureting passageway and a constant level fuel chamber, a connection for communication of suction between the air space in said fuel chamber and a point of suction in said passageway, an air passageway leading from a region of atmospheric pressure to the air space of said fuel chamber, a barometrically controlled valve for automatically controlling the supply of air through said passageway, and additional valve means associated with said air passageway, said additional valve means being controllable manually to supply air to the float chamber in addition to that supplied by said barometrically controlled valve and being also controllable to reduce to any degree the air supplied by said barometrically controlled valve.

1,636,481. RACING AMUSEMENT DEVICE. FRANK J. NEWBAUM, Detroit, Mich., and JULIUS M. LONN, La Porte, Ind., assignors to International Amusement Corporation, Detroit, Mich., a Corporation of Michigan. Filed May 11, 1926. Serial No. 108,293. 15 Claims. (Cl. 104—60.)

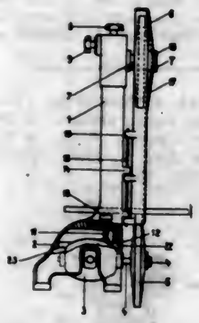
1. In an amusement device, a platform comprising a stationary floor section and a movable floor section, said sections defining parallel courses, drive means for moving said movable section, a vehicle mounted on the stationary section to move thereover, and connecting means secured



to the said movable section and to said vehicle, so that the latter may travel over said stationary section and the spaces between the floor sections reduced to a minimum.

1,636,482. VAGINAL APPLICATOR. FRANK H. NEWTON, Los Angeles, Calif., assignor to Duplex Dilator Corporation, Los Angeles, Calif., a Corporation of California. Filed July 9, 1925. Serial No. 42,337. 2 Claims. (Cl. 128—254.)

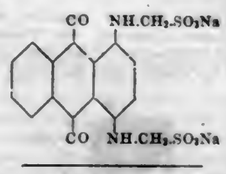
1. In a vaginal applicator, a relatively rigid tube, discharge means at one end of said tube, a relatively resilient sheath adapted to be fitted over the tube, resilient studs integral with the sheath and adapted to engage the tube, said studs being spirally arranged for conveying liquid of a desired temperature from the discharge end of the tube into and through said sheath.



1,636,483. WHEEL. HANS P. NIELSEN, Alameda, Calif., assignor to Eames Company, San Francisco, Calif., a Corporation of California. Filed Mar. 23, 1927. Serial No. 177,589. 6 Claims. (Cl. 301—63.)

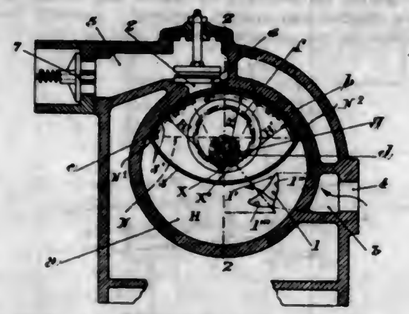
5. A wheel comprising a pair of spaced disks forming a wheel structure having a rim, a tire formed of resilient material arranged circumferentially of the wheel and

seated on the rim, a central web formed of rubberized fabric embedded at its outer peripheral edge in the tire and extending radially inwardly between the disks beyond the rim, and clamping means extending through the disks and web to clamp the disks tightly against the web.



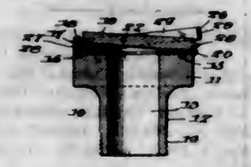
1,636,484. BAND SAW. ALBERT OBERMOSER, Bruchsal, Germany. Filed Jan. 13, 1925, Serial No. 2,212, and in Germany Jan. 15, 1924. 2 Claims. (Cl. 143—17.)

1. A band saw comprising the combination with the saw frame of a driving motor having a shaft on which the saw driving pulley is mounted, said motor being hinged to said saw frame so that it hangs together with the pulley in the band saw, an upper pulley adjustably mounted in a slot of the frame so as to be capable of adjustment in the vertical direction, for regulating the inclination of the motor and driving pulley with respect to the horizontal plane, a spring and an adjusting screw for said spring arranged between said saw frame and said motor for increasing the load on the saw blade for tensioning the same.



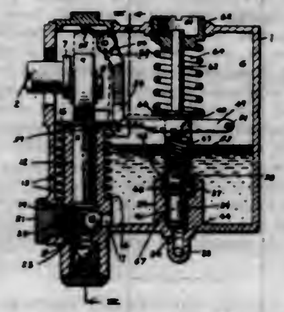
1,636,485. PROCESS FOR THE MANUFACTURE OF ANTHRAQUINONE DERIVATIVES. WILLIAM HENRY PERKIN, Oxford, and ALEXANDER WALKER FYFE and MORDECAI MENDOZA, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Apr. 5, 1926, Serial No. 99,984, and in Great Britain July 8, 1925. 4 Claims. (Cl. 260—60.)

4. As a new product, the substance having the structural formula



1,636,486. ROTARY ENGINE OR PUMP. BENJAMIN RENÉ PLANCHE, Villefranche-sur-Saone, France, assignor to Mrs. Widow Ernest Benoit Planche, born Clotilde Perdrix, France. Filed Jan. 29, 1923, Serial No. 615,725, and in France Feb. 17, 1922. 3 Claims. (Cl. 103—130.)

1. In a rotary pump or compressor, a cylindrical casing having inlet ports in its side walls situated below the median horizontal plane of the casing and to one side of its median transverse vertical plane, and also having an exhaust port situated in its cylindrical wall above said horizontal plane and to the other side of said vertical plane; and a rotary fusiform piston in said casing having flat side faces to close the inlet ports, the said cylindrical wall of the casing having a channel therein which is situated above said horizontal plane and to the same side of said vertical plane as said exhaust port and adjacent thereto to place the spaces on opposite sides of



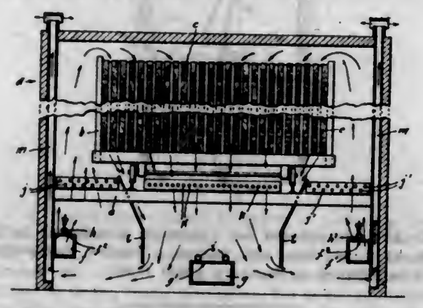
said piston in communication during a fraction of a rotation of the piston when the inlet and outlet ports are closed.

1,636,487. CLOSURE. THOMAS T. READ, Washington, D. C. Filed Apr. 24, 1924. Serial No. 708,751. 11 Claims. (Cl. 220—24.)

8. A device of the class described comprising the combination, with a casing having an opening and provided with an abutment, and a closure member adapted to close said opening, of a lever pivotally connected to said closure member and movable to engage said abutment as said closure member is closed, said lever operable to move the closure member from a position out of alinement with said lever to a position in alinement with said lever, and a latch for holding said lever and closure member in alinement.

1,636,488. HYDRAULIC UNIT. JOY S. REYNOLDS, San Francisco, Calif., assignor of one-half to Charles A. Balcom, San Francisco, Calif. Filed June 7, 1924. Serial No. 718,630. 8 Claims. (Cl. 103—42.)

1. A hydraulic unit for attachment to a source of power comprising a reservoir adapted to contain liquid and provided with a connection leading to a pressure tank, a pump in said reservoir adapted to force liquid therefrom to said tank, a mechanism in said reservoir, responsive to fluctuation of pressure in said tank, for intermittently operating said pump from said source of

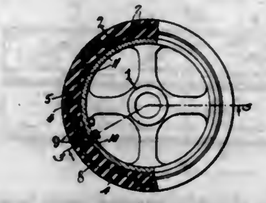


power, said connection provided with an outlet for communication with a work line, and a control valve in said reservoir and associated with said connection, adapted to regulate the passage of liquid to and from said work line.

1,636,489. CIGARETTE-MAKING MACHINE. IVAN ALEXANDROVIČ SEMENOV, Plzen, Czechoslovakia. Filed Oct. 22, 1925, Serial No. 64,225, and in Germany Nov. 4, 1924. 2 Claims. (Cl. 131—39.)

1. In a cigarette making machine means for depositing cigarettes in regular rows, comprising in combination a smooth distributing band and a roller lying above the said distributing band for bringing each finished cigarette on to the surface of the said band and for increasing the speed of travel of the cigarette, for the purpose of forming spaces between successive cigarettes, as set forth.

1,636,490. REVERSIBLE-FLOW DRY KILN. R. A. SIMMONS, Vernonia, Oreg. Filed July 13, 1925. Serial No. 43,274. 2 Claims. (Cl. 34—46.)



1. In a dry kiln, in combination with means for supporting a pile of material spaced from the floor of the kiln, air-inlets, one located at the middle and one at each side of the kiln adjacent its floor, air-outlets located at each side of the kiln under the air-inlets, said air-outlets opening into stacks respectively, partitions separating the air-inlet at the middle from those at the sides of the kiln, such partitions extending downward in close proximity to the floor, spray pipes and heating coils associated with each air-inlet whereby exterior air is drawn into, conditioned and induced to circulate through the kiln, and is removed again by the stacks, for replacement by the admission of further exterior air.

1,636,491. ELECTRIC INSULATION BOARD. DANIEL MANSON SUTHERLAND, Jr., Trenton, N. J. Filed Nov. 11, 1924. Serial No. 749,345. 3 Claims. (Cl. 106—15.)

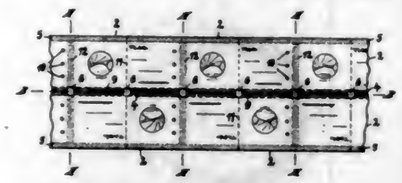
3. A compressed and compacted insulating body consisting of the following ingredients in substantially the proportions of: cellulose 40%, oil soap 15%, acaroid resin 2%, and gilsonite 43%, by weight.

1,636,492. PULLEY. CHARLES WILLIAM TAYLOR, Hendon, London, England. Filed Jan. 2, 1926. Serial No. 78,882. 4 Claims. (Cl. 64—15.)

1. As a new article of manufacture, a non-slip cover for a belt pulley comprising a flexible sheet-metal strip having apertures therethrough and having also a plurality of spaced protuberances disposed transversely of said strip together with a continuous surfacing of resilient material attached to both sides of said strip to unite integrally through the apertures therein and embed said protuberances.

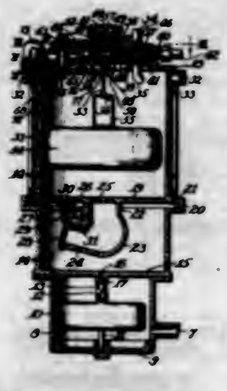
1,636,493. PROCESS FOR DISSOLVING A MIXTURE OF HAFNIUM AND ZIRCONIUM PHOSPHATES AND FOR SEPARATING HAFNIUM AND ZIRCONIUM. ANTON EDUARD VAN ARKEL and JAN HENDRIK DE BOER, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands. Original application filed May 11, 1925, Serial No. 29,561. Divided and this application filed Jan. 4, 1926, Serial No. 79,259, and in the Netherlands June 6, 1924. 4 Claims. (Cl. 23—22.)

1. A process of converting a mixture of hafnium and zirconium phosphates, characterized in that said hafnium and zirconium phosphates are introduced into a medium containing phosphoric acid.



1,636,494. REVERSIBLE HEEL. GEORGE A. VOLZ, Cincinnati, Ohio. Filed Feb. 1, 1927. Serial No. 165,199. 2 Claims. (Cl. 36—35.)

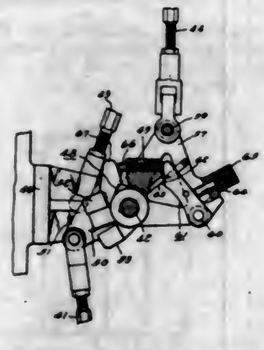
1. In combination with a pair of shoes having heel bases, a pair of metal base members attached to said heel bases substantially flush with the bottoms of said heel bases, and each provided with projections extending into said heel base, and a series of projections extending away from said heel base and a threaded sleeve recessed into the heel base, a pair of detachable and interchangeable metal heel members having each a central perforation opposite the threaded sleeve of said metal heel base members, and perforations to register with and engage the outward projections of said metal heel base members, and a series of toe members off-set to one side of the plane of the body of said metal heel members, and a pair of molded composition heel mmebers in the body of which the toe members of said metal heel members are anchored by molding the material of said composition heel members about and upon both sides of said toe members, central



recesses in said composition heel members, and screws having their heads located in the central recesses of said composition heel members, and their shanks passed through the central perforations of said metal heel members and threaded into the sleeves of said metal heel base members.

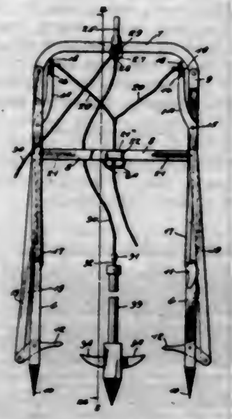
1,636,495. ENVELOPE BLANK AND METHOD OF MAKING SAME. OTTO WIDMAIER, Magstadt, Germany. Filed May 19, 1925, Serial No. 31,403, and in Germany Mar. 22, 1924. 5 Claims. (Cl. 93—63.)

1. The method of making envelope blanks from a web of paper, comprising punching transverse rows of feeding holes in the web at predetermined points for the attack of feeding grippers, each row comprising only a few holes evenly distributed in spaced relation across the width of the web, and cutting the web on lines parallel to and spaced from said rows.



1,636,496. VACUUM-CONTROLLED FUEL-SUPPLY SYSTEM. MARTIN C. BRIGHT, Indianapolis, Ind., assignor to Bernerd B. Carlin, Chicago, Ill. Filed Dec. 16, 1922. Serial No. 607,306. 19 Claims. (Cl. 103—236.)

1. A vacuum-controlled fuel-supply system including a vacuum tank, a suction conduit having connection with the tank, a main valve in the tank to close the conduit, a buoyant device in the tank having a connection to move the valve to close the conduit, and resistance means effective to temporarily arrest the closing operation of the valve and subject to suction in the conduit and to a greater degree than the main valve.

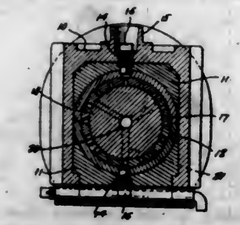


1,636,497. POWER-PRESS CONTROL. ARTHUR A. BYERLEIN, Detroit, Mich. Filed Jan. 7, 1925. Serial No. 1,018. 9 Claims. (Cl. 192—139.)

1. In a power press, a slide member mounted for reciprocation therein, a driving member, a driving connection including clutch means operable when engaged to operatively connect said members and releasable to disconnect said members, manual means including an operating lever and a control member connected thereto through a lost motion for engaging said clutch means to set the press in motion, and means responsive to the movement of the press for automatically disengaging said clutch means to stop the press, said manual means having auto-

matic provisions responsive to the position of said operating lever so as to be operated upon relative movement of said operating lever and control member for rendering said last-mentioned means ineffective to stop the press.

1,636,498. DEVICE FOR HANDLING HAY AND THE LIKE. JOHN W. CALLAHAN, Wellsboro, Pa., and GEORGE B. DUSINBERRE, Elmira, N. Y., assignors to Callahan Distributor Company, Incorporated. Filed Jan. 26, 1924. Serial No. 688,792. 10 Claims. (Cl. 294—128.)



6. A clevis adapted for removable attachment to the bow of a hay-fork, and having a sheave incorporated therein adapted to receive a guide rope.

1,636,499. BEARING FOR LOCOMOTIVE TRUCKS AND THE LIKE. JOHN W. CHAPMAN and JOHN J. MELLEY, Parsons, Kans. Filed Nov. 24, 1926. Serial No. 150,599. 2 Claims. (Cl. 308—79.)

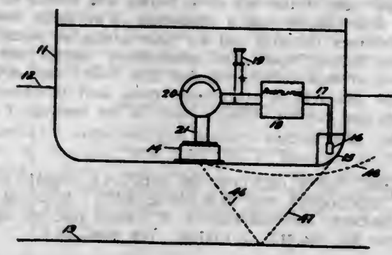
1. In an axle bearing for locomotives, a journal having a longitudinal bore and lateral ducts communicating with the longitudinal bore, an adjustable device for closing the outer end of the bore and controlling lubricating material within the bore and ducts, an apertured bushing surrounding said journal, a second bushing concentric with that first named, an outer structure, retaining devices extending thru this structure into the second bushing, and means including upper and lower con-

cave elements, receiving and mounting the second bushing within said outer structure, the apertured bushing including an outer flange extending over the end of the

second bushing, and means engaging the flange on its outer side, said apertured bushing floating with reference to the second bushing.

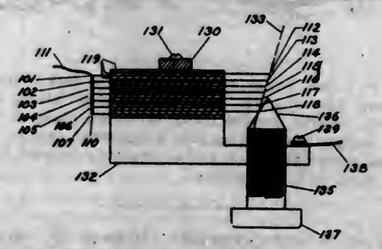
1,636,500. HOLDER FOR LABELS. BERTRAM COX, London, England. Filed Nov. 6, 1926, Serial No. 146,797, and in Great Britain Nov. 14, 1925. 4 Claims. (Cl. 40—10.)

1. A label holder comprising a transparent shallow cup-shaped receptacle adapted to contain a disc label and expose it through its bottom, and a plug of compressible material for closing said receptacle and holding said label in position within the receptacle.



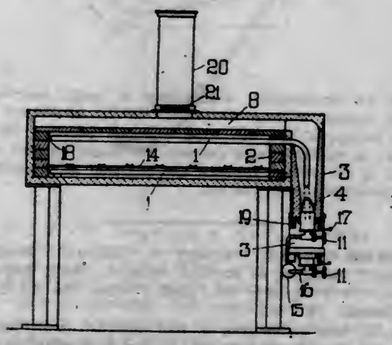
1,636,501. PUSH BUTTON ELECTRIC SWITCH. FELIX DECRAENE, Pantin, France. Filed Apr. 6, 1925, Serial No. 21,173, and in France Apr. 14, 1924. 2 Claims. (Cl. 200—68.)

1. A push-button switch including a casing, a push-button operable in the casing and formed at its lower end with a slot, a shaft mounted in the casing and extending through the slot to limit the movement of the push button, a switch blade pivoted on the shaft and tongues pivotally mounted on the blade on opposite sides of the shaft, said tongues bearing against, but being free of connection with the push button, the push button being formed with shoulders to engage the uppermost tongue on the depression of the button to thereby operate the blade.



1,636,502. METHOD AND APPARATUS FOR DETERMINING DISTANCE BY ECHO. REGINALD A. FESSENDEN, Chestnut Hill, Mass. Filed Mar. 28, 1921. Serial No. 456,112. 10 Claims. (Cl. 177—386.)

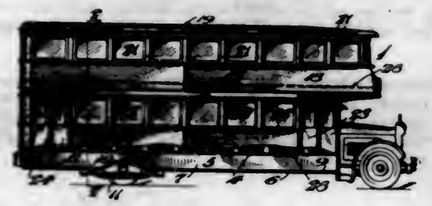
6. The method of determining distance by echo which comprises sending out compressional waves toward the object the distance of which is to be determined and receiving the echo therefrom in the form of compressional waves and causing said received waves to cause the sending of other like waves repeating the cycle in-



definitely at a frequency automatically determined by the distance of the object whose distance is to be determined and observing a suitable function of said frequency.

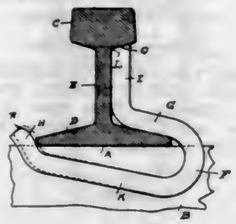
1,636,503. VARIABLE CONDENSER. HERBERT GROVE DORSEY, Gloucester, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Nov. 11, 1922. Serial No. 600,349. 2 Claims. (Cl. 175—41.5.)

1. A variable electrical condenser comprising two sets of opposed parallel plates separated by a dielectric, one set of plates extending beyond the other and the dielectric, and means for bending at will any number of the extended portion of the extended plates whereby they will make rubbing contact with said means.



1,636,504. HEATING OVEN FOR BAKING, ROASTING, DRYING, AND LIKE PURPOSES. WILLIAM DREDGE, Manchester, England. Filed June 12, 1924, Serial No. 719,610, and in Great Britain June 15, 1923. 6 Claims. (Cl. 107—63.)

5. Means for heating ovens, for baking, roasting, drying and like purposes of the kind wherein the heating of the oven-chamber is effected by hermetically sealed liquid-



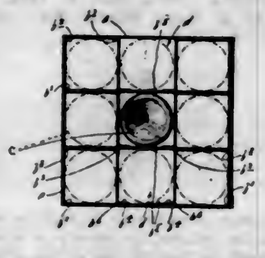
containing tubes to one end of which heat is applied, comprising in combination a plurality of said heating-tubes; a closed tubular casing arranged to surround each separate tube at the end to be heated and spaced therefrom, said tubular casing consisting of an inner casing of refractory material and an outer casing of metal; a heating burner capable of independent control located in each of said tubular casings, and means for conveying the products of combustion from said tube-heating casings and further utilizing them in the heating of the ovens.

1,636,505. LOW CENTER OF GRAVITY, COMPLETELY INCLOSED DOUBLE-DECK BUS. WILLIAM D. FAIRBANKS, Merchantville, N. J. Filed Dec. 13, 1926. Serial No. 154,617. 5 Claims. (Cl. 296—28.)

1. In a low center of gravity, double deck completely inclosed bus, a lower deck compartment having a depressed, central, longitudinally extending aisle, an upper deck compartment having also a depressed, central longitudinally extending aisle and a completely inclosed top for said upper deck compartment.

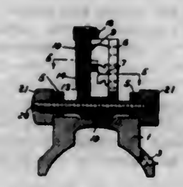
1,636,506. ANTICREEPER. HORATIO G. GILLMOR, Washington, D. C. Filed Aug. 2, 1923. Serial No. 655,323. 16 Claims. (Cl. 238—330.)

1. An anticreeper, comprising a body, adapted to bear against a cross tie and to be out of contact with the bottom of the rail base, and end portions disposed so as to rigidly engage the web and upper surface of the base at one side of the rail and the edge of the rail base at the other side of the rail.



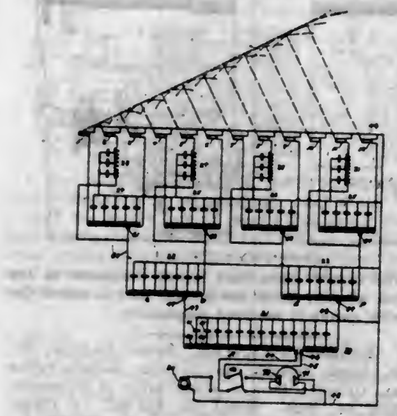
1,636,507. TENT. ALBERT J. GOODMAN, Reidsville, N. C., assignor of one-fifth to R. L. Watt, Reidsville, N. C. Filed May 26, 1925. Serial No. 32,921. 4 Claims. (Cl. 135—15.)

4. A tent comprising a roof member, wall members secured to said roof member at eaves of substantial width, said wall members secured together a substantial distance downward from the eave to form a corner, a sheet of reinforcing material secured to the inner surface of the roof and joining wall members, turned into the eave to reinforce the corner thereof and secured to the wall members through said substantial downward distance,



said eave extending in two directions from said corner, whereby to provide an interior-lined pocket to take the wear of a frame member.

1,636,508. FOLDABLE CELLULAR CARTON. CHARLES H. GOODYEAR, Portland, Oreg. Filed Jan. 9, 1926. Serial No. 80,269. 3 Claims. (Cl. 229—15.)

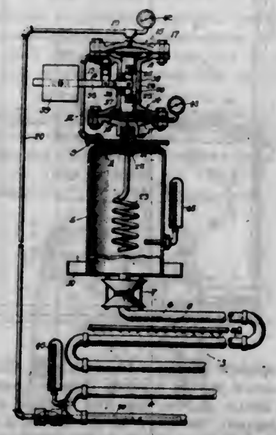


1. In combination with an enclosing outer container, a plurality of filler sections each composed of a single sheet of relatively stiff cardboard, the lateral ends of which are scored, and folded and have their extremities secured in place to form cellular, spaced collapsible pockets adapted to assume a rectangular cross-section when set up, and to be arranged flatwise with the unscored portion of the sheet when collapsed, and the filler sections being arranged with their pockets in alinement whereby that portion of one filler section intermediate its pockets constitutes the closure for the space between the pockets of the adjacent filler section; said outer container holding said filler sections in their set-up state.

1,636,509. RECEIVER SIGHT FOR RIFLES. JAMES L. HATCHER, Brooks Field, Tex. Filed Jan. 2, 1925. Serial No. 194. 2 Claims. (Cl. 33—56.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

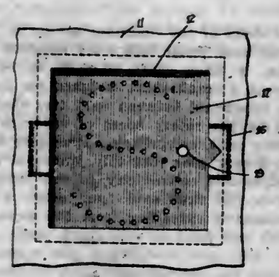
1. A sight embodying a base adapted for attachment to a rifle, a leaf mounted on the base, a sight slide carried by the leaf, a screw for adjusting the sight and a retaining member for the screw adapted for attachment to the leaf and formed with an angled end to embrace the upper end of the screw and with a detent for retaining the screw in adjusted position.

1,636,510. DIRECTIVE SOUND TRANSMISSION. HARVEY C. HAYES and MAX MASON, New London, Conn., assignors to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed June 25, 1919. Serial No. 306,685½. 7 Claims. (Cl. 177—386.)



1. Directional sound transmitting apparatus comprising a plurality of transmitters disposed in a straight line and having their effective faces in the same plane and facing in the same direction, means for electrically generating therein sounds of the same frequency and of a variable phase relation and means for varying progressively said relation from one end to the other of said line.

1,636,511. FIBROUS MATERIAL AND METHOD OF MAKING THE SAME. CARL HERING, Philadelphia, Pa. Original application filed Sept. 2, 1924, Serial No. 735,282. Divided and this application filed Jan. 18, 1926. Serial No. 82,157. 3 Claims. (Cl. 49—78.1.)

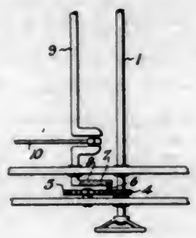


1. The method which comprises spinning a thread from liquefied non-combustible material, fabricating cloth therefrom, and heat treating said cloth to set the threads in their fabricated positions.

1,636,512. METHOD OF AND MEANS FOR REMOVING FOREIGN GAS FROM CONDENSERS. GEORGE HILGER, Chicago, Ill. Filed Nov. 28, 1923. Serial No. 677,383. 21 Claims. (Cl. 62—170.)

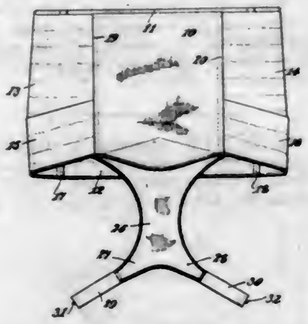
1. The combination with a condenser, of a receiver for noncondensible gases communicating with the upper portion of the condenser, a pair of pressure elements arranged in opposed relation and respectively responsive to temperature changes in the region of condensation of the condenser and in the receiver, means for subjecting the condenser and receiver to a cooling medium, and valve means operatively associated with and arranged to be controlled by said pressure elements to permit the escape of gases from the receiver when the temperature of the gases therein falls below a predetermined point.

1,636,513. AUTOMOBILE THEFT DETECTOR. JOSEPH D. E. HUGHES, New York, N. Y., assignor to Stotesbury & Miner, New York, N. Y., a Firm composed of Louis W. Stotesbury and Justin L. Miner, Copartners. Filed Sept. 18, 1923. Serial No. 663,351. 5 Claims. (Cl. 40—2.2)



1. A system of identifying and guarding against theft of motor cars which comprises providing each car with a removable portion adapted to register at its marginal edge with a permanent portion of the body of that particular car but not other cars and adapted to be removed by the authorized driver of the particular car when he leaves the car, and indicating the absence of each such removable portion to persons not occupying the car upon which the removable portion is missing.

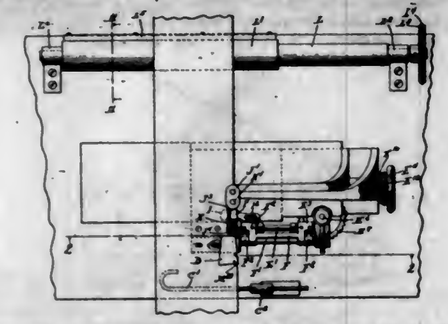
1,636,514. GOLF CLUB. CHARLES J. JAHANT, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 13, 1926. Serial No. 148,221. 2 Claims. (Cl. 273—80.)



1. A golf club comprising a shaft, a driving head formed with a tapered neck connecting portion having a bore for receiving one end of the shaft, windings wrapped around the neck portion of the head and the base of the shaft, and a removable thin walled rubber protecting sleeve entirely encasing the winding and protecting the winding from impact with the ball in the use of the club, said protecting sleeve being of relatively thin, high grade rubber with beaded ends to prevent injury thereto during installation.

1,636,515. LOOM. ALFRED JOHN, Gera-Reuss, Germany. Filed Apr. 5, 1926, Serial No. 99,686, and in Germany Oct. 29, 1925. 1 Claim. (Cl. 139—190.)

In a loom drive of the character set forth, in combination with the loom frame and a lay mounted therein for reciprocation, a drive shaft adapted to be driven at constant speed, a crank shaft designed for operating the lay, means interposed between said two shafts for uniformly varying the rotary speed of said crank shaft in each operative cycle, comprising a spur gear fixed on said drive shaft, a spur gear rotatably journaled on the loom frame in adjustable eccentricity to said crankshaft and meshing with the first said spur gear, a driver pin laterally adjustably extending from the second said spur gear, a crank arm fixed on said crank shaft presenting a longitudinal slot, and said driver pin engaging in said crank arm slot for sliding cooperation therein.

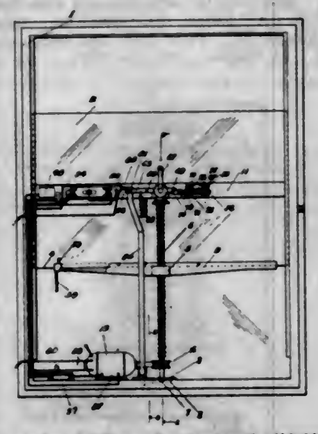


1,636,516. APPAREL GARMENT. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 22, 1925. Serial No. 76,947. 2 Claims. (Cl. 2—41.)

1. In a garment of the type described, a front member, a sides and back member connected to the front member to form a continuous structure, a thigh and buttocks strap extending downwardly from the lower side portions of the front member to points at the rear of the axillar lines of the garment between which the said strap forms a lower continuation of the back member, and a crotch strap extending from the lower portion of the front member, to which the crotch strap is permanently attached, to the lower portions of the sides and back member to which said crotch strap is adjustably connected.

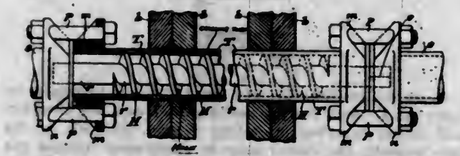
1,636,517. HEMMING MACHINE AND PROCESS OF FORMING BAG TUBING. ALBERT KRASA, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed Mar. 16, 1922. Serial No. 544,127. 6 Claims. (Cl. 112—203.)

1. In combination, means for folding together the edges of a strip and turning said edges to form a hem, means contacting the edges only for drawing said edges through the hem-turning device, a sewing head having a presser foot and adapted to sew a beam longitudinally



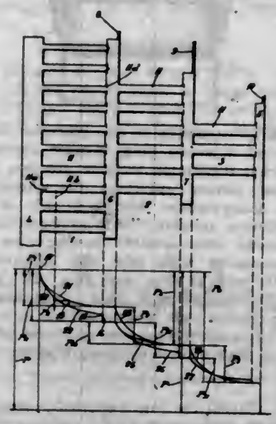
through the turned edges, and means connected to the presser foot whereby when the presser foot is raised the said drawing means is rendered inoperative.

1,636,518. BASEBALL CENTER. SHARP LANNOM, Jr., Grinnell, Iowa, assignor to Lannom Manufacturing Company, Grinnell, Iowa, a Corporation of Tennessee. Filed July 24, 1924. Serial No. 727,897. 1 Claim. (Cl. 273—60.)



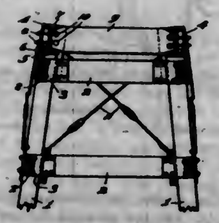
In a base ball, a hollow hard rubber core having fluid under pressure contained therein, a resilient casing comprising hollow hemispheres for enclosing said inner core, a relatively thick enveloping body for enveloping and causing compressions of the resilient casing, and a flexible covering for the enveloping body.

1,636,519. MOTOR-OPERATED WINDOW. NILES L. LARSEN, Oakland, Calif. Filed Dec. 10, 1924. Serial No. 755,070. 7 Claims. (Cl. 268—124.)



1. In a window having a frame, a sash slidable therein, a vertical screw having a screw threaded connection with the sash, gears on the top and bottom of the screw, means to support the screw in the frame, a motor in the frame having a gear engaging the said bottom gear, a manually operated gear to engage the said top gear and means to connect the top or the bottom set of gears.

1,636,520. METHOD OF AND APPARATUS FOR TREATING PETROLEUM. JOSEPH W. LEWIS, Jr., Philadelphia, Pa., assignor to The Atlantic Refining Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 4, 1925. Serial No. 20,638. 4 Claims. (Cl. 196—47.)

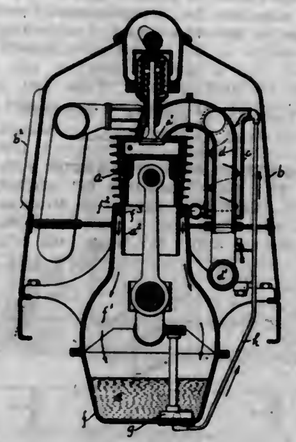


1. The method of producing lower boiling point from higher boiling point hydrocarbon oils, which comprises passing the higher boiling point oil in liquid phase in a helical path through a tubular passage in a stream whose cross section is a small fraction of the cross section of said tubular passage, and subjecting the oil while in said helical path to cracking temperature.

1,636,521. AIR-COOLED CONDENSER. FREDRICK LJUNGSTRÖM, Lidingo-Brevik, and ISIDOR BROBERG, Skarsatra, Sweden, assignors to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed Apr. 13, 1922, Serial No. 552,410, and in Sweden Nov. 8, 1921. 6 Claims. (Cl. 257—36.)

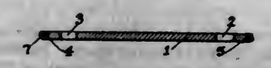
1. An air cooled condenser comprising groups of cooling elements, the elements of each group being placed side by side, said groups being connected in series, and throttling means between one group and the following.

1,636,522. DERRICK-TOP ASSEMBLY. CHARLES W. LYNCH, Perry, Okla., assignor to Pickering Lumber Company, Kansas City, Mo., a Corporation of Delaware. Filed Aug. 18, 1926. Serial No. 129,877. 2 Claims. (Cl. 20—0.5.)



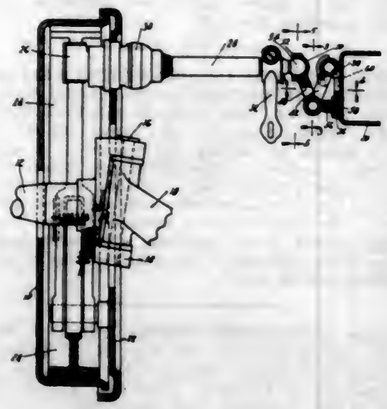
1. A derrick comprising a set of four legs, right angle corner plates fitting respectively against the two outer sides of each leg and projecting thereabove, plates resting upon the upper ends of the legs within said brackets, a pair of parallel I-beams bridging the space between pairs of the posts and resting thereon, a pair of parallel deadwoods extending at right angles to and abutting said I-beams, means for securing the I-beams and deadwoods to said corner brackets, and compression means for bracing the plates, benders and deadwoods against relative spreading movement.

1,636,523. METHOD OF DECORATING CELLULOID ARTICLE AND DECORATED CELLULOID ARTICLE. HUGO MANOVILL, New York, N. Y. Filed Mar. 10, 1926. Serial No. 93,793. 11 Claims. (Cl. 41—26.)



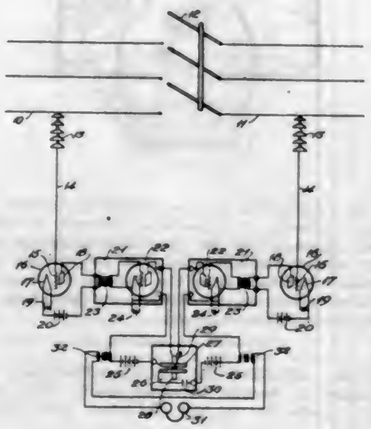
1. A method of coloring the surface of a celluloid base which consists in spraying directly thereon a mixture of coloring matter and a celluloid solvent, the said spraying being conducted with sufficient force with respect to the thinness of the mixture to cause the said coloring matter to be uniformly distributed over the surface of the celluloid, to penetrate the same to produce a uniform colored layer.

1,636,524. LUBRICATING SYSTEM. ALFRED F. MASURY and CHARLES FROESCH, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 2, 1926. Serial No. 78,769. 3 Claims. (Cl. 123—196.)



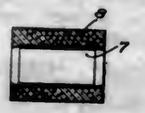
1. The combination with an internal combustion engine having a cylinder and a lubricant reservoir, of means to conduct lubricant from the reservoir to a passage formed in the engine circumferentially of the cylinder, means to conduct lubricant from the passage to the external peripheral surface of the cylinder, and means to return the lubricant to the reservoir.

1,636,525. REENFORCED MOVING-PICTURE FILM. CHARLES H. MEEKER, Riverside, Calif. Filed June 9, 1924. Serial No. 718,800. 7 Claims. (Cl. 88—19.5.)



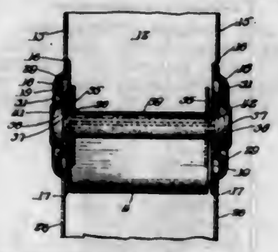
1. A moving picture film in combination with a reenforcing border therefor, said border including a reenforcing longitudinal member secured solely to the edge of said film and in the plane of the film.

1,636,526. BRAKE-OPERATING MEANS. Gus F. MICHAEL, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 11, 1926. Serial No. 140,750. 14 Claims. (Cl. 188—194.)



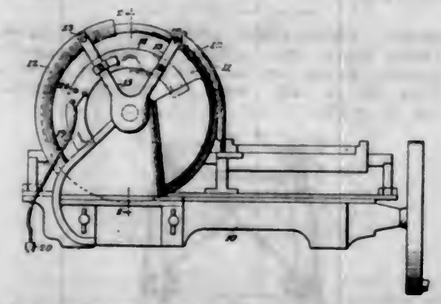
1. Operating means for a brake opposite a chassis part comprising, in combination, a brake-applying shaft having one end adjacent the chassis part, a supporting member pivotally mounted on the chassis part opposite the end of the shaft, and a second supporting part pivotally connected to the unpivoted end of the first supporting part and universally supporting the end of said shaft.

1,636,527. METHOD AND APPARATUS FOR DETERMINING THE SYNCHRONISM OF ALTERNATING-CURRENT CIRCUITS. GEORGE H. MIDDLEMISS, Birmingham, Ala. Filed Nov. 3, 1922, Serial No. 598,960. Renewed June 3, 1927. 10 Claims. (Cl. 172—245.)



1. Apparatus for determining the synchronic condition of alternating currents including an indicating device, local circuits connected to said indicating device in opposition to each other, vacuum valves, each controlling a respective local circuit, and current limiting devices each adapted to be controlled by a respective alternating current and electrically connected to a respective vacuum valve.

1,636,528. BUSHING FOR STEERING COLUMNS. FRED C. MORRIS, San Francisco, Calif. Filed Oct. 11, 1922. Serial No. 593,863. 4 Claims. (Cl. 308—238.)

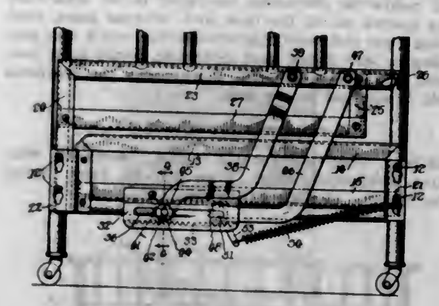


1. An anti-rattling bushing for shafts comprising a tubular metal shaft bearing and a rubber covering therefor, said rubber covering projecting beyond the ends of the tube whereby the rubber may be compressed against the shaft to prevent rattling.

1,636,529. HINGE. HENRY H. MOTSCHMAN, Chicago, Ill., assignor to Union Bed and Spring Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 17, 1925. Serial No. 50,561. 1 Claim. (Cl. 287—100.)

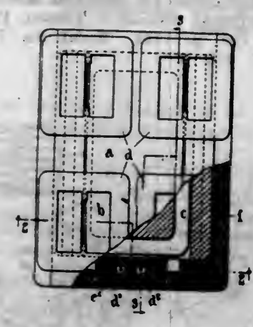
In a hinge construction of the character described, the combination of a hollow hinge-member having a pair of spaced internal registering annular grooves, the walls of said member having apertures therethrough, a complementary hinge-member having a pair of spaced external registering annular ribs in said grooves, the walls of said second hinge-member having apertures therethrough concentric with said ribs, a cover-plate concentric with said grooves and ribs and having parts apertured in register with said other apertures, and means to maintain said hinge-members in assembled relation and extended through the apertures of both hinge-members and those of said cover-plate parts.

1,636,530. MACHINE FOR SLICING MEAT. SVERRE NYHUS, Lille-Hammer, Norway, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed Aug. 16, 1926, Serial No. 129,411, and in Denmark May 8, 1925. 5 Claims. (Cl. 146—1.)



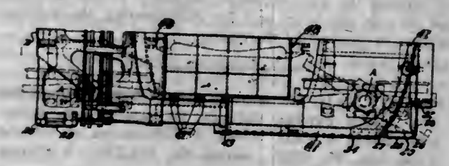
4. A rotary disc slicing machine comprising a slicing blade, an electrical heating element for raising the temperature of said blade, a support of insulating material for said element, and means for mounting said support adjacent said blade.

1,636,531. SAFETY LID. FELIPE OBIOL, Buenos Aires, Argentina. Filed Dec. 30, 1925. Serial No. 78,289. 1 Claim. (Cl. 215—51.)



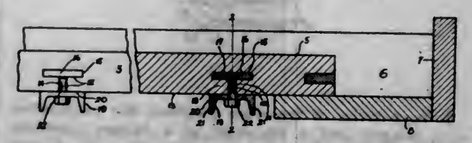
In a closure of the character described, the combination with a receptacle mouth having a sealing chamber formed by an annular groove, the outer portion thereof projecting under the lip of the mouth, of a sealing means for the chamber comprising a metal crown having its marginal portion bent downwardly at an angle to the perpendicular, then upwardly again to provide a recess for the elevated portion of the groove and terminating in a corrugated outwardly projecting skirt portion insertable under the lip of said mouth, the entire crown being disposed below the lip of the mouth when in closed position.

1,636,532. FOLDING BED STRUCTURE. GEORGE G. POWERS, Chicago, Ill., assignor to Union Bed & Spring Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1924. Serial No. 724,937. 6 Claims. (Cl. 5—22.)



6. In a folding-bed construction of the character described, the combination of a stationary bed-section, a movable bed-section in its inoperative position above and in its operative position in front of and in the plane of said stationary bed-section, legs at the front of the movable bed-section adapted to rest on the floor in the open condition of the bed, a pair of bent supporting links at each end of the structure each pivoted at its upper end to the movable bed section, a pivotal mounting for the lower end of each such link causing its travel forwardly and rearwardly during the opening and closing movements of the movable bed-section, and an abutment at each end of the construction on which the pair of links at the respective ends of the structure bear in the open condition of the folding-bed construction.

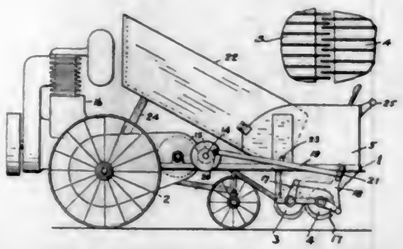
1,636,533. MAGNETIC CHUCK. JOHN EDWARD SEARS, Jr., and ARTHUR JOHN CHARLES BROOKES, Teddington, Middlesex, England; said Sears assignor to said Brookes. Original application filed Nov. 22, 1919, Serial No. 339,915, and in Great Britain Nov. 22, 1918. Divided and this application filed June 14, 1920. Serial No. 389,044. 5 Claims. (Cl. 175—367.)



1. A chuck for use in the production of such articles as slip gauges comprising a solid metal block having a number of facets integral therewith and projecting somewhat above the general surface of the block, said facets being of a size and shape conforming to the size and shape of the slip gauges.

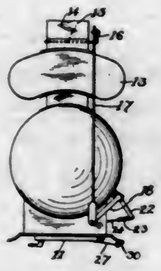
1,636,534. ORE CAR. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 21, 1922. Serial No. 576,526. 15 Claims. (Cl. 105—251.)

2. In a railway car, the combination of a cast steel underframe having integral walls forming a centrally arranged hopper opening, the end walls of which are obliquely disposed and curved, and curved end hopper sheets whose lower edges are connected to the upper edges of the curved obliquely disposed walls on said underframe.



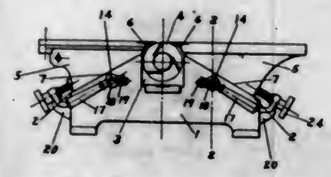
1,636,535. SHUFFLE BOARD CONSTRUCTION. MICHAEL J. SHERRY, Utica, N. Y. Filed Feb. 26, 1927. Serial No. 171,352. 5 Claims. (Cl. 273—51.)

5. A shuffleboard construction consisting of a wood shuffleboard having intermediate its top and bottom sur-



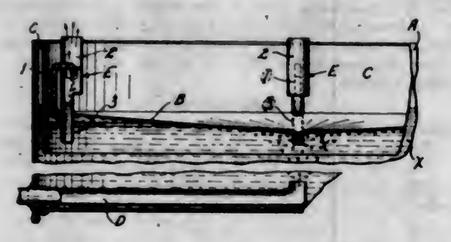
faces a slot extending transversely of the board, a rigid bar in said slot, a rigid re-inforcing metal member engaging the bottom surface of the board below said bar and means for rigidly connecting said bar and said bottom metal member at a plurality of points and clamping the wood therebetween to the said bottom member.

1,636,536. SPREADING OR SOWING MACHINE FOR ROOT PLANTING. HOWARD C. TOOMEY, Philadelphia, Pa. Filed Oct. 9, 1924. Serial No. 742,512. 3 Claims. (Cl. 275—2.)



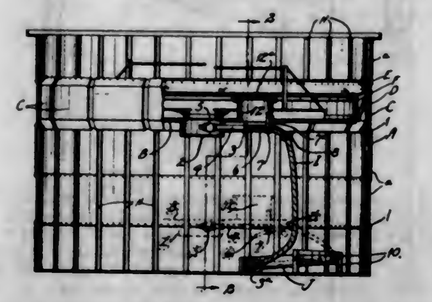
1. An automotive spreading and sowing machine for root planting comprising a power means for propelling the machine, a pair of rotatively mounted rolls provided with circumferential spaced rows of saw teeth and the teeth of one row projecting into the spaces between the rows of teeth of the other roll, a hopper having at its bottom an outlet opening disposed at the space between the rolls, an agitator provided with pins and arranged for horizontal reciprocation in the hopper above the bight of the rolls, and mechanism actuated by the power means for turning the rolls oppositely and first in one direction and then in the other and for reciprocating the agitator endwise in horizontal direction.

1,636,537. DAMPER REGULATOR FOR FURNACES. BEN JAMES TAYNER, Chicago, Ill., assignor to Enterprise Boiler & Tank Works, a Corporation of Illinois. Filed Jan. 15, 1927. Serial No. 161,250. 5 Claims. (Cl. 126—287.)



1. In a device of the class described, the combination of a damper, and a fire door, of a damper operating mechanism comprising linkage controlling the damper movement, a flexible connection thereto leading to the fire door and adapted to open said damper upon opening said door.

1,636,538. TABLE FOR JOINTERS. LELAND B. WHIPPLE, Rochester, N. Y. Filed July 11, 1923. Serial No. 650,823. 2 Claims. (Cl. 144—129.)



1. In a machine of the character described, a bed and a table having cooperating inclined surfaces, one of said parts containing a slot and the other of said parts having a tongue projecting through said slot and containing an elongated aperture, and a shaft journalled in said slotted part and having a cam rotatable in said elongated aperture.

1,636,539. LIQUID-STORAGE TANK. JOHN H. WIGGINS, Bartlesville, Okla. Filed Oct. 12, 1925. Serial No. 62,019. 12 Claims. (Cl. 220—26.)

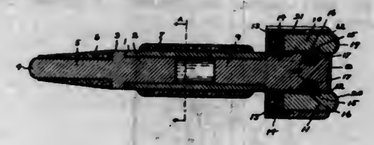
1. In a liquid storage tank provided with a floating deck, means for preventing the liquid in the tank from being carried out of the tank with escaping gases, comprising a gas and liquid separating device, and a vent pipe leading to said device, said separating device being connected to the deck in such a way that the separated liquid is returned to the tank.

1,636,540. LIQUID-STORAGE TANK. JOHN H. WIGGINS, Bartlesville, Okla. Filed Feb. 15, 1926. Serial No. 88,308. 13 Claims. (Cl. 220—26.)

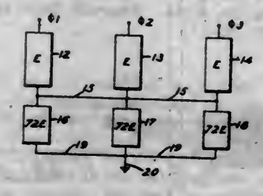
1. A liquid storage tank provided with a floating roof or deck that normally rests upon the liquid in the tank, a flexible conduit leading downwardly from said deck towards the bottom of the tank for draining the top surface of said deck, and means for causing said conduit to coil into a certain quadrant when the deck rises and falls due to variations in the level of the liquid.

1,636,541. TUBULAR-SPOKED WHEEL. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 1, 1922. Serial No. 579,016. 2 Claims. (Cl. 301—67.)

1. In a wheel, the combination with a metal rim having a cylindrical flange, of a series of tubular metal spokes each of unitary construction thickened on two sides from end to end, having its outer end portion flattened and bent laterally to fit the rim, and means for rigidly uniting each flattened portion to the rim.



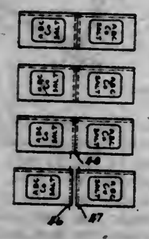
1,636,542. PISTON HAVING AN ADJUSTABLE HEAD FOR FACILITATING THE REMOVAL OF THE PISTON RINGS. JOHN P. WILLIS, Jenkins, Ky. Filed Oct. 2, 1926. Serial No. 139,167. 1 Claim. (Cl. 74—108.)



In a device of the class described, the combination of an annularly recessed piston head, spacing rings removably seated on the recessed portion of said piston, rings alternately arranged with the spacing rings, and a removable head having a screw-threaded cylindrical projection engaging a correspondingly recessed portion of the piston head, said projection and the aforesaid piston head being correspondingly recessed to receive a lock washer.

1,636,543. ADJUSTABLE LIMIT-PIN GAUGE. ERIK H. ALDEBORGH, Poughkeepsie, N. Y., assignor to Standard Gage Co., Inc., Poughkeepsie, N. Y., a Corporation of New York. Filed Jan. 13, 1927. Serial No. 160,983. 4 Claims. (Cl. 33—163.)

1. An adjustable limit pin gauge, comprising in combination with a tubular body portion having a stationary gauging pin mounted in one end thereof, of a head carried by the other end, said head provided with an adjustable go pin and an adjustable no go pin, each of which forms a predetermined dimension with the stationary pin.



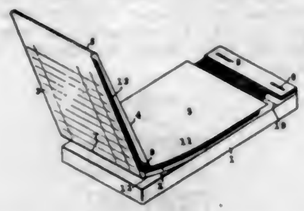
1,636,544. LIGHTNING-ARRESTER CONNECTION. ALFRED L. ATHERTON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1923. Serial No. 633,743. 9 Claims. (Cl. 175—36.)

1. An excess-voltage protective system for multiple-phase circuits comprising a plurality of excess-voltage protective devices connected to the several line conductors of said circuits, a star-connecting means for said devices having a negligibly small impedance to excess-voltage discharges, and excess-voltage protective means connected between the star point and ground, the discharge current-carrying capacity of said means being equal to the combined current-carrying capacities of all of said star-connected protective devices.

1,636,545. METHOD OF MAKING BAGS. ADELMER M. BATES, Chicago, Ill., assignor to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed Aug. 20, 1923. Serial No. 658,240. 14 Claims. (Cl. 93—35.)

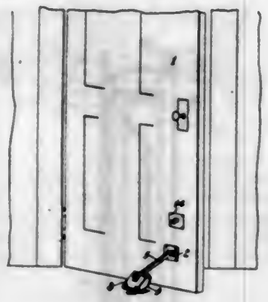
1. The process of making bags from a tube, which consists in severing the tube into lengths, each of proper length to make two bags, sewing parallel transverse seams midway of each length, and severing each length between the seams.

1,636,546. STENCIL AND METHOD OF MAKING THE SAME. ADELMER M. BATES and JOHANN E. DANCKER, Chicago, Ill., assignors to Bates Valve Bag Company, Chicago, Ill., a Corporation of West Virginia. Filed Mar. 17, 1924. Serial No. 699,690. 2 Claims. (Cl. 101—127.)



1. The method of making a stencil plate, which consists in die-cutting the outlines of the desired characters except for connecting lines sufficient to keep the stencil material in place when the dies are removed, removing the dies, and then completing the cutting of said outlines and removing the stencil material within the outlines.

1,636,547. BRICK-SCORING APPARATUS. GEORGE W. BOOTH, New Toronto, Ontario, Canada. Filed Feb. 12, 1925, Serial No. 8,776. Renewed June 13, 1927. 3 Claims. (Cl. 25—1.)



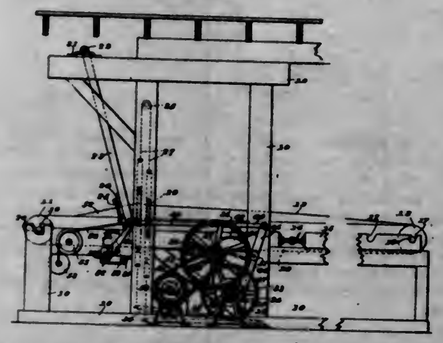
1. Apparatus for scoring brick comprising a plurality of independent scoring members floatingly supported relative to the surface of the brick material; and individual means for yieldingly pressing each scoring member towards the brick.

1,636,548. MANIFOLDING SALES BOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario, Canada. Filed Sept. 14, 1921. Serial No. 500,498. 1 Claim. (Cl. 282—9.)

A manifolding pad, comprising, in combination, a plurality of sets of leaves, each set comprising four leaves attached together end to end to form a strip, said strip being folded to superpose the third and fourth leaves upon the second and first respectively, and being folded a second time to bring all four leaves of the set in registry with each other, the first leaf of each set being extended beyond the others to form an extension by which the sets are attached together in the pad, and a carbon strip bound within the pad above the record leaves of length equal to two of the record leaves, carrying transfer material upon both of its faces for portions of its length, whereby when folded to extend between the record leaves quadruplicate copies may be made.

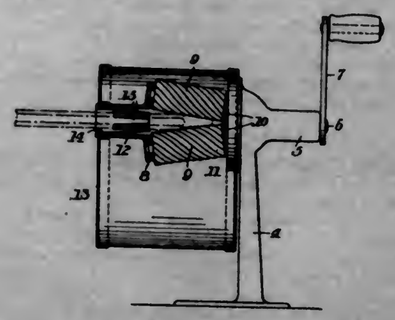
1,636,549. DOORCHECK. MAX BROWN, New York, N. Y., assignor to The Brown Door-Check Co. Inc., a Corporation of New York. Filed Oct. 29, 1924. Serial No. 746,499. 3 Claims. (Cl. 292—338.)

1. In a door check, a plate for attachment to a door, a rocker member having projections thereon, a bar pivotally connected to said plate at one end, its opposite end being so mounted pivotally between the said projections on the rocker member that in operation the inner end of the rocker member is adapted to contact with the bar some distance from the pivoted end thereof.



1,636,550. EXTRACTION METHOD AND APPARATUS. HAMBDEN BUEL, Fairview, N. J., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Filed July 9, 1925. Serial No. 42,446. 5 Claims. (Cl. 167—4.)

1. Extraction method for materials containing extractives injuriously affected by high temperatures which comprises passing a heated solvent through the material, reducing the boiling point of the solvent to a temperature below that injuriously affecting the extractive by maintaining the space holding the material at a pressure below atmosphere, and cooling vapors from the operation to substantially completely condense the same.

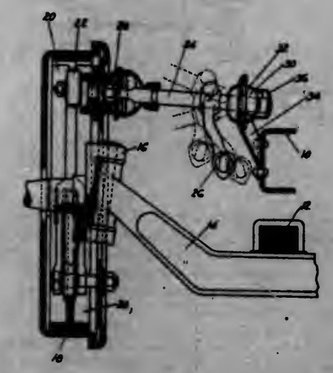


5. Apparatus for extraction of essential substances injuriously affected by high temperature comprising a holder for the material treated, a vessel to contain a solvent, means for vaporizing the solvent in said vessel, a vapor duct leading from the vessel to the holder, a return duct from the holder to the vessel for the solvent and extractive, a condenser connected with the holder to receive the vaporized solvent and reflux the same upon the material in the holder and an exhauster connected with the condenser to maintain a pressure therein and in the holder and vessel at such point below atmospheric pressure that the solvent will evaporate at a temperature below that at which the extractive volatilizes.

1,636,551. LOOM WITH EDGE TRIMMERS. EARL C. BUNNELL, Stratford, and LESTER H. MESSINGER, Jr., Bridgeport, Conn., assignors to The C. O. Jelliff Manufacturing Corporation, Southport, Conn., a Corporation of Connecticut. Filed Apr. 5, 1926. Serial No. 99,667. 14 Claims. (Cl. 139—190.)

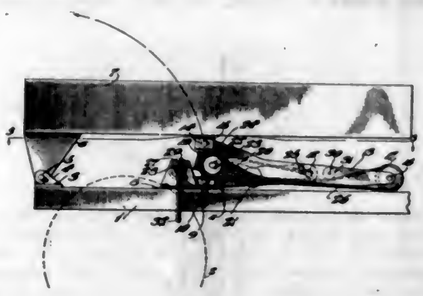
1. A loom for weaving wire fabric, comprising a beater, means for actuating the beater to cause it to strike a plurality of blows against each of cross-wires to be woven into warp wires, said means comprising a plurality of cams for withdrawing said beater from the weaving location, there being a cam for each blow to be struck a cross-wire, and each cam being adapted to release said beater when withdrawn, and means upon said beater for causing it to strike a trip hammer blow against a cross-wire each time it is released from a cam, said last mentioned means comprising a weight, a cord suspending said weight from said beater, and a rotatable member over which said cord passes.

1,636,552. PENCIL SHARPENER. CHARLES R. CLARK, Homestead, Pa. Filed Sept. 24, 1926. Serial No. 137,492. 7 Claims. (Cl. 120—95.)



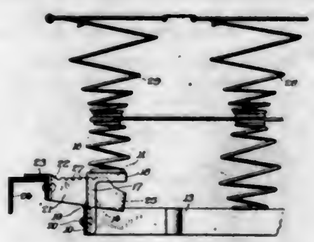
1. The combination with a pencil sharpener composed of a pair of abrading members mounted for rotatable movement about axes that are angularly disposed relative to one another, of a centering sleeve whose axis is located on a line that is symmetrically disposed between the first named axes, and yieldable fingers carried by said sleeve in position to engage a pencil inserted therein and center the same between said abrading members.

1,636,553. FOOTBALL TROUSERS. GEORGE W. CAUDEN, Brooklyn, N. Y., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed May 3, 1927. Serial No. 188,452. 3 Claims. (Cl. 2—23.)



3. Athletic trousers provided with thigh pads formed of a stiff protective material, slots in the pads, tapes carried at one of their ends with the waist section and fastened at their other ends to the pads and passing back and forth through the slots, whereby the height of the pads with respect to the waist section may be varied, and means to maintain the pads in position relative to the thighs of the wearer.

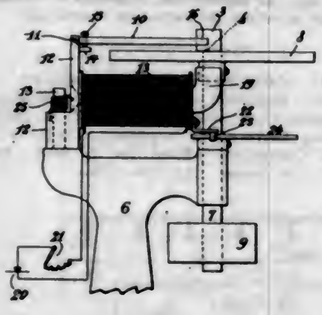
1,636,554. BRAKE-OPERATING MECHANISM. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1925. Serial No. 29,344. 3 Claims. (Cl. 188—194.)



1. Brake-operating mechanism including a shaft, and comprising, in combination therewith, a pressed metal support having at one end a flange to be secured to a chassis frame and extending upwardly at a substantial angle away from the flange and frame, and formed at its upper end with a half-socket, a ball in said half-socket supporting the end of the shaft, and a separate half-socket secured to the support and arranged on the opposite side of the ball.

1,636,555. HOISTING DEVICE FOR VEHICLE BODIES. WILLIAM B. ENGLER, Waterloo, N. Y. Filed Feb. 26, 1927. Serial No. 171,101. 6 Claims. (Cl. 298—19.)

1. In an apparatus of the character stated, a chassis, a body pivotally mounted thereon, spaced pairs of body arms pivoted to said body, spaced pairs of chassis arms pivoted to said chassis and to said body arms, a slidably supported U-shaped yoke, said yoke being provided with opposed end rollers for engaging simultaneously the undersides and the uppersides of said body and chassis arms, a sheave carried by said yoke, a sheave at the forward ends of said body arms, a winch, and a cable operatively interposed between said winch, and sheaves for raising said body about its pivot point.



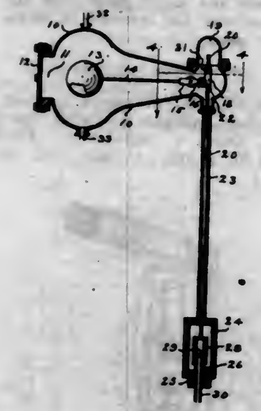
1,636,556. BED-SPRING CONSTRUCTION. BEN K. FORD, Oak Park, Ill., assignor to Union Bed and Spring Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1922. Serial No. 598,991. 5 Claims. (Cl. 5—209.)

1. In a bed-spring structure of the character described, the combination of a main-frame having a plurality of vertically-disposed slots and also having a plurality of cross-bars, a number of adjustable arms each slidingly accommodated in one of said slots, and a supporting-bar connecting the outer ends of said arms and designed to support the bed-spring frame by resting on a bedstead side-rail, the tops of said arms having a series of notches to receive those parts of the frame at the tops of said slots, whereby to hold the arms and supporting-bar in adjusted position, each of said arms at its inner end being bent laterally to provide means to bear on the corresponding cross-bar of the frame.

5. In a bed-spring structure of the character described, the combination of a bedspring frame having a side-bar, a slotted sheet-metal bracket secured to said side-bar and having lugs struck out of its body overlying and bearing on the top of said side-bar, an outstanding frame-supporting bar slidingly adjustable in said slot, and an upright spiral-spring mounted on said bracket.

1,636,557. POLISHING MACHINE. ROBERT G. GUTHRIE, Chicago, Ill. Filed July 28, 1926. Serial No. 125,386. 4 Claims. (Cl. 51—124.)

4. A polishing apparatus of the character described comprising in combination a work holder adapted to hold the work therein, a polishing disk, electromagnetic means for keeping the work in polishing contact with the said disk, non-magnetic means for positioning the work holder and work on the said disk, means for rotating the disk to polish the work and keep it in position in said non-magnetic means and means for automatically moving the work over said polishing disk during the polishing operation.

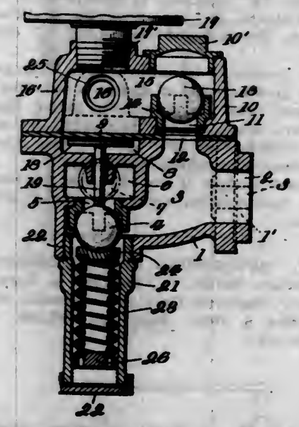


1,636,558. SAFETY-PIN HOLDER. ALBERT HAGEL, Bloomfield, N. J., assignor to Consolidated Safety Pin Company, Bloomfield, N. J. Filed Sept. 18, 1926. Serial No. 136,371. 2 Claims. (Cl. 211—24.)

1. A safety pin holder comprising a support, a plurality of rods on said support, each rod being bent to form a plurality of horizontally extending differently directed sections and in such manner that one bend of a rod contacts with a second rod near the end thereof, the two in conjunction serving as a stop against undue displacement of pins on the rods.

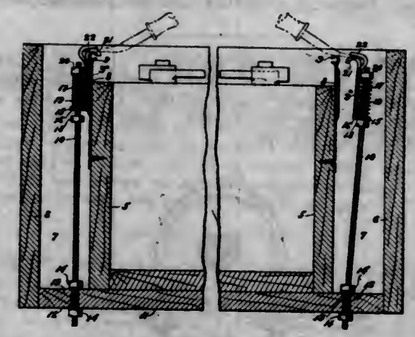
1,636,559. BOILER WATER FEEDER. CHARLES B. HAINES, Indianapolis, Ind. Filed July 14, 1926. Serial No. 122,338. 1 Claim. (Cl. 137—101.)

In a boiler water feeder, a housing adapted to be mounted in relation to a boiler to encompass normal boiler water level fluctuations, a float within the housing, a pivoted bracket in the housing, a float rod secured to the bracket and carrying the float, a pipe of relatively small diameter depended from the housing, a valve chamber carried on the lower end of the pipe, a valve nozzle projecting upwardly into said chamber, a valve having a sleeve fitting around said nozzle as a guide, a valve disk carried within said valve adapted to close the end of said nozzle with the valve in its lowered position, said nozzle being connected to a water supply under pressure, a valve rod carrying said valve and extending through said pipe into said housing, a head carrying said valve rod and pivotally connected to said float rod bracket whereby said valve is lifted as said float drops, and means for adjusting the vertical position of the valve in relation to the float, said nozzle having recessed passages in its outer face to permit water to enter said valve chamber between said nozzle and said valve sleeve whereby all entering water is discharged upwardly into said float chamber.



1,636,560. PORTABLE GRINDING TOOL. ERNEST A. HALL, Toledo, Ohio. Filed Mar. 5, 1924. Serial No. 696,924. 12 Claims. (Cl. 51—241.)

1. In a tool of the class described, a hollow inner shaft, a hollow outer shaft rotatable on said inner shaft, an abrading element rotatable with said outer shaft, a work engaging pilot member adapted to extend into an end of said inner shaft for centering the same with respect to the work, means for driving said outer shaft, and means for axially adjusting said outer shaft and abrading member toward or away from the work, said means including a part extending into the end of said inner shaft away from said pilot member, and adapted to engage said member.



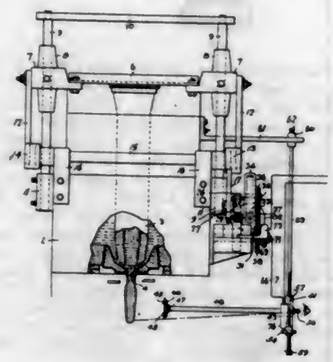
12. In a tool of the class described, inner and outer hollow shafts axially movable together and mounted one on the other for free relative rotary movements, an abrading element carried by the outer shaft at one end thereof, a work engaging pilot adapted to have work centering connection with one of said shafts, and means connecting the pilot and one of said shafts through the inner shaft and operable in cooperation with the pilot during a running of the outer shaft to effect a positive axial adjustment of the shafts and abrading element toward or away from the work, said means being manually adjustable from the opposite end of the outer shaft to that which carries the abrading element.

1,636,561. PRESSURE-CONTROL DEVICE. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed Dec. 8, 1926. Serial No. 153,296. 1 Claim. (Cl. 103—42.)

A pressure controlling device comprising a housing having upper and lower chambers substantially in a vertical line and a third chamber located to one side of said chambers and below the upper chamber, said third chamber having its lower portion in communication with the lower chamber and its upper portion in communication with the upper chamber, a downwardly closing valve controlling communication between the upper chamber and the third chamber and an upwardly spring actuated valve controlling the communication between the lower chamber and said third chamber, said upper and lower chambers having outlets, a diphragm in the upper chamber, a downwardly projecting member actuated by the diaphragm for unseating the valve controlling communication between the lower chamber and the third chamber, said third chamber having an inlet, whereby said device operates in the manner specified.

1,636,562. BATTERY CLAMP. HARRY J. HICK, Alliance, Ohio, assignor to The Hykon Manufacturing Company, Alliance, Ohio, a Corporation of Ohio. Filed Feb. 6, 1922. Serial No. 534,424. 1 Claim. (Cl. 180—685.)

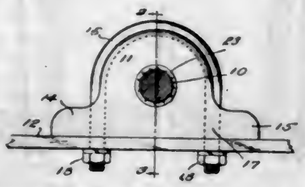
A clamp for the handle bar of a battery box and the like, including a laterally movable member yieldingly mounted alongside the handle and having spaced in-



wardly extending hooks for engaging the bar and a separate inwardly extending tongue intermediate the hooks and adapted to be lifted by a tool bearing on the bar for engaging and disengaging the hooks.

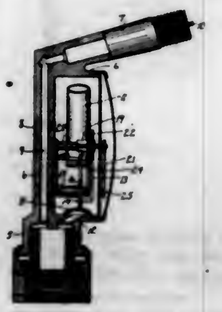
1,636,563. PROCESS FOR MANUFACTURING YEAST FOAM MALTED MILK AND PRODUCT THEREOF. CHARLES B. HILL, Glencoe, and MAURICE H. GIVENS, Evanston, Ill., assignors to Northwestern Yeast Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 12, 1926. Serial No. 94,316. 7 Claims. (Cl. 99—11.)

1. The process of manufacturing a food product consisting in growing yeast in and on a nutritive medium of cereal flour treated with a malt cereal, then mashing the mixture, neutralizing if necessary, and subjecting it to high heat to stop yeast growth, fermentation, dissipate alcohol, and sterilize the product.



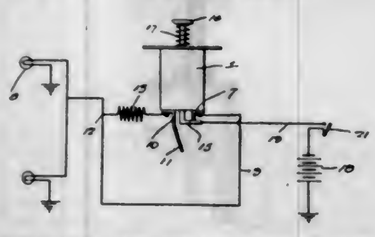
7. A food product of the character described, consisting of yeast-fermented-malt-treated-alcohol-free-gelatinized-cereals.

1,636,564. REGULATING GLASS FEEDERS. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 8, 1924. Serial No. 697,805. 15 Claims. (Cl. 49—55.)



11. The combination with means for feeding gathers of glass, of apparatus for determining the character of said gathers comprising a gauge device past which said gathers are fed, an aperture through which said gauge device and gathers may be viewed, a shutter, and means intermittently actuated by the feeding means for actuating said shutter to alternately open and close said aperture.

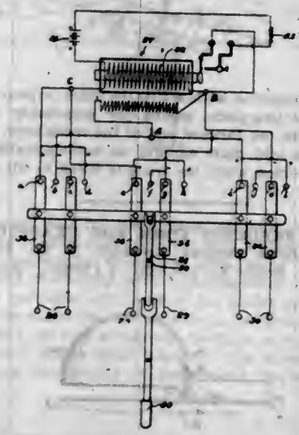
1,636,565. BEARING MECHANISM. JAMES M. HOWE, Cleveland Heights, Ohio, assignor to The Murray Manufacturing Company, Cleveland, Ohio, a Corporation of Michigan. Filed Sept. 6, 1924. Serial No. 736,223. 4 Claims. (Cl. 308—72.)



1. In combination a leaf spring for a vehicle, an axle and a sleeve bearing directly engaging the same to support it, and means for supporting the sleeve to allow a weaving movement between the spring and the axle, comprising a block of resilient material in which the sleeve is embedded, and means penetrating the block on either side of the sleeve and spaced apart from the sleeve by said resilient material and arranged to clamp the block flat against the spring.

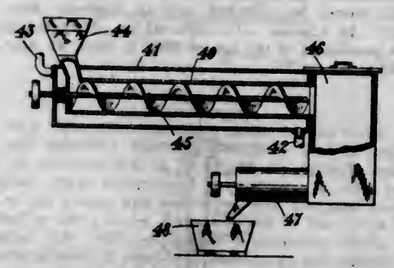
1,636,566. AIR GAUGE. FREDERICK GODFREY JOHNSON, New Haven, Conn., assignor to Visible Tire Gauge Co., New Haven, Conn., a Corporation. Filed Aug. 5, 1925. Serial No. 48,190. 1 Claim. (Cl. 73—109.)

An air gauge, comprising a housing, a Bourdon tube mounted in the housing, a center arbor, a pinion mounted thereon, a rack meshing with said pinion, said rack provided with an integral central disk formed with a radial slot, and a wire soldered directly to and forming a rigid operative extension of the closed end of the Bourdon tube, and its outer end turned into said slot.



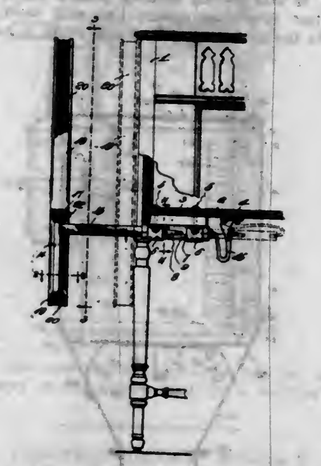
1,636,567. LIGHT ACCELERATOR OR SWITCH. ALEX M. KELSO, Murphysboro, Ill. Filed Nov. 10, 1925. Serial No. 68,135. 1 Claim. (Cl. 200—16.)

A switch of the class described comprising a block of insulated material having a longitudinal bore, a stationary contact secured on the bottom of the block on one side of the bore, a second stationary contact secured on the bottom of the block on the other side of the bore at a point diametrically opposite the first mentioned stationary contact, said second contact having a strip of spring metal depending therefrom and being slightly inclined downwardly in a direction toward the first mentioned contact, the free end portion of the strip being disposed over the bore of the block, a plunger adapted for vertical slidable movement through the bore, a lateral extension formed on the lower end of the plunger and providing a contact adapted for cooperation with the aforementioned contacts, a foot pedal on the upper end of the plunger, an expansible coil spring encircling the upper portion of the plunger disposed between the foot pedal and the upper end of the insulated block for normally holding the lateral extension on the lower end of the plunger in engagement wtih the first mentioned stationary contact, said lateral extension being adapted to



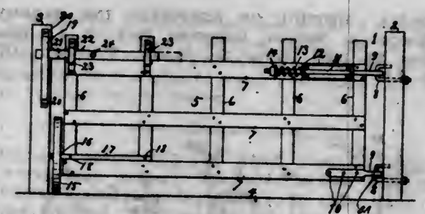
be moved out of engagement with the first mentioned stationary contact and into engagement with the depending spring strip of the second stationary contact when the foot pedal is depressed.

1,636,568. ELECTRICAL APPARATUS FOR TREATING NERVES, MUSCLES, AND BLOOD. JAMES W. KENNEDY, Canton, Ohio. Filed May 29, 1924. Serial No. 716,746. 7 Claims. (Cl. 174—87.)



1. Electrical apparatus for treating the human system, comprising limb receiving tanks, means secured to said tanks for enclosing portions of the body, means for supplying hot water to said tanks, electric terminals on each of said tanks, the limbs of the patient serving to complete the circuit between said terminals, and means for reversing the current passing through said portions of the body.

1,636,569. TREATMENT OF CEREAL SUBSTANCES. DOUGLAS WILLIAM KENT-JONES and CHARLES WOODLAND CHITTY, Dover, England, assignors to Woodlands Limited, Charlton Green, Dover, England, a British Company. Original application filed Sept. 3, 1924, Serial No. 735,628, and in Great Britain Dec. 9, 1923. Divided and this application filed Nov. 5, 1925. Serial No. 66,993. 6 Claims. (Cl. 99—10.)

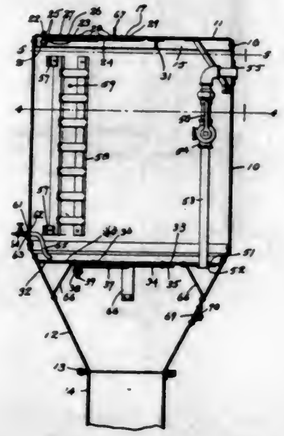


1. A continuous process for the treatment of wheat flour so as to improve its baking qualities which consists in introducing it into a closed conduit raising the temperature of the walls of the conduit so that the flour becomes heated to a temperature lying in the region of 120 to 230 degrees Fahrenheit and feeding the flour through the conduit at such a rate that it will be maintained in the conduit at the required temperature for a time long enough to impart to it a substantial increase in strength but not so long as to render the contained gluten non-retainable in a washing test as described.

1,636,570. RADIO RECEIVING APPARATUS. FREDERICK A. KOLSTER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed June 24, 1926. Serial No. 118,247. 3 Claims. (Cl. 250—14.)

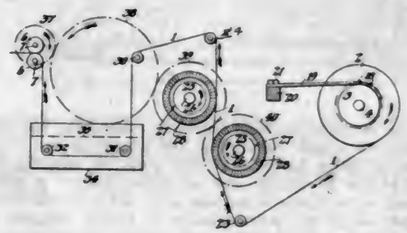
1. In a radio receiving apparatus including a radio cabinet, the combination of a tubular sleeve member supported with respect to said cabinet, a slidable tubular member carried by said sleeve member and a loop antenna pivotally mounted on one end of said slidable tubular member whereby connections between said radio cabinet and said loop antenna may be established by conductors passing through said tubular member.

1,636,571. GATE. LEO LIEPOLD, Heron Lake, Minn. Filed Apr. 3, 1926. Serial No. 99,517. 2 Claims. (Cl. 39—96.)



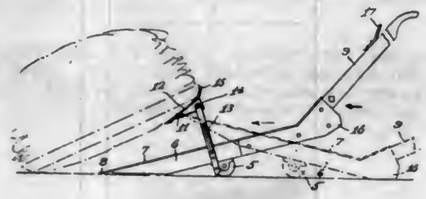
1. A device of the kind described, comprising two fixed gate posts, a gate having one end hinged to one of the posts by hinges having a vertical play, the swinging end of the gate having an arm projecting beyond it and a ground wheel rotatable on said arm, and a spring at the hinged end of the gate arranged to further support the gate that the wheel will not be unduly worked into the ground, and means on the wheel-supported end of the gate and on the other post for latching the gate.

1,636,572. AIR LOCK. JOHN H. MURPHY and ELSTON A. LOTZ, St. Louis, Mo. Filed Aug. 28, 1925. Serial No. 52,972. 4 Claims. (Cl. 61—83.)



1. An air lock comprising a cylindrical member, a top having a circular opening eccentrically located therein secured to one end of said cylindrical member, a one piece air tight closure for said circular opening, said closure and the top each provided with a semicircular passage through which a cable is adapted to pass, said open-

ings being located in the center of the top, a second member secured to the opposite end of said cylindrical member, a deck provided with a central opening located in said second member, a one piece air tight closure for said last mentioned opening, a shaft projecting through one wall of said second member, hinges rigidly secured to said last mentioned closure and said shaft, a lever secured to the projecting end of said shaft, a rod having

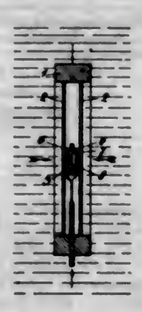


a bifurcated end secured to said lever and projecting upwardly therefrom so that said closure can be opened and closed from the top of said air lock, a guide-loop carried by the top of said cylindrical member, a hardened wear plate surrounding the semi-circular opening in the top, and a hardened wear plate surrounding the semi-circular opening in the edge of the first mentioned closure.

1,636,573. METHOD OF RENEWING INK RIBBON. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed June 23, 1925. Serial No. 39,159. 7 Claims. (Cl. 8—8.)

1. The method of renewing used ink ribbon, formed of textile fabric impregnated with dried ink; which consists in progressing such inked ribbon, in one direction, while dry, between rollers provided with card clothing, including stiff wire papillæ; while beating and brushing said fabric in the opposite direction, by rotating said rollers, and thus loosening the dried ink in the fabric and reforming a nap upon each side of said fabric; progressing said fabric through an ink solvent, including carbon tetrachloride; thus dissolving such loosened ink from the fabric; and then expressing such solvent and solute from said fabric, by wringing the latter between opposed rotary rollers.

1,636,574. HAND-TRUCK ATTACHMENT. HOWARD M. PERRY, Clarksville, Tenn. Filed Sept. 20, 1926. Serial No. 136,531. 8 Claims. (Cl. 214—1.)

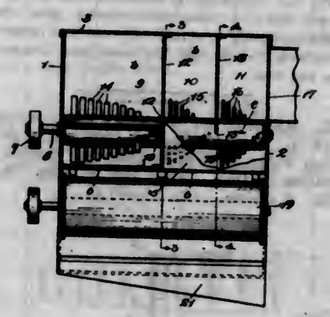


1. In combination with a tiltable truck, a prop embodying a supporting-plate, means for detachably engaging the plate with the forward end of the truck-body, and legs connected to said plate adapted to automatically assume propping position when the truck is tilted to tilt the load.

1,636,575. SKELETON FORM FOR HEADPIECES OF FURS. JACOB PEITZER, Brooklyn, N. Y. Filed Nov. 26, 1926. Serial No. 150,833. 4 Claims. (Cl. 2—65.)

1. In a device of the class described, a base, a projection of said base on which to form the snout of the animal, a resilient cup having a flattened portion at the front which forms the head of the animal, and means for attaching the said cup to the base of the structure, the said means consisting of a cross rib attached to said base adjacent the inside of the front wall of said cup, a staple attached to said base and having upright members provided with hooks embedded in said cup, the front of said cup being supported between the said cross member and the uprights of said staples.

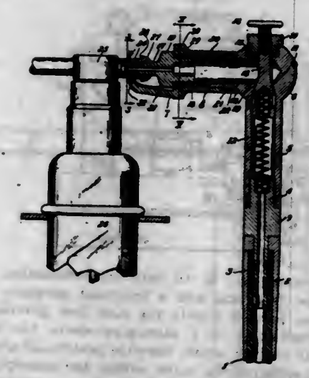
1,636,576. SOUND-DIRECTION FINDER. WILHELM RUDOLPH, Kiel, and ALARD DU BOIS-REYMOND, Plon, near Kiel, Germany, assignors to the Firm Signal Gesellschaft m. b. H., Kiel, Germany. Filed Feb. 4, 1921. Serial No. 442,584, and in Germany May 29, 1915. 18 Claims. (Cl. 180—01.5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



7. A sound signal receiving apparatus having a portion possessed of such a small amount of inertia that this portion is responsive to the movement of the particles of the sound propagating medium, and is so arranged in the medium that the pressure fluctuations acting on it are balanced.

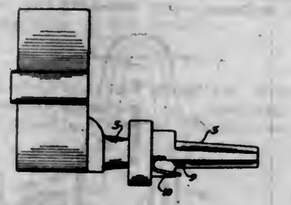
1,636,577. ROTARY CUTTING TOOL. CARL G. SCHULLER, Brecksville, Ohio. Filed June 28, 1926. Serial No. 118,940. 8 Claims. (Cl. 32—10.)

1. A rotary tool for the purpose specified comprising a shaft and a head having a central body portion and blades extending outwardly therefrom, each being rounded at its end and contacting with a perimetrical line at substantially one point only, each of the blades being twisted along a non-radial line to provide a concavity extending substantially entirely across the blade in such manner as to guide and deflect chips inwardly from such perimetrical line and backwardly in the general direction of the shaft.



1,636,578. THRASHING MACHINE. FRANK G. TERRY, Salinas, Calif. Filed Oct. 1, 1925. Serial No. 59,966. 2 Claims. (Cl. 130—27.)

1. In a thrashing machine, a casing having a top, bottom and upwardly diverging side-walls, and having an inlet at one end and an outlet at the opposite end, a rotatable drum extending longitudinally in the lower part of the casing and having spirally arranged beaters adapted to carry straw from the inlet to the outlet, the diverging side walls extending considerably above the drum to provide a relatively large space into which the straw may be tossed by the beaters and in which the grain may separate from the straw, and a transverse partition in the casing extending below the drum and having an opening above the drum.

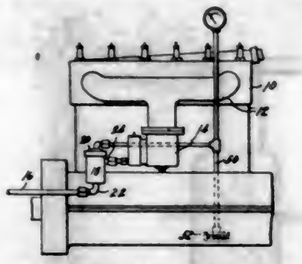


1,636,579. HOSE COUPLING. HENRY E. WEBER, Canton, Ohio. Filed Feb. 10, 1921. Serial No. 443,946. 6 Claims. (Cl. 285—180.)

1. A coupling including two separable members, a head on one member having an axial socket therein and a concentric periphery, a shank on the other member for inserting into the socket, and an eccentrically mounted

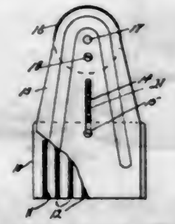
sleeve on said other member having an arm for clamping the periphery of the tubular head by a rotation of the sleeve.

1,636,580. FUSE-PLUG HOLDER. WILLIAM W. WEIDA, Massillon, Ohio. Filed Oct. 12, 1925. Serial No. 62,004. 2 Claims. (Cl. 200—133.)



1. A fuse box for outside use upon a pole, a fuse plug arranged to be normally received within the box and means upon the exterior of the fuse box for temporarily supporting the fuse plug to permit a workman upon the pole to make repairs thereon.

1,636,581. MOIST-HOT-AIR BATH. PERCY ROBERTS WILDE, Bath, England. Filed Mar. 5, 1926, Serial No. 92,533, and in Great Britain Mar. 17, 1925. Renewed Apr. 25, 1927. 2 Claims. (Cl. 4—165.)

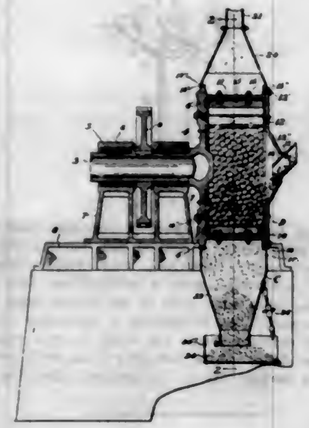


1. In a portable vapor bath, a frame channel-shaped in cross-section and having converging sides and being open at its bottom and at its larger end and adapted to be stood over the limb of a patient, inclined receptacles for steam secured at the sides of the frame and provided with perforations in their inner sides, and means for supplying steam to and draining off water from the said receptacles connected to their lower ends, said lower ends being arranged at the smaller and closed end of the frame.

1,636,582. FUEL-FEED-CONTROL MECHANISM. LEON A. WITTER, Lakewood, Ohio. Filed Aug. 19, 1926. Serial No. 130,187. 4 Claims. (Cl. 123—196.)

1. The combination in an internal combustion engine having a fuel feed line and a lubricant pressure line, a fuel container located within the feed line provided with an inlet terminating in a standpipe above the floor of the container and an outlet likewise positioned above the floor of the container, a valve within the standpipe held yieldingly upwardly to close the fuel passageway therethrough, said valve having a stem extending above the standpipe, a diaphragm positioned within the container above the standpipe open on one side to lubricant pressure and provided with a part engaging the stem of said valve to depress the same to open the valve.

1,636,583. VEGETABLE SLICER. NIELS K. AHL, Philadelphia, Pa. Filed Sept. 1, 1925. Serial No. 53,813. 3 Claims. (Cl. 146—210.)



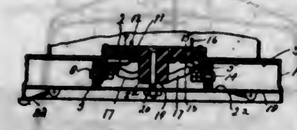
1. A slicer comprising two side plates, the lower edges of which terminate in knives; cross knives secured to said plates in such manner as to space the latter apart; a block fitted to slide between said plates, said block having slots therein in which the cross knives are adapted to move vertically, said slots forming bars for stripping both sides of all the cross knives; screws passing through slots formed in the plates; said screws being secured in the block and serving to limit the sliding movements of the plates; a handle secured between the upper ends of said plates; and a coil spring, the lower end of which is seated in a recess formed in the block, the upper end thereof being seated in the recess formed in the handle.

1,636,584. METHOD OF MAKING PAPER CONTAINERS. JAMES E. ANNEN, Milwaukee, Wis., assignor to The National Paper Can Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 21, 1923. Serial No. 664,022. 5 Claims. (Cl. 93—36.)

1. The method of forming a closure retaining seat on a paper container, which comprises rolling the edge of the container over to form a loose roll and then pressing on the upwardly and inwardly extending portion of the roll to reverse the curvature of such portion and form it into an upstanding portion and an inwardly projecting portion adapted to receive a closure.

1,636,585. BALL MILL. WILLIAM M. BARKER, Canton, Ohio. Filed Oct. 13, 1924. Serial No. 743,219. 16 Claims. (Cl. 83—9.)

1. A ball mill including a rotatable drum having opposite drum heads, a sole and relatively short supporting trunnion on one drum head, and a sole bearing bracket for the trunnion, a material inlet orifice in the other drum head, a removable blower case about the drum, communicating openings between the drum and the case, a material outlet for the case, and a separate air outlet for the case.

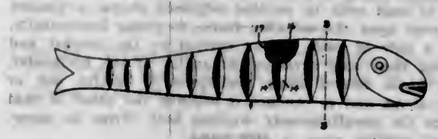


1,636,586. METHOD OF MAKING INSULATOR CAPS. HERMAN L. BARNES, Canton, Ohio, assignor to The American Forge & Machine Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 2, 1926. Serial No. 152,232. 8 Claims. (Cl. 78—81.)

1. The method of making an insulator cap or the like, which includes forming by forging means a cup having a tubular wall, and inwardly pressing the tubular wall to form a dome socket.

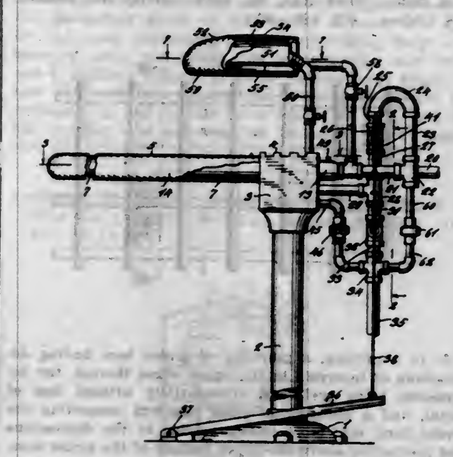
1,636,587. ELECTRIC-CORD REEL. FREDERICK BUDDENDORF, Philadelphia, Pa. Filed July 10, 1925. Serial No. 42,692. 3 Claims. (Cl. 173—367.)

1. In an electric cord reel of the character described, a hollow base, an insulating block secured to said base, said block having a hub projecting into the base, a reel mounted within the base upon and adapted to revolve concentric with the hub, two insulating sections carried by the reel, contact strips secured to the insulating sections, contact rings secured upon the insulating block, each of said strips contacting with one of said rings, a



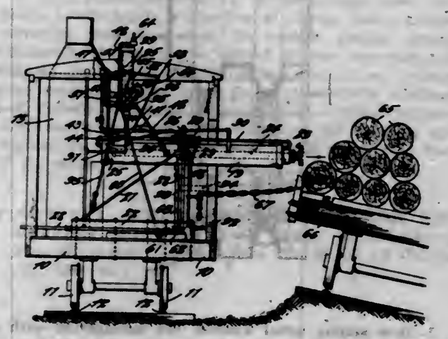
parallel wire cord having each of the wires thereof connected with one of the contact strips, said cord being so positioned as to be wound upon or unwound from the reel when the latter is revolved, and means for manually revolving the reel.

1,636,588. STEERING-GEAR STABILIZER. JOHN F. CAVANAGH, Providence, R. I., assignor to Apco Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 8, 1926. Serial No. 134,250. 5 Claims. (Cl. 280—89.)



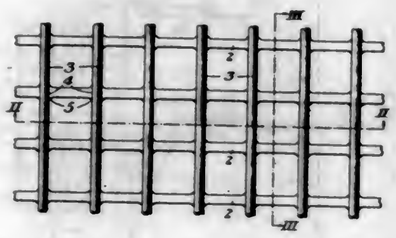
1. In a device of the type specified the combination of an arm adapted for insertion through the forked end of the tie-rod of an automobile steering-gear to bear against the end of the steering-arm connected thereto, a second arm pivoted to the first arm and adapted to bear against the front axle of the automobile, and a spring connected at opposite ends to the arms.

1,636,589. METHOD OF MAKING JOINTED TOYS. SALVATORE COLLEDANCHISE, Boston, Mass. Filed Oct. 12, 1926. Serial No. 141,093. 1 Claim. (Cl. 18—59.)



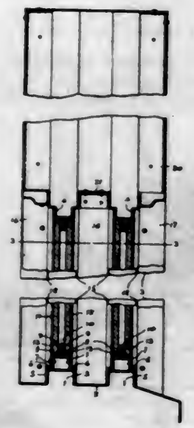
That improvement in the method of making a jointed toy, which consists in forming in separable molds, from a hard-drying plastic mixture composed of comminuted material and an adhesive, two rows of body sections, each section being independent of the others, the molds being formed to impart diverging end faces and rounded external faces to the sections, interposing between the molds an elongated strip of open mesh fabric, pressing the molds against opposite sides of the strip while the mixture is plastic, thereby causing the inner faces of the sections to enter and fill the spaces bounded by the meshes of the fabric, and meet within said spaces, and allowing the sections to solidify and become rigid by drying, thereby causing them to adhere to and become integral with each other within the meshes of the fabric strip, the sections having rigid external surfaces adapted to support surface ornamentation.

1,636,590. DRY-STEAM SLEEVE-FINISHING BOARD. IRWIN W. COX, Denver, Colo. Filed Nov. 26, 1926. Serial No. 150,846. 16 Claims. (Cl. 68—9.)



1. A steam sleeve finishing board comprising an arm consisting of an elongated member having three parallel chambers, one of which is located intermediate the other two, the two outside chambers being connected at one end, the top wall of the central chamber being perforated and connected to the walls of the outside chambers so as to form with the latter a convex surface and means for conducting steam to said chambers.

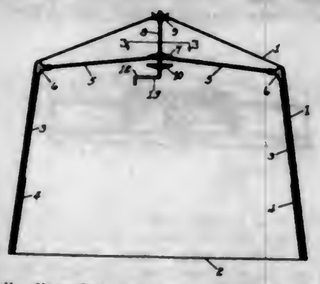
1,636,591. LOG-UNLOADING MACHINE. MILLARD FILLMORE CRAWFORD, Natalbany, La. Filed Sept. 7, 1926. Serial No. 134,041. 3 Claims. (Cl. 214—44.)



1. In a log unloading machine, a ram cylinder, means for pivotally supporting the ram cylinder intermediate its ends but at a point toward its rear end whereby to normally urge the rear end of the ram cylinder to extend upwardly, a tilting cylinder mounted above the rear end of the ram cylinder and having a piston rod projecting downwardly toward the ram cylinder, a yoke member pivotally mounted between the cylinders and having one end pivotally connected to said piston rod for urging the end of the yoke against the upper side of the ram cylinder, a spring wear plate carried upon the upper side of the ram cylinder beneath the yoke for receiving impact thereof and absorbing shock incident to the pounding of the piston rod, and means for controlling admission of fluid under pressure to the tilting cylinder.

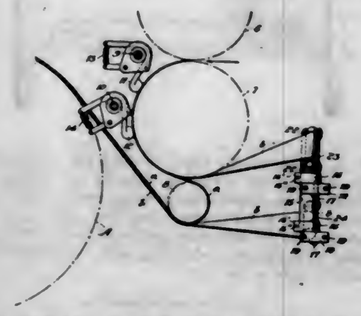
1,636,592. GRATING. CHARLES B. CUSHWA, Youngstown, Ohio, assignor to The Commercial Shearing and Stamping Company, Youngstown, Ohio, a Corporation of Ohio. Filed Apr. 26, 1926. Serial No. 104,657. 8 Claims. (Cl. 189—82.)

1. In a grating, a plurality of girder bars having depressions at intervals in the upper edges thereof, the depressions being preformed substantially without loss of metal, and a plurality of cross members connecting the girder bars, said cross members lying in the depressions and protruding above the upper surface of the girder bars.



1,636,593. SLIDING METAL WINDOW. JOHN EDWIN DENNIS, London, Ontario, Canada. Filed Dec. 6, 1926. Serial No. 152,991. 7 Claims. (Cl. 189—72.)

1. In a sliding metal window, the combination with a frame having an inwardly projecting rib, of a sash formed of a pair of metal strips having inner parallel flanges secured together and outer flanges spaced apart in parallel offset relation to said inner parallel flanges and forming shoulders therebetween, said outer flanges engaging the sides of said frame ribs in sliding contact, and a glass beded in the shoulder between the offset flanges.



1,636,594. TENT. GEORGE I. DICKEY, Toledo, Ohio. Filed Feb. 4, 1924. Serial No. 690,380. 7 Claims. (Cl. 135—4.)

6. In a tent, a distending means having parts extending inwardly from the corners of the tent and hingedly jointed together in the central part of the tent, a threaded rotatable member located intermediate the top and the joint for forcing the joint downwards and the top upwards and distending the corners, a member connected to the threaded rotatable member for supporting the parts

temporarily distended, a means connected to the threaded means for temporarily supporting the distending means in the top of the tent.

1,636,595. APPARATUS FOR AND PROCESS OF MAKING TIRES. HAROLD F. DUMBLETON, Cleveland, Ohio, assignor to The Republic Rubber Corporation, Youngstown, Ohio, a Corporation of Ohio. Filed Oct. 20, 1920. Serial No. 418,275. 10 Claims. (Cl. 154—9.)

1. In a machine for forming solid resilient tires, the combination with calendering rolls and means for rotatably supporting a tire band arranged adjacent thereto and having its axis substantially parallel to the axes of said rolls, of means for cutting calendered stock from one of said rolls in parallel adjacent strips, a bracket mounted upon the calender frame to swing horizontally, and a pair of guide rollers carried by the bracket and having their axes arranged at angles to the horizontal, said guide rollers being positioned to receive one of said strips and to conduct it beneath the other of said strips for simultaneously winding both strips in superposed relation upon a tire band.

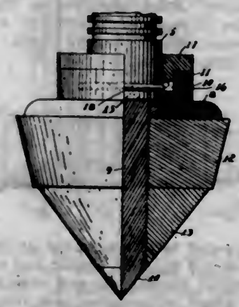
1,636,596. PROCESS OF MAKING SULPHUR PHENOL RESIN. CARLETON ELLIS, Montclair, N. J. Filed Dec. 30, 1922. Serial No. 610,042. 8 Claims. (Cl. 260—20.)

1. A process of making a resinous product which comprises heating a mixture containing substantially more than three atoms of sulphur, with one molecule of a phenolic body and an alkaline catalyst, to a temperature of at least 165° C.

1,636,597. FUEL BURNER. CARL FISCHER and ALEXANDER SIMONET, West Homestead, Pa. Filed Jan. 17, 1925, Serial No. 3,113. Renewed Mar. 24, 1927. 5 Claims. (Cl. 158—11.)

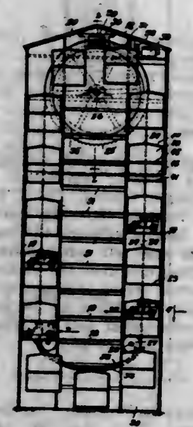
5. A fuel burner comprising a casing having a nozzle and an enlarged portion at the inner end thereof, said enlarged portion being formed with an inner wall having

tangential openings through the same, spaced apart collars formed on the inner and outer walls at the inner end of said casing, a member having a cylindrical portion extending through said collars into the nozzle with an enlarged portion beyond the inner end of the casing to provide a receiving chamber open at its outer end, and a member comprising a closure for said opening and a tube



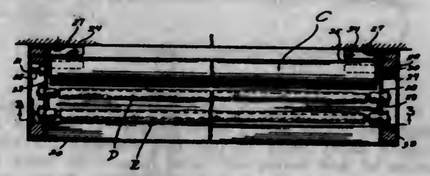
extending through the receiving chamber and cylinder, angularly disposed vanes carried by the closure and located within the receiving chamber, a hollow conical cap at the outer end of the tube with tangential openings through the sides thereof, and angularly disposed vanes carried by the conical cap and disposed at the outer end of the aforementioned cylinder.

1,636,598. TOOTHPICK HOLDER. WALTER F. GAGE, Smith, Nev. Filed Oct. 4, 1926. Serial No. 139,460. 2 Claims. (Cl. 206—21.)



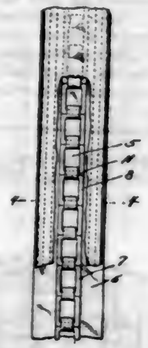
1. A tooth pick holder of the character described comprising a base having a standard, a bracket adjustably connected with said standard, a tooth pick container having a dispensing opening for emitting a portion of a tooth pick singly in successive order, and means on the base in position relative to the opening to limit the exposure of a tooth pick when projected from the container.

1,636,599. HYDRANT. PAUL P. GARBARINO, San Jose, Calif. Filed Jan. 16, 1926. Serial No. 81,712. 2 Claims. (Cl. 251—25.)



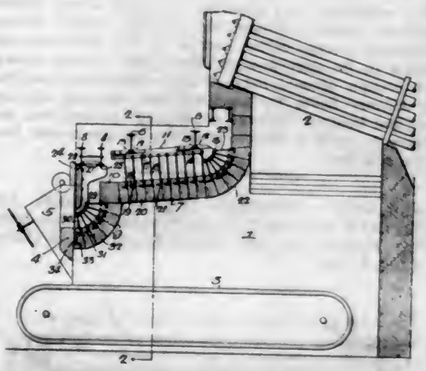
1. A valve comprising a carrier element provided with an externally threaded pin mounted thereon in axial alignment therewith and having an upstanding annular flange formed thereon on the side opposite to said pin, a resilient ring mounted on said pin, a nut mounted on said pin to engage said ring, a stem having a laterally extending flange formed on one end and insertible within the upstanding flange on said carrier element, a closure for the space surrounded by said upstanding flange and mounted upon said flange and encompassing said stem, and a resilient element inserted between said flange on said stem and said closure, the outer peripheries of the resilient ring and the nut being conical in form, and the pin carrying said nut and ring having a conical shaped end.

1,636,600. GARAGE. ERNST GEIGER, Irvington, N. J. Filed Feb. 18, 1926. Serial No. 89,231. 2 Claims. (Cl. 214—16.1.)



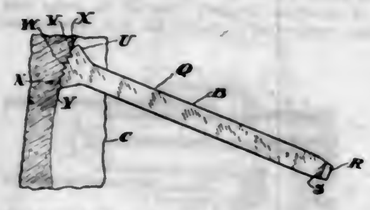
1. In a garage structure, a central storage space vertically subdivided in a plurality of storage floors, endless conveyors running around the central storage spaces, automobile storage cabins carried by the conveyors and adapted to be aligned with either side of any storage floor, certain of said lower floors constituting receiving and delivery floors for incoming and outgoing automobiles, and inclined runways connecting the receiving and delivery floors to a common driveway at the ground floor of the structure.

1,636,601. COMBINED CURTAIN, SHADE, AND DRAPERY SUPPORT. ALEX GIVENS, St. Petersburg, Fla. Filed Dec. 9, 1925. Serial No. 74,357. 5 Claims. (Cl. 156—23.)



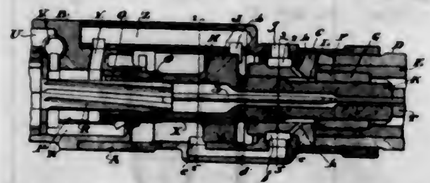
2. In a support for curtain fixtures, a frame including hollow terminally disposed heads having aligned sockets provided in the confronting faces thereof for yieldably receiving the ends of said fixtures, and guides extending longitudinally of the under side of the frame and secured at their ends to said heads below the sockets for said fixtures.

1,636,602. BELT. JAMES T. GRIFFIN, Winder, Ga., assignor of forty per cent to Fletcher C. Graddick and thirty-five per cent to Henry C. Hargrove, Winder, Ga. Filed June 11, 1925. Serial No. 36,507. 4 Claims. (Cl. 74—65.)



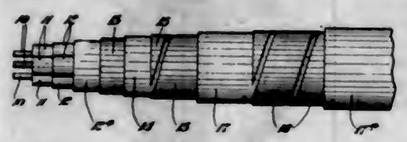
1. A belt of the class specified, comprising a base element, a backing element extending fully thereover throughout the length thereof, and a single interposed endless link belt retained centrally and loosely and extending the full length between the base and backing elements, the said link belt being prevented from moving laterally in either direction, the backing element being formed with a central bulged enclosing means for the link belt throughout the full length of the complete belt and permitting the endless link belt to move longitudinally within the enclosure thus formed.

1,636,603. FURNACE ARCH. LYNFORD HAMILTON, Philadelphia, Pa. Filed Dec. 31, 1923. Serial No. 683,810. 2 Claims. (Cl. 110—99.)



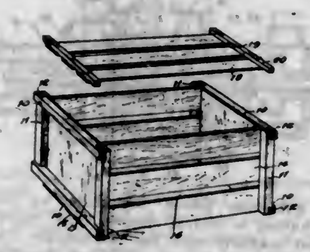
1. The combination in a furnace, of two overhead transverse beams having lower flanges; a series of detachable bars; hooks on said bars engaging the lower flanges of said beams, one hook of each set being detachable, each bar having a longitudinal flange, said flange having a beveled upper surface; a series of bricks forming the body of the arch, said bricks being spaced a considerable distance from the bars so that they can be removed without removing the bars, each brick having a recess and a hole in one side; and long hooks having undercut heads engaging the flanges of the bars and having arms extending into the holes in the bricks, the body of the hooks being located in the recesses in the bricks.

1,636,604. CHANNELER STEEL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 17, 1926. Serial No. 109,494. 5 Claims. (Cl. 262—33.)



1. A channeler steel comprising a body portion having a head at one end and a convexly arcuate cutting bit at the other end, teeth extending across the face of the cutting bit, and means adjacent the outer teeth to prevent the teeth from engaging a rock face when the steel is being oscillated from one position to another.

1,636,605. ROCK DRILL. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 28, 1926. Serial No. 138,247. 1 Claim. (Cl. 121—13.)

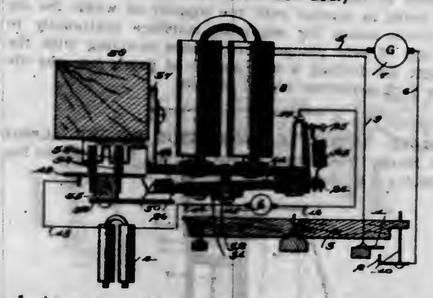


In a fluid actuated rock drill, the combination of a cylinder having an exhaust port, a hammer piston in the cylinder controlling the exhaust port, a fluted extension on the hammer piston, a front cylinder washer forming a closure for the front end of the cylinder and having a bore to slidably receive the extension, said front cylinder washer having an external annular groove, a passage in the cylinder to convey exhaust fluid from the exhaust port to the annular groove for cooling the front end of the cylinder, an exhaust passage in the cylinder for conveying such exhaust fluid from the annular groove to the atmosphere, and passages leading from the annular groove to the bore to convey pressure fluid and entrained lubricant to the fluted extension or lubricating movable elements forwardly of the cylinder.

1,636,606. ARMORED CABLE. ALEXANDER O. HOEFTMANN, Worcester, Mass., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Jan. 31, 1924. Serial No. 689,695. 1 Claim. (Cl. 173—266.)

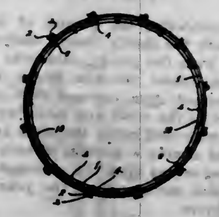
A flexible armored cable comprising at least one conductor, a lead sheath mounted around and enclosing said conductor, a fibrous covering for said sheath, a non-magnetic metallic armor surrounding said fibrous covering, said armor comprising inner and outer helically wound zinc strips, and a continuous layer of jute between said inner and outer zinc strips adapted to relieve and cushion a blow or compression on the inner strip when such blow or compression is exerted on the outer strip, said outer zinc strip being staggered with respect to said inner zinc strip so as to overlap the helical joint formed by the abutting edges of said inner strip, and a waterproof covering enclosing said armor.

1,636,607. CRATE. JOHN SEYMOUR HORTON, Milford, Del. Filed Mar. 30, 1923. Serial No. 628,879. 1 Claim. (Cl. 217—3.6.)



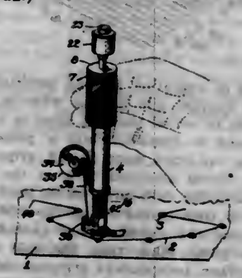
A crate comprising a pair of end frames, longitudinal slats between said end frames providing the side and bottom walls of the crate, the bottom slats extending the entire length of the crate, a top for said crate comprising longitudinal slats extending the entire length of the crate, said top slats connected in rigid relation by transverse cleats secured to the upper face of the slats at their ends, transverse cleats secured to the bottom face of the bottom wall adjacent each end, said bottom cleats being set back from their respective ends a distance equal to the width of the top transverse cleats, the end frames being substantially equal in thickness to the combined width of the said top and bottom cleats at their respective ends, whereby the crates may be stacked in superposed spaced relation and the weight of the superposed crates supported entirely within the plane of the end frames.

1,636,608. SALES RACK. FRANK C. KENYON, Jr., Philadelphia, and FRANK R. GOODELL, Strafford, Pa., assignors to Congoleum-Nairn, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 1, 1924. Serial No. 740,981. 3 Claims. (Cl. 211—14.)



1. The combination in a sales rack, of a frame having a vertical back section and an open front, said frame having a base with an inclined bottom plate, the bottom plate being inclined towards the rear, the outer edges of rolls vertically located in the rack resting upon the inclined bottom plate, so that the tendency of the rolls will be to rest against the back of the structure.

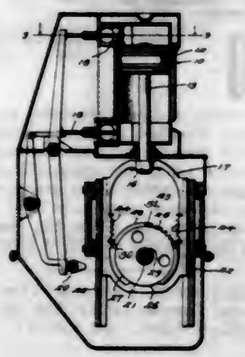
1,636,609. ELECTROMAGNETIC RELAY. AUGUST A. KLANN, Waynesboro, Va. Filed July 24, 1925. Serial No. 45,898. 7 Claims. (Cl. 200—104.)



1. An organ relay having a plurality of contacts, a movable armature, a contactor which is slotted along one edge to provide a plurality of fingers existing integrally with said contactor which are engageable with the contacts, a clamp plate applicable to the armature and to the contactor along the edge opposite to said fingers, and means including screws by which the clamp plate is tightened upon the contactor to hold it in place.

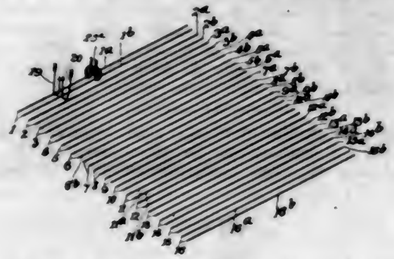
1,636,610. WELL CRIB. WILLIAM VANCE MCCLURE, Elva, Manitoba, Canada. Filed June 24, 1925. Serial No. 39,326. 1 Claim. (Cl. 166—4.)

A circular well crib comprising a plurality of similar, interchangeable, metallic staves concentrically arranged, each stave having one of the vertical edges thereof provided with an outstanding laterally disposed tongue and the other of the vertical edges thereof provided with a vertical extending channel complementary to the tongue and adapted to receive the tongue of the adjoining stave and lengthwise extending keeper plates permanently secured to the inner sides of the channel carrying edges of the staves and overlying the inner faces of the adjacent tongue carrying edges of the staves.



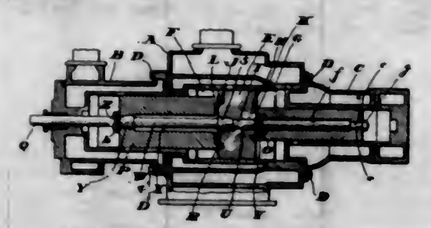
1,636,611. PASTER CUTTING AND APPLYING MACHINE. FREDERICK T. MCGLYNN, Jamaica, N. Y. Filed Sept. 15, 1926. Serial No. 135,618. 15 Claims. (Cl. 216—22.)

1. A paster cutting and applying apparatus comprising a body, a die connected with the body at the lower end, a reciprocating plunger co-acting with said die, said



plunger acting as a co-acting die with the parts arranged to cut a small section from a piece of paper mounted in the die and force the same through the die to a point in contact with the support on which the die is placed, means for supplying moisture continually to the end of said plunger, and means co-acting with the plunger for feeding a new supply of paper into the die upon each actuation of the plunger.

1,636,612. INTERNAL-COMBUSTION ENGINE. LEROY H. NOAH, Palco, Kans. Filed Apr. 24, 1926. Serial No. 104,414. 5 Claims. (Cl. 74—14.)

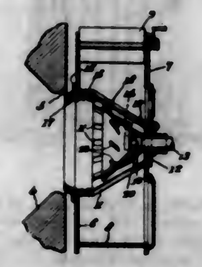


1. Means for connecting the pistons of internal combustion engines with the shafts thereof comprising a yoke rigidly connected with the piston, said yoke being in the form of an open frame through which the shaft is directed, racks formed upon opposed sides of the frame and a disk secured to the shaft and including a segmental gear for coaction with said racks, the racks and gear being out of engagement during a portion of each cycle of the piston and coacting means upon the yoke and disk for preventing longitudinal movement of the yoke during said portion of each cycle.

1,636,613. PRODUCTION OF KNOTTED-PILE FABRICS. FRANCIS HERBERT OLDROYD, Radcliffe, England. Filed May 5, 1927, Serial No. 189,064, and in Great Britain Oct. 20, 1925. 4 Claims. (Cl. 139—4.)

1. A method of operation for the mechanical knotting of the pile of knotted pile fabrics, wherein, of the pair of warp threads to which the tuft piece is to be knotted, one warp thread is displaced into a plane other than that containing the other warp thread, gripping means is inserted in a lateral direction between the said threads prior to gripping the tuft piece to be inserted, the first named thread is then moved out of the said plane into a second plane and the second named thread is then displaced into a plane other than the said second plane, whereupon another, independent gripping means is passed laterally between the threads prior to gripping the tuft piece to be inserted and finally the tuft piece is gripped separately at two different places by the two gripping means and the gripping means are both withdrawn by return movement from between the said pair of yarn threads and then caused to release the tuft piece.

1,636,614. PISTON ASSEMBLY. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 4, 1926. Serial No. 127,055. 3 Claims. (Cl. 74—108.)



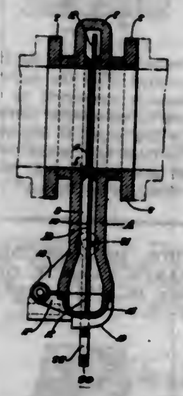
1. An adjustable piston, comprising an intermediate member having a central tapered bore, outer members interlocked coaxially with the intermediate member and having tapered bores in one end, a rod extending through the members, said rod being flexible to permit the outer members to incline from the longitudinal axis of the intermediate member, tapered portions on the rod to cooperate with the tapered bores for limiting endwise movement of the members in one direction with respect to each other, and nuts on the rod for preventing relative longitudinal movement between the members in the opposite direction.

1,636,615. SURGICAL NEEDLE AND METHOD OF MAKING IT. EVERETT A. QUINT, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Mar. 18, 1926. Serial No. 95,637. 4 Claims. (Cl. 128—339.)

1. A method for quantity production of surgical needles characterized by their uniformity and substantial freedom from fatigue, which consists in subjecting bar stock to a metal displacing operation regulated as to depth so as to leave bridging bar stock free from mechanical strains and stresses while forming a groove which merges at each end, without abruptness, in full section bar stock, dividing the stock transversely of the groove area, tempering and pointing the divided stock, and annealing the burs formed by the displaced metal.

1,636,616. BURNER CONE. CHARLES SCHEUERMANN, Mobile, Ala. Filed Sept. 25, 1926. Serial No. 137,708. 3 Claims. (Cl. 158—1.5.)

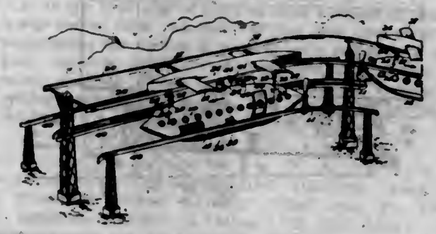
1. A burner construction comprising an outer slotted cone, a burner therewithin, and an inner slotted cone within the outer cone and about the burner, said inner



cone having end openings therein for receiving air through the slots of the outer cone, and the inner cone flaring toward the outer cone to restrict the passage between the cones.

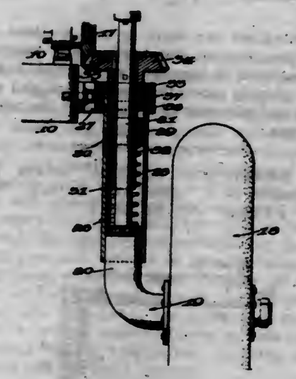
1,636,617. ANCHOR. CHARLES BENJIMAN SCOTT, Hanover, N. H. Filed Oct. 5, 1926. Serial No. 139,695. 3 Claims. (Cl. 189—02.)

1. An anchor of the class described comprising a rod, a plate freely slidable thereon, arms pivotally engaged with the peripheral portion of the plate, each of said arms having a tail extension extending inwardly of the plate, and a second plate carried by the rod below the first named plate and tail extensions for contact with such extensions to swing the arms outwardly into working position.



1,636,618. VALVE. PAUL D. WRIGHT, Wilkinsburg, Pa. Filed Nov. 20, 1920, Serial No. 425,529. Renewed Nov. 24, 1925. 3 Claims. (Cl. 251—51.)

1. A valve comprising a hollow valve body having a guide slot formed therein, a closed hollow integral projection formed on its one side and communicating with said slot, a second hollow integral projection on the opposite side of said valve body and provided with an open outer end, said projection being of considerably greater length than said first mentioned projection, a cover hinged to said second projection and adapted to close the open end thereof, means for locking said cover in place, and a slidable gate adapted to fit within said valve body and have its ends enclosed in said projections, said gate being substantially rectangular in shape and having a solid cut-off portion and an open passage portion, and said projections being adapted to completely house the portions of said gate projecting beyond the valve body.

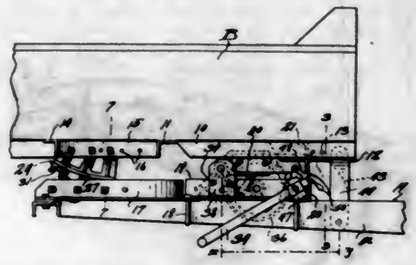


1,636,619. AERIAL RAILWAY. FLOYD PAUL ARCHER, Wilkes-Barre, Pa. Filed Feb. 11, 1926. Serial No. 87,666. 5 Claims. (Cl. 104—23.)

2. An aerial vehicle of the type described, having supporting wheels in line thereabove including a central wheel and end wheels, a support connecting the vehicle with the central wheel and with respect to which the

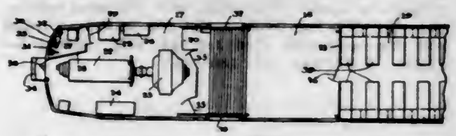
vehicle is rotatable, and detachable connections between the vehicle and the end wheels permitting endwise reversal of the vehicle with respect to the central wheel.

1,636,620. VEHICLE LEVELING DEVICE. HIRAM NEWTON BERRY, Greenville, Miss., assignor of one-third to Hugh A. Gamble, Greenville, Miss. Original application filed May 23, 1925, Serial No. 32,986. Divided and this application filed Jan. 14, 1926. Serial No. 81,340. 3 Claims. (Cl. 180—41.)



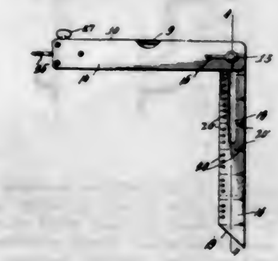
1. In an apparatus of the character described, a frame, wheel supporting uprights having vertically adjustable connection with the frame at their upper portions and having lower angular extensions, wheels rotatable on said extensions, power actuated rotatable members on each upright with respect to which the latter is rotatable, and a non-rotatable member around each upright and shiftable lengthwise thereof, having threaded connection with the said power actuated rotatable member, and a spring compressed between a portion of each upright and of said non-rotatable member thereof.

1,636,621. POWER-ELEVATED DUMPING TRUCK. PERRY A. BRICK, Galion, Ohio, assignor to The National Grave Vault Co., Galion, Ohio, a Corporation of Ohio. Filed Mar. 4, 1926. Serial No. 92,870. 2 Claims. (Cl. 298—10.)



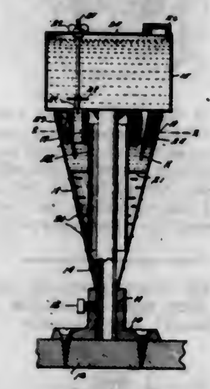
1. A dumping truck including a chassis and a body, oppositely disposed rockers mounted on the body, each having an arcuate series of recesses in its under face,

and the chassis having a series of members with which said recesses coact and mesh, one of said recesses being



approximately elliptical through which the corresponding member passes to thereby limit the tilting movement of the body and rockers upon the chassis.

1,636,622. ARTICULATED CAR. CHARLES E. BROOKS, Montreal, Quebec, Canada, assignor to Canadian National Railways, Montreal, Canada. Filed Nov. 6, 1926. Serial No. 146,710. 7 Claims. (Cl. 105—4.)



1. An articulated car built in two sections mounted on three bogies, one of said bogies being positioned between and adapted to support the adjacent ends of the sections, an electric generating unit at one end of one of the sections and car controlling means at the remote ends of the sections.

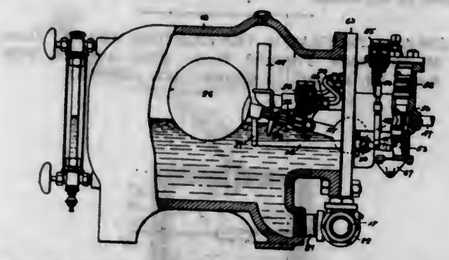
1,636,623. BEVEL AND SQUARE. FRANK P. CASH, Winston-Salem, N. C. Filed Aug. 4, 1921. Serial No. 489,732. 1 Claim. (Cl. 33—102.)

In an instrument of the class described, a body of general rectangular form having two parallel sides, the remaining sides of said body being parallel each to each at the ends of the body and inclined toward each other from one of the parallel end portions to the other whereby the body has ends forming rectangular parallelepipeds and a central portion of rectangular cross section, the narrower end of the rectangular portion being of less width than the adjacent parallelepipedal portion to provide a pair of shoulders adjacent the last mentioned parallelepipedal portion, cover plates, each cover plate being secured at one end to said body and closely engaging the last mentioned parallel portion, said cover plates being spaced from the rectangular portion and the remaining end of the body, a pivot bolt extending through the other ends of said cover plates and the last mentioned end of the body, clamp nuts threaded on the ends of said bolts to draw the cover plates toward said body, slotted blades normally positioned between the cover plates and body and having the bolt extending through the slots thereof, said blades being movable out of the spaces between the cover plates and body to assume angular relations with respect to the body, said blades being normally flat but capable of the deflection to enter said spaces, and stop plates carried by the body adjacent said bolt.

1,636,624. HOG OILER. ELMER R. CLEMENTS, Riverton, Nebr. Filed June 22, 1926. Serial No. 117,816. 8 Claims. (Cl. 119—157.)

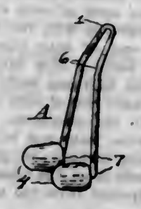
1. A hog oiler comprising a base having an upstanding support, a tank mounted upon the upper end of the support, a casing disposed concentric to the support and oscillatably mounted in connection therewith, the casing having an oil receiving space in its upper end and receiving oil from the tank, and means for causing the discharge of oil from said space onto the exterior of the casing when the casing is oscillated.

1,636,625. METHOD OF STARTING AND TRANSPLANTING PLANTS. JAMES W. CONRAD, Rockbridge, Ohio. Filed May 11, 1926. Serial No. 108,317. 1 Claim. (Cl. 47—37.)



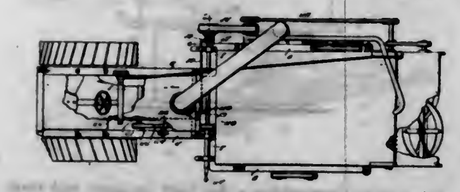
The method of growing and transplanting plants consisting in disposing upon a separate sod a frustro-conical shell or rim with its small end upward, filling the shell with earth and planting seeds therein, allowing the plant to grow to suitable size, then moving the rim with the sod to the permanent bed, lifting the rim to thereby dislodge its attachment to the earth and filling earth around the cone of earth left by removing the rim.

1,636,626. RETURN TRAP. ERIC LORNE CORTIS-STANFORD, Birmingham, Mich., assignor to W. H. Nicholson & Company, Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Oct. 17, 1925. Serial No. 63,119. 8 Claims. (Cl. 137—103.)



1. A return trap comprising a float chamber, a pivoted float therein, a pivoted weight lever, a float-operated trip for releasing the weight lever on the rise of the float, a

piston-operated slide valve controlling the admission of pressure to the float chamber, a valve controlling the admission of pressure to the piston cylinder, and an

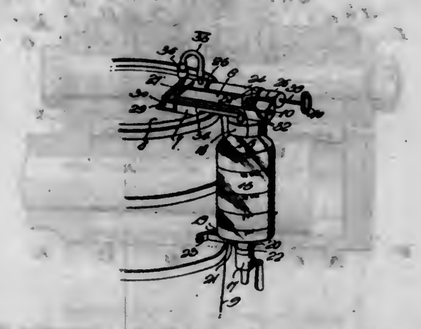


operating connection between the weight lever and piston cylinder admission valve for opening the latter on the fall of the weight lever.

1,636,627. COMBINATION BROOM AND DOOR HOLDER. ROBERT J. CRAVEN, Battle Creek, Mich. Filed July 6, 1925. Serial No. 41,813. 1 Claim. (Cl. 292—343.)

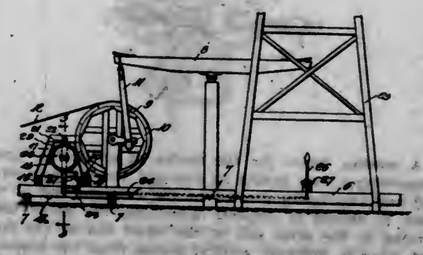
A broom and door holder comprising a spring wire bent to form a loop having two substantially equal side members with outwardly extending parallel arranged offset ends, said ends being corrugated or roughened and fitted with resilient rubber knobs, substantially as set forth.

1,636,628. ATTACHMENT FOR TRACTORS. ROSS E. CURTIS, Lincoln, Kans. Original application filed Nov. 17, 1922, Serial No. 601,561. Divided and this application filed Mar. 9, 1925. Serial No. 14,210. 2 Claims. (Cl. 180—1.)



1. An attachment for tractors comprising a frame having side bars to extend longitudinally of a tractor and having portions adapted to be secured at opposite sides of the tractor and portions to extend forwardly therefrom, said side bars having the portions to extend forwardly from the tractor offset transversely of their other portions and connected therewith by transversely extending portions, a counter shaft extending across said frame, bearings for said shaft carried by the first-mentioned portions of said side bars adjacent their forward ends, other bearings carried by the transversely extending portions of said side bars and projecting rearwardly therefrom and engaged with said shaft, means for transmitting rotary motion to said shaft from a tractor, and means for transmitting rotary motion from said shaft to apparatus to be driven therefrom.

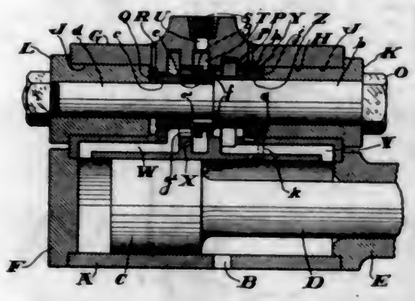
1,636,629. FACING OR PRESERVATION OF WALLS AND OTHER SURFACES. JOHN WILSON DOUGAL, Edinburgh, Scotland. Filed June 4, 1927, Serial No. 196,627, and in Great Britain Dec. 21, 1925. 3 Claims. (Cl. 91—68.)



1. In the treatment of walls or other surfaces of cement work, stone, brick, concrete, or the like, the steps of maintaining the surface in a damp state sufficient to promote complete hydration of a hydraulically setting cement, spraying a dry cementitious powder capable of setting hydraulically thereon, and applying a hardening solution of a soluble silicate to said surface.

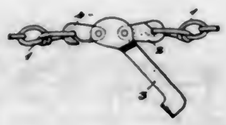
1,636,630. LIQUID-DISPENSING DEVICE. JOHN E. FREEBERG, Sarles, N. Dak. Filed June 10, 1926, Serial No. 115,037. 2 Claims. (Cl. 221—111.)

1. A liquid dispensing means comprising a horizontally elongated body having a downwardly projecting boss at one end adapted to rest upon the head of a reservoir, means for detachably securing said body to the reservoir, a liquid conducting tube connected with said body and projecting downwardly therefrom for reception in the reservoir, said body having a longitudinal port which communicates with said tube, a dispensing container secured to and projecting from the outer end of said body, said container having a discharge valve at its lower end, valve means for placing said container in communication with said port and tube or in communication only with the atmosphere, a suction pump cylinder extending longitudinally of and mounted on said body, a valve suction line from said cylinder to the interior of the dispensing container, a suction creating piston in said cylinder, and an operating rod for said piston extending to the front end thereof and having a handle.



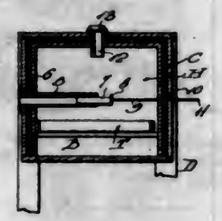
1,636,631. WELL-DRILLING RIG. GEORGE P. GEPHART, Peabody, Kans. Filed Sept. 18, 1926. Serial No. 136,330. 3 Claims. (Cl. 255—11.)

1. In a well drilling rig, a sand reel having a driving wheel co-operable with the usual band wheel, means mounting said sand reel for movement toward and from



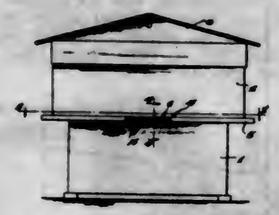
the band wheel, including a swing lever, a brake drum on the sand reel, a brake band passing around said brake drum, and contracting means for said brake band connecting the latter with said swing lever, said contracting means being operable by said swing lever to apply the brake to any desired extent when said lever is moved to disengage the reel driving wheel from the band wheel.

1,636,632. VALVE FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 18, 1926. Serial No. 149,137. 2 Claims. (Cl. 121—19.)



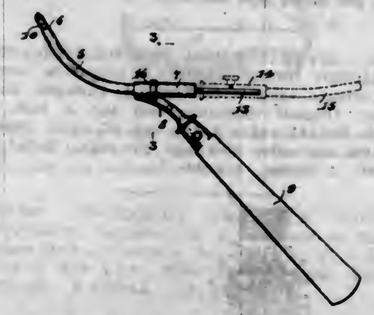
1. In a fluid actuated rock drill, the combination of a cylinder having a free exhaust port, a hammer piston in the cylinder, a valve chest having a chamber with a reduced bore at one end, inlet passages leading from the chamber to the cylinder, a distributing valve in the chamber having a central head and an end head of the same diameter, an actuating face on one end of the valve intermittently exposed to live pressure fluid for throwing the valve in one direction, the opposite end of the valve being constantly exposed to atmospheric pressure, a holding face of smaller area than the actuating face constantly exposed to live pressure fluid for holding the valve in thrown position, an opposed actuating and holding face on the central head intermittently exposed to air compressed by the piston for throwing the valve and intermittently exposed to live pressure fluid flowing to one end of the cylinder for holding the valve.

1,636,633. TENSOR SYSTEM. ADALBERTO GUALTERIO HARTUNG, Buenos Aires, Argentina. Filed July 10, 1925. Serial No. 42,780. 1 Claim. (Cl. 24—68.)



A tension device for the chains of automobile tyres, comprising a lever having an enlarged and laterally offset end and two hooks pivoted to the enlarged end of the lever to extend in opposite directions, the hooks being pivoted to the same side of the offset end of the lever and lying in different vertical planes from the plane of the body of the lever, the other end of the lever having a rigid lateral hook extending in the same direction as the enlarged offset end of the lever, said hook being adapted to rest upon the chain and extend down the side of the same at a point remote from the engagement of the pivoted hook with the chain and secure the said lever to the chain.

1,636,634. INCUBATOR VENTILATING MEANS. DAVID M. HOLBROOK, Portland, Oreg. Filed Aug. 26, 1926. Serial No. 131,707. 3 Claims. (Cl. 119—35.)



1. In an incubator ventilating means, a tube projecting from one wall of the incubator into the interior of the latter, said tube being open at both ends and having its outer end in communication with the atmosphere, a slide engaging the inner end of said tube and transversely curved into channel form, a disk carried by the end of said slide remote from said one wall, said disk being of a size to close said inner end of said tube when the slide is inwardly forced to the maximum, and a rod coaxial with the aforesaid tube, said rod being connected with said slide and passing through an opening in the wall of the incubator remote from the aforesaid wall, whereby said slide may be adjusted from the exterior of the incubator.

1,636,635. BEE ESCAPE. HARVEY A. HOLMES, Elyria, Ohio. Filed Dec. 18, 1925. Serial No. 76,248. 1 Claim. (Cl. 6—4.)

A bee escape comprising a flat body member, end members extending upwardly from the opposite ends thereof and provided with outstanding attaching flanges adapting the escape to be supported and secured within a recess formed in the edge of the closure board of a bee hive, a rod fitted at its ends through the forward upper corner portions of the end members with its said ends projecting beneath the said flanges, the rod extending between the said end members in a vertical plane spaced inwardly with respect to the vertical plane occupied by the forward edge of the body member, and a plurality of baffle members freely pivotally fitted at their upper ends to and suspended from the said rod, the said baffle members being tapered from their upper to their lower ends and resting with their lower end portions in contact with and projecting slightly below the said forward edge of the body member.

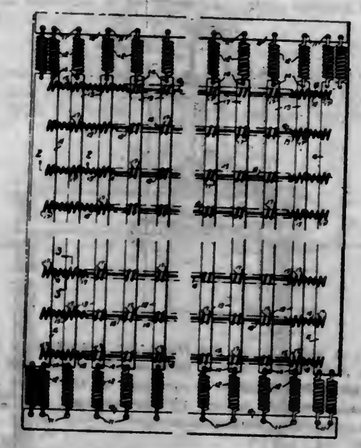
1,636,636. SURGICAL INSTRUMENT. WILLIAM S. HUMBLE, Riverside, Calif. Filed Jan. 20, 1927. Serial No. 162,376. 3 Claims. (Cl. 128—305.)

1. In an antrum drill and cleaner, a curved tube having an enlarged barrel at one end and opened at its opposite end, a handle connected with said barrel, and a drilling element removably insertable through the barrel and into the tube to have its drilling tip exposed through the open end of said tube.

1,636,637. COMBINATION TOOL. THOMAS SETZER HUTCHISON, Chicago, Ill. Filed July 31, 1926. Serial No. 126,324. 5 Claims. (Cl. 33—107.)

1. In an implement of the class described, two rulers having scales thereon, each ruler being provided with a longitudinal slot, a clamping thumb screw cooperating with the slots to set the rulers in a desired relative position, said thumb screw having a centering hole therethrough, and one of the rulers having a diamond shaped opening adjacent one end.

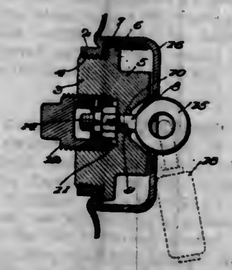
1,636,638. LOAD BINDER. FLOYD A. JENKINS, Olden, Tex. Filed Feb. 16, 1927. Serial No. 168,733. 3 Claims. (Cl. 24—68.)



1. A load binder comprising a pair of shackles, one of which is provided with one or more retaining notches, a lever, a portion of which is curved, pins passing through the shackle ends and the lever substantially where the curved and straight portions of the lever join, and means whereby to engage one or more of the heads of one of the pins in the retaining notches.

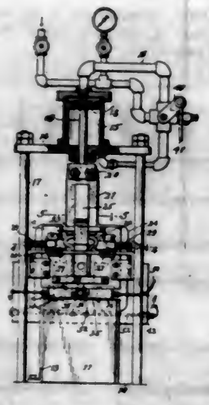
1,636,639. BRACELET. PERCIVAL W. JONES, Warwick, R. I., assignor to Rosenheim Co. Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 26, 1927. Serial No. 178,676. 9 Claims. (Cl. 59—79.)

1. An extendible chain structure comprising a series of units, each comprising a box link and a slide link mounted therein for limited relative movement, a pin mounted in said slide link for endways movement with its ends extending into the walls of the next adjacent box link and detachable therefrom by such endways movement, and means carried by said slide link for retaining said pin in the different positions to which it is moved.



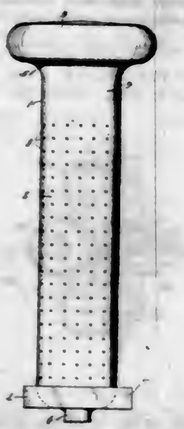
1,636,640. FABRIC. FREDERICK L. KUNKEL, Milwaukee, Wis. Filed Apr. 9, 1926. Serial No. 100,876. 2 Claims. (Cl. 245—11.)

1. A bed-bottom fabric comprising a series of longitudinal load-sustaining straps, transverse helical springs intersecting said straps, said straps having diagonal slots formed therein for receiving convolutions of said springs, and a wire projected lengthwise through each spring for retaining said convolutions within said slots.



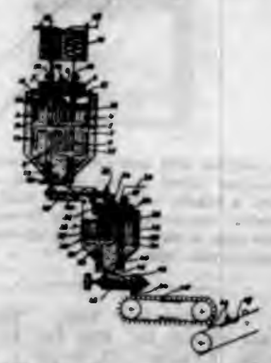
1,636,641. BUNG-PLUG LOCK. BEN F. LEWIS, Olga, Fla. Filed May 7, 1925. Serial No. 28,672. 1 Claim. (Cl. 220—39.)

In combination with a drum having a bung plug threaded thereinto, a bolt having a shank slidably and rotatably fitted in an opening in the bung plug, the bung plug having an opening receiving the shank and having a cavity into which the shank projects, a nut threaded on the portion of the shank lying within the cavity of the plug and leaving the shank free to move axially relative



to the plug for swivelling the shank to the plug, said bolt having an eye at its outer end, a bell enclosing the plug and having an opening through which the eye projects, the bell being rotatable relative to the plug, and a lock engageable with the eye of the bolt for holding the bell against removal while leaving the same free to rotate, said cavity opening to the inner face of the plug, and a small plug for closing the cavity.

1,636,642. HANDLE-INSERTING MACHINE. HENRY WEBB LORMOR, Cleveland, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a Corporation of West Virginia. Filed Dec. 31, 1923. Serial No. 683,843. 9 Claims. (Cl. 29—84.)



3. In a machine of the character described, a handle setting plunger for driving handles into boxes, and means for guiding the handles to openings in the boxes as the handles are being moved by the plunger, the guiding means comprising slides.

1,636,643. GAS BURNER FOR HEATING PURPOSES. LUIGI MORABITO, Port Chester, N. Y. Filed Sept. 29, 1926. Serial No. 138,441. 4 Claims. (Cl. 158—99.)

1. A gas burner comprising a tubular body portion provided with spaced rows of circumferentially extending openings, a solid, heat radiating head integral with one end of said body portion and of greater diameter than the latter, and a chambered base of greater diameter than and integral with the other end of said body portion, the chamber of the base opening into the body portion, and said base having a nipple extended therefrom adapted to couple a gas supply pipe therewith.

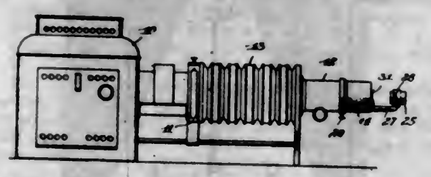
1,636,644. APPARATUS FOR THE SOLIDIFICATION OF LIQUID HYDROCARBONS. HIPPOLYTE NEVEU, Paris, France, assignor to Ysabel de Paniagua, Paris, France. Original application filed Apr. 3, 1922, Serial No. 549,141, and in France Jan. 27, 1922. Divided and this application filed Sept. 27, 1924. Serial No. 740,346. 2 Claims. (Cl. 44—7.)

1. An apparatus for the continuous solidification of hydrocarbon liquids comprising a receptacle wherein suitable mixing arms mounted upon a vertical shaft are provided with conduits for the admission of hydrocarbon liquid and of an emulsifier, whilst other mixing arms mounted upon another vertical shaft are provided with conduits admitting the hardening substance into the emulsified mass.

1,636,645. AMUSEMENT DEVICE. ICHIRO NODA, Brooklyn, N. Y. Filed Apr. 2, 1927. Serial No. 180,515. 2 Claims. (Cl. 273—102.)

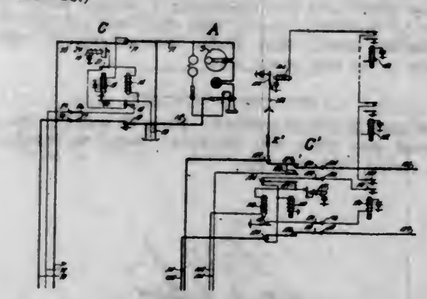
1. An amusement apparatus, including frangible targets adapted to be broken by projectiles, a target-supporting panel having a padded covering on the opposite faces, from which faces the targets are supported, and a wall having an opening in which the panel is supported for turning movement to selectively expose either of said opposite faces toward the participants.

1,636,646. EXTENSION DEVICE FOR FLEXIBLE BRACELETS. CHARLES H. PATTEN, Providence, R. I., assignor to Rex Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 11, 1926. Serial No. 154,117. 3 Claims. (Cl. 24—71.)



1. An extension device for a flexible bracelet comprising a pair of sheet metal sections, each having a slot adjacent one end and hingedly connected together at their

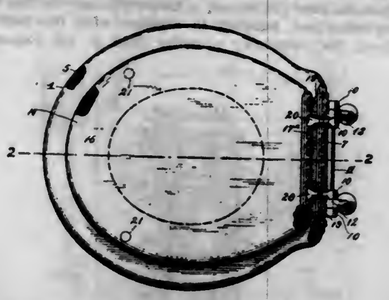
opposite ends, integral lateral projections extending from one of said sections and formations on the other of said



sections to snap behind said lateral projections by resiliency in a longitudinal direction of one of said sections and retain the sections in closed position.

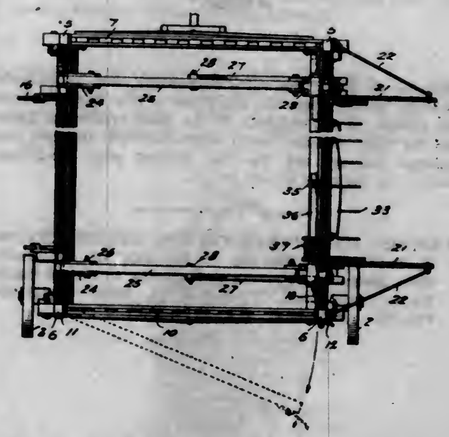
1,636,647. PROJECTION APPARATUS. WILLIAM L. PATTERSON, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 18, 1924. Serial No. 687,103. 8 Claims. (Cl. 88—24.)

3. The combination with a projection lantern having an objective lens barrel, of a projection microscope adapted for cooperation with said lantern, and a device for detachably securing said microscope on said lens barrel.



1,636,648. MULTIOFFICE AUTOMATIC TELEPHONE SYSTEM. ARTHUR J. RAY, Chicago, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 2, 1923, Serial No. 616,476. Renewed Dec. 13, 1926. 10 Claims. (Cl. 179—18.)

4. In a telephone system, a main exchange and a plurality of branch exchanges, a switching selector repeater in one of said branch exchanges for extending local or outgoing calls, means in said selector repeater for preliminarily routing all calls via the main exchange, means in said selector repeater for switching local calls or calls to another branch exchange over routes by-passing the main exchange when digit combinations are called which exclude the main exchange, and means for preventing false switching operations due to the calling of digit combinations made up of one or more digits in each of two switching digit combinations.

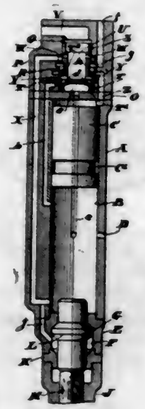


1,636,649. WATER-CLOSET STRUCTURE. ERNEST RICHARDSON, Beaver Falls, Pa. Filed Oct. 11, 1924. Serial No. 742,988. 5 Claims. (Cl. 4—234.)

1. A water closet element comprising a hollow metal body provided at its rear end with an opening leading to the interior thereof, in combination with a hinge structure clamped to the marginal edges of said opening said hinge structure comprising a supporting element located within the hollow metal body, and the opening in

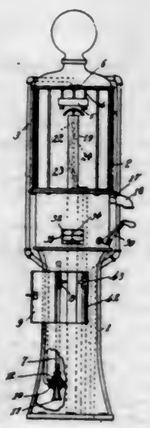
the rear end of said body being of sufficient size to permit the insertion of the hinge supporting element into the interior of the hollow metal body.

1,636,650. COMBINED GRAIN AND HAY STACKER. JOSEPH SCHRAG, Jr., Mound Ridge, Kans. Filed Dec. 27, 1926. Serial No. 157,156. 2 Claims. (Cl. 214—9.)



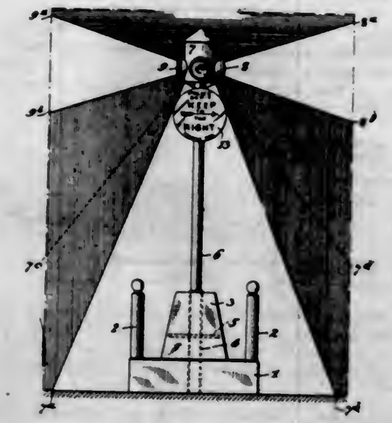
1. In a device of the class described, a vehicle provided with a box-like rack open at the top and bottom, the rack comprising fixed sides, a front wall, a movable rear gate, movable sides mounted for swinging movement below the fixed sides, means for holding the gate releasably in closed position, means for holding the movable sides in adjusted positions, and means for dumping material within the box-like rack, over one of the fixed sides.

1,636,651. VALVE FOR PNEUMATIC TOOLS. WILLIAM A. SMITH, Jr., New York, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 5, 1926. Serial No. 146,394. 1 Claim. (Cl. 121—27.)



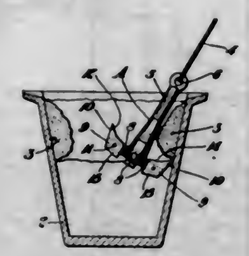
A pneumatic tool comprising a cylinder having a free exhaust port for the front end thereof, a piston in the cylinder controlling the free exhaust port, said piston having a neck, a valve chest having a valve chamber, supply passages leading from the valve chamber to the ends of the cylinder, a valve chamber having a recess in constant communication with the atmosphere, a head on one end of the valve having opposed actuating surfaces and an expansion chamber, said head also having radial ports, the rearward actuating surface being constantly exposed to pressure fluid for throwing the valve

forwardly, ports in the valve to register with the supply passages for exhausting pressure fluid from the ends of the cylinder into the recess, a kicker passage leading from the cylinder and adapted to register with the ports in the head for admitting pressure fluid to the expansion



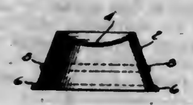
chamber to throw the valve rearwardly, and an exhaust passage leading from the front end of the valve chamber to a point in the cylinder in the same transverse plane as the free exhaust port, communication between the exhaust passage and the free exhaust port being controlled by the neck of the piston.

1,636,652. GASOLINE-DISPENSING DEVICE. WALTER E. SPLAIN and HOWARD L. STACKHOUSE, Cincinnati, Ohio, assignors, by mesne assignments, to United States Pump Corporation. Filed Jan. 21, 1924. Serial No. 687,412. 3 Claims. (Cl. 221—100.)



1. A gasoline dispensing device having a gravity dispensing tank, a pipe in said tank, a sleeve, said pipe and sleeve concentric with each other, and one having a spiral slot and the other a straight slot opening into the tank, and means for revolving said sleeve, said sleeve having communication with a delivery pipe and means for filling the said tank with liquid.

1,636,653. TRAFFIC LIGHT. ELMER M. VAN BUREN, Bronxville, N. Y. Filed Mar. 4, 1924. Serial No. 696,723. 8 Claims. (Cl. 177—329.)



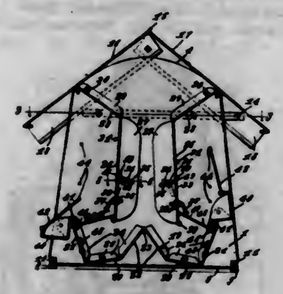
8. In a traffic signal device, a post, and means supported above said post comprising a unitary source of light for throwing a cone of light about said post and for projecting lateral light beams substantially at right angles to the axis of the post.

1,636,654. SCULLING HOOK. PAUL D. WRIGHT, Edgewood, Pa. Filed Nov. 15, 1926. Serial No. 148,510. 2 Claims. (Cl. 294—82.)

1. A sculling hook comprising a shank, at least three radially disposed arms formed integral with said shank and having substantially the same cross-section throughout their length, hook-shaped point members provided with a hollow sleeve-like body portion adapted to slip loosely over said arms, and pins for removably securing said point members on said arms.

1,636,655. GOLF TEE. PHILIP E. YOUNG, Fairhaven, Mass., assignor to Acushnet Process Company, a Corporation of Massachusetts. Filed Mar. 23, 1927. Serial No. 177,496. 2 Claims. (Cl. 273—38.)

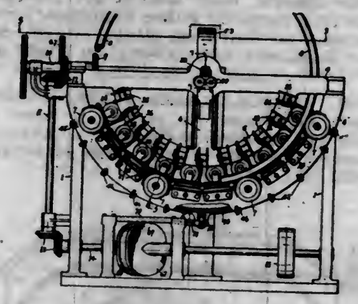
1. A golf tee in the form of a truncated cone of rubber with side walls of a thickness about one-twentieth of the total diameter, a very thin concave top to distribute strain to the sides and a strengthening bead about the base.



1,636,656. WELDING COPPER AND ALUMINUM. JAMES V. CAPICOTTO, Brooklyn, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed June 10, 1924. Serial No. 719,119. 1 Claim. (Cl. 219—10.)

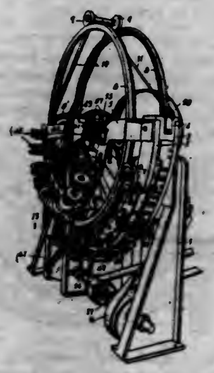
The method of uniting copper and aluminum, which consists in coating the copper with solder, bringing the aluminum in contact with the coated copper and then spot welding the parts of the two metals in contact with each other, to join them together.

1,636,657. MAKING MALLEABLE-IRON CASTINGS. HARRY A. SCHWARTZ, Cleveland Heights, Ohio, assignor, by mesne assignments, to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 5, 1923, Serial No. 617,163. Renewed Dec. 7, 1926. 6 Claims. (Cl. 148—3.)



1. The process of making malleable iron castings containing an inappreciable percentage of silicon which comprises adding a graphitization accelerator to the iron, casting the metal without precipitating a substantial proportion of the carbon, annealing the casting and thereby precipitating the carbon, in the form of small particles.

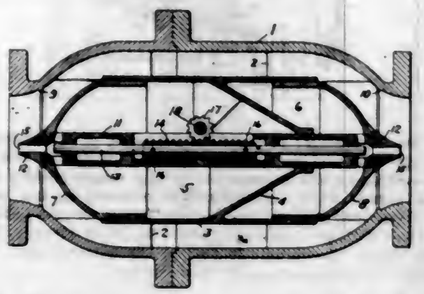
1,636,658. ADJUSTABLE FEEDER. HAROLD S. SPRICHER, Urbana, Ind., assignor to The Cyclone Manufacturing Company, Urbana, Ind. Filed Aug. 5, 1926. Serial No. 127,315. 21 Claims. (Cl. 119—53.)



1. A poultry feeder comprising a housing, a feed pan arranged therein at the lower portion thereof and enclosed thereby, means within said housing for regulating the flow of feed to said pan, and a grate hinged at its outer side against the inner face of the outer wall of the pan and adapted to be arranged over the feed therein and further adapted to have its inner side slidably abut against said means.

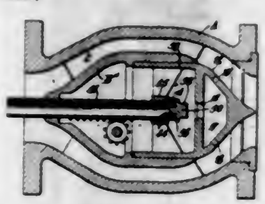
1,636,659. BRAIDING MACHINE. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed July 24, 1925, Serial No. 45,812. Renewed Jan. 5, 1927. 31 Claims. (Cl. 94—4.)

16. A structure of the class described, of braider units comprising braider members disposed in spaced relation providing braider throats and having complementary bobbin carrier ways, bobbin carriers mounted in said ways and provided with bobbins, driving means for said bobbins, strand shifters adapted to shift the fixed strands from the throat of one unit to that of the adjacent unit, and timed actuating means for said shifters.



1,636,660. BRAIDING MACHINE. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed Apr. 23, 1926, Serial No. 104,122. Renewed Jan. 5, 1927. 25 Claims. (Cl. 96—4.)

1. In a machine of the class described, the combination of a frame comprising front and rear segmental frame members, the front frame member having a segmental shifter way in the inner side thereof, gear supporting rollers mounted on said frame members, oppositely driven annular bobbin driving gears carried by said rollers, braider head members mounted on said frame members and having opposed slot-like throats, said braider head members being provided with complementary bobbin carrier ways, bobbin carriers mounted in said ways and provided with bobbins and with segmental gears coacting with said annular driving gears, a forming roll disposed centrally relative to said braider heads, a plurality of fixed bobbins disposed in an arc, a gathering roll disposed centrally relative to said fixed bobbins and head members and over which the strands are led from said fixed bobbins, shifters provided with rollers having horizontal axes traveling in said shifter way and rollers having vertical axes traveling on the opposite side of the

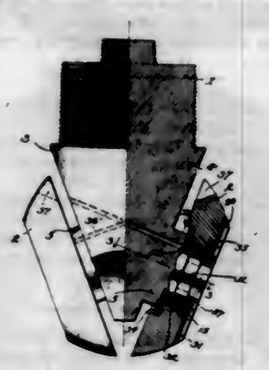


frame member, said shifters being provided with guide pulleys for guiding the shifting strands from said gathering roll to said throats, means for actuating said shifters in synchronism with said bobbin carriers, and brackets on the rear segmental frame members and provided with pairs of guide pulleys for guiding nonshiftable strands to project below the front frame member to guide the nonshifting strands from said gathering roll to said throats.

1,636,661. DOUBLE-PLUNGER VALVE. CHESTER W. LARNER, Philadelphia, Pa., assignor, by mesne assignments, to I. P. Morris Corporation, a Corporation of Delaware. Filed May 6, 1921. Serial No. 467,417. 19 Claims. (Cl. 137—139.)

12. The combination with a conduit casing having oppositely disposed valve seats, of a cylindrical housing for containing fluid pressure, oppositely directed valve plungers adapted to engage said seats and movably supported by said housing, and means adapted to move with said plungers for controlling the discharge of fluid contained in said housing whereby movement of said plungers may be controlled in either direction.

1,636,662. VALVE. CHESTER W. LARNER, Philadelphia, Pa., assignor, by direct and mesne assignments, to I. P. Morris Corporation, a Corporation of Delaware. Filed Feb. 25, 1922. Serial No. 539,161. 24 Claims. (Cl. 137—139.)



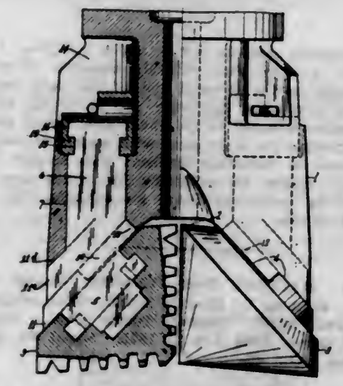
2. A valve for a fluid way comprising a casing having a contracting portion, a valve plunger having a tapering end portion seating against the contracting portion of said casing and an internal chamber portion subjected to the pressure of the fluid way, and means for varying the pressure in said chamber comprising an auxiliary chamber formed by a partition moving with said plunger and partitioned off from said first mentioned chamber, said auxiliary chamber being connected to the fluid way by a plurality of orifices through the tapering portion of said plunger, said orifices being so disposed in said tapering portion that transmission of pressure fluctuations between said auxiliary chamber and fluid way are relatively restricted.

9. A valve for a fluid way comprising a casing having a contracting portion, a valve plunger having a tapering end portion seating against the contracting portion of said casing and an internal chamber portion subjected to the pressure of the fluid way, and means for controlling the pressure in said chamber comprising a port connecting said chamber to the fluid way and a pilot valve having a portion movably extending through said port to restrict the flow therethrough in one position and withdrawn therefrom in another position.

20. A valve for a fluid way comprising a casing having a contracting portion, a central hollow member forming a chamber, a valve plunger having a nose seating against the contracting portion and carried by said member, and valve mechanism for controlling fluid in said chamber, said valve mechanism including means forming a port, a valve for said port, and a dash-pot for controlling relative movement between said port and valve.

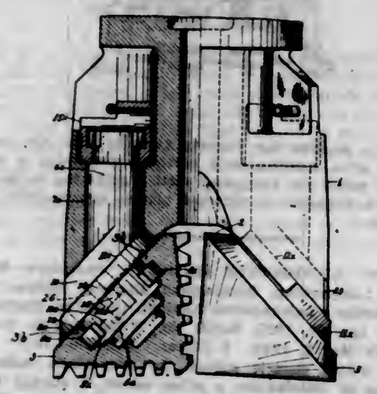
1,636,663. WELL-DRILLING CUTTER AND BEARING THEREFOR. CLARENCE E. REED, Wichita, Kans. Filed Sept. 27, 1926. Serial No. 138,061. 14 Claims. (Cl. 255—71.)

14. The combination of an inner bearing member; an annular outer bearing member, said members being provided with complementary wings and spaces, the bearing members being adapted to be assembled by passing the wing of each member through the space on the other member and then turning the members so as to locate the wings behind each other; a locking member inserted between the inner and outer bearing members and filling the wing spaces so as to maintain the parts in interlocked relation; means for retaining said locking member in place, said retaining means comprising a cotter pin passing through an opening in the inner bearing member and bearing against said locking member, the outer locking member being grooved to permit said cotter pin to be placed or removed; and a roller cutter rotatively mounted on the outer bearing member.



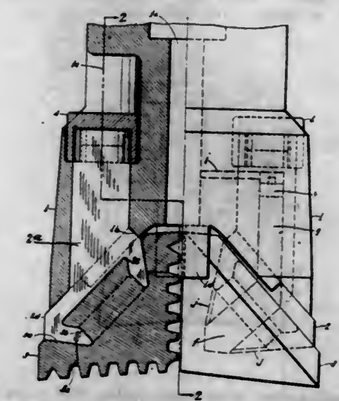
1,636,664. ROTARY DEEP-WELL-DRILLING APPARATUS. CLARENCE E. REED, Wichita, Kans. Filed Oct. 27, 1926. Serial No. 144,487. 7 Claims. (Cl. 255—71.)

1. In combination in a rotary deep well drilling apparatus, a drill head having at its lower end depending side walls and a depending central wall, said side walls



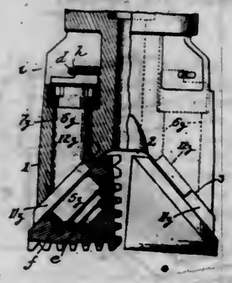
having projecting bosses on their outer sides which are offset in relation to the radii of the head and also in relation to each other in the direction circumferentially of the head, rotary disc cutters mounted on said bosses having a rolling and slicing cutting action by reason of their axes being offset in respect to the radii of the head, a pair of inner disc cutters, one of which is disposed in the recess on each side of the central wall, said inner cutters being offset in relation to each other and to the radii of the head and substantially in the same vertical axial plane with the adjacent outside cutter, pins passing through the bosses and having their inner ends seated in disaligned sockets on opposite sides of the central wall and means mounted on the bosses for holding the said pins in place, substantially as described.

1,636,665. EARTH-BORING DRILL. CLARENCE E. REED, Wichita, Kans. Filed Mar. 1, 1927. Serial No. 171,833. 30 Claims. (Cl. 255—71.)



13. A roller cutter unit for earth boring drills comprising a bearing with a shank extending at an angle thereto, and a roller cutter having a gateway, said shank and bearing being divided lengthwise into sections, each of which is composed of a bearing portion and a shank portion integral with the bearing portion, each bearing portion having a projection to pass through the gateway and when turned to interlock with a portion of the roller cutter, said sections being insertible into or removable from the roller in succession, substantially as described.

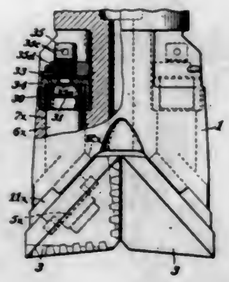
1,636,666. EARTH-BORING DRILL. CLARENCE E. REED, Witchita, Kans. Filed Mar. 1, 1927. Serial No. 171,832. 20 Claims. (C. 255—71.)



1. In an earth boring drill the combination of a bit head, a roller cutter, a spindle with means for detachably holding it in the bit head, and a bayonet joint connection between the roller cutter and the spindle, including complementary flanges and gates on the spindle and roller cutter and a locking member removably mounted on the spindle and obstructing one of the gates to hold the roller to the spindle when the gates and flanges register, said locking piece being held in place by the wall of the head, substantially as described.

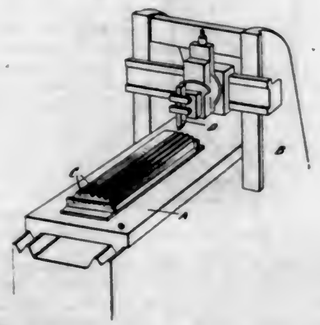
1,636,667. DEEP-WELL-DRILLING APPARATUS. CLARENCE E. REED, Wichita, Kans. Filed Jan. 12, 1927. Serial No. 160,668. 9 Claims. (Cl. 255—71.)

4. In an earth boring drill a roller cutter having a stem within it with a groove between said stem and the surrounding body of the roller, said stem at its end having a flange overhanging the groove, said flange being cut away to provide a gate, and a bearing for said roller split lengthwise to provide two sections, each of which sections has a flange adapted to pass into the groove of the roller by way of said gate, and fit under the flange of the stem of the roller, a bit head and means for holding the sections of the bearing to said head, substantially as described.



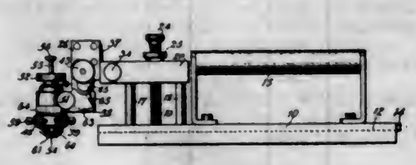
1,636,668. EARTH-BORING TOOL. CLARENCE E. REED, Wichita, Kans. Filed Mar. 12, 1927. Serial No. 174,824. 8 Claims. (Cl. 255—71.)

1. In combination in an earth boring apparatus, a one piece head having an inverted V-shaped recess in its lower end, a removable spindle member projecting substantially at right angles to the downwardly and outwardly inclined wall defining said inverted V-shaped recess, a shank member integral with the spindle member and extending at an inclination to said spindle member, and seated within the head, the juncture between said



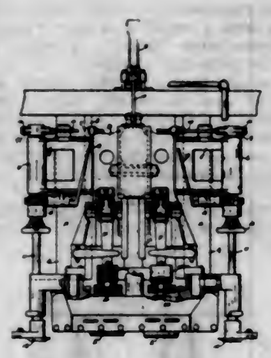
spindle member and shank member being at the said inclined wall of the recess, a roller cutter mounted on the spindle and a second roller cutter mounted upon the other inclined wall of the recess, said cutters being juxtaposed on opposite sides of the vertical axis of the drill and cutting the entire area at the bottom of the hole, and means connecting the shank member to the head and resisting displacement of said shank axially, substantially as described.

1,636,669. RETAINING MEANS FOR SPINDLES OF DEEP-WELL ROTARY CUTTERS. FRED K. BLAUVELT, Wichita, Kans., assignor to Clarence E. Reed, Wichita, Kans. Filed Mar. 15, 1927. Serial No. 175,570. 9 Claims. (Cl. 255—71.)



1. In combination in an earth boring drill a bit head, a roller cutter unit comprising a roller, spindle and shank, said shank having a flange and gate at its upper end, and means for drawing and holding the shank into the head, comprising a member having a flange and gate complementary to the flange and gate of the shank, said member when moved axially of the shank and then turned bringing its flange beneath that of the shank, and operating means for drawing said member upwardly relative to the drill head to draw the shank firmly to its seat in the bit head, substantially as described.

1,636,670. METHOD OF MAKING SEGMENTAL LAMINATED GEARS. JOHN C. SHAW and ROBERT D. SHAW, Brooklyn, N. Y., assignors to Keller Mechanical Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 15, 1925. Serial No. 23,191. 3 Claims. (Cl. 29—159.)

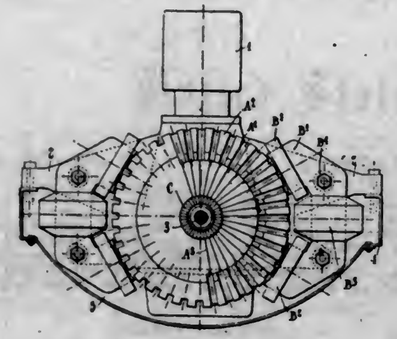


1. The method of forming laminated gears, which comprises assembling a plurality of segmental lamina blanks in parallel relation, then cutting a predetermined number of gear teeth in said assembled lamina, then heat-treating the cut lamina segments, then finishing the gear teeth and thereafter assembling the lamina segments in proper cooperative relation to form the completed gear.

1,636,671. HAND DEVICE FOR CUTTING AND POLISHING DIAMONDS. ABRAHAM ANZELEWITZ, New York, N. Y. Filed June 25, 1925. Serial No. 39,618. 8 Claims. (Cl. 51—229.)

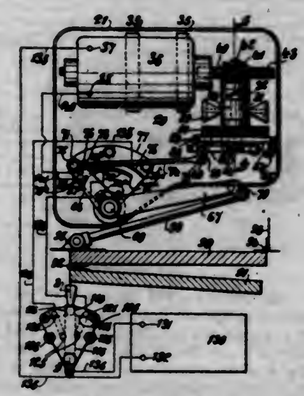
1. A diamond grinding device, which comprises a slidable plate, a head plate slidably mounted thereon, a head pivoted to the forward end of the head plate, a chuck arm pivoted to the lower portion of the head, a chuck member mounted on the chuck arm, means for vertically adjusting the head plate with respect to the slide plate, means for adjusting the head with respect to the head plate, means for adjusting the chuck arm with respect to the head, and means for adjusting the chuck on the chuck arm.

1,636,672. MACHINE FOR FORMING GLASS ARTICLES. RICHARD LA FRANCE, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 2, 1925. Serial No. 66,125. 7 Claims. (Cl. 49—[illegible]



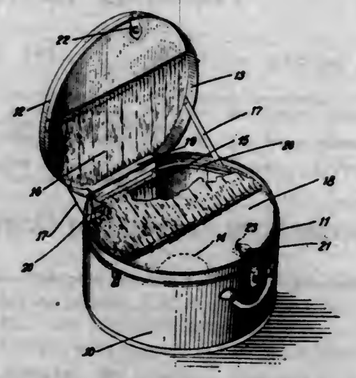
1. In a machine for forming glass articles, the combination of a rotating mold carriage comprising a plurality of units, and compound suction gathering molds in each unit disposed in different planes, substantially as described.

1,636,673. AUTOMOBILE VEHICLE. FREDERICK WILLIAM LANCHESTER, Birmingham, England, assignor to Lanchester's Laboratories, Limited, Coventry, England. Filed Apr. 27, 1925, Serial No. 26,255, and in Great Britain May 2, 1924. 8 Claims. (Cl. 290—19.)



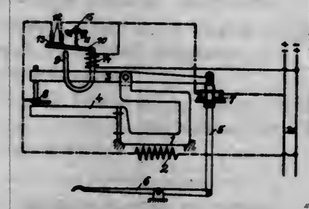
1. A petrol electric system for automobile vehicles including in combination a prime mover, a storage battery and a direct current dynamo electric machine embodying a plurality of field magnet units, each unit

comprising a pair of series windings disposed around the pole pieces and immediately adjacent the armature and a shunt winding, said windings being widely spaced apart



and the intervening spaces between said windings being adapted to promote magnetic leakage during the charging régime.

1,636,674. DOOR-OPERATING DEVICE. JOHN A. LUTHER, Bayonne, N. J., assignor of one-fourth to Peter Paris, one-fourth to Gaetano Merola, and one-fourth to Alfred Auletta, Bayonne, N. J. Filed Aug. 24, 1925. Serial No. 52,133. 3 Claims. (Cl. 268—65.)



1. In a door operating device the combination of a hinged door, an electric motor, a source of electric current for the motor, a bell crank pivoted in the device, a pair of electric contact strips adjacent to one arm of the bell crank and disposed so that one end of each extends beyond the adjacent end of the other, contact plugs carried by the said arm of the bell crank, one of said plugs coacting with one contact strip and the other contact plug coacting with the other contact strip, the electric motor, contact strips and contact plugs in electric circuit a three pole switch in the electric circuit, connecting means between said arm and said motor to swing the former with the rotations of the motor and connecting means between the other arm of the bell crank and said door.

1,636,675. HATBOX. OSSIP JOSEPH WALINSKY, Sea Gate, N. Y., assignor to White Luggage Co. Inc., New York, N. Y., a Corporation of New York. Filed Apr. 22, 1926. Serial No. 103,754. 1 Claim. (Cl. 206—8.)

A hat box comprising a body, a cover hinged to said body at a point removed from the edge thereof, a tray, a flexible hinge piece attached to said tray and to the upper edge of said body whereby said tray may be arranged either within said body or said cover, means to support said tray within said body to act as a cover therefor and means to maintain said tray in said cover when not so used.

1,636,676. ELECTRIC WELDING APPARATUS. RICHARD MACK, Berlin-Tempelhof, Germany. Filed Feb. 17, 1921, Serial No. 445,902, and in Germany Nov. 11, 1920. 3 Claims. (Cl. 219—4.)

2. In an electric resistance welding apparatus, the combination with welding circuits comprising primary and secondary circuits, of a switch in said primary circuit, a magnet having an armature for operating said switch, said magnet being under the control of the secondary circuit, and a spring device for holding said primary switch closed but having provisions for adjusting the spring tension relatively to the secondary circuit pull on said armature whereby to operate said armature and open the primary switch at a predetermined point in the intensity of the secondary current.

Patents Nos. 1,636,677 to 1,637,326.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 360—No. 4. TUESDAY, JULY 26, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Disclaimer.

1,472,888.—*Charles B. Rose*, East Moline, Ill. TRACTOR ATTACHMENT. Patent dated November 6, 1923. Disclaimer filed May 25, 1927, by the assignee by mesne assignments, *Moline Plow Company, Incorporated.*

Disclaimer is entered as to claims 1, 2, 3, 4, and 5, except when said claims are construed to give to the word "tillage" in line 1 of claims 3, 4, and 5 the meaning of cultivator and except where the expression "tillage implements" in claims 1, 2, 3, 4, and 5 is given the meaning of cultivator shovels such as shown and described in said Patent No. 1,472,888 and their equivalent.

Interference Notice.

U. S. PATENT OFFICE, *Washington, June 28, 1927.*

Warren E. Sadler, his assigns or legal representatives, take notice:

Interferences have been declared by this office between an application for patent filed by Warren E. Sadler, 1440½ West Twenty-third Street, Los Angeles, Calif., and applications for patent filed by Samuel K. Wellman, 2730 Derbyshire Road, Cleveland Heights, Ohio, and Arch M. Brown, 423 Kansas Avenue, Chickasha, Okla. Counsel for Sadler state they are unable to locate said Sadler. Notice is hereby given that unless said Sadler, his assigns or legal representatives, shall enter an appearance therein within 20 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,529,151, W. P. Albert, Controlling system, decided July 2, 1927, claims 4 and 5.

Pat. 1,541,485, E. L. Reller, Rotary pump, decided June 3, 1927, claims 1 to 5, inclusive.

Pat. 1,578,656, W. E. Gordon, Crown-block bolt, decided June 4, 1927, claims 1, 2, 7, and 8.

Pat. 1,613,366, R. H. Van Schaack, Jr., Ester of butyl alcohol, decided June 18, 1927, claims 1, 2, and 3.

Final decisions in interferences have been rendered against the following trade-marks:

T. M. 97,945, Wheat flour, Cadick Milling Company, Grand View, Ind. Registered June 30, 1914. Decided June 6, 1927.

T. M. 215,428, Wheat flour, The St. Paul Milling Co., St. Paul, Minn. Registered July 20, 1926. Decided June 6, 1927.

ADJUDICATED PATENTS.

(D. C. Mich.) The Rousso patent, No. 1,157,046, for device to prevent theft of towels from public washrooms, claims 1, 2, 3, and 5 *Held* invalid. *Rousso* v. *First National Bank*, 19 F. (2d) 247.

(D. C. Mich.) The Olsen patent, No. 1,295,578, for device to prevent theft of towels from public washrooms, claim 1 *Held* invalid and claims 3 and 5 *Held* not infringed. *Id.*

Drawings.

Attention is called to paragraphs *g* and *i* of Rule 52 of the Rules of Practice of the Patent Office, and inventors and attorneys are directed to omit from the space outside of the marginal line of the drawings any marks of identification, inasmuch as the space referred to is reserved for the use of the Patent Office. Such identifying marks should be placed upon the back of the drawings.

Condition of Applications Under Examination at Close of Business July 15, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 66,411; Trade-Mark Division, 1,630. Oldest new case, Dec. 1, 1926; oldest amended, Dec. 1, 1926. The dates given are 1927 except where † indicates 1926.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action.		No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE FREEDLANDER.

Decided June 2, 1928.

INVENTION—PROCESS UNPATENTABLE OVER PRIOR ART.

Where the steps recited in claims 1 and 3 of applicant's process for making a driving belt are not materially different from the steps outlined in the patent to G., and the patent to P. discloses a compound fabric of the character claimed by applicant and which P. states may be used for a belt, *Held* that the claims are unpatentable, since there was nothing inventive in using the steps adopted by G. with the materials noted by P.

[Note.—The application has resulted in Patent No. 1,611,830, December 21, 1926.]

APPEAL from Examiners in Chief.

Application for patent for driving belt filed June 21, 1922. Serial No. 569,941.

Messrs. Toulmin & Toulmin for the applicant.

KINNAN, *First Assistant Commissioner:*

The applicant has appealed from the decision of the Examiners in Chief affirming that of the Primary Examiner denying patentability to claims 1 to 4, inclusive, and claim 7. Claims 1 and 2 will serve for illustrative purposes and are as follows:

1. The herein described method of making a driving belt, consisting in fabricating material therefor of vulcanisable soft rubber mixed with fiber; in winding such material on a suitable instrument into the form of a roll; and in vulcanising such roll.

2. The herein described method of making a driving belt consisting in fabricating material therefor of vulcanisable soft rubber mixed with fiber, the strands of which are placed substantially crosswise such material; in winding such material upon a suitable instrument to form a roll of belting; and in vulcanising such roll.

The references relied upon are: Swain, 1,152,849, August 31, 1915; Price, 1,192,794, July 25, 1916; Ryan, 1,215,064, February 6, 1917; Redform, 1,255,107, January 29, 1918; Gates, 1,854,788, October 5, 1920; Deisell, 1,482,973, October 24, 1922; Fisher, 1,438,370, December 12, 1922; Goodyear (reissue) 157, December 25, 1849.

The first four claims are directed to a method for making a driving belt, and claim 7 is directed to the belt itself. To produce the belt of claims 1 and 3, applicant fabricates a material of vulcanisable soft rubber mixed with fiber and then winds such material upon a support into a cylindrical roll and vulcanises it. Subsequently a suitable length of belting is cut off for use; but this latter step is not involved in the claims.

While the references disclose fiber reinforcing vulcanised-rubber belts, yet the patent to Gates is mainly relied upon by the tribunals below to show the method of making a V-shaped belt, which is the form of belt produced by the applicant's process, although such form is not specified in the appealed claims, which method includes the laying of vulcanised layers one upon the other and finally applying rubber composition on them and vulcanising the whole. The steps of the method, as disclosed in claims 1 and 3 here on appeal, are not materially different from the steps outlined in the patent to Gates. The patent to Price, however, more nearly discloses a compound fabric, which the patentee states may be used for a belt, of layers of the character claimed by the applicant. The holding below was to the effect that there was nothing inventive in using the steps adopted by Gates with the materials noted by Price. There would seem to be no possible error in the conclusions reached by the Examiner and the Examiners in Chief as to the want of any merit in so obvious a method of producing a belt. It is thought this same state of the art, especially as disclosed in Price, anticipates completely claim 7.

Claims 2 and 4 are quite similar to claims 1 and 3, but specify the fiber or strands "are placed substantially crosswise such material." The patent to Price does not disclose such an arrangement. It is not apparent that he realised the advantages to be obtained from so placing the fibers or strands. The Examiners in Chief were of the view that the disclosure of the laminated cross-fiber shoe sole in the Redform patent anticipated, in connection with the patent to Price, this feature of the parallel relation of the fibers crosswise of the belt. It is believed the use of such cross-fibers in a shoe sole is not analogous to the use in a belt. The requirements are different, the stresses are different, and the functions are quite dissimilar. The crosswise fibers or strands enable the belt to withstand lateral compression or distortion, so that it maintains its cone-like shape of cross section when subjected to the contact with the pulley grooves. The patent to Price does not disclose that he was aware of this specific advantage in this particular relation. It is believed these claims 2 and 4 should be allowed.

The decision of the Examiners in Chief is affirmed as to claims 1, 3, and 7 and reversed as to claims 2 and 4.

Supreme Court of the United States.

BEECH-NUT PACKING COMPANY *v.* P. LORILLARD COMPANY.

Decided April 11, 1927.

1. TRADE-MARKS — ABANDONMENT — MERE NONUSE DOES NOT ESTABLISH.

Lapse of some four years after taking over of tobacco trade-mark by a new company before using trade-mark in placing new tobacco on the market *Held* not to have destroyed right to use thereof as matter of law where nothing had happened in the meantime to make purchaser's position worse than if it had acted more promptly.

2. SAME — SAME — LOSS OF GOODWILL — PREFERENTIAL RIGHT TO AGAIN USE.

The fact that the goodwill once associated with a trade-mark has vanished does not end at once the preferential right of the proprietor to try it again on goods of the same class with improvements that renew the proprietor's hopes.

3. SAME—DEFINITION.

Primarily a "trade-mark" is a distinguishable token devised or picked out with intent to appropriate it to a particular class of goods and with the hope that it will come to symbolize goodwill.

ON WRIT OF CERTIORARI to the United States Circuit Court of Appeals for the Third Circuit.

Mr. Charles E. Hughes, Mr. Walter A. Scott, Mr. James R. Offield, and *Mr. H. McClure Johnson* for Beech-Nut Packing Co.

Mr. John W. Davis for P. Lorillard Co.

Mr. Justice HOLMES delivered the opinion of the Court.

This is a suit in equity brought by the petitioner, Beech-Nut Packing Company, a corporation of New York, charging the P. Lorillard Company, a corporation of New Jersey, with infringement of its registered trade-mark, "Beech-Nut," and with unfair competition. The bill also takes the possibly broader ground that "Beech-Nut," being the plaintiff's trade-mark and part of its corporate name, has become the plaintiff's badge and autograph so far that the public seeing the mark on any package of consumable goods will believe that the article is of the plaintiff's make. The trade-mark was first used on ham and bacon but gradually has been extended to many other articles so diverse as chewing gum, peanut butter, and ginger ale, but always, the plaintiff says, as a guaranty of excellence, often expressed by it in advertisements, as "Beech-Nut Quality." The defendant uses the words "Beech-Nut" on chewing tobacco and cigarettes and the bill takes the hardly consistent positions, on the one hand that the plaintiff's reputation is hurt with its refined female customers by the belief that it would manufacture a cheap chewing tobacco, and on the other hand that it may wish to extend its business into that domain. The bill was dismissed on the merits by the district court, 299 Fed. Rep. 834, and by the circuit court of appeals. 7 F. (2d) 967. As the principles involved seemed important and as it was urged that the decision was in conflict with decisions in other circuit courts of appeal, such as *Aunt Jemima Mills Co.* v. *Rigney*, 247 Fed. Rep. 407 and *Vogue Co.* v. *Vogue Hat Co.*, 6 F. (2d) 875, a writ of certiorari was granted by this Court. 269 U. S. 551.

[1] The plaintiff's trade-mark goes back to before the beginning of this century. The registration specially relied upon was dated December 31, 1912, and states that the plaintiff has adopted the mark for use upon a large number of specified objects, including those that we have mentioned, "all in Class 46, Foods and ingredients of foods." The defendant claims the mark "Beechnut" for tobacco through successive assignments from the Harry Weissinger Tobacco Company, of Louisville, Ky., which used it from and after 1897. The plaintiff does not contest the original validity of this mark or suggest any distinction on the ground that it originated in a different State, but says that the right has been lost by abandonment. It appears that brands of tobacco have their rise and fall in popular favor, and that the Beechnut had so declined that in 1910 only twenty-five pounds were sold, and the trade-mark was left dormant until after the dissolution of the American Tobacco Company which then held it. This was in 1911, and the Lorillard Company took over the mark with many others. Then in connection with an effort to get a new brand that would hit the present taste, this mark was picked out, some of the adjuncts were changed, and in 1915 the new tobacco was put upon the market. Nothing had happened in the meantime to make the defendant's position worse than if it had acted more promptly and we see no reason to disturb the finding of two courts that the right to use the mark had not been lost. The mere lapse of time was not such that it could be said to have destroyed the right as matter of law.

[2, 3] A trade-mark is not only a symbol of an existing goodwill although it commonly is thought of only as that. Primarily it is a distinguishable token devised or picked out with the intent to appropriate it to a particular class of goods and with the hope that it will come to symbolize goodwill. Apart from nice and exceptional cases and within the limits of our jurisdiction a trade-mark and a business may start together, and in a qualified sense the mark is property, protected and alienable, although as with other property its outline is shown only by the law of torts, of which the right is a prophetic summary. Therefore the fact that the goodwill once associated with it has vanished does not end at once the preferential right of the proprietor to try it again upon goods of the same class with improvements that renew the proprietor's hopes.

It may be true that in a case like the plaintiff's its rights would not be sufficiently protected by an injunction against using the marks upon goods of the same class as those to which the plaintiff now applies it and to which its registration is confined. Upon that we express no opinion. For when it is conceded that whatever its effect the defendant has a right to use "Beechnut" on tobacco unless the right has been abandoned, that possibility does not matter. Again it may be true that in putting a hyphen between Beech and Nut, framing its label with an oval and substituting a beechnut for a squirrel in the center the defendant was trying to get an advantage from the plaintiff's goodwill and if challenged at once might have been required to make it even plainer than it was made by the word "Lorillard's" in large letters upon the label that the plaintiff had nothing to do with the goods. But the plaintiff waited until 1921. The Lorillard Company is at least as well known to those who do not despise tobacco as the Beech-Nut Company is to its refined customers and the time and the need for that additional precaution has gone by. If the plaintiff was misled in its reason for thinking that the defendant's right had been kept alive it was right in its belief, and further, the belief had no bearing on the question whether the mark was presented in an unjustifiable form.

Now that the case has been more fully considered than it could be on the petition for certiorari it seems to us that the facts do not present the nice question upon which the petitioner wished us to pass. Both courts having found for the defendant we see no ground upon which it can be said that they were wrong as matter of law. *Joseph Schlitz Brewing Co.* v. *Houston Ice & Brewing Co.*, 250 U. S. 28, 29.

Decree affirmed.

Court of Appeals of the District of Columbia.

W. R. ROACH & Co. *v.* G. & J. LO BUE BROS.

No. 1,285. Decided February 7, 1927.

TRADE-MARKS — OPPOSITION — MOTION TO DISMISS — GOODS—DESCRIPTIVE PROPERTIES DIFFERENT.

Where opposer used its mark upon canned fruits, canned vegetables, canned salmon, canned pork and beans, canned evaporated milk, fresh fruits, fresh vegetables, coffee, tea, and similar products and applicant was seeking registration upon macaroni, *Held* that the goods were not of the same descriptive properties and the opposition was properly dismissed on motion.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. E. T. Fenwick for W. R. Roach & Co.

Messrs. G. & J. Lo Bue Bros. pro se.

Before MARTIN, Chief Justice, and ROSS and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.:*

The appellee applied for the registration of its trade-mark consisting chiefly of the representation of a heart, for use upon macaroni. The appellant opposed the application, upon the ground that it was the prior registrant of a mark similarly embellished with a heart, used upon canned fruits, canned vegetables, canned salmon, canned pork and beans, canned evaporated milk, fresh fruits, fresh vegetables, coffee, tea and similar products. The appellant has also used its mark upon macaroni, but this use first began after the present application of appellee was filed.

The Examiner of Interferences dismissed the opposition upon motion of the applicant, upon the ground that the goods upon which appellant had used the mark prior to this application, as above specified, were not of the same descriptive properties as macaroni.

The opposer appealed from the dismissal to the Commissioner of Patents, claiming that the goods in question were of the same descriptive properties as macaroni, and insisting that the Examiner erred in denying opposer the right to introduce testimony in order to prove the likelihood of confusion in trade and injury to opposer.

The Commissioner considered the appeal and observed that an order like this which denies opposer the opportunity to take testimony, should be granted only in a clear case; but held nevertheless that the Examiner was right in his ruling that the goods of the respective parties were not of the same descriptive properties. He therefore affirmed the decision of the Examiner. The Commissioner based his conclusion in part upon the opinions of this court in *Johnson Educator Food Company* v. *Sylvanus Smith & Co., Inc.*, 174 O. G. 1027, 37 App. D. C. 107, and *The Quaker Oats Co.* v. *Mother's Macaroni Company*, 198 O. G. 899, 41 App. D. C. 254. The first of these cases held that salted, smoked and canned fish were not of the same descriptive properties as crackers, biscuits, bread and breakfast cereals. The second case held that the registration of the word "Mother's," as a trade-mark for macaroni, spaghetti, and vermicelli, will not be denied on the ground that it would be deceptive and confusing because already used as a trade-mark for breakfast cereals.

We think that these authorities sustain the decision of the Commissioner of Patents. It is accordingly affirmed.

PATENT SUITS.

TRADE-MARKS

OFFICIAL GAZETTE, JULY 26, 1927.

[VOL. 360. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 173,679. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio. Filed Dec. 21, 1922.

MARVELAC

Particular description of goods.—Varnishes, First Coaters, Paint Enamels, and Lacquers.
Claims use since June 1, 1906.

Ser. No. 210,411. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE SILVA-BERGTHOLDT CO., Newcastle, Calif. Filed Mar. 2, 1925.

The shading on the drawing indicates a red and a blue color. All the descriptive and geographical reading matter on the drawing including the words "The Silva-Bergtholdt Co., California Fruits, Newcastle, California," is hereby disclaimed apart from the other features of the mark.

Particular description of goods.—Fresh Fruits—Namely, Cherries, Peaches, Pears, Apricots, Plums, and Grapes.
Claims use since 1913.

Ser. No. 214,280. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) FLORENCE W. SHEPLER, doing business as The F. W. Shepler Stove Company, Pittsburgh, Pa. Filed May 13, 1925.

RADIA

Particular description of goods.—Radiant Gas-Heating Devices.
Claims use since June 1, 1917.

Ser. No. 223,128. (CLASS 39. CLOTHING.) MARATHON RUBBER COMPANY, INC., Akron, Ohio. Filed Nov. 11, 1925.

Particular description of goods.—Soles and Heels for Boots and Shoes Composed Wholly or in Part of Rubber.
Claims use since February, 1918.

Ser. No. 223,838. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) ETTIE DODGE, Sydney, New South Wales, Australia. Filed Nov. 25, 1925.

VIGORO

Particular description of goods.—Field Games Played With Bats, Balls, and Wickets.
Claims use since about March, 1900.

Ser. No. 224,418. (CLASS 37. PAPER AND STATIONERY.) THE PECK ENGRAVING COMPANY, Cleveland, Ohio. Filed Dec. 8, 1925.

The word "Bond" as it appears in the trade-mark is disclaimed separate and apart from the mark as shown in the drawing.

Particular description of goods.—Writing Paper.
Claims use since May 1, 1924.

Ser. No. 225,149. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) SWANFELDT TENT AND AWNING COMPANY, Los Angeles, Calif. Filed Dec. 24, 1925.

SWANFELDT AWNINGS

The word "Awnings" is disclaimed.

Particular description of goods.—Awnings, Tents, Tarpaulins, and Canopies.

Claims use since Jan. 1, 1924.

Ser. No. 225,313. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MOTTE-DEVEAN, INC., San Francisco, Calif. Filed Dec. 30, 1925.

Mardo

Particular description of goods.—Decorated Handkerchiefs.

Claims use since January, 1925.

Ser. No. 225,539. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) AMERICAN SMELTING & REFINING COMPANY, New York, N. Y., and San Francisco, Calif. Filed Jan. 6, 1926.

CHECK

Particular description of goods.—Nonferrous Metals, Lead, Babbit, Solder, and Alloys in Ingots, Pigs, Slabs, Bars, Rods, Wires, Sticks, Sheets, Anodes, Cathodes, and Dust Made Therefrom.

Claims use since Apr. 20, 1925.

Ser. No. 225,543. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) AMERICAN SMELTING & REFINING COMPANY, New York, N. Y., and San Francisco, Calif. Filed Jan. 6, 1926.

ACME

Particular description of goods.—Nonferrous Metals, Lead, Babbit, Solder, and Alloys in Ingots, Pigs, Slabs, Bars, Rods, Wires, Sticks, Sheets, Anodes, Cathodes, and Dust Made Therefrom.

Claims use since November, 1907.

Ser. No. 225,995. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) BUFFALO SPECIALTY COMPANY, now by change of name to Liquid Veneer Corporation, Buffalo, N. Y. Filed Jan. 16, 1926.

FLÜSSIG FURNIR

Claims use since August, 1925.

230,558. (CLASS 12. CONSTRUCTION MATERIALS.) EGBERT CONCRETE PRODUCTS, INC., Brooklyn, N. Y. Filed Mar. 23, 1926. Serial No. 229,026.

ROCK-TILE

Particular description of goods.—Tiles.
Claims use since about Mar. 17, 1926.

230,559. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE AMERICAN PULLEY COMPANY, Philadelphia, Pa. Filed Jan. 13 1927. Serial No. 242,768.

AMERICAN PULLEYS

Particular description of goods.—Steel Split Pulleys.
Claims use since February, 1923.

230,560. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) BENTZ ENGINEERING CORPORATION, Newark, N. J. Filed Oct. 18, 1926. Serial No. 238,767.

Chillblast

Particular description of goods.—Air Conditioners, Coolers, and Dehumidifiers for Use in the Confectionery and Bakery Trade.
Claims use since May, 1922.

230,561. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE AMERICAN PULLEY COMPANY, Philadelphia, Pa. Filed Jan. 13, 1927. Serial No. 242,769.

AMERICAN HANGERS

Particular description of goods.—Pressed Steel Hangers for the Mounting of Machinery Shafts.
Claims use since February, 1923.

230,562. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE AMERICAN PULLEY COMPANY, Philadelphia, Pa. Filed Jan. 13, 1927. Serial No. 242,770.

AMERICAN BEAM HEADS

Particular description of goods.—Pressed Steel Beam Heads.
Claims use since May, 1925.

230,563. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SIMONDS SAW AND STEEL COMPANY, Fitchburg, Mass. Filed Feb. 14, 1927. Serial No. 244,871.

PLANER

Particular description of goods.—Saws.
Claims use since Jan. 1, 1926.

230,564. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RICHARD M. DESTEL, Los Angeles, Calif. Filed Mar. 23, 1927. Serial No. 246,201.

RASINUT

Particular description of goods.—Bread.
Claims use since June 1, 1925.

230,565. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM GEORGES, doing business as La Rex Chemical Company, Seattle, Wash. Filed Apr. 25, 1927. Serial No. 247,947.

NOITCH

Particular description of goods.—Eczema Lotion.
Claims use since Jan. 1, 1926.

230,566. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) RAY E. BRIGGS, Los Angeles, Calif. Filed May 18, 1927. Serial No. 249,151.

QUALITY

Particular description of goods.—A Waxy Preparation for Cleaning and Polishing Floors, Woodwork, and Furniture.
Claims use since Feb. 1, 1924.

230,567. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE J. R. WATKINS COMPANY, Winona, Minn. Filed Jan. 6, 1925. Serial No. 207,766.

WATKINS

Particular description of goods.—Brown Skin Face Powder, Complexion Powder, Deodorant Powder, Talcum Powder, Tooth Powder, Powdered Insecticides, Cold Cream, Face Cream, Vanishing Cream, Skin Lotion, Rouge, Perfume, Toilet Water, Scalp Tonic, Shampoo Jelly, Coconut-Oil Shampoo, Mouth Wash, Tooth Paste, Nail Polish, Aspirin, Kidney and Bladder Pills, Cascara Senna Tablets, Cathartic Liver Pills, Camphor Mustard Ointment, Menthol Camphor, Liniment, Cough Medicine, Volatyle Salve (a Medicinal Compound Suitable for the Relief of Respiratory Disorders), After-Shave Lotion, Pomades, Root and Herb Tea, Stock Tonic, Baking Powder, Digestive Tablets, Corn Salve, Diuretic Tablets, Headache Tablets, Herb Laxative Tablets, Little Liver Pills, Rheumatic and Gout Pills, Salves Suitable as a Dressing in Reducing Pains by External Application, Toothache Wax, Worm Tablets, Household Disinfectant, Liquid Insecticides, and Poultry Tonic.

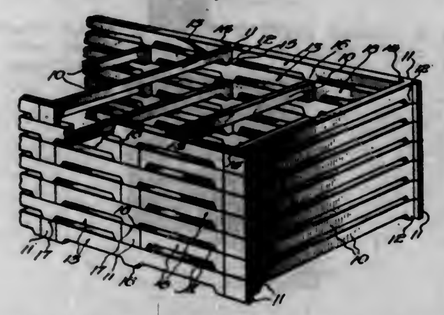
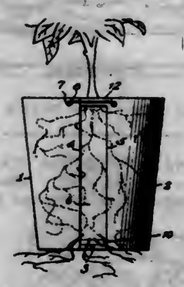
REISSUES



JULY 26, 1927.

16,688. CLAMP. HARRY R. LONGANECKER, Centerville, Iowa. Filed June 14, 1927. Serial No. 198,856. Original No. 1,615,092, dated Jan. 18, 1927, Serial No. 46,840, filed July 29, 1925. 1 Claim. (Cl. 20—99.)



A clamp device for connecting two poles together, comprising a saddle member designed to be inserted between two pole members and to substantially conform to the contour of the adjacent sides of both pole members, a band for encircling both poles, and a bolt passed through both sides of the band and also passed through the saddle between the poles to thereby provide means whereby the band may be tightened and the saddle, band and both pole members held in their relative positions.

16,689. REENFORCED-CONCRETE CRIBBING. ROBERT H. FORD, CHARLES P. RICHARDSON, and ALEXANDER L. GREENABAUM, Chicago, Ill., and HENRY M. PRIEST, East Orange, N. J., assignors to Charles P. Richardson, trustee, Chicago, Ill. Filed Aug. 27, 1925. Serial No. 52,971. Original No. 1,312,689, dated Aug. 12, 1919, Serial No. 278,810, filed Feb. 24, 1919. 5 Claims. (Cl. 61—47.)

5. A concrete cribbing having longitudinally disposed stretchers and transversely arranged headers, the headers having extensions disposed laterally beyond two parallel sides of the headers and depending beyond the lower surfaces of the headers, while the stretchers are provided with kerfed ends of dimensions substantially similar to the dimensions of the depending portions of the extensions on the header end, whereby said kerfed ends of the stretchers are adapted to receive the lateral extensions of the headers and provide interlocking relation between the headers and stretchers.

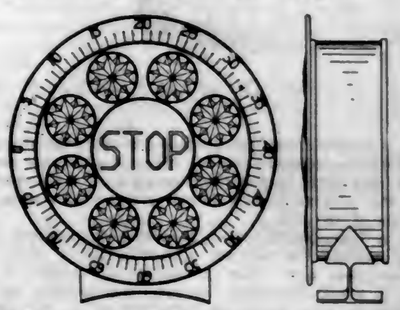
16,690. TRANSPLANTING POT. JAMES M. EVERETT, Clearwater, Fla., assignor of one-half to Charles M. Hunt, Lake Wales, Fla. Filed May 27, 1927. Serial No. 194,829. Original No. 1,542,683, dated June 16, 1925, Serial No. 690,233, filed Feb. 2, 1924. 3 Claims. (Cl. 47—37.)

1. A transplanting pot including imperforate side wall sections, the adjacent vertical edges of which are spaced from each other to form root openings, a hinge connecting the sections at the bottom and means sealing the bottom of the pot.

2. A transplanting pot including imperforate side wall sections, the adjacent vertical edges of which are spaced from each other throughout the height of the pot, a hinge connecting the sections together at the bottom of the pot, and a false bottom in the bottom of the pot.

3. A transplanting pot including imperforate side wall sections, the adjacent vertical edges of which are spaced from each other throughout the height of the pot, a hinge connecting the sections together at the bottom, a false bottom in the bottom of the pot sealing the bottom of the pot, and fastening means at the top of the sections holding the sections together at the top.

DESIGNS

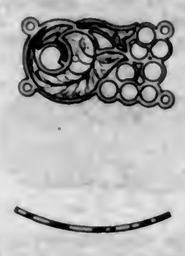


JULY 26, 1927.

73,119. SERVING TRAY. ABRAHAM BARCHOFF, New York, N. Y. Filed Jan. 27, 1927. Serial No. 20,520. Term of patent 14 years.

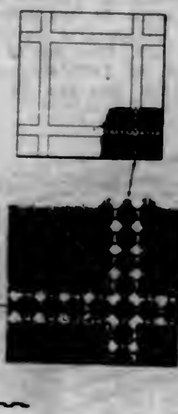
The ornamental design for a serving tray as shown.

73,120. COMBINATION SIGNAL CASING. RAYMOND L. BARTON, Los Angeles, Calif. Filed Mar. 23, 1927. Serial No. 21,286. Term of patent 3½ years.



The ornamental design for a combination signal casing, substantially as shown.

73,121. BRIDGE-LAMP ARM OR A SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed May 14, 1927. Serial No. 21,993. Term of patent 3½ years.



The ornamental design for a bridge lamp arm or a similar article, as shown.

73,122. BRACELET LINK. PERCY J. CALLOWHILL, Providence, R. I. Filed Mar. 28, 1927. Serial No. 21,367. Term of patent 7 years.

The ornamental design for a bracelet link, as shown.

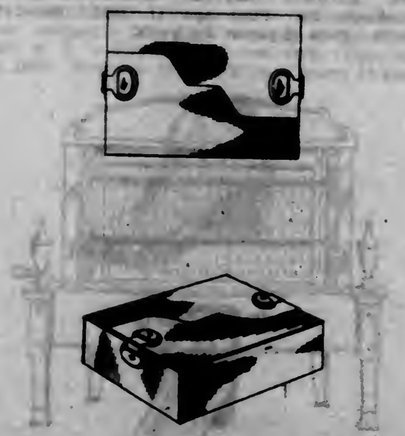
73,123. PAPER NAPKIN. FRED A. CONRAD, Milwaukee, Wis., assignor to American Lace Paper Co., Milwaukee, Wis. Filed Jan. 24, 1927. Serial No. 20,483. Term of patent 14 years.

The ornamental design for a paper napkin as shown.

73,124. NOSE TILE. PETER CHRISTIAN CARL FRIDERICHSEN, Independence, Mo. Filed Mar. 24, 1927. Serial No. 21,309. Term of patent 14 years.

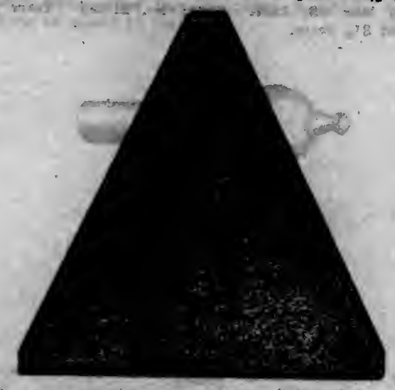
The ornamental design for a nose tile, as shown.

73,125. NOSE TILE. PETER CHRISTIAN CARL FRIDERICHSEN, Independence, Mo. Filed Mar. 24, 1927. Serial No. 21,310. Term of patent 14 years.



The ornamental design for a nose tile, as shown.

73,126. COMBINED LAMP AND SUPPORTING BRACKET. EDWARD M. GARBY, New York, N. Y. Filed May 6, 1927. Serial No. 21,874. Term of patent 14 years.

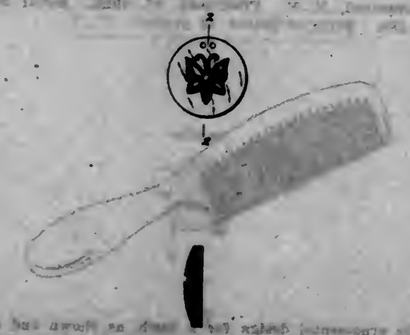


The ornamental design for a combined lamp and supporting bracket substantially as shown.

73,127. CARTON. HERMAN L. GREVE, Brooklyn, N. Y. Filed Sept. 7, 1926. Serial No. 18,993. Term of patent 14 years.

The ornamental design for a carton, as shown.

73,128. DISPLAY BOARD OR SIMILAR ARTICLE. SAMUEL H. HARRIS, Brooklyn, N. Y. Filed May 10, 1926. Serial No. 17,624. Term of patent 3½ years.

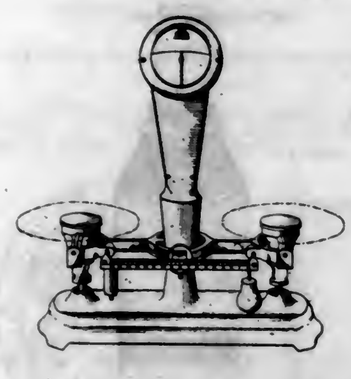


The ornamental design for a display board or similar article as shown.

73,129. BOTTLE. WILBERT A. HEYMAN, New York, N. Y., assignor to Heyman Process Corporation, New York, N. Y. Filed Apr. 8, 1927. Serial No. 21,507. Term of patent 14 years.

The ornamental design for a bottle, substantially as shown.

73,130. BUTTON. WILLIAM W. HOBE, New York, N. Y. Filed Mar. 16, 1925. Serial No. 12,742. Term of patent 8½ years.



The ornamental design for a button as shown.

73,131. CURTAIN-POLE FIXTURE. WILLIAM FREDERICH HOFMANN, Brooklyn, N. Y., assignor to H. L. Judd Co., New York, N. Y., a Corporation of Delaware. Filed Mar. 29, 1927. Serial No. 21,893. Term of patent 3½ years.

The ornamental design for a curtain pole fixture, as shown and described.

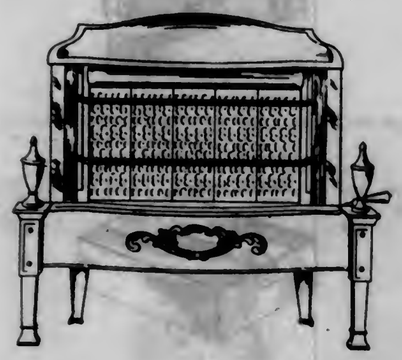
73,132. SCALE FRAME. AARON J. JACOBS and HARRY M. JACOBS, Brooklyn, N. Y. Filed May 22, 1926. Serial No. 17,817. Term of patent 14 years.

The ornamental design for a scale frame as shown.

73,133. COMB. GEORGE KOHLMEYER, College Point, N. Y., assignor to American Hard Rubber Company, Hempstead, N. Y. Filed Aug. 27, 1926. Serial No. 18,888. Term of patent 14 years.

The ornamental design for a comb, as shown and described.

73,134. RADIANT HEATER. LINDLEY S. LAWSON, Pittsburgh, Pa. Filed Apr. 11, 1927. Serial No. 21,532. Term of patent 3½ years.

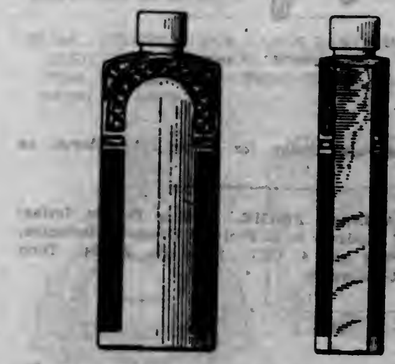


The ornamental design for a radiant heater, substantially as shown.

73,135. RADIANT HEATER. LINDLEY S. LAWSON, Pittsburgh, Pa. Filed Apr. 11, 1927. Serial No. 21,534. Term of patent 3½ years.

The ornamental design for a radiant heater, substantially as shown.

73,136. RADIANT HEATER. LINDLEY S. LAWSON, Pittsburgh, Pa. Filed Apr. 11, 1927. Serial No. 21,535. Term of patent 3½ years.

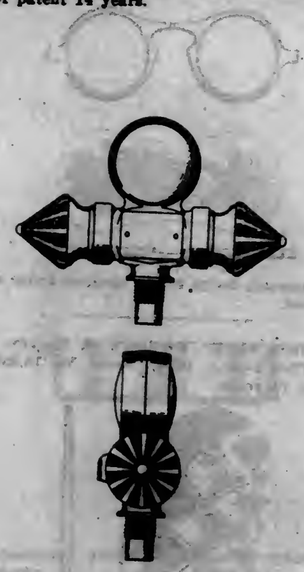


The ornamental design for a radiant heater, substantially as shown.

73,137. RADIANT HEATER. LINDLEY S. LAWSON, Pittsburgh, Pa. Filed Apr. 11, 1927. Serial No. 21,536. Term of patent 3½ years.

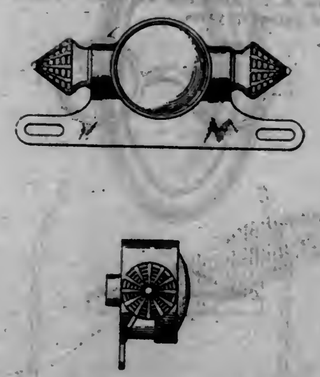
The ornamental design for a radiant heater, substantially as shown.

73,138. BOTTLE. JOSEPH S. LINDEMANN, New York, N. Y. Filed Dec. 1, 1926. Serial No. 19,892. Term of patent 7 years.



The ornamental design for bottle as shown.

73,139. OVERSHOE. FREDERICK H. MARTIN, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1926. Serial No. 17,058. Term of patent 14 years.



The ornamental design for an overshoe as shown.

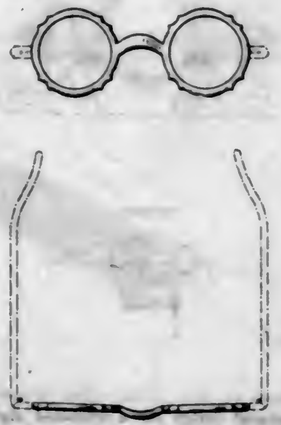
73,140. COMBINED SIGNAL CASING AND RADIATOR CAP. PATRICK MCMANAMAN and JULIUS NAMET, Cleveland, Ohio. Filed Dec. 10, 1926. Serial No. 20,018. Term of patent 14 years.

The ornamental design for a combined signal casing and radiator cap, as shown.

73,141. COMBINED SIGNAL CASING AND TAG HOLDER. PATRICK MCMANAMAN and JULIUS NAMET, Cleveland, Ohio. Filed Dec. 10, 1926. Serial No. 20,019. Term of patent 14 years.

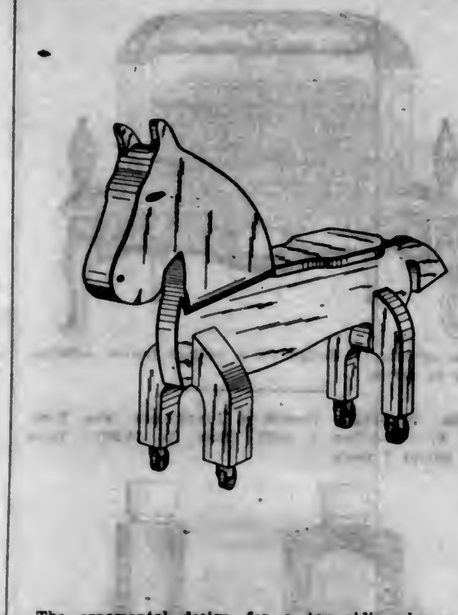
The ornamental design for a combined signal casing and tag holder, as shown.

73,142. EYEGLASS FRAME. GEORGE E. NEARNEY, Attleboro, Mass. Filed Mar. 23, 1927. Serial No. 21,287. Term of patent 14 years.



The ornamental design for an eyeglass frame as shown and described.

73,143. SHOE SOLE. LAURENCE M. OAKLEY, Trenton, N. J. Filed Feb. 1, 1926. Serial No. 16,358. Term of patent 14 years.

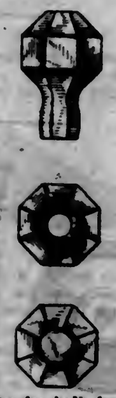


The ornamental design for a shoe sole as shown.

73,144. SPECTACLE FRAME. EMANUEL PAPPERT, Brooklyn, N. Y. Filed Dec. 24, 1926. Serial No. 20,145. Term of patent 7 years.

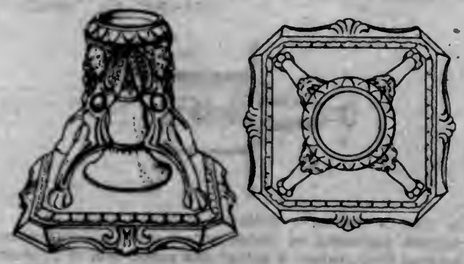
The ornamental design for a spectacle frame, as shown.

73,145. TOY RIDING HORSE. NEAL W. PLOOSTER, St. Paul, Minn. Filed May 23, 1927. Serial No. 22,188. Term of patent 14 years.



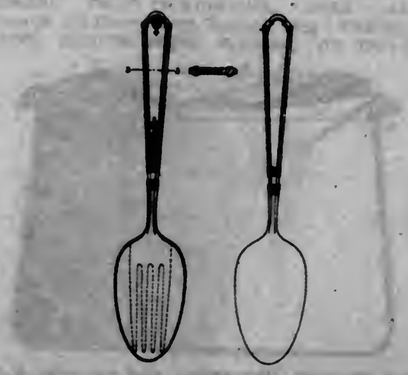
The ornamental design for a toy riding horse, as shown.

73,146. HAND-BAG FRAME. EDWARD POETER, Irvington, N. J., assignor to E. Poeter & Company, Irvington, N. J. Filed Apr. 4, 1927. Serial No. 21,454. Term of patent 3½ years.



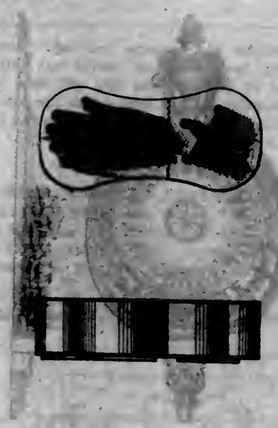
The ornamental design for a hand bag frame as shown.

73,147. BULB FOR HYDROMETER SYRINGES. WILLIAM A. REYNOLDS, Cleveland, Ohio, assignor to The Ohio Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 11, 1927. Serial No. 20,699. Term of patent 7 years.



The ornamental design for bulb for hydrometer syringe substantially as shown.

73,148. PEDESTAL FOR TABLE LAMPS OR SIMILAR ARTICLE. ALEXANDER H. RIMMING, New York, N. Y. Filed Feb. 24, 1927. Serial No. 20,872. Term of patent 3½ years.



The ornamental design for a pedestal for table lamps or similar article, as shown.

73,149. SPOON OR SIMILAR ARTICLE. AXEL H. STAF, Providence, R. I., assignor to Gorham Mfg. Company, Providence, R. I. Filed June 18, 1926. Serial No. 18,080. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

73,150. VEHICLE SIGNAL-LIGHT CASING. AUGUST SWANSON, New Lexington, Ohio. Filed Dec. 28, 1925. Serial No. 15,880. Term of patent 7 years.

The ornamental design for a vehicle signal light casing, as shown.

73,151. BRACKET BACK FOR LIGHTING FIXTURES. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 5, 1927. Serial No. 21,462. Term of patent 7 years.

The ornamental design for a bracket back for lighting fixtures, as shown.

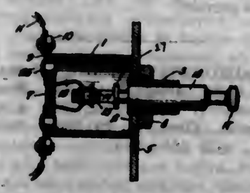
73,152. BRACKET BACK FOR A WALL LIGHTING FIXTURE. GUSTAVE E. VILLAREY, Leonia, N. J., assignor to Owen Walsh Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1927. Serial No. 21,541. Term of patent 3½ years.

The ornamental design for a bracket back for a wall lighting fixture substantially as shown.

73,153. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Apr. 15, 1926. Serial No. 17,806. Term of patent 3½ years.

The ornamental design for a lamp, as shown.

PATENTS

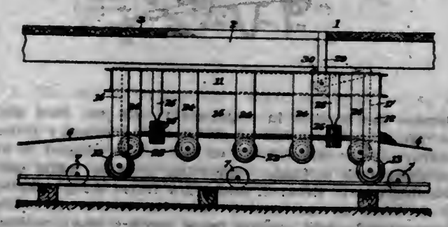


GRANTED JULY 26, 1927.

1,636,677. LAST. JAROSLAV BENDA, Prague, Czechoslovakia. Filed Oct. 11, 1924, Serial No. 743,140, and in Czechoslovakia Oct. 19, 1923. 2 Claims. (Cl. 12—133.)

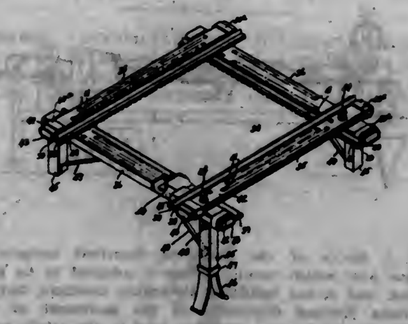
1. A boot last having a bottom surface comprising a middle bottom portion which is substantially flat in cross-section, and a substantially flat margin extending entirely around the last except at the inside of the waist, the margin being upwardly inclined relative to said middle bottom portion at an angle of substantially 20°, the width of the margin being substantially one quarter of the widest portion of the bottom surface of the last, substantially as and for the purpose set forth.

1,636,678. PUSH AND PULL SWITCH. BERNHART A. BENSON, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1925. Serial No. 16,398. 6 Claims. (Cl. 200—163.)



5. An electric switch including a casing, a pair of spring contact arms in the casing, an insulating member movable in said casing and having a contact, said member being loosely supported at one end by the arms, operating means for the member, and means to loosely connect the opposite end of the member to the operating means whereby to allow the member to move vertically and to rock so as to permit the contacts of the arms to make electrical contact with the contact of the member.

1,636,679. FRUIT-PICKING-PAIL COVER. ALBERT BURCH and RAY C. YOST, Medford, Oreg. Filed Sept. 8, 1925. Serial No. 55,034. 5 Claims. (Cl. 150—2.)

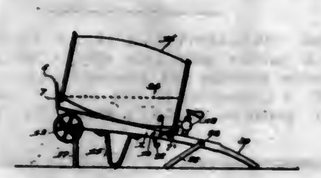


1. A cover for fruit picking pails comprising a web adapted to be detachably mounted across the top of a pail to check the fall of fruit, said web having a centrally disposed aperture arranged to admit said fruit into the pail; and elastic means secured upon the web to normally hold the web substantially in the plane of the top of the pail and adapted to be extended to permit said web to extend downwardly into the pail in inverted cone shape to deliver the fruit into the pail.

1,636,680. BELT-CONVEYER ARRANGEMENT. ESPEY TELLE CANNON, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 10, 1925. Serial No. 68,075. 9 Claims. (Cl. 198—56.)

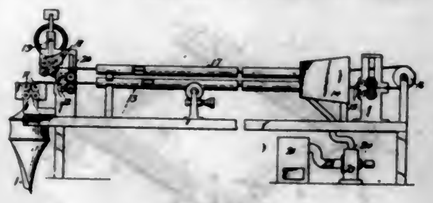
1. In combination, a storage bin, a traveling belt beneath said bin, a plurality of supports for normally supporting said belt, a hopper between said bin and belt having means enabling it to travel parallel to said belt under said bin, and means carried by and underneath said hopper for supporting and guiding said belt free of its supports where said belt passes under said hopper.

1,636,681. EMBROIDERY FRAME. PETER CARBONE, Brooklyn, N. Y. Filed May 28, 1926. Serial No. 112,230. 2 Claims. (Cl. 45—24.)



1. In an embroidery frame, a resilient jaw member, a lower leaf on the jaw member, teeth integral with the said leaf, an upper leaf member, a housing bent up on the upper leaf member forming a groove and a slidable sleeve on each end of the leaf members to maintain the jaw in closed position.

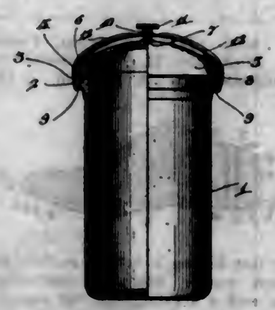
1,636,682. BARREL-EMPTYING HAND TRUCK. CLARENCE G. CARLSON, Spokane, Wash. Filed May 11, 1926. Serial No. 108,365. 3 Claims. (Cl. 280—54.)



1. In a barrel emptying hand truck device, a truck frame having a shoe adapted to be projected into supporting relation beneath the barrel, said frame having handles at one end thereof, fulcrum wheels at that end

of said frame opposite the handle end thereof on which said frame and barrel is adapted to be tilted from a substantially vertical to a substantially horizontal inclined position, means on said frame engaging the upper end of said barrel to hold the latter against slipping toward the handle end of said frame, said frame having fulcrum legs coacting with said wheels to support said barrel in a substantially horizontal inclined position whereby a major portion of the contents of the barrel may be drained off, said legs being sufficiently close to said wheels to be disposed substantially mid-way between the ends of the barrel, whereby the frame may be tilted on said legs to

dispose the handles in engagement with the floor and elevate the wheeled end of said frame, a primary frame support at the wheeled end of said frame adapted to be unfolded into a frame supporting position while said wheeled end is elevated, said truck frame being adapted to be lifted by the operator from the handle end while fulcruming on said primary frame support, and a secondary frame support on the handle end of said frame adapted to be un-folded into a frame supporting position to support said frame and its barrel in an inclined position whereby the balance of the contents may be drained off.

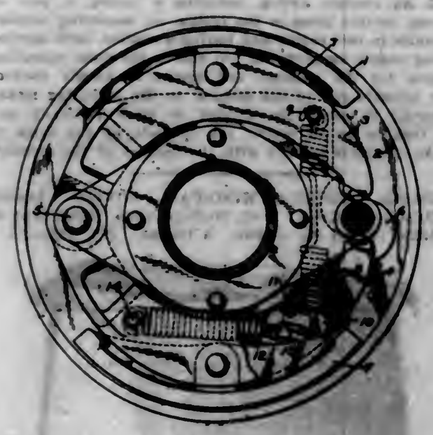


1,636,683. MACHINE FOR STRETCHING, DRYING, AND WINDING UP TUBULAR FABRIC. SAMUEL COHN, New York, N. Y. Filed June 17, 1924. Serial No. 720,547. 20 Claims. (Cl. 26—56.)

1. A device of the character described comprising means over which tubular fabric is adapted to be propelled, and means including stretching members, having surfaces directed diagonally of the movement of the fabric, for producing a diagonal lead in the fabric as it is propelled for the purpose set forth.

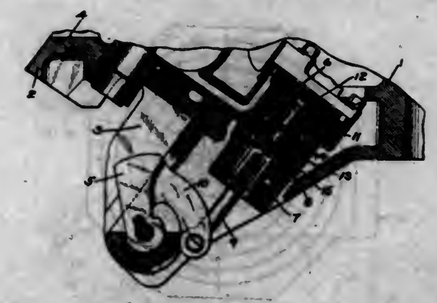
1,636,684. FRUIT JAR AND CLOSING MECHANISM. LEWIS O. CULVER, West Pittston, Pa., assignor, by direct and mesne assignments, to Culver-Bevan Fruit Jar Company, Wilkes-Barre, Pa. Filed Feb. 26, 1926. Serial No. 90,753. 2 Claims. (Cl. 215—88.)

1. A fruit jar, having an undercut annular shoulder adjacent its mouth and a flange of substantial height extending upwardly from the inner edge of the shoulder, in combination with a metallic clamping member having upwardly and inwardly extending end flanges adapted to engage the undercut shoulder and having reinforcing ribs formed in the body part, the ends of said body part adjacent said ribs being adapted to press against the cover of the jar, a threaded tubular aperture formed near the



center of the clamping member, and a thumb screw mounted in the threaded aperture and adapted to engage the cover of the jar.

1,636,685. PRODUCTION OF CATALYST CARRIER. CHARLES RAYMOND DOWNS, Yonkers, N. Y. Filed Dec. 9, 1926. Serial No. 153,734. 3 Claims. (Cl. 23—283.)

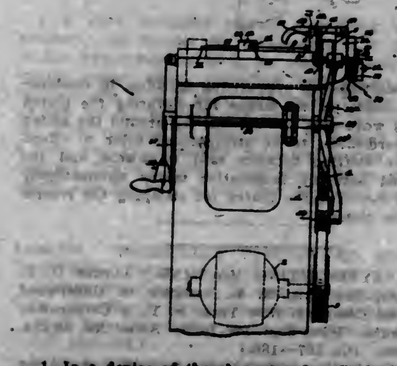


2. A catalyst carrier comprising particles of iron with an aluminum surface.

1,636,686. AUTOMOTIVE BRAKE. HOWARD B. ELLIOTT, Oakland, Calif., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1926. Serial No. 89,814. 3 Claims. (Cl. 188—78.)

1. In a vehicle brake, the combination with a brake drum and expansibe brake heads mounted within said drum, of a release spring having one end connected to one brake head and extending to the other brake head, a second release spring connected to said other brake head, and a bell crank lever connected to one end of each spring.

1,636,687. AUTOMATIC CAR COUPLER. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 18, 1924. Serial No. 726,736. 5 Claims. (Cl. 213—76.)



1. A car coupler comprising a coupler head, a locking latch pivoted to said head for engaging a surface on a counterpart coupler head to lock the coupler heads together, an operating stem operatively connected to said latch, and a piston head having a lost motion connection to said stem and operated by fluid under pressure for operating said stem.

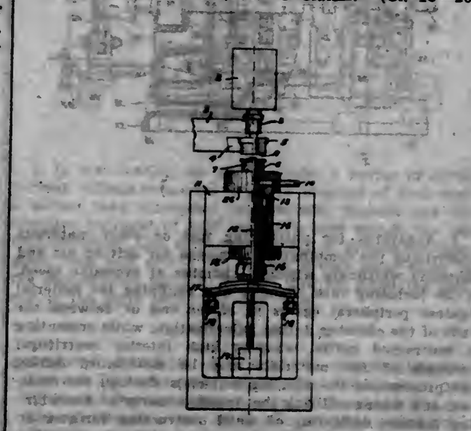
1,636,688. COMPOSITION AND METHOD OF PREPARING ROACH TABLETS. PARLEY F. HARRIS, Washington, D. C. Filed Aug. 3, 1926. Serial No. 126,924. 8 Claims. (Cl. 167—6.)

1. A roach and waterbug exterminator comprising a composition of substances deadly to insects consisting of boric acid and sodium fluoride, combined with bait substances, the whole being compressed into small, flat discs, suitable for placing in cracks, crevices and other places frequented by such insects.

2. The method of preparing a deleterious food for insects which consists in mixing a cereal flour and a sweetening substance with boric acid and sodium fluoride, adding moisture to the mass during agitation, distributing the moistened mass into a thin layer, heating the substance into crystallization, reducing the crystallized combination to powdered form, and compressing the same into tablet form.

1,636,689. APPARATUS FOR WINDING SPRINGS. STEWART H. HARTSHORN, Short Hills, N. J., assignor to Stewart Hartshorn Company, East Newark, N. J., a Corporation of New Jersey. Filed June 6, 1925. Serial No. 35,268. 18 Claims. (Cl. 153—67.)

1. In a device of the character described, the combination with a supporting framework, a rotatable mandrel journalled therein and driving means for the mandrel, of a travelling carriage adapted to advance parallel to the mandrel upon the winding of a spring upon the latter, and means arranged eccentric to the mandrel and frictionally engaging a spring along its length while on the mandrel.



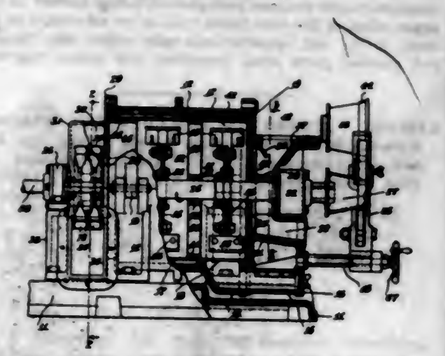
1,636,690. DRAFT-GEAR YOKE AND METHOD OF MAKING SAME. ARTHUR G. HAWKES and ELLIS W. TEST, Michigan City, Ind., assignors to The Pullman Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1922. Serial No. 535,794. 4 Claims. (Cl. 29—167.)

1. The method of making a draft gear yoke having a yoke head, top and bottom straps and an end loop from a single piece of stock which consists in stamping out a blank consisting of an intermediate strap portion with relatively wide and narrow heads, having complementary tongues and grooves in their outer edges, the wider head having oppositely directed lateral wings, punching slotted openings in said wings to provide key slots, folding over said wings to form the side walls of the yoke head, bending the intermediate strap portion upon itself to produce the loop of the yoke, to bring the smaller head of the blank into position upon the outer edges of the wings and to interlock said complementary tongues and grooves and welding the two ends of the strap together.

4. A draft gear yoke comprising a pair of forged steel side plates and a forged steel strap integral therewith, complementary tongues and grooves being formed in the upper edges of the side plates and in the side edges of the strap at its end opposite said side plates, the tongued and grooved parts being assembled and welded together.

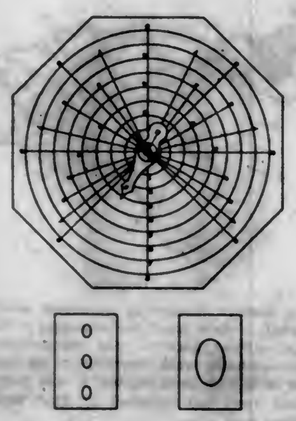
1,636,689. APPARATUS FOR WINDING SPRINGS. RICHARD M. HRAMBS, Grosse Pointe Village, and BIRGE W. LINDQUIST, Detroit, Mich. Filed Sept. 20, 1923. Serial No. 663,783. 5 Claims. (Cl. 10—20.)

5. In combination, a stationary cutting die, a reciprocable ram for forcing a blank against said die under positive pressure to partially trim the blank, and a spring



pressed plunger carried by said ram for subsequently forcing the blank against said die under resilient pressure acting in the same direction to further trim the blank.

1,636,692. FLEXIBLE COUPLING. HERMANN HILL, Fredonia, N. Y. Filed July 22, 1925. Serial No. 45,160. 26 Claims. (Cl. 64—96.)



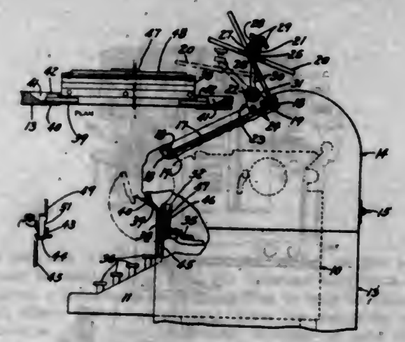
1. In a coupling, a driving member, a driven member, a first link element connected at one end to the driving member, a second link element connected at one end to the driven member, and resilient means associated with the free ends of the said elements, said link elements being bendable laterally to compensate for longitudinal play between the said members.

1,636,693. PULVERIZING MACHINE. PAUL ARTHUR HIRSCH, New York, N. Y., assignor to Furnace Engineering Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 20, 1924. Serial No. 751,119. 16 Claims. (Cl. 83—11.)

1. Apparatus for pulverizing fuel or other materials comprising the combination of means for driving air and material whirlingly within a chamber at excessive speed, walls enclosing such chamber and confining the material against peripheral egress at either end or between the ends of the chamber during pulverization, while presenting a contracted outlet, whereby high interior centrifugal pressure of the materials may be maintained during the progress of the whirling materials through the chamber, and means utilizing the dynamic energy of the whirling matters consisting of whirl obstructing surfaces arranged to cause the whirling matters to impact against such surfaces and to spread inwardly to said contracted outlet, whereby progressive advance and delivery of the material being pulverized may be maintained.

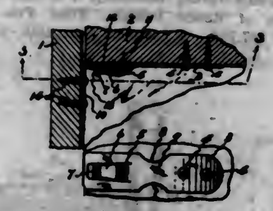
1,636,694. GAME. ROBERT JACOBS, Boston, and IRVING WILLIAM JACOBS, Brookline, Mass. Filed Feb. 19, 1927. Serial No. 169,511. 2 Claims. (Cl. 273—152.)

1. As a new article of manufacture, a card deck containing five sets of ten cards each on which there appear zeros, numbering from one to ten, and three cards on which single large zeros appear.



1,636,695. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,451. 18 Claims. (Cl. 197—128.)

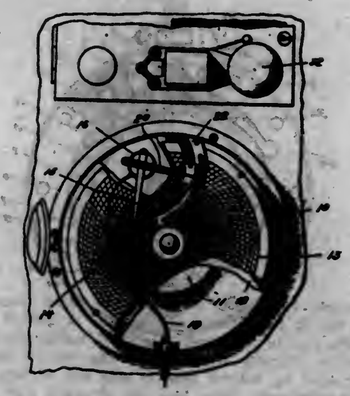
1. In a multiple-web typewriting machine, in combination, a revoluble platen, means for elevating the platen that permit work-webs and carbons fed around the platen with a record-sheet, to be straightened prior to effecting relative shifting between said work-webs and the carbons, and normally inoperative means automatically released in elevating the platen for clamping the record-sheet to the platen.



1,636,696. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 29, 1925. Serial No. 59,264. 13 Claims. (Cl. 197—186.)

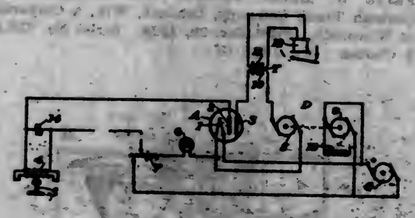
1. The combination with a sound-deadening casing for a typewriting machine, the casing having a glass window to render visible the platen of said machine, of a support extending along the window, and a glare-prevention shield overlying only a portion of said window, the shield being movable on said support from one region

to another along said window, whereby glare-causing rays of light are prevented from striking the glass, while other rays of light are permitted to pass by said shield and through the glass to the interior of the casing.



1,636,697. CLIP-DOOR CATCH. IVAR C. LARSON, East Providence, and GEORGE S. COOPER, Providence, R. I., assignors, by direct and mesne assignments, to Kisco Works, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Apr. 4, 1925. Serial No. 20,778. 2 Claims. (Cl. 292—76.)

1. A door retaining means, comprising cooperative members, one member for attachment to a door frame or the like consisting of a flat metallic body having a spring tongue struck therefrom and spaced from the external side of said body, said spring tongue having at its free end an upwardly and outwardly inclined portion, the other member for attachment to a door comprising a base and an outwardly projecting seeing having an enlarged free end portion receivable between said spring tongue and flat body of said first mentioned member.

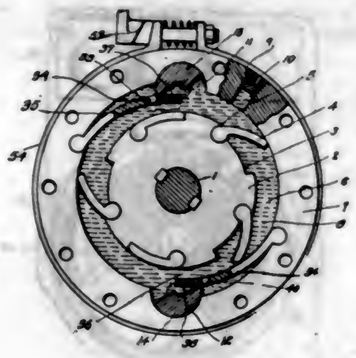


1,636,698. THERMALLY-CONTROLLED SIGNALING DEVICE. FREDERICK C. LEONARD and CHARLES W. RIESTAL, Providence, R. I., assignors to Leonard-Rooke Co., Providence, R. I., a Corporation of Rhode Island. Filed July 20, 1925. Serial No. 44,945. 7 Claims. (Cl. 200—56.)

1. In a signaling attachment for a recording device having a movable recording arm, a chart over which said arm operates, two pairs of spaced contacts, and contact means carried by said arm for engaging said pairs of contacts without appreciably affecting the operating movement of said arm for an indefinite range.

4. In a signaling attachment for an indicating device having a movable indicating arm, a pair of contact arms carried by said indicating arm, a contact positioned in the path of one of said arms to be engaged thereby and disengaged upon further movement of the arm, and a second contact insulated from the first and positioned to be engaged by the other of said contact arms upon the disengagement of the first contact with its contact arm.

1,636,699. AMPLIFYING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 1, 1924. Serial No. 723,602. 8 Claims. (Cl. 179—171.)

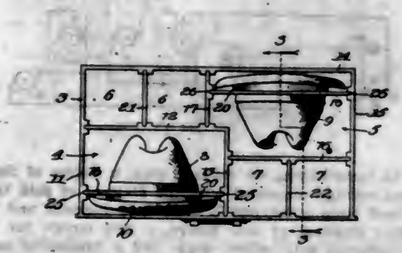


1. In combination, an electron tube, a source of direct current voltage connected with the filament of said tube, a ballast lamp interposed between said filament and the negative terminal of said source, a grid circuit for the tube including said ballast lamp, and a dynamotor energized from said source and having a turn ratio equal to the amplification constant of said tube for supplying voltage to the plate circuit of said tube.

1,636,700. HYDRAULIC CLUTCH TRANSMISSION. EDWARD H. MCKINNEY, Salina, Kans., assignor to The Hydraulic Specialty Manufacturing Company, Topeka, Kans., a Corporation. Filed Dec. 12, 1924. Serial No. 756,701. 1 Claim. (Cl. 192—58.)

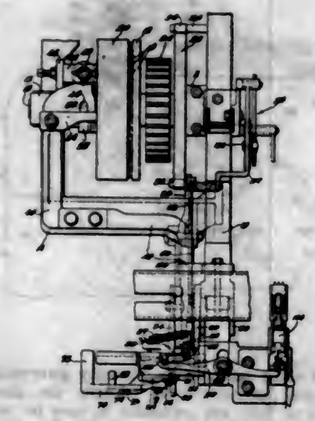
A device of the character described, comprising a cylinder having a liquid space, an impeller in the cylinder in spaced relation with the walls thereof and movable

in the liquid space, inwardly swinging wings carried by the cylinder, and actuators for the wings comprising



means for swinging said wings into any desired position comprising rotatable camming members having wing-receiving recesses therein.

1,636,701. PROCESS OF MANUFACTURING ACETIC ANHYDRIDE. RUDOLF MEINGAST and MARTIN MUDGAN, Munich, Germany, assignors to Consortium für Elektrochemische Industrie, Munich, Germany. Filed Feb. 21, 1925, Serial No. 10,953, and in Germany Feb. 25, 1924. 7 Claims. (Cl. 260—123.)



1. A process of manufacturing acetic anhydride which comprises passing acetic acid vapor in contact with an alkali metal phosphate heated to between 400° C. and 800° C.

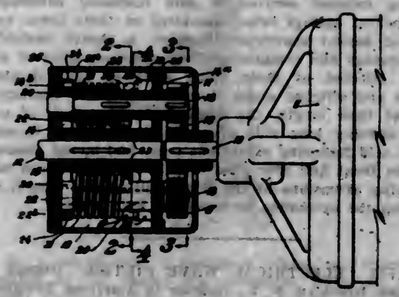
1,636,702. COMBINED HAT AND SHOE DRAWER. FRANK W. MEYER, Oshkosh, Wis., assignor to The Oshkosh Trunk Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Dec. 29, 1924. Serial No. 758,492. 3 Claims. (Cl. 190—13.)

1. A single drawer or compartment for trunks divided by vertical partitions into two offset hat compartments, each of a width less than the width of the drawer and former in part by the associated walls thereof, the partition of one compartment extending into the other compartment at their contiguous corners so that each compartment may have a length greater than half the length of the drawer taken up by said compartments, and vertical hat carrying slides in said compartments with the slides extending the full length of their respective compartments.

1,636,703. CLUTCH MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor to Hopedale Manufacturing Company, Milford, Mass., a Corporation of Massachusetts. Filed June 3, 1924. Serial No. 717,540. 9 Claims. (Cl. 192—17.)

1. A loom having, in combination, a frame, a crank shaft, a driving pulley, a friction clutch connecting the driving pulley to the shaft, a clutch lever, a toggle mechanism for operating the clutch lever to close the clutch and lock and hold it closed.

1,636,704. MECHANICALLY-OPERATED LEAD PENCIL. CHARLES H. PATTEN, Providence, R. I., assignor to Rex Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Feb. 12, 1927. Serial No. 167,740. 4 Claims. (Cl. 120—17.)

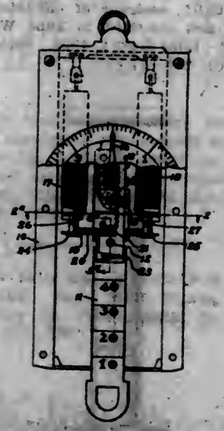


1. A mechanical lead pencil including a barrel portion, a lead guide tube mounted therein for reciprocating movement relative thereto, pivotally mounted jaws extending through the walls of said tube, and means for causing said jaws to grip and release a lead in said tube at opposite ends of a reciprocating stroke of said tube relative to said barrel.

1,636,705. SICK BED WITH MEANS FOR EASING NATURE. VINCENS FREITENTHALER, Betzdorf, Sieg, Germany, assignor to Mrs. Else Halbe. Filed Oct. 1, 1925, Serial No. 59,875, and in Germany Feb. 7, 1925. 1 Claim. (Cl. 5—90.)

A sick-bed with arrangement for easing nature comprising in combination with the bedstead and with the mattress a transverse shaft journalled in said bedstead, a hand wheel and a worm gear drive for revolving said transverse shaft, two cross bars, bearings on said cross bars, two longitudinal shafts mounted in said bearings, means for transmitting the revolving movement of said transverse shaft to said longitudinal shafts, a cut out portion of the mattress, means for connecting said cut out portion of the mattress with one of said longitudinal shafts so that when said shaft revolves in one sense said cut out portion of the mattress is removed from said mattress, a bed-pan, a frame on which said bed-pan is suspended in equilibrium, and a lever system connecting said frame with the other longitudinal shaft, so that when said hand wheel is rotated in anticlockwise direction said cut out portion of the mattress is removed and said bed-pan is inserted into the corresponding opening of the mattress and that when said hand wheel is rotated in clockwise direction said bed-pan is removed from the opening of the mattress and said cut out portion of the mattress is re-inserted into said opening of the mattress.

1,636,706. COUPLING. LOUIS REISFELD, Chicago, Ill. Filed Apr. 9, 1924. Serial No. 705,185. 15 Claims. (Cl. 64—96.)



1. The combination in a coupling for connecting aligning shafts, of mechanism carried entirely by said shafts and controlled entirely by the rotation of said shafts for transmitting motion from one shaft to the other, said mechanism comprising intermeshing relatively movable gear members and the connected parts adapted to compensate for inaccuracies in the alignment of said shafts and to permit relative angular movement of said shafts for storing energy when one of said shafts is started in operation.

1,636,707. ELECTRIC-CIRCUIT TESTER. WILLIAM P. ROBINSON and FRANKLYN P. ROBINSON, Kansas City, Mo. Filed Mar. 3, 1924. Serial No. 696,651. 1 Claim. (Cl. 175—183.)

A circuit tester comprising a broad flat supporting member having at one end two arms and at its other end a longitudinal handle, and having at one side between the handle and said arms a laterally extending bracket and at one side of said bracket an imperforate portion, two contacts on said arms respectively, two lamp sockets mounted one on said supporting member and adapted to receive a fuse, the other socket being mounted on the side of the bracket next to said imperforate portion and facing longitudinally with respect to said supporting member and adapted to hold a lamp bulb at one side of and wholly between and parallel with the longitudinal edges of said supporting member, and adapted to be covered by said imperforate portion, and conductive means connecting said sockets and said contacts.

1,636,708. SPRING SCALE. JOHN W. ROCKEFELLER, Jr., New York, N. Y., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Apr. 29, 1926. Serial No. 105,384. 13 Claims. (Cl. 265—69.)

1. A scale comprising a coil spring, a casing to which said spring is attached, a runner to which said spring is attached at the opposite end, an indicator responsive to the elongation of the spring under load, a flat spring connected at a free end to said coil spring, temperature responsive means for automatically varying the resiliency of said flat spring by varying its effective thickness.

1,636,709. METHOD OF PROVIDING CAKES OF SOAP WITH ADVERTISING MATTER. CAMILLA SCHMIDT, Berlin-Lichterfelde, Germany. Filed May 1, 1925. Serial No. 27,145, and in Germany June 13, 1924. 2 Claims. (Cl. 87—23.)

1. The method of providing cakes of soap with advertising devices which consists in forming an internal open-ended slot in said cake of soap, inserting at least one end of a flexible ribbon into said slot and compressing the soap to bring the opposite walls of said slot into contact with each other and into clamping engagement with the inserted end of said ribbon.

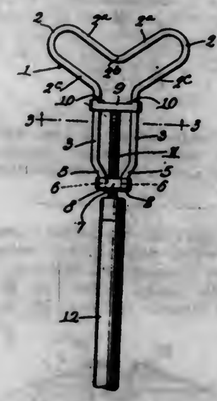
1,636,710. MANUFACTURE OF ALKALINE POTASSIUM COMPOUNDS. WILHELM SIEGEL, Berlin-Charlottenburg, Germany. Filed Oct. 21, 1925, Serial No. 63,918, and in Germany July 12, 1924. 12 Claims. (Cl. 23—185.)

1. The process of producing potassium compounds from silico-potassium-fluoride, which consists in treating the same with alkaline potassium compounds, thereby producing silica and potassium-fluoride and treating the fluoride with alkaline compounds of the alkali-earth metals.

1,636,711. TANK PUMP. RUSSELL CHARLES NICOLL, Wilmington, Calif., assignor of one-third to H. Stanley Benedict and one-third to June W. Hadley, Los Angeles, Calif. Filed Sept. 5, 1923. Serial No. 661,015. 3 Claims. (Cl. 221—77.)

1. An appliance of the character described, comprising a pump; a liquid container; a fitting connecting the pump and the liquid container, and formed with a bore for admitting air under pressure from the pump to the interior of the container above the level of the liquid therein, and also formed with a liquid outlet passage; an outlet pipe threaded into one end of said passage and extending into the container to deliver liquid under pressure therefrom, said fitting further provided with a horizontally extending lateral passage communicating with said bore; a valve seat formed at the intersection of the lateral passage and bore; a ball valve for said seat; a spring disposed in said passage for normally holding said valve upon said seat, and a stop cock in said lateral passage adapted for actuation to relieve the pressure in said container through said bore and passage.

1,636,712. SUSPENDER ATTACHMENT. ELMER E. PECK, Neosho, Mo. Filed Sept. 24, 1925. Serial No. 58,225. 6 Claims. (Cl. 241—19.)



1. In a device of the class described, the combination of two shoulder straps, an inverted V-shaped wire connecting member, said shoulder straps being looped about the sloping side portions of said wire connecting member, eyes formed in the outer ends of said wire connecting member, helical springs having their upper ends hooked into said eyes and extending downwardly therefrom in substantially parallel relation, a pair of fastening extensions for fastening to a garment, a second connecting member secured to said fastening extensions, said helical springs being connected at their lower ends to said second connecting member, a sheath enclosing said springs and comprising front and rear plies of material stitched at their upper ends to said shoulder straps and stitched along their lateral edges through a part of their length, the unstitched lower ends of said plies defining long side openings therebetween through which said fastening extensions pass, and means connecting the front and rear plies of said sheath between said fastening extensions at the lower end of said sheath for limiting the extensible movement of said springs.

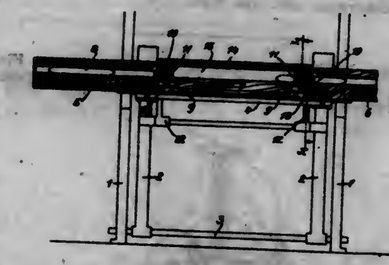
1,636,713. ELECTRICAL WAVE FILTER. GEORGE C. RZIEB, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1921. Serial No. 499,190. 6 Claims. (Cl. 178—44.)

1. A wave filter of the type having recurrent sections, said sections being of at least two different kinds such that a wave filter made up entirely of one kind of these sections will have a different attenuation frequency characteristic as compared with a wave filter made up entirely of another kind of the sections, but will have its critical frequencies the same and its impedance frequency characteristic the same as a wave filter made up entirely of the other kind of the sections.

1,636,714. MOP HANDLE. JOSEPH S. ROUX, Manchester, N. H. Filed Feb. 14, 1927. Serial No. 168,072. 3 Claims. (Cl. 15—153.)

1. In a device of the class described, a triangular looped head the outer side of which defines an inwardly projecting angle, the inner sides of the head merging into parallel side arms, a presser bar slidable on the arms toward and away from said angle, and cooperating with said angle to form a swab-grip, a screw threaded into a portion of the head and engaging the bar to advance the bar toward said angle, and a handle whereon the screw is fixed.

1,636,715. STYLUS MOUNTING FOR SOUND BOXES. CARL SCRABIC, Urbana, Ohio. Filed Mar. 28, 1921. Serial No. 456,048. 2 Claims. (Cl. 274—35.)



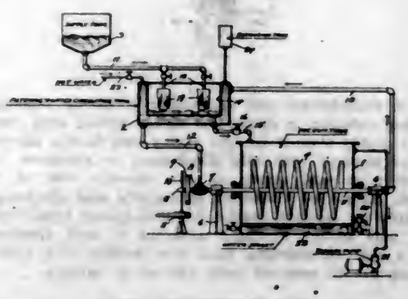
1. In a sound box, a casing, a stylus bar pivotally connected to the casing for movement about an axis disposed perpendicularly to the major and longitudinal axis of the stylus bar, said stylus bar being formed with a horizontally disposed projection extending from the stylus contiguous to its pivotal mounting and facing toward said casing, a substantially U shaped leaf spring having the opposite arm portions thereof arranged to engage respectively said casing and said projection, and a tensioning element passing through the intermediate portion of said spring and connecting the latter with said casing, one end of said spring engaging the under surface of said projection in order to produce a force tending to swing the upper end of the stylus bar in a direction away from said casing.

1,636,716. COMBINATION RECORDER AND REPRODUCER OF SOUND. CARL SCRABIC, Urbana, Ohio. Filed July 3, 1924. Serial No. 723,904. 3 Claims. (Cl. 179—100.1.)

1. A reproducing unit comprising a casing including a sound chamber, a diaphragm seated within said chamber, a stylus pivoted to said casing and having one end thereof engaged with said diaphragm, an armature connected with said stylus on the opposite side of the pivotal connection therewith as regards said diaphragm, a stationary magnet carried by said casing terminating in a pole section arranged adjacent to said armature, and a coil surrounding said pole section and excited by response to received radio current pulsations.

1,636,717. LAY STRUCTURE FOR POWER LOOMS. CASPAR SENN, Ruti, Switzerland, assignor to Maschinenfabrik Rüti, formerly Caspar Honegger, Ruti, Switzerland. Filed Aug. 12, 1925, Serial No. 49,819, and in Switzerland Aug. 23, 1924. 3 Claims. (Cl. 139—188.)

1. In a power loom, an oscillating shaft, a shuttle race, a rail, a supporting arm secured to each end of said rail and to the oscillating shaft, an angle bar secured to said rail, said bar being provided with vertical slots, and means adjustable in said slots for securing said shuttle race to said bar.



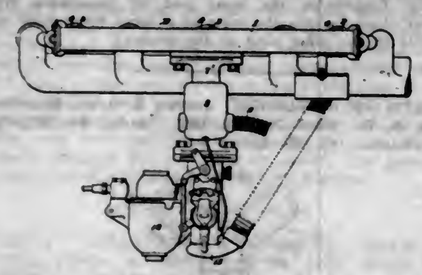
1,636,718. CONTROL MECHANISM FOR CALCULATING MACHINES. JOHN H. F. SILVER, Philadelphia, Pa. Filed May 27, 1925. Serial No. 33,192. 28 Claims. (Cl. 235—130.)

1. In a keyboard calculating machine, a plurality of rows of keys, locking means common to each of the keys for all rows and arranged with respect to the keys

so that the partial depression of any one of said keys will lock all the keys in the remaining rows upon release of pressure from said partially depressed key and means associated with said keys whereby the completion of downward pressure upon the partially depressed key will unlock all the locked keys.

1,636,719. PROCESS FOR REFINING BEE HONEY. WALTER W. SOMESFORD, Rosslyn, Va. Filed Aug. 24, 1922. Serial No. 584,027. 2 Claims. (Cl. 99—5.)

1. A process for refining bee honey consisting of first mixing the natural honey with a filtering substance and water and then running the mass through filter bags in the presence of heat, after which the filtered mass is introduced into a vacuum tank and stirred by a heated agitator until the mass attains a predetermined consistency at which time the vacuum is relieved and the honey withdrawn from the tank.

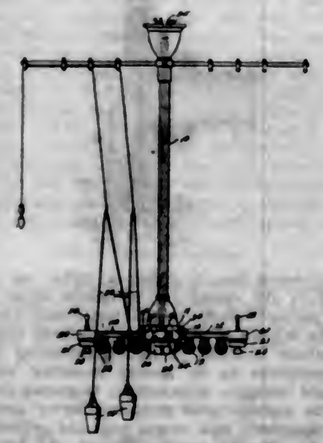


1,636,720. GARTER. JAMES R. STARBUCK, Tampa, Fla. Filed May 3, 1926. Serial No. 106,527. 1 Claim. (Cl. 241—5.)

A garter of the character described comprising an open band formed from a single piece of resilient material and including spaced coils, means for connecting the adjacent ends of the garter together, and each coil being curved to provide one side of the garter with a concaved surface.

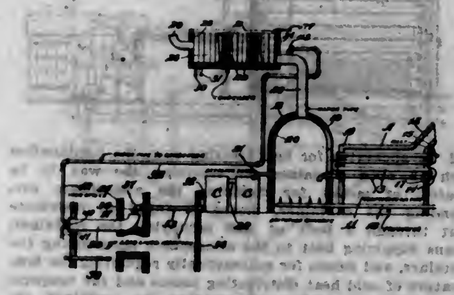
1,636,721. MANIFOLD. JOHN W. SWAN, Stamford, Conn. Filed Sept. 17, 1921. Serial No. 501,314. 8 Claims. (Cl. 123—52.)

1. A manifold comprising a horizontally disposed body portion, a supply pipe adapted to discharge into the bottom of said body portion, the juncture between the supply pipe and the body portion being at the distributing zone of the manifold and devoid of curved corners in the lines of travel of the fuel in the various directions, outlet branches offset from the body portion of the manifold adapted to lead to cylinders, the junctures between the branches and the body portion at the inner side of any turn being devoid of any curvature in the line of travel of the fuel, and the wall of the body of the manifold opposite the supply inlet thereinto being



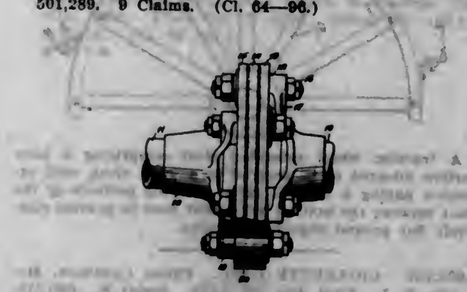
coincident with continuations of said wall which constitute the upper wall of adjacent oppositely extending leads of the body portion from the distributing zone.

1,636,722. SKIVING MACHINE. CHARLES EDWIN THIBAUDEAU, Ivry-sur-Seine, France, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 5, 1925. Serial No. 48,384. 9 Claims. (Cl. 164—70.)



1. A device of the class described having, in combination, a hub adapted to be fastened to a shaft and having a machined surface facing outwardly from the end of the shaft to serve as a seat, a rigid, dished knife having a machined surface to fit the seat, and a rigid clamping member adjustable on the hub and shaped to bear at separated localities on the knife.

1,636,723. CHANDELIER. ERNEST UNGER, New York, N. Y. Filed Oct. 28, 1924. Serial No. 746,264. 19 Claims. (Cl. 132—36.)



1. A chandelier for supporting a plurality of electric heaters in operative position relative to a person's head in the process of waving the hair on the head, including a depending support, a plurality of horizontally disposed hollow arms extending radially from the lower part of said support; a plurality of replaceable units secured in spaced relation to each of said hollow arms and positioned exteriorly of and below the same, each of said units provided with means constituting sockets for receiving electric attachments from the heaters and electric leads extending down through said support, and through said hollow arms into said units.

1,636,724. METHOD OF CONCENTRATING SLUDGE ACIDS. ARTHUR A. VINEYARD, Wood River, Ill. Original application filed Sept. 9, 1925, Serial No. 55,324. Divided and this application filed Nov. 27, 1925. Serial No. 71,703. 3 Claims. (Cl. 23—169.)

1. A method of concentrating sludge acid containing organic matter consisting in preheating the acid, carrying it into an agitating tank, maintaining the temperature of the acid therein and agitating the acid to break up organic matter, carrying the liquid to a settling tank to thereby separate the organic matter from the acid, conducting the acid free from organic matter to a heater and while still hot concentrating the acid.

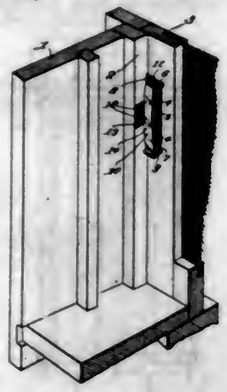
1,636,725. FLEXIBLE DRIVING COUPLING. HIRAM L. WALKER, Cleveland, Ohio, assignor to Chandler Cleveland Motors Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 17, 1921. Serial No. 501,289. 9 Claims. (Cl. 64—26.)

1. In a flexible shaft, the combination of a flexible driving member and a flexible driven member having opposing faces normally disposed in parallelism and adapted to be moved relative to each other, a bolt connecting the members and passing through said faces, a washer having an aperture through which the bolt is passed, said washer positioned between and engaged on opposite sides by said faces, said washer normally having a less thickness at the aperture than at a point remote from the aperture and progressively converging in cross-section from said remote point towards the aperture whereby the bolt in drawing the members together will cause the faces to press on the washer and crowd the flexible material of the driving and driven members towards the bolt and thus tend to eliminate clearance.

1,636,726. HARNESS FRAME. EMIL WEIBEL, Montreal, Quebec, Canada. Filed Apr. 24, 1926. Serial No. 104,379. 2 Claims. (Cl. 139—92.)

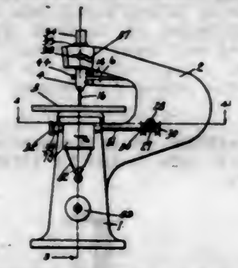
1. A heddle frame comprising, in combination, with upper and lower structures each including a horizontally elongated heddle-supporting element and said upper and lower structures also including abutments close to and respectively above and below such elements thereof, links each having its ends formed with return portions and thus hook-shaped, the hooks of each link respectively receiving said elements and each return portion thereof having a length exceeding the distance between the corresponding element and abutment.

1,636,727. INFUSER. ELIAS WILLNER, New York, N. Y. Filed Aug. 6, 1926. Serial No. 127,550. 5 Claims. (Cl. 53—8.)



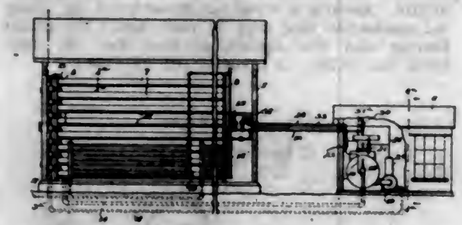
1. A pot cover comprising a convex circular lower plate provided with an inreaching annulus to seat upon a pot, a convex plate engaged at its edge with the first named plate to extend spacedly thereover, a plunger movable through said plates, said plunger having a non-conducting knob, a spring in said plunger to retain it normally raised, and a perforate cup removably engaged with said plunger below said plates.

1,636,728. SCREEN FASTENER. ISAIAH W. WOLF, Mobile, Ala. Filed Jan. 13, 1926. Serial No. 81,032. 8 Claims. (Cl. 292—210.)



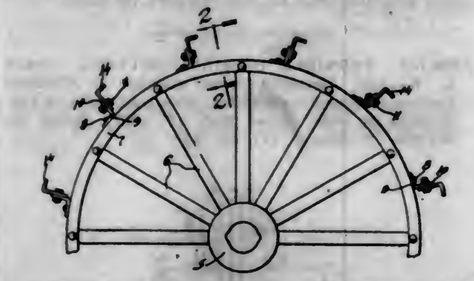
1. The combination with a window casing and a frame that is designed to be removably sustained on the casing, said means comprising a plate fixed on the inner stile

of the frame, a second plate hingedly secured to the first mentioned plate, an angle bracket fixed on the side of the casing against which the last mentioned plate



is designed to be swung and to contact therewith, and means for latching the free end of the last mentioned plate to the first mentioned plate.

1,636,729. FILING MACHINE OR JIG SAW. BENSON A. YARRINGTON, Grand Rapids, Mich. Filed Apr. 2, 1926. Serial No. 99,409. 15 Claims. (Cl. 29—76.)

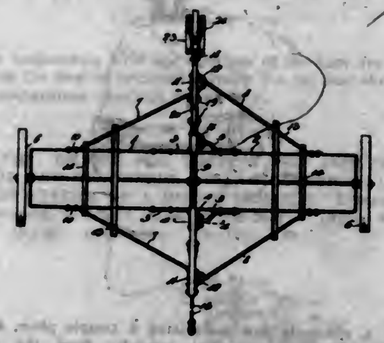


1. In a structure of the class described, the combination with a suitable base and rigid supporting frame arm, of upper and lower clamps, parallel arms extending from the said clamps and connected at their rear ends by a cross-shaped connecting arm, a vertical upwardly projecting arm parallel to the cross-shaped connecting arm with a parallel link connecting the upper end thereof to the said upper clamp, a horizontal link slotted at its forward end disposed parallel to the cross arm of the said connecting arm and pivoted at its rear end to the said frame arm, upwardly extending parallel links connecting the cross portion of the said cross arm to the said horizontal link, an adjusting disk with a wrist pin engaging the said slot supported on a suitable shaft stub in the said frame arm, a worm gear on the said shaft, a worm for adjusting the same with an axially disposed rod extending to the front of the said machine, a vertical guiding recess in the upper end of the said frame arm, a guiding slideway adjustable therein, a slide bar for the said upper clamp playing freely in the said adjustable slideway, a spring holding said slide bar yieldingly towards the front of the machine, a downwardly depending shank from the said lower clamp, a driving disk with a peripheral cam and adjustable wrist pin, a pitman connecting the said wrist pin to the said shank, a slide connected to the said shank, a yieldingly adjustable slideway, a support for the said slideway adjustably connected to the interior of said machine, springs for holding the said slideway yieldingly towards the front of the machine, a pair of cam levers disposed on the front of said support, a lever with a cam roller to cooperate with the peripheral cam of said disk, and connections from said lever to the cam levers whereby the slideway is moved to the rear on the upstroke, coacting as specified.

1,636,730. APPARATUS FOR REGULATING WAX-SWEATING SYSTEMS. SAMUEL S. ANDURSKY, Rochester, N. Y., assignor to The Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Oct. 9, 1923. Serial No. 667,499. 3 Claims. (Cl. 196—20.)

2. In apparatus for heat-treating wax, the combination with an open container for receiving the wax to be treated, of means for confining the atmosphere surrounding the container, means arranged to distribute heat through a body of wax occupying the container, means supplying heat to the atmosphere surrounding the container, and means for automatically regulating the temperature of said heat distributing means and the temperature of the atmosphere surrounding the container, operative to increase the temperature of the heat distributing means at a greater rate than the temperature of the surrounding atmosphere.

1,636,731. TRACTION-WHEEL CLEAT. WILLIAM C. ANDERSON, Bark River, Mich. Filed Sept. 25, 1926. Serial No. 137,756. 1 Claim. (Cl. 301—44.)

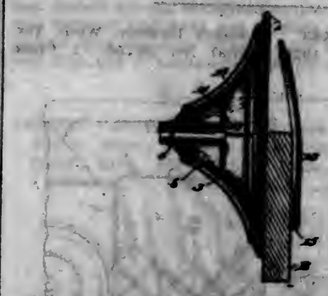


A traction wheel extension cleat comprising a body portion adapted to be secured to a main cleat, said extension having a notched outer end, the portions of the cleat between the notches being bent over to provide relatively flat ground engaging portions.

1,636,732. CIGARETTE CASE. PEDRO CABANGIS, Manila, P. I. Filed Aug. 27, 1923. Serial No. 659,619. 3 Claims. (Cl. 206—41.)

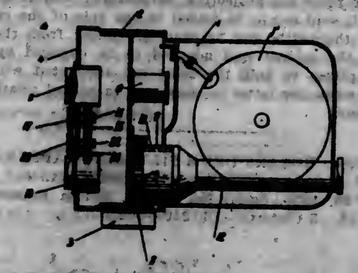
1. In a cigarette case adapted to receive a full package of cigarettes, a rigid main body portion being open at one side and of greater length than the package, a major cover portion of less length than the package for partially closing the open side of the main body portion, a minor cover portion forming a closure for the remainder of the open side of the main body portion, and securing means for retaining the cover portions in closing relation at the open side of the rigid main body portion.

1,636,733. TRACTOR ATTACHMENT. EDGAR GARDNER CALKINS, Morland, Kans. Filed Mar. 6, 1926. Serial No. 92,855. 1 Claim. (Cl. 97—235.)



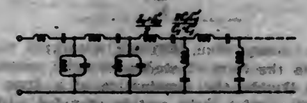
A device of the class described comprising a central beam, a substantially rectangular frame rigidly fastened to the central portion of the beam on one side, a second duplicate frame hingedly connected to the other side of the beam the ends of said frames resting upon and being supported by said beam, a guide wheel equipped trailer carried by the rear end of the beam, main supporting wheels for the outer ends of said frames, and a tractor hitching device associated with the forward end of the beam.

1,636,734. POWDER CHARGER. ALVA W. CALLIS, Baxter Springs, Kans., and FRANK E. SMOOTS, Zincville, Okla. Filed Oct. 2, 1926. Serial No. 139,110. 1 Claim. (Cl. 86—21.)



A device of the class described comprising a cylinder, a pair of rods fastened to one end of the cylinder, a cross piece connecting the outer ends of the rods together and forming a handle, a tamper member of tubular shape extending into the cylinder and having longitudinal grooves therein for receiving the rods and a latch on the outer end of the said member for engaging the cross piece.

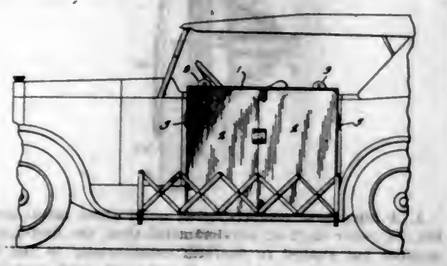
1,636,735. PORTABLE LAMP BASE. ANDREW J. CARMICHAEL, New Haven, Conn., assignor to The Greist Manufacturing Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 17, 1923. Serial No. 632,740. 5 Claims. (Cl. 240—53.)



1. A lamp base comprising an outer sheet metal member, an inner shell of heavier metal than the first-named member but shaped to conform substantially to the latter, a stem extending centrally through said members, and a washer separate from, but bearing at its periphery against the interior of said shell, said stem extending through said washer and having its end secured thereto.

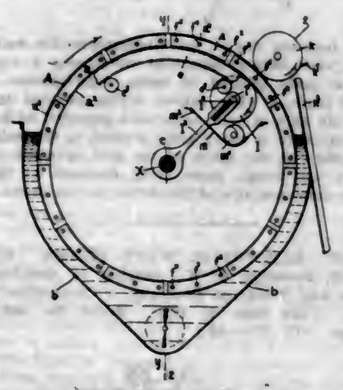
1,636,736. FOCUSING DEVICE FOR CINEMATOGRAPHIC AND PHOTOGRAPHIC VIEW-TAKING APPARATUS. ANDRÉ LÉON VICTOR CLEMENT DEBRIE, Paris, France. Filed Apr. 12, 1926, Serial No. 101,512, and in France Apr. 25, 1925. 6 Claims. (Cl. 95—44.)

1. A focusing device for cinematographic and photographic view taking apparatus comprising a supporting collar, a plate secured to same, object-glasses secured to said plate, a view taking device adapted to rotate around its axis in said collar and provided with a view taking aperture, a rough glass secured to the said device and parallel to the plane of the said aperture, the said aperture and rough glass being disposed at the same distance from the axis of the device as the object glasses.



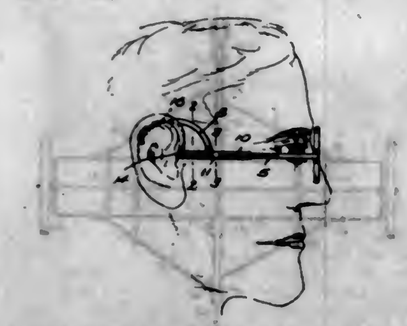
1,636,737. ELECTRICAL WAVE FILTER. EGINHARD DIETZE, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 8, 1921. Serial No. 499,191. 6 Claims. (Cl. 178—44.)

1. A band filter having sections of different type, the sections of one type being such that a complete filter of sections of that type will have a different attenuation



frequency characteristic but the same cut-off frequencies as a filter whose sections are all of another type involved, whereby the composite filter combines the advantages of the different attenuation frequency characteristics.

1,636,738. CABINET. MARGARET DUMONT, Waco, Tex. Filed Apr. 18, 1925. Serial No. 24,250. 1 Claim (Cl. 190—12.)



A camper's outfit comprising in combination a cabinet, doors closing the front of the cabinet, spaced hook-like elements arranged vertically on the rear wall of the cabinet and having their corresponding upper ends projecting above the cabinet and provided with openings whereby the cabinet can be suspended from an elevated support, a table top including foldable supporting legs, slotted plates secured to the under side of the table top and projecting beyond one end thereof to receive said hooks when the cabinet is supported upon the ground with the table top projecting horizontally therefrom, and to permit said top to be folded at one side of the cabinet parallel therewith, and brackets depending from the bottom of the cabinet and adapted to be engaged by said slotted plates to hold the table top associated with the cabinet when the latter is supported in spaced relation to the ground.

1,636,739. ROTARY-DRUM-FILTERING APPARATUS. LEON HERTENBEIN, Levallois-Perret, France. Filed June 29, 1925, Serial No. 40,429, and in France July 2, 1924. 5 Claims. (Cl. 210—202.)

1. In a rotary drum filtering apparatus for the extraction, in the form of sludge, of solid substances suspended in liquids, the combination of a drum having a cylinder of annular cross section provided with a filtering surface upon its external and internal faces, suction means to cause the solid matter suspended in the liquid to adhere in the form of sludge to both filtering surfaces over the major part of the circumference of the drum, pressure means, acting on the emerged area of the drum upon the solid matter adhering to the filtering surfaces and arranged to detach such matter therefrom, two rollers arranged parallel to and facing one another, one on the exterior and the other in the interior of the drum, in contact with the external and internal filtering surfaces of the drum and arranged to remove the sludge therefrom.

1,636,740. SPECTACLES. DENNIS E. HICKEY, Chicago, Ill. Filed Feb. 16, 1926. Serial No. 88,454. 5 Claims. (Cl. 88—52.)

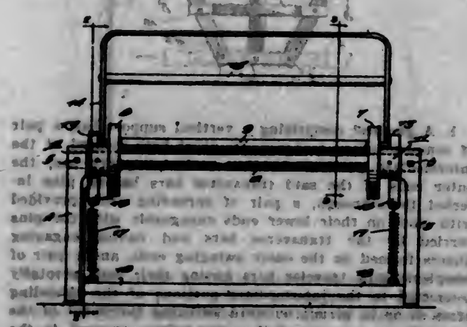
1. A spectacle bow comprising a temple piece, an ear abutting portion extending laterally from the temple piece and adapted to engage the forward portion of the ear, and an ear embracing piece movably carried by said ear abutting portion whereby it may be actuated to embrace the rear portion of the ear.

1,636,741. WIRE-TYING TOOL. FERDINAND WALTER HUEMPFNER, Chicago, Ill., assignor of one-half to Mid-States Gummed Paper Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1923. Serial No. 643,125. 1 Claim. (Cl. 140—117.)

A wire loop tying-tool comprising a handle having a goose neck shank formed at one end thereof, and having wire loop engaging members provided with rounded ends extending in alinement on opposite sides of the end of said shank and substantially perpendicular thereto.

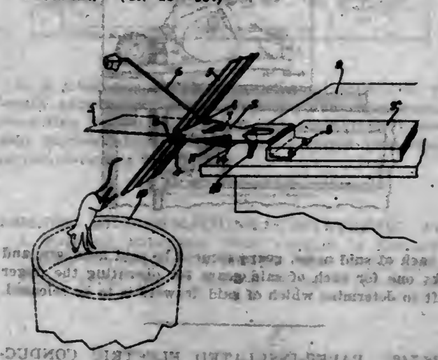
1,636,742. OIL CUP. HARRY L. HUNT, Bigelow, Mo. Filed Feb. 10, 1926. Serial No. 87,885. 1 Claim. (Cl. 184—60.)

An oil cup comprising an oil retaining receptacle, an outlet tube disposed vertically in the receptacle and having lateral openings in its upper end, and a cylindrical cap mounted on said tube and having openings in its



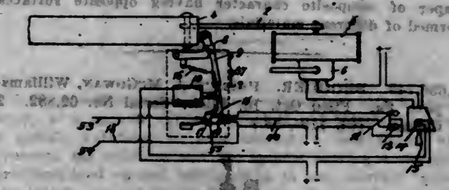
flange cooperating with the openings of the tube for controlling the flow of lubricant through the cap and through said cooperating openings of the tube.

1,636,743. DEVICE FOR TESTING THE INDUCTION COIL AND CONDENSER OF AN ELECTRICAL IGNITION SYSTEM OF A MOTOR VEHICLE. EDWARD B. JACOBSON, Pittsfield, Mass. Filed Mar. 5, 1925. Serial No. 13,130. 10 Claims. (Cl. 175—183.)



10. A portable device for the purpose described comprising in combination with a metallic casing, a handle part attached to the casing, a part attached to the casing for grounding the same, a make and break device in the casing, means for operating said device, spark gap terminals electrically connected to the make and break device, a condenser in the handle, and means in the handle part for detachably connecting and disconnecting the condenser to the make and break device, as described.

1,636,744. METAL-WORKING IMPLEMENT. CHARLES JOHANSON, Dover, N. J. Filed Aug. 14, 1925. Serial No. 50,297. 4 Claims. (Cl. 153—46.)

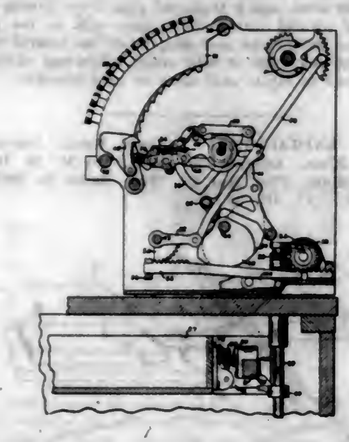


1. In a sheet metal bending machine, a pair of standards, a cylindrical mandrel having its opposite ends fixed to said standards, a plate parallel to and spaced from and having its ends fixed to said mandrel, a pair of disks rotatably mounted on opposite ends of said mandrel and having a radial slot through each, a bending roller having its ends slidably mounted in and projecting through said slots, and a U-shaped yoke lever having the legs thereof pivoted intermediate their ends to the outside faces of said disks and adapted to be rotated into contact with the ends of said roller projecting through said slots and to rotate said disks on said mandrel.

1,636,745. ANIMAL TRAP. ALFRED ERICK JOHNSON, Duluth, Minn., assignor of one-half to M. M. Berg, Duluth, Minn. Filed Mar. 22, 1926. Serial No. 96,553. 4 Claims. (Cl. 43—69.)

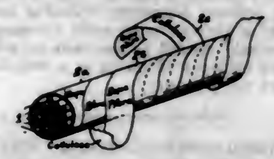
1. A base member for the purpose described comprising a bendable metal sheet stamped and bent to provide transversely opposed depending stiffening and abutment elements, and a central transversely arranged depending tongue opposingly related to the ends of said abutment elements, said elements extending in a direction generally lengthwise of the member.

1,636,746. DOOR-CONTROL SYSTEM. CARL S. KLUMPP, Brooklyn, N. Y. Filed Jan. 11, 1922. Serial No. 528,473. 4 Claims. (Cl. 105—341.)



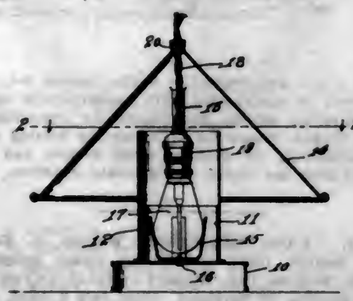
1. In a car door control, a locking system for vehicle doors, and in combination with pneumatically operated door operating devices and electrically controlled door locking devices, means for operating the locking devices independently of the door operating devices, and means for indicating the locked and unlocked condition of the doors.

1,636,747. CASH REGISTER. WALTER J. KREIDER, near Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed July 2, 1924. Serial No. 723,689. 3 Claims. (Cl. 235—22.)



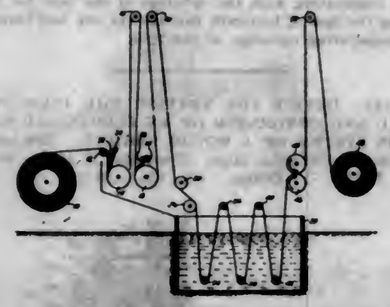
1. In a cash register, the combination of a plurality of cash drawers, a finger shaft the position of which determines which of said drawers will be released, a trans-

verse shaft adapted to drive said finger shaft, a plurality of arms fast on said shaft, studs projecting laterally from said arms, a plurality of members loose on said shaft one



for each of said arms, gears secured to said members, and racks one for each of said gears for operating the finger shaft to determine which of said drawers is to be released.

1,636,748. PAPER-INSULATED ELECTRIC CONDUCTOR. JOHN R. LONG, Tarentum, Pa. Filed Jan. 12, 1926. Serial No. 80,814. 5 Claims. (Cl. 173—264.)

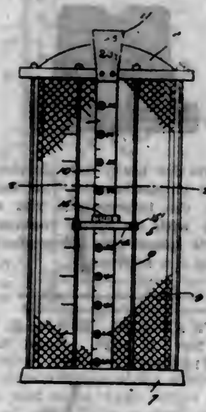


1. An electric conductor having a paper insulating envelope formed of one or more spirally wound layers of paper of composite character having opposite surfaces formed of different materials.

1,636,749. BROODER. PATRICK A. MCGOWAN, Williamsport, Pa. Filed Oct. 16, 1926. Serial No. 62,882. 2 Claims. (Cl. 119—33.)

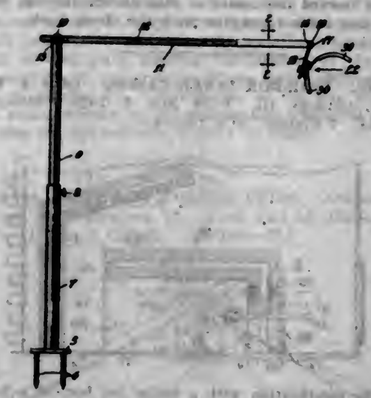
1. A brooder of the character described comprising a supporting base, a sleeve provided upon the upper side thereof, a tubular member telescopically associated with the sleeve, means for retaining an incandescent lamp bulb within the sleeve and tubular member, and a canopy supported in slight spaced relation upon the upper periphery of the tubular member for deflecting the heat rays generated by the incandescent lamp bulb and emitted from the sleeve and tubular member around the supporting base.

1,636,750. MANUFACTURE OF PREPARED ROOFINGS. JOHN E. MILLER, Marseilles, Ill., assignor to Certain-teed Products Corporation, New York, N. Y., a Corporation of Maryland. Filed Mar. 23, 1926. Serial No. 96,681. 13 Claims. (Cl. 91—68.)



1. The process of saturating felt for the manufacture of roofing material and the like, which consists in applying to one face only of the felt fluid saturant heated to a temperature sufficiently high rapidly to vaporize any moisture in the felt and to permit rapid absorption by the felt, carrying the felt a sufficient distance through the air to permit the saturant, by its heating and penetrating action, to drive the moisture and air from the other face of the felt, and then applying saturant to the other face of the felt.

1,636,751. GAMBREL. DAVID L. MILLSAP, Powersville, Mo. Filed July 30, 1925. Serial No. 47,105. 2 Claims. (Cl. 17—44.)

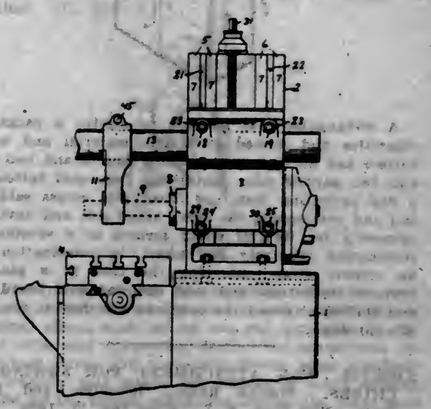


1. A gambrel comprising a vertical support bar, a pair of complementary transverse support bars secured at the intermediate portions to the vertical support bar, the outer ends of the said transverse bars having pins inserted therethrough, a pair of spreading arms provided with slots on their lower ends engageable with the pins carried by the transverse bars and having engaging fingers formed on the outer swinging ends, and a pair of complementary traveler bars having their ends pivotally connected to the intermediate portions of the spreading arms so as to permit outward swinging movement of the arms, the lower ends of the arms being arranged, in the outer horizontal position of the arms, to engage the central support bar so as to be firmly wedged against further movement.

1,636,752. INDICATING DEVICE FOR VISIBLE-GASOLINE TANKS. WILLIAM E. MITCHELL, Anderson, Mo. Filed Apr. 1, 1927. Serial No. 180,822. 1 Claim. (Cl. 116—135.)

In combination, a visible gasoline tank including a pair of spaced parallel bolts, a strip disposed between the bolts, means for holding the strip in place, a slide comprising an arcuate bar having curved fingers fixed to engage with the bolt and from its upper edge at the center merging therefrom an extension, one end of which merges into an overlapping portion, said extension and overlapping portion straddling the strip.

1,636,753. TRAINING APPARATUS. HERMAN PARKER OLCOTT, Wallingford, Conn. Filed July 15, 1924. Serial No. 726,111. 6 Claims. (Cl. 273—35.)

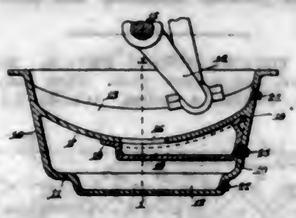


6. A device of the character described comprising telescopic sections one of which is adapted to assume a vertical position and another of which is adapted to be moved to a horizontal position, means for locking said sections together and for permitting horizontal adjustment of one section with respect to the other, a support attached to that section which is adapted to assume a horizontal position, a head-gear comprising a plate, adjustable arms carried by said plate, and means for slidably and pivotally connecting said plate to said support.

1,636,754. FOOT-MEASURING DEVICE. MICHAEL J. O'SULLIVAN, Los Angeles, Calif. Filed Mar. 1, 1926. Serial No. 91,402. 8 Claims. (Cl. 33—3.)

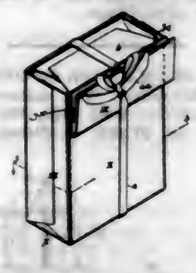
1. A measuring device comprising an expansible foot length gage including a pantograph, and supplementary measuring devices located on said pantograph whereby said supplementary devices will be moved proportional to the movement of said gage.

1,636,755. MILLING-MACHINE CONSTRUCTION. FRED A. PARSONS, Milwaukee, Wis., assignor to Kearney & Trecker Corporation, West Allis, Wis. Filed May 2, 1925. Serial No. 27,393. 5 Claims. (Cl. 90—16.)



5. In a milling machine, the combination with a headstock, of a spindle carrier adjustably clampable thereto, a spindle rotatable in said carrier, a tool arbor, an overarm, the overarm and the spindle bearing a definite predetermined spaced relationship to one another when the spindle carrier is clamped to the headstock, a pendant secured to the overarm and having a bearing for the tool arbor to maintain the tool arbor and the overarm in the same definite predetermined spaced relationship that exists between the spindle and overarm in the spindle carrier, means for clamping the pendant to the overarm, and means for simultaneously clamping the overarm in the spindle carrier and the spindle carrier to the headstock.

1,636,756. CRANK CASING. WALTER B. POHLE, Lynn, Mass., assignor of one-third to Parker B. Haskell, Lynn, Mass., and one-third to Susan V. Russell, Chelsea, Mass. Filed Dec. 26, 1925, Serial No. 77,843. Renewed Dec. 7, 1926. 4 Claims. (Cl. 184—13.)



1. A crank casing having formed integral therewith a plurality of splash troughs extending transversely there-

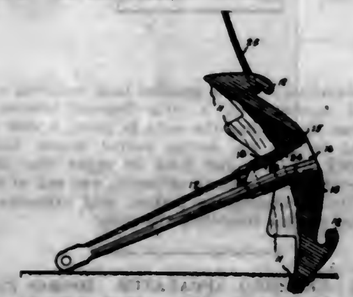
of and through which the ends of the cranks pass during their rotation, each trough having an opening in the

lowest part of its bottom and a sediment receptacle fixedly secured to the under face of said bottom of each trough and always in communication with said opening.

1,636,757. PACKET CONTAINER. EDWARD J. READING, Paterson, N. J. Filed Dec. 2, 1926. Serial No. 152,075. 1 Claim. (Cl. 206—41.)

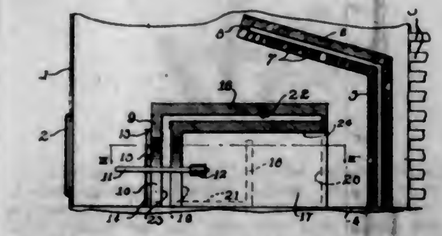
A rectangular case adapted to receive a package of cigarettes and formed of flexible material and with a bottom and an open end opposite thereto and two broad and two narrow sides upstanding from said bottom and a flap projecting from one broad side across said open end and overlapping the other broad side and having its extremity for its full width formed as a substantially rectangular relatively stiff panel, in combination with an endless strap embracing the case in a plane to traverse its bottom and said end and said broad sides and shiftable around the case and attached to the panel of said flap.

1,636,758. FAN ATTACHMENT FOR SEWING MACHINES. SIMONE RENNA, Brooklyn, and LEUIGI RENNA, New York, N. Y. Filed Dec. 27, 1926. Serial No. 157,191. 7 Claims. (Cl. 230—248.)



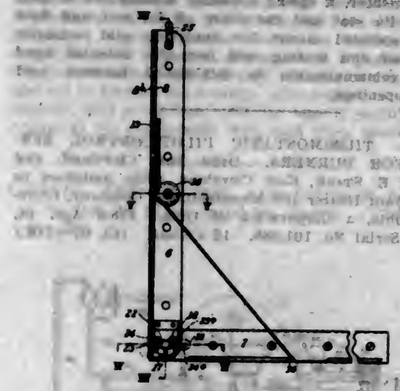
1. In combination with a belt driven machine, a fan, and means driven by said belt driven machine for communicating movement to the fan and for causing the fan to run free of said means and by its own momentum on slowing or stopping of the machine.

1,636,759. CUSHION TIRE. LEON N. SOUTHMAYD, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed May 18, 1923. Serial No. 639,732. 5 Claims. (Cl. 152—1.)



2. A cushion tire for heavy duty service comprising in combination three circumferential rim sections, a small tire mounted on the intermediate rim section, and a cushion tire body with its cavity containing said small tire and having its spaced legs independently mounted on the two remaining rim sections.

1,636,760. SHIP'S ANCHOR. EDWARD B. SWIFT, Seattle, Wash. Filed Nov. 1, 1926. Serial No. 145,472. 8 Claims. (Cl. 114—206.)

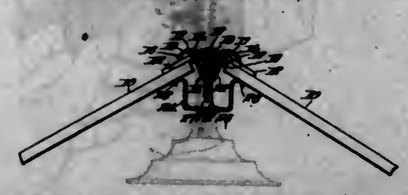


5. The combination with a concavo-convex anchor having a plurality of star points on its periphery, of an integral chock hook formed on the rear side of each of said points each of said chock hooks having an opening directed toward the center of said anchor through which a line may enter to engage with the chock hook.

1,636,761. FIRE-BOX INNER CASING. OLOF A. TOFFTEEN, Chicago, Ill. Filed Nov. 5, 1925. Serial No. 66,918. 7 Claims. (Cl. 158—4.)

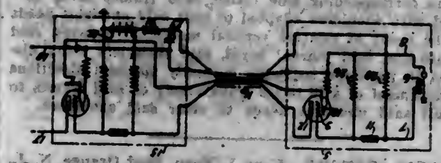
1. The combination with a boiler fire box, of a hollow apertured fire arch mounted therein, an inner casing mounted within said fire box at a distance from the front wall of the fire box and below the fire arch and open at both ends, said inner casing having hollow walls, means for adjustably closing one end of the casing and a fuel supply device projecting into said fire box and into said inner casing to supply fuel to the interior of said inner casing for carburination with pre-heated air issuing from said hollow casing walls and with the air entering the fire box below said inner casing.

1,636,762. WINDOW. PEARL H. WILLIAMSON and FLOYD M. WILLIAMSON, Detroit, Mich. Filed Mar. 6, 1926. Serial No. 92,743. 10 Claims. (Cl. 20—40.)



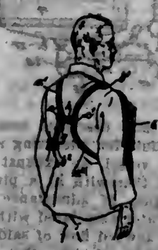
1. In a window arrangement, the combination of a frame having stops therein, slides adapted to move vertically between said stops, angle strips on the inner and rear surfaces of said slides, a sash pivotally mounted between said slides, said slides having recesses therein, pulleys rotatably mounted on said angle strips and located in said recesses, other pulleys in said frame at its upper end, sash weights in said frame, sash cords having one of their ends attached to said sash, said angle strips having openings therethrough for the passage of said sash cords, said sash cords passing through said openings, around said first named pulleys, up and around said other pulleys, and secured at their other ends to said sash weights.

1,636,763. METALLIC COMPOSITION. HENRIK BOVING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 26, 1920. Serial No. 384,264. 4 Claims. (Cl. 75—1.)



1. The method of forming an alloy comprising a plurality of metallic elements, one or more of said metallic elements having a comparatively low volatilization point which consists in reducing said metallic elements to a finely divided state, molding the mixture of the resulting particles in the presence of gas under sufficient pressure to blanket the volatilization of the low volatilization point element at the temperature employed and increasing the temperature to form an alloy.

1,636,764. SASH-BAR CONSTRUCTION. GEORGE WILLIAM CLAY, Kingston, Pa. Filed July 18, 1925. Serial No. 44,526. 2 Claims. (Cl. 189—78.)



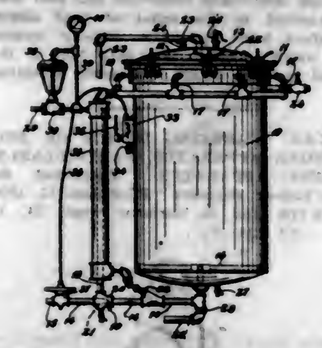
1. A joint of the class described comprising an adapter member having plates to engage panels, means flexibly securing the plates together, an outer clamp bridging the plates contacting therewith at their side edges to exert a pressure substantially transversely of the panels, an inner clamp to engage the inner surfaces of the panels, and means to secure the clamps together at the requisite pressure.

1,636,765. WAVE-TRANSMISSION SYSTEM AND APPARATUS. ALFRED S. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1925. Serial No. 51,280. 1 Claim. (Cl. 179—171.)

In apparatus for the transmission of sound wave energy, an amplifier, a cabinet therefor, said cabinet comprising a metallic shield surrounding said amplifier, a condenser transmitter, a metallic shield therefor, said shields being electrically connected and said transmitter being connected to the input of said amplifier by sensibly short leads, having a capacity between them negligibly small in comparison with that of the transmitter and included within said metal shielding.

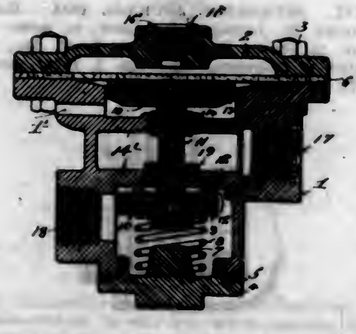
1,636,766. CARRYING DEVICE OR BELT FOR BREATHING APPARATUS, PARTICULARLY SELF-RESCUING APPARATUS. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany. Filed June 11, 1926, Serial No. 115,170, and in Germany Sept. 24, 1925. 5 Claims. (Cl. 224—5.)

1. A carrying harness for breathing apparatus comprising a looped connecting device, and a plurality of individual straps each having one end permanently connected with said connecting device, the connections between said straps and connecting device being relatively loose whereby said straps are capable of being slidably movable on the looped connecting device, the other ends of said straps being arranged for connection with the apparatus.



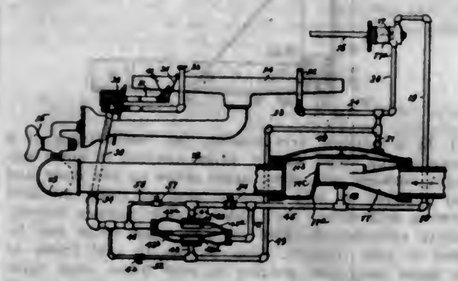
1,636,767. SEPARABLE JOURNAL BOX. HARRY C. DREIBUSS, St. Louis, Mo., assignor, by mesne assignments, to Scullin Steel Co., St. Louis, Mo., a Corporation of Delaware. Filed Apr. 2, 1926. Serial No. 99,278. 6 Claims. (Cl. 105—230.)

1. In combination, a pair of side frames, means cooperatively associated with said side frames for holding same in spaced relationship with one another, and sepa-



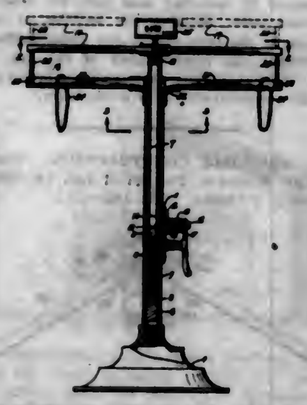
rable journal boxes for supporting said side frames, said boxes and said side frames having interfitting parts, said interfitting parts associated with each of said journal boxes comprising a projection mounted upon the top of one of said journal boxes, said projection having an undercut head adapted to be disposed within the outline of its corresponding side frame, said frames being provided with shoulders adapted to abut said undercut heads in the event of relative vertical movement between said frames and said journal boxes, said shoulders being disposed in positions requiring mutually opposite directions of movement of said boxes transversely of said frames to permit said undercut heads to clear said shoulders.

1,636,768. RETORT. KARL L. FORD, East Orange, N. J., assignor to Glass Container Association of America, New York, N. Y., a Corporation of Delaware. Filed Mar. 12, 1926. Serial No. 94,128. 1 Claim. (Cl. 99—2.)



Apparatus of the class described comprising a closed vessel, an intake conduit for admitting a vaporized heating medium into the vessel, an exhaust conduit for the vessel communicative therewith at a plurality of points spaced from the region of admittance of the heating medium, and an aspirator associated with said intake and exhaust conduits, the inward flow of said heating medium operating said aspirator whereby the gaseous contents of the vessel are exhausted therefrom and returned thereto intermixed with said heating medium to provide approximately uniform heating throughout the vessel.

1,636,769. QUICK APPLICATION AND RELEASE VALVE. PARIS R. FORMAN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Jan. 20, 1926. Serial No. 82,439. 15 Claims. (Cl. 303—6.)

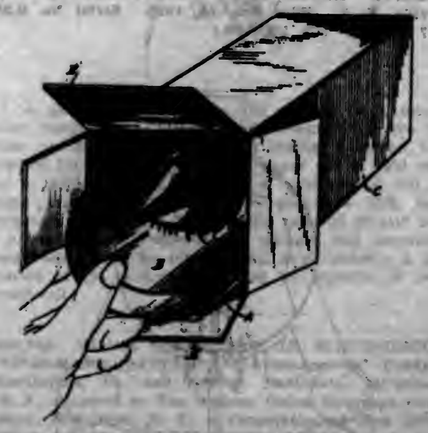


12. In a quick application and release valve a hollow body member having threaded openings therein, cap members on the ends of said body member forming a closed chamber, transverse walls within said body member having openings therein with seats on the edges of the openings, valve heads for said openings joined by a fluted member, a spring normally holding one of said heads on its seat and the other off its seat and fluid pressure operated means for unseating said normally seated head and seating said normally unseated head whereby communication is established between said threaded openings.

1,636,770. THERMOSTATIC PILOT-CONTROL SYSTEM FOR BURNERS. OTTO FOX, Cleveland, and WILLET E. STARK, East Cleveland, Ohio, assignors to The Bryant Heater and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 14, 1926. Serial No. 101,886. 12 Claims. (Cl. 67—116.)

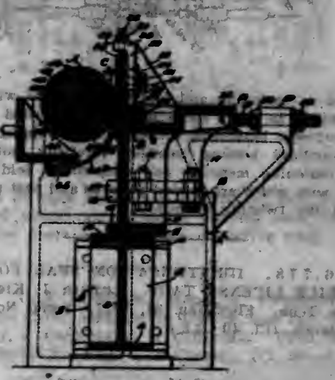
1. In a thermostatic pilot control system for burners, a main burner, a pipe for supplying gas thereto, a pilot burner having a thermostat, a valve associated with the thermostat and adapted to be opened when the thermostat cools by the extinguishment of the flame of the pilot burner, a main control valve, and means whereby the opening of the first mentioned valve prevents opening of the main control valve.

1,636,771. DISPLAY RACK. HARRY GLABERMAN, Brooklyn, N. Y. Filed July 10, 1924. Serial No. 725,201. 8 Claims. (Cl. 211—24.)



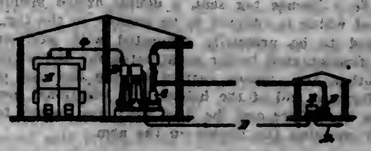
1. A display rack comprising a base, a tube supported by said base, a cross member supported near the upper end of said tube for holding a plurality of objects for display, a substantially T-shaped member having its stem portion slidably mounted within said tube, pieces extending downward from the ends of the cross bar of said T-shaped member adapted when brought into engagement with said cross member to complete a closed area between said cross member and said cross bar, spring means for normally holding up said cross bar with its downwardly extending end pieces out of contact with said cross member, locking means for locking said T-shaped member with said end pieces in engagement with the cross member, said T-shaped member having its stem adapted to prevent its rotation with respect to said tube, whereby said cross bar with its legs is maintained in alignment for engagement with said cross member.

1,636,772. RUBBER HEEL. ABE GOLUB, St. Louis, Mo. Filed Dec. 21, 1925. Serial No. 76,618. 1 Claim. (Cl. 36—35.)



A rubber heel comprising a resilient member having a recessed upper face and a lower face, and a plurality of intersecting channels having undercut edges formed in the lower face of said member, said channels located directly below the recess in the upper face whereby that portion of the heel at the recesses is rendered more flexible, and the lower face of the member along said channels more resilient.

1,636,773. MAILING PACKAGE. HERMAN L. GEAVE, Brooklyn, N. Y. Filed Dec. 30, 1922. Serial No. 609,828. 4 Claims. (Cl. 206—57.)

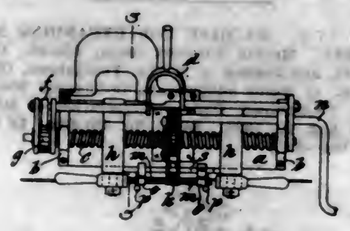


4. The combination of a mailing tube container suitable for shipping, storage and dispensing and a number of flexible permanently curved-shaped mailing wrappers having their end curled up portions brought closer together to compactly nest same in said container and held against movement by the normal uncurling pressure of the wrappers on each other and on a plurality of the longitudinal sides of the container, said container constructed with end openings for allowing the removal of the wrappers in any desired units at one time by a slight inward pressure toward the center of said container.

1,636,774. MACHINE FOR EXPANDING METAL SHEETS. MELVIN SOLOMON GROH, Toronto, Ontario, Canada, and JOSEPH A. HALLS, Youngstown, Ohio, assignors, by mesne assignments, to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Aug. 12, 1924. Serial No. 731,634. 15 Claims. (Cl. 164—6.6.)

11. A machine including a frame member carrying a stationary die, and a ribbed expanding drum having its ribs spirally set.

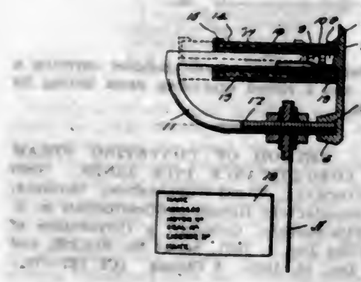
1,636,775. METHOD OF CONVEYING STEAM THROUGH LONG-DISTANCE PIPE LINES. OTTO HERMANN HARTMANN, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed Dec. 2, 1921, Serial No. 519,329, and in Germany Dec. 16, 1920. 5 Claims. (Cl. 137—78.)



4. The method which consists in conducting high pressure steam to a point remote from its source, whereby the steam loses not more than half its initial pressure, increasing the pressure of said steam at said point to substantially restore it to its initial pressure, and conducting said steam to a point of utilization remote from said first mentioned point.

1,636,776. POISON COMPOSITION. OSCAR F. HEDENBURG, Pittsburgh, Pa., assignor to Rex Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 19, 1926. Serial No. 89,296. 7 Claims. (Cl. 167—6.)

1. A poison composition for pests containing colloidal white arsenic.

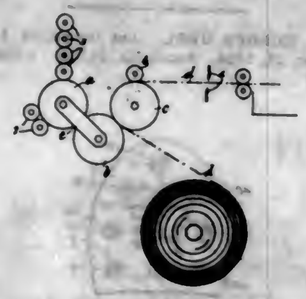


7. A poison composition for pests consisting of colloidal white arsenic, meat and cereal.

1,636,777. TENSIONING AND LOCKING DEVICE FOR WIRE-BINDING MECHANISMS. EMIL HOFFMANN, Cologne, Germany. Filed June 29, 1926, Serial No. 119,412, and in Germany July 1, 1925. 4 Claims. (Cl. 140—93.)

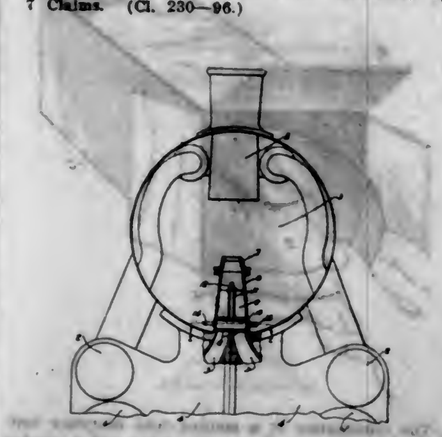
1. In a tensioning and locking device for wire-binding mechanisms in which the wire is finally twisted for securing purposes, tensioning members for straining the wire and auxiliary holding members receiving motion from said tensioning members and adapted to hold the ends of the wire which are pushed towards and past each other during the twisting operation.

1,636,778. IDENTIFICATION SEAL FOR AUTOMOBILE LICENSE TAGS. LUTHER J. KIGER, Nashville, Tenn. Filed Jan. 31, 1927. Serial No. 164,843. 4 Claims. (Cl. 40—2.2.)



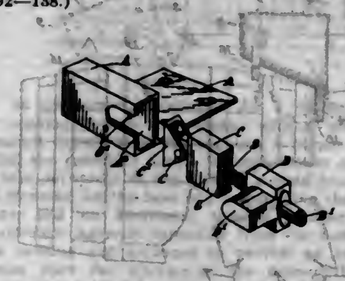
1. In a license tag seal, a double armed member, one arm of which is adapted to be secured to the tag, a disc adapted to be primarily connected with said arm, an identification card holder constructed for disposition upon the other arm, means carried by the disc for entering the forward end of the holder, and additional means between the holder and the first mentioned means for positively securing the holder on the arm.

1,636,779. TIRE CONSTRUCTION. FREDERICK W. KRONE, San Francisco, Calif. Filed Aug. 4, 1926. Serial No. 127,104. 1 Claim. (Cl. 152—10.)



A rubber inner tube for tires equipped with an interior solid rubber annulus of increased thickness formed integral with said tube and only on the rim zone thereof and of a thickness less than half the cross sectional dimension of the tube; the remainder of the cross section of the tube being of substantially the standard thickness of inner tubes.

1,636,780. DUPLICATOR. EDMUND LICHTENSTEIN, Berlin, Germany, assignor to Deutsche Maschinenbau- und Vertriebs-Gesellschaft m. b. H., Berlin, Germany, a Firm. Filed Sept. 26, 1925, Serial No. 58,908, and in Germany Oct. 16, 1924. 12 Claims. (Cl. 101—148.)



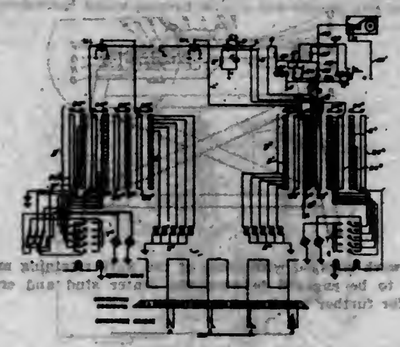
1. A duplicator operating upon the offset principle comprising an impression cylinder, a printing cylinder, a rubber cylinder located beneath said first mentioned cylinders when the machine is in operation, said cylinders being operatively connected by toothed gearing, means whereby one of said cylinders may be moved to facilitate access to said rubber cylinder, a cutting mechanism, means for permitting play between the axes of said cylinders, means for taking up this play, the amount of said play being of limited extent so that said toothed gear connection between said cylinders is maintained even when said means for taking up said play is released and means whereby the toothed wheel connection is also maintained when effecting the movement which renders the rubber cylinder conveniently accessible.

1,636,781. LOCOMOTIVE. NEAL T. MCKEE, Bronxville, N. Y. Filed Feb. 14, 1925. Serial No. 9,337. 7 Claims. (Cl. 230—96.)

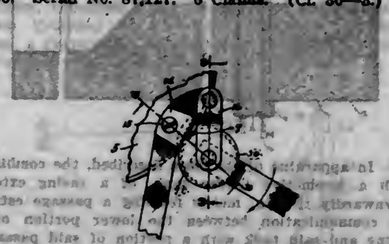
1. In a locomotive smokebox, the combination, with exhaust steam passages terminating in a main exhaust pipe; of auxiliary draft creating means located within said pipe, and means for supplying steam to said draft creating means, said first named means having discharge openings therein so located that when steam is supplied thereto a portion of said steam is admitted to said main exhaust pipe and passages.

1,636,782. WINDOW LATCH. ORAZIO MILLAURO, London, England. Filed Dec. 18, 1926, Serial No. 155,654, and in Great Britain Oct. 25, 1926. 3 Claims. (Cl. 292—138.)

1. A window latch comprising a box-like bracket secured to the head of the lower window sash, two blocks slidably mounted in said bracket and internally screw-threaded, and a right- and left-handed screw-threaded rod engaging said blocks so as to cause them to take a direct thrust on the upper window sash and on the beading of the window frame.



1,636,783. PORTABLE DESK. DAVID BARRON O'KELLY, Miami Beach, Fla. Filed Mar. 12, 1926. Serial No. 94,187. 7 Claims. (Cl. 40—87.)

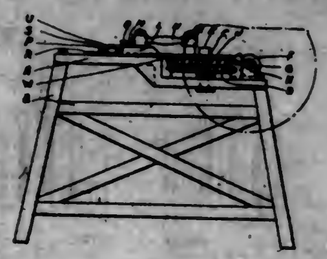


1. A device for facilitating the reading of a manuscript, comprising a casing, a roll mounted for free rotation at the lower end of said casing, a second roll mounted for free rotation at the upper end of said casing, a ratchet fixedly mounted on said second roll, a spring pressed pawl adapted to cooperate with said ratchet in the manner to cause the rotation of said roll in a predetermined direction, a plunger and operating means connecting the plunger and pawl whereby a depression of the plunger will cause the rotation of said second roll.

1,636,784. PHASE CORRECTION IN SYNCHRONOUS TELEGRAPH SYSTEMS. LEIGHLAND F. PARKER, Burlington, Vt., and FAY B. BRAMHALL, Metuchen, N. J., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 6, 1926. Serial No. 79,586. 5 Claims. (Cl. 178—53.)

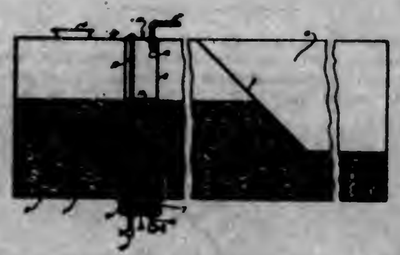
1. In a telegraph system, a correcting distributer, a corrected distributer rotating in approximate synchronism with said correcting distributer, a circuit connecting said distributers, means for transmitting impulses of two polarities over said circuit, a condenser, a phase correcting relay, mechanism controlled by said relay to shift the brushes of the distributor relative to their driving shaft, circuit arrangements whereby said condenser is charged on each reversal of polarity of said impulses and second circuit arrangements whereby said charging impulse also operates said phase correcting relay.

1,636,785. CAN OPENER. AXEL W. PETERSON, San Francisco, Calif., assignor to Western Tool and Wrench Company, a Corporation of California. Filed Feb. 9, 1926. Serial No. 87,127. 6 Claims. (Cl. 30—3.)



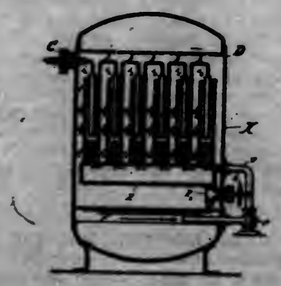
1. A can opener comprising a cutting blade adapted to penetrate the end wall of a can adjacent the periphery thereof and means for operating said blade to cut the end wall on a continuous line extending around the end wall from one end of a perforation made therein by the blade to the other end of the perforation, said means comprising a pair of relatively movable manually operable levers, a link connecting said levers together at one end, one of said levers being rigidly secured to the blade and the other having its connected end portion provided with a curved extension having a roughened surface adapted to bear upon the upper end portion of the side wall of the can at right angles to the blade and cooperate with the blade to grip said side wall therebetween when the said levers are moved relatively toward each other whereby the curved extension is caused to turn upon the side wall and advance the blade through the end wall.

1,636,786. METAL-BENDING MACHINE. THOMAS ROLLEY, Brisbane, Queensland, Australia. Filed Jan. 13, 1925, Serial No. 2,230, and in Australia June 16, 1924. 8 Claims. (Cl. 153—48.)



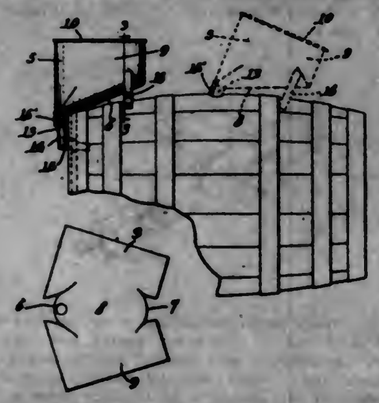
1. In a metal bending machine, a support, a plurality of work retaining members, carried by said support, a pusher bar associated with certain of the work retaining members for bending work, a rotatable member, an upstanding center stud and a crank pin both carried

by said rotatable member, and a removable connecting rod engaged with the crank pin and the pusher bar for operating the latter and adapted, upon removal, to per-



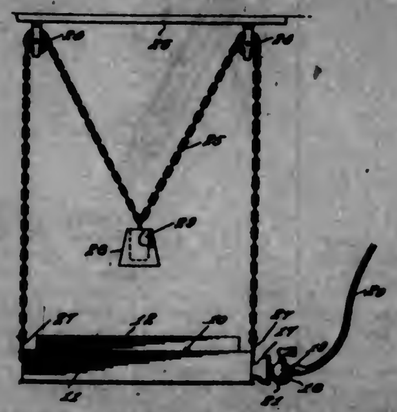
mit work engaged with other of the work retaining members to be engaged between the center stud and crank pin for further bending operations.

1,636,787. LOCOMOTIVE TENDER WITH OIL SEPARATOR. GILBERT E. RYDER, Leonia, N. J., assignor to The Superheater Company, New York, N. Y. Filed Oct. 10, 1925. Serial No. 61,867. 3 Claims. (Cl. 210—51.)



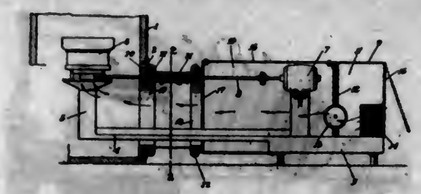
1. In apparatus of the class described, the combination with a locomotive tender tank, of a casing extending downwardly therein, means forming a passage establishing communication between the lower portion of said casing and said tank with a portion of said passage lying wholly below the level of the bottom of said tank, a condensate return pipe opening into said casing, and an overflow pipe leading from the upper portion of said casing.

1,636,788. ELECTRIC STEAM BOILER. EDUARD SCHLECK, Berlin, Germany. Filed Jan. 16, 1926, Serial No. 81,821, and in Germany Oct. 24, 1924. 7 Claims. (Cl. 219—40.)



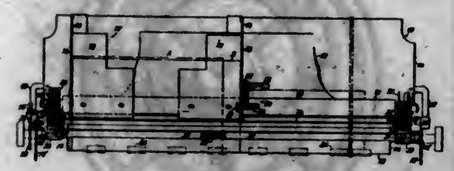
1. In an electrically heated boiler the combination of steam generating apparatus arranged in the boiler, consisting of several outer vessels serving as electrodes and of inner electrodes inserted into said outer vessels, and means permitting of series-connecting the electrodes like a battery in such a manner that the outer electrode of the first steam generating apparatus is electrically connected with the inner electrode of the second apparatus and so forth.

1,636,789. FUNNEL. WILLIAM HENRY SIGLEY, Sylvan Grove, Kans. Filed Sept. 11, 1926. Serial No. 55,768. 1 Claim. (Cl. 225—38.)



A funnel including a blank formed of a length of sheet material having converging side edges and having cut out portions formed in its front and rear end edges, the cut out portions having curved lateral walls and curved inner walls, said blank adapted to be folded intermediate its side edges to provide side walls and a curved bottom, and said bottom having a discharge opening.

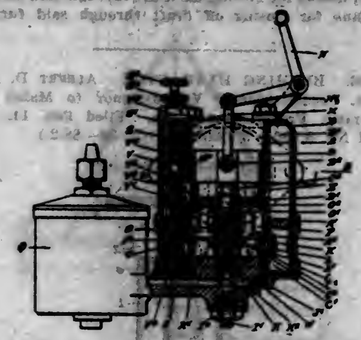
1,636,790. GAS HEATER FOR PRINTING PRESSES. FRANCIS X. SMITH, New York, N. Y. Filed Oct. 9, 1926. Serial No. 140,588. 1 Claim. (Cl. 24—18.)



A portable and adjustable gas heater device for printing presses comprising an elongated reflector having outwardly flared side walls, a reduced hot air pocket provided in the top of said reflector and extending the major portion of the length thereof, a gas burner tube supported by the end walls of said reflector and disposed directly beneath said hot air pocket and having a row of flame openings along its underside, and a wire gauze cylinder supported from and enclosing said burner tube but spaced from said row of flame openings to trap the flame within said cylinder when said burner tube is lighted to cause a glow along the length of said cylinder, the heat from which is trapped in said hot air pocket and reflected by the walls of said reflector.

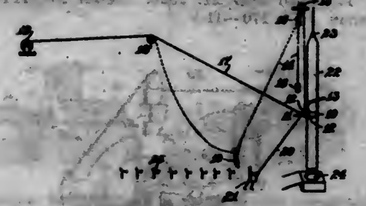
1,636,791. OIL-BURNER INSTALLATION. IRA E. SMITH, Stockton, Calif. Filed Mar. 7, 1927. Serial No. 173,335. 6 Claims. (Cl. 158—4.)

1. An oil burner installation for a firebox having a side opening therein, comprising, with a base member supported exteriorly of the opening, a burner inside the firebox and operating means for said burner mounted on the base outwardly of the firebox; a rigid housing structure mounted on the base and surrounding the operating means, and an additional housing member made of vibrationless material extending from the firebox to the rigid housing and arranged to provide an enclosed air passage from the interior of the firebox through the side opening thereof and into the rigid housing.



1,636,792. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 12, 1923. Serial No. 680,153. 34 Claims. (Cl. 197—127.)

1. A typewriting machine for typing items to be billed and posted, having a revoluble platen, a statement and ledger sheet collating device, including a collating table disposed above the platen at the delivery side thereof, a mechanism for presenting a ribbon to the outer of two work-sheets, and mechanism for feeding an auxiliary ribbon between the outer work-sheet and the inner work-sheet to make a permanent record copy upon the inner work-sheet, said auxiliary ribbon-mechanism including a back-print-prevention shield for the auxiliary ribbon, and devices for shifting said auxiliary ribbon and said shield to a sheet-collating position adjacent the lower end of said collating table, so that said auxiliary ribbon and said shield will be disposed in the rear of said main ribbon and substantially parallel to the work-face of said collating table to avoid smudging the outer work-sheet during numerous insertions and removals of the same.



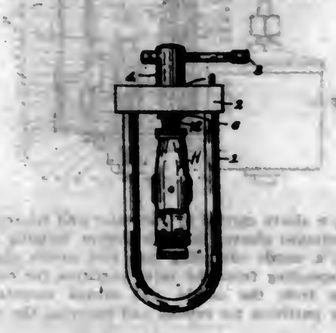
1,636,793. CARBURETOR. FENTON FREDERICK STRATTON, East Croydon, England. Filed Nov. 16, 1921, Serial No. 515,516, and in Great Britain Nov. 16, 1920. 2 Claims. (Cl. 261—41.)

2. A carburetor for internal combustion engines comprising a mixing and control chamber surrounded by superimposed annular chambers, the lower for the admission of air and the upper for the passage of the mixture, the mixing and control chamber having vertically spaced openings therein affording communication with the superimposed annular chambers, a sliding valve operable within the mixing and control chamber for placing the annular chambers into communication with the mixing and control chamber, said valve having a horizontal partition intermediate its ends and openings therebeneath adapted to be placed in registration with the upper openings in the mixing and control chamber when the valve is raised, a perforated sleeve secured within the mixing and control

chamber, a sleeve carried by the valve and telescoping the first mentioned sleeve, the two sleeves forming a nozzle chamber, a nozzle extending into said nozzle chamber, a needle depending from the valve partition for controlling discharge from the nozzle, and means mounted above the valve partition for raising and lowering the valve.

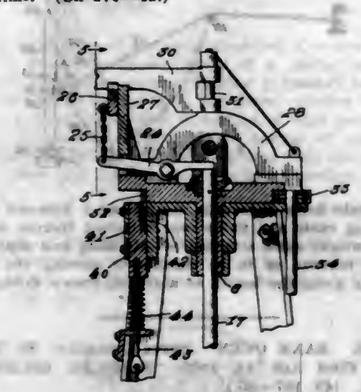
1,636,794. TAKEDOWN APPARATUS. THOMAS F. WATERS, Okmulgee, Okla., assignor to Baker Brothers Glass Company of Okmulgee, Oklahoma, Okmulgee, Okla., a Corporation of Oklahoma. Filed Nov. 5, 1925. Serial No. 67,116. 5 Claims. (Cl. 214—3.1.)

1. A take-down apparatus comprising a hole-end sling, a hoisting cable and guide rope attached thereto, and a counter-weight cable attached to said sling and supported in such manner as to be capable of moving the sling upwardly along the length of a freshly-drawn cylinder.



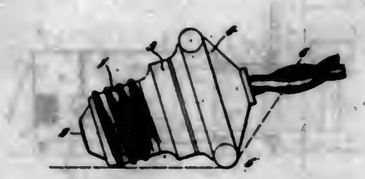
1,636,795. BAKE OVEN. PETER AHLHEIM, St. Louis, Mo. Filed Apr. 11, 1923. Serial No. 631,288. 1 Claim. (Cl. 107—55.)

A bake oven comprising a casing, heat furnaces having a solid floor located in said casing, parallel flues formed in the rear portion of said furnaces, a bake oven located



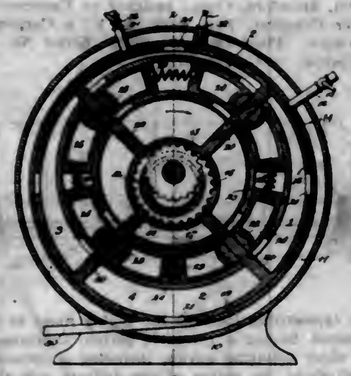
above said flues, a plurality of flues parallel to each other and to the first mentioned flues located in said casing above said oven, a single vertical flue for connecting said first and second mentioned flues, a chimney, a flue for connecting all of said second mentioned flues to said chimney, means for closing off draft through said chimney, and means for closing off draft through said furnaces.

1,636,796. BUSHING EXTRACTOR. ALBERT D. ALEXANDER, Fredericksburg, Va., assignor to Mabel Viola Alexander, Fredericksburg, Va. Filed Feb. 11, 1925. Serial No. 8,486. 3 Claims. (Cl. 29—88.2.)



3. A bushing extractor, comprising a yoke having a cross-piece connecting the same, a bearing in the cross-piece, a screw-shaft in the bearing, and means to rotate the shaft.

1,636,797. WINDMILL. FRANK W. BAKER, East Aurora, N. Y. Filed July 21, 1926. Serial No. 124,071. 4 Claims. (Cl. 170—41.)

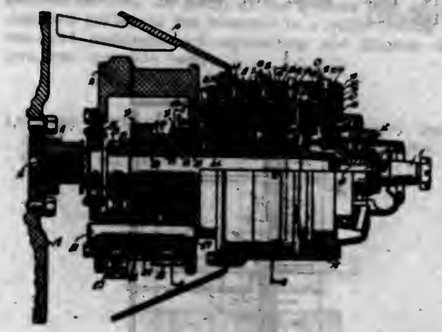


1. A wind mill of the class described comprising a tower, a driven shaft journaled therein, a turntable rotatably mounted on the top of the tower, a horizontal shaft carried by the turntable, gears connecting the two shafts together, a wind wheel carried by the horizontal shaft, manually operated means for rotating the turntable, locking means for locking the turntable in adjusted position, manually operated means for actuating the locking means, a vane pivotally supported on the turntable, a weighted latch lever on the turntable for holding the vane parallel with the wind wheel, a lever pivoted to the turntable, a flexible member connecting the lever to the latch lever and means for moving the driven shaft vertically to move the lever to a position where the flexible member will move the latch lever to releasing position.

1,636,798. ATTACHMENT PLUG. EDWIN C. BALLMAN, St. Louis, Mo. Filed Nov. 9, 1923. Serial No. 673,690. 2 Claims. (Cl. 173—359.)

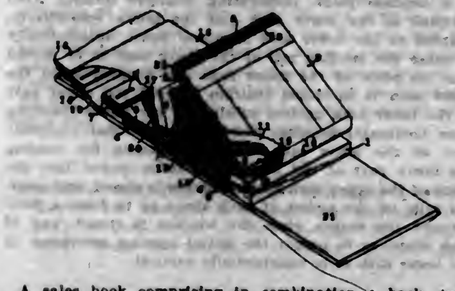
1. An electrical attachment plug, of fragile materials, having an annular recess therearound at the point of greatest diameter, a contact shell projecting from one side thereof, a lead from the other side thereof, and a resilient ring mounted in said recess and encircling said plug in order to protect the same against breakage.

1,636,799. ROTARY ENGINE. BERNT M. BERNTSEN, Brooklyn, N. Y. Filed Feb. 12, 1921. Serial No. 444,530. 5 Claims. (Cl. 123—16.)



2. In a device of the class described, the combination with the framework thereof, of a rotatable member comprising a plurality of fixedly mounted radiating pistons, a second rotatable member mounted eccentrically of the first said rotatable member and comprising flanges loosely embracing said pistons, a plurality of packing members yieldingly mounted in the second rotatable member and confined between the flanges thereof and each embracing a respective one of said pistons, and semi-cylindrical members mounted in said packing members and slidably engaging said pistons.

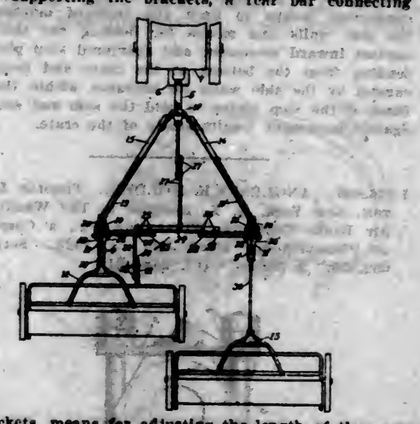
1,636,800. TRANSMISSION. HOWARD E. BLOOD, Detroit, Mich., assignor to Detroit Gear and Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 14, 1925. Serial No. 56,348. 7 Claims. (Cl. 74—34.)



1. In a transmission the combination with a transmission case, a driving gear, a driven gear, a planetary housing and a sun gear all journaled concentrically and adapted for independent rotation, of a plurality of planet gears journaled eccentrically in said housing and adapted to rotate together at all times, said planet gears meshing with said driving gear, driven gear and sun gear respectively, a series of concentric sleeves respectively

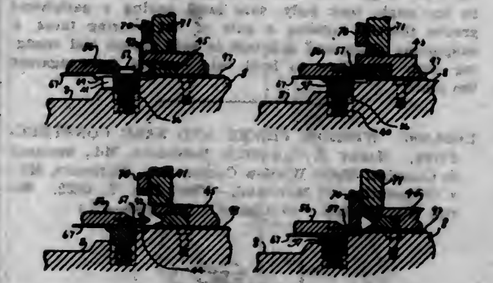
connected to said driving gear, driven gear, sun gear and housing, means for clutching said driving gear sleeve to said driven gear sleeve, means for clutching each of

the other sleeves to said transmission case, and means for alternatively engaging said clutching means whereby only one of said clutching means is engaged, at all times.



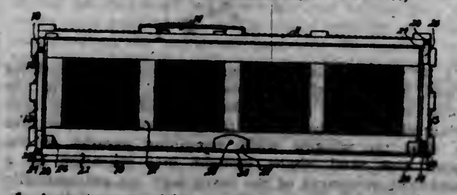
1,636,801. MANIFOLDING SALES BOOK. EDWARD KIRBY BOTTLE, Elmira, N. Y., assignor to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Ontario. Filed May 23, 1922. Serial No. 562,955. 1 Claim. (Cl. 282—24.)

A sales book comprising in combination a back, two pads bound to said back adjacent to each other, with the free ends of the leaves extending in opposite directions, said pads being sufficiently spaced to permit the back to be folded to superpose the pads, one of said pads comprising a set of superposed leaves, and the other comprising a plurality of sets of leaves, each set comprising four leaves attached together end to end to form a strip, said strip being folded to superpose the third and fourth leaves upon the second and first respectively, and being folded a second time to bring all four leaves of the set in registry with each other, the first leaf of each set being extended beyond the others to form an extension by which the sets are bound together in the pad, said pad being pivoted to said support at the end opposite said binding, and a carbon strip bound within the pad above the record leaves and of a length equal to two of said record leaves, whereby it may be folded to extend between the record leaves, and a carbon sheet attached to the back at the side of said second mentioned pad.



1,636,802. TRACTOR HITCH FOR DRILLS. HARRISON B. BOZARD, Hamilton, Ontario, Canada, assignor, by mesne assignments, to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed July 15, 1920. Serial No. 396,508. 5 Claims. (Cl. 280—33.44.)

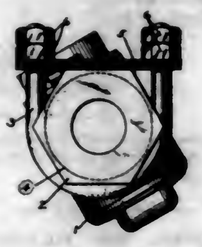
1. In a tractor hitch, the combination of side bars pivotally connected at their front ends and pivotally secured to brackets at their rear ends, caster wheels pivoted in and supporting the brackets, a rear bar connecting



the brackets, means for adjusting the length of the rear bar, and a draft bar carried by each of the brackets for connection to an implement.

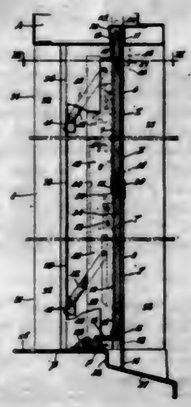
1,636,803. MACHINE FOR FOLDING STOVEPIPE BLANKS. JOHN MOOTRY BROWN, Hamilton, Ontario, Canada. Filed Oct. 6, 1926. Serial No. 139,890. 5 Claims. (Cl. 153—13.)

1. A machine for folding stove pipe blanks comprising a main table, a pair of opposed substantially horizontal rams supported above the table and movable both horizontally and vertically, one of said rams formed with a depression in its face and the other ram with a projecting tongue adapted to move into said depression, a vertical ram movable vertically above the table between the opposed rams, the table formed with a depression positioned vertically below the vertical ram and means for automatically operating said rams at predetermined intervals to constitute a complete cycle of forming operations.



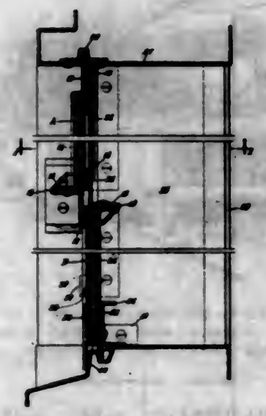
1,636,804. CRATE. MARVIN AUSTIN BROWN, Artesia, N. Mex. Filed Nov. 19, 1923. Serial No. 675,735. Renewed June 4, 1927. 3 Claims. (Cl. 217—47.)

1. A crate comprising a bottom, top, side walls and end walls, means hingedly connecting the side walls to the top wall to permit of inward folding movement,



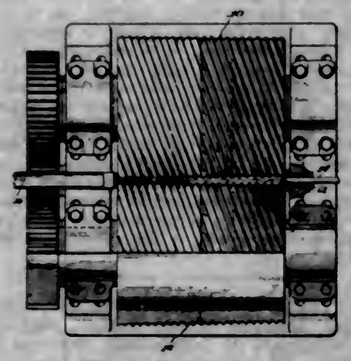
means for hingedly connecting the end walls to the top and bottom of the crate, means carried by the hingedly connecting means to limit the outward movement of the side walls and means for holding the side walls against inward movement and apertured stop plates extending from the bottom of the crate and projections carried by the side walls for entrance within the apertures of the stop plates to hold the side and end walls against movement longitudinally of the crate.

1,636,805. ANGLE-COCK HOLDER. THOMAS L. BURTON, New York, N. Y., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 18, 1923. Serial No. 652,355. 2 Claims. (Cl. 248—31.)



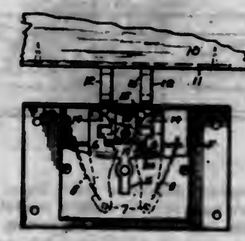
2. In a device of the class described, the combination with an angle cock having a hexagonal head adjacent to the angle cock body, said head having a peripheral groove therein forming a pair of flat bearing faces, a supporting plate, and a U-bolt in said groove and engaging with the plate to hold said bearing faces against the plate.

1,636,806. WINDOW FRAME AND SASH CONSTRUCTION. HARRY E. CAMPBELL, Baltimore, Md., assignor to Campbell Metal Window Corporation, Baltimore, Md., a Corporation of Maryland. Filed Dec. 7, 1922. Serial No. 605,359. 19 Claims. (Cl. 189—75.)



1. A window-frame and sash construction comprising jambs, sashes having frames adapted to slide in the jambs in different planes, the frame of the lower sash being adapted to move into the plane of the upper sash to close the window while remaining parallel to the upper sash, and means brought into operation by a downward movement of the lower sash for automatically causing the frame of the lower sash to move into the plane of the upper sash and close the joint between the sashes.

1,636,807. WINDOW. HARRY E. CAMPBELL, Baltimore, Md., assignor to Campbell Metal Window Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 14, 1923. Serial No. 651,506. 6 Claims. (Cl. 189—72.)



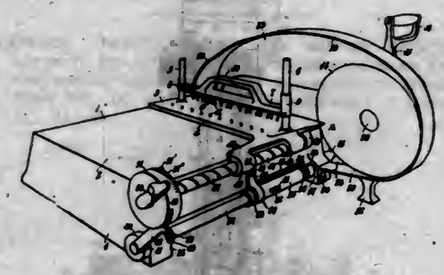
1. A window-frame and sash construction comprising jambs, sashes adapted to slide in said jambs with their frames in different planes and to move into such a position when the window is closed that their frames will lie in a common plane, cooperating members forming fixed portions of the lower sash and the jambs respectively, adapted as the lower sash is moved down, automatically to cause the meeting rail of the lower sash to be moved into the plane of the upper sash and adapted when the lower sash is in closed position to hold the upper part of the lower sash against substantial movement resulting from horizontal pressure exerted on the front (outside) face of the lower sash, automatic means for causing the lower part of the lower sash to be moved into the plane of the upper sash as the window is closed, and meeting rails on the sashes of such shape as to form a joint between the sashes when the window is closed, and of such shape as to permit the initial opening movement of the lower sash to be substantially vertical.

1,636,808. FORGING BALLS FROM LONG BARS. ABEEL CANDA, Cranford, N. J. Filed May 12, 1924. Serial No. 712,859. 3 Claims. (Cl. 80—23.)

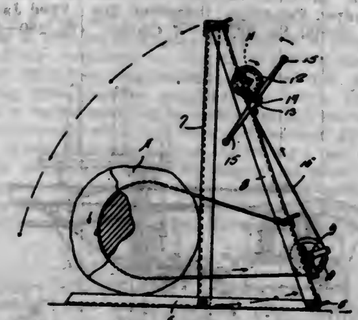
1. The method of forging balls, which consists in axially rolling a heated metal bar and grooving it progressively from one end into a connected series of elements of cylindrical frustro-conical configuration, subjecting the metal to a kneading action and simultaneously causing the displaced metal to flow oppositely from the grooves, severing the metal at the grooves into separate elements, subjecting the elements to a spiral rolling motion and simultaneously compacting and shaping them into true spherical bodies.

1,636,809. SPRING LOCK. WILLIAM DE GROOT, Ogden, Utah. Filed Oct. 20, 1926. Serial No. 142,936. 2 Claims. (Cl. 70—27.)

1. A lock of the character described comprising a body portion, a pair of spring actuated tumblers pivoted for swinging movement at their lower ends and beveled at their upper ends, keepers adapted to be engaged by the upper ends of said tumblers, there being a keyhole in said body portion adapted to receive a key to force said tumblers apart by turning movement, and a vertically slidable latch operable manually and wholly independent of the action of said key upon the tumblers from the exterior of the lock, in such manner as to hold said tumblers apart, after they are brought to open position.



1,636,810. ROLLING COLTER. FREDERICK L. DEWEY, Canton, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Dec. 2, 1926. Serial No. 152,098. 7 Claims. (Cl. 97—209.)

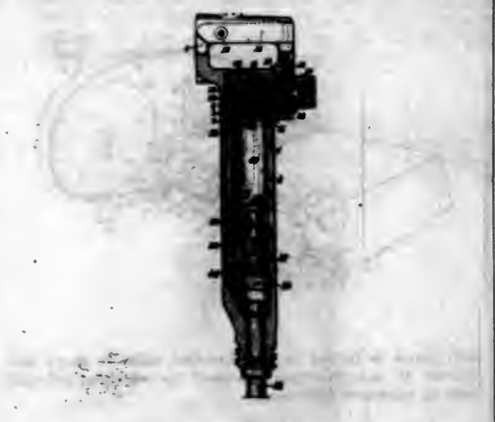


2. In a rolling colter construction, a colter disk, an arbor bolt about which the disk is rotatable, bearing members interposed between the bolt and the disk for rotatably mounting the latter, the arbor bolt being formed with an abutment near one end, a removable support engaging the abutment, said support forming a relatively permanent stop against which the bearing members are adjusted, and means screw threaded upon the bolt near its other end for adjusting the members against said stop.

1,636,811. SLICING MACHINE. WILLIAM H. DONALD, Cincinnati, Ohio, assignor of one-half to John P. Jagy and one-half to Carl Kloss, Cincinnati, Ohio. Filed Sept. 17, 1925. Serial No. 56,976. 8 Claims. (Cl. 146—103.)

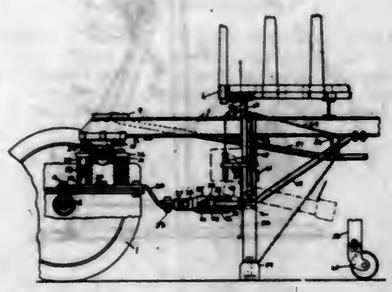
1. In a slicing machine, a support, a cutting member mounted on said support for movements in alternate directions, a carrier movable on said support, a screw operatively engaging said carrier, an arm swung in alternate directions incident to the movements of said cutting member, and a ratchet geared to said arm and operatively connecting said arm to said screw, whereby said screw is turned in one direction only, to move said carrier in one direction, incident to swinging of said arm in alternate directions.

1,636,812. CUTTING DEVICE. ROY W. DONOVAN, Kansas City, Mo. Filed Jan. 18, 1927. Serial No. 161,936. 1 Claim. (Cl. 25—105.)



In a cutting device of the class described, a pair of spaced parallel co-extensive horizontal bars, a pair of vertical bars one rising from the intermediate portion of each horizontal bar to be perpendicular thereto, a pair of slanting bars rising from the ends of the horizontal bars, means for attaching the upper ends of the slanting bars to the upper ends of the vertical bars, a drum journaled between the upper portions of the slanting bars, a pulley, means for supporting the pulley between the lower portions of the slanting bars, and an anchor on the slanting bars between the drum and the pulley, a cable having one end fixed to the anchor and trained over the pulley and windable about the drum whereby an article supported on the horizontal bars may be received in a loop formed with the wire and upon the winding of the wire on the drum said article will be drawn against the vertical bars and the wire drawn through the article to cut the same.

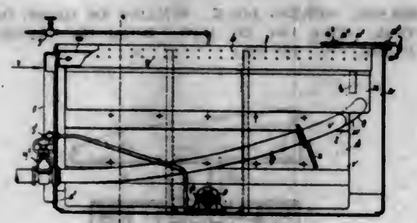
1,636,813. PERCUSSIVE PNEUMATIC TOOL. GUIDO ELSTER, Herne, Germany. Filed Aug. 28, 1926. Serial No. 132,233. 3 Claims. (Cl. 121—18.)



1. A percussive pneumatic tool comprising a working cylinder, a percussion piston, a rigid valve-seat, a sliding

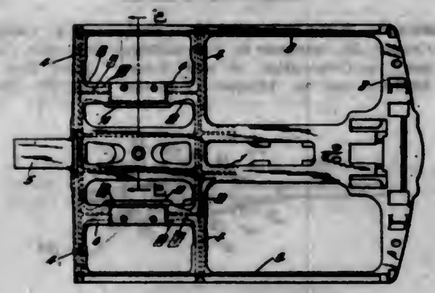
valve-seat, a valve arranged between said valve-seats, and means arranged on said sliding valve-seat and adapted to operate the latter by a part of the charge to interrupt

the inflow of motive fluid into the active cylinder-chamber before said percussion piston has opened the exhaust thereof.



1,636,814. MOTOR-VEHICLE TRAILER CONNECTION. ALEXANDER FEIGELSON, Beaumont, Tex. Filed July 14, 1925. Serial No. 43,470. 7 Claims. (Cl. 280—33.1.)

1. In a motor vehicle including a tractor having a gear housing and driving axle, and a trailer connected therewith, the combination of a draw yoke on said gear housing above said axle, a supporting transom plate mounted resiliently above said yoke, and means adapted to allow oscillation of said spider on horizontal axes and at right angles to each other, a trailer reach supported rotatably on said plate, means allowing a sliding of said reach relative to said plate, and a draw bar on said yoke below said reach detachably connected with said trailer.

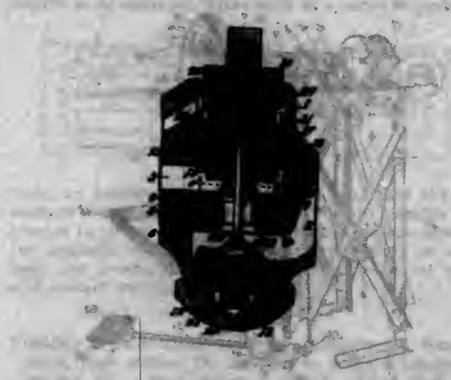


1,636,815. APPARATUS FOR SEPARATING FUEL AND OTHER OILS FROM WATER CONTAMINATED THEREWITH. EDWARD WILLIAM GREEN, London, and HERBERT OGDEN, Westcliff-on-Sea, England. Filed Aug. 14, 1925, Serial No. 50,204, and in Great Britain Aug. 26, 1924. 5 Claims. (Cl. 210—51.)

1. An apparatus for separating immiscible liquids from one another comprising a tank, channels in which the liquids tend to stratify arranged in the upper part of said tank, said channels being adapted to receive the admixed liquids for separation, perforations in the floor of each of said channels for permitting the liquid having the greater specific gravity to pass downwardly under the action of gravity, a series of perforations in a side wall of each of said channels for permitting the liquid having a less specific gravity to pass out from said channels on to the upper surface of the liquids in the tank, a discharge weir for the liquid having the greater specific

gravity, a conduit delivering such liquid to said weir from the lower part of said tank, a conduit for receiving the liquid from the weir and conducting it to the exterior of the tank, a discharge weir for the liquid having the less specific gravity and a conduit for receiving the liquid from the last named weir and conducting it to the exterior of the tank.

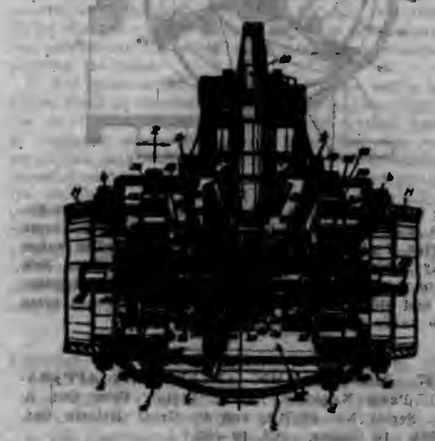
1,636,816. CAR PLATFORM. EINAR G. HALLQUIST, Edwardsville, Ill., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 25, 1925. Serial No. 46,153. 8 Claims. (Cl. 105—415.)



1. In a car platform, transverse transoms spaced from each other, a longitudinal side bearing arch extending between said transoms, there being a side bearing housing formed in said arch above the bottom thereof and opening downwardly.

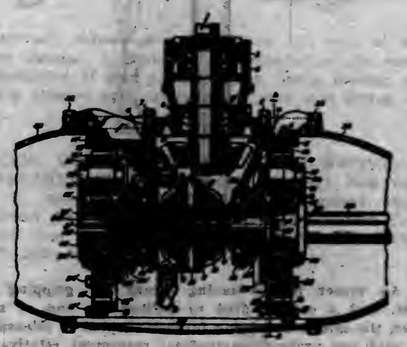
1,636,817. DISPENSING FAUCET. GEORGE N. HEIN, San Francisco, FRANK L. PLATT, Berkeley, and ROBERT R. IMPEY, San Francisco, Calif. Filed June 19, 1926. Serial No. 117,012. 7 Claims. (Cl. 251—27.)

3. A dispensing faucet comprising a body provided with a discharge channel extending therethrough, a tubular valve seat within said channel provided with a conical face at one end, a valve stem mounted within said body for movement to and from said valve seat, a valve carried by the stem and provided with a cylindrical end having a transverse face for reception within said tubular seat



with a wiping contact on said conical face on the operation of said valve stem, said stem provided with a polygonal recess, said valve provided with a polygonal extension for reception within said recess, and means within said recess for engaging the extension for detachably uniting the parts.

1,636,818. PROCESS FOR THE TREATMENT OF HORN OR THE LIKE. FELIX HOMBERG, Barmen, Germany, assignor to American Nuplax Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 30, 1924, Serial No. 758,959, and in Germany Jan. 7, 1924. 12 Claims. (Cl. 99—11.)



1. Process for the treatment of horn and the like more particularly for the production of digestible albumen, comprising, soaking horn with acid at a temperature below the boiling point of the acid, allowing the horn to stand, continuing both these steps for only such limited time that the horn is softened but not dissolved, then treating the horn with water, and then drying and comminuting the horn.

1,636,819. FINAL DRIVE FOR MOTOR TRUCKS. LOUIS C. HUCK, Chicago, Ill., assignor to Huck Axle Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1919. Serial No. 331,713. 10 Claims. (Cl. 74—99.)

1. A final drive for automotive vehicles comprising an axle housing having a driving mechanism carrier frame removably secured thereto, a driving mechanism comprising a speed change mechanism, a ring gear, a pinion in the plane of said ring gear and driven from said speed change mechanism, and planet gears meshing with said ring gear and pinion, said speed change mechanism, ring gear, pinion and planet gears being removable from the housing with said carrier frame as a unit.

1,636,820. FINAL DRIVE FOR MOTOR TRUCKS. LOUIS C. HUCK, Chicago, Ill., assignor to Huck Axle Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1920. Serial No. 358,905. 7 Claims. (Cl. 74—99.)

1. In a final drive for automotive vehicles of the type having a differential gearing mounted in a housing and operatively connected for driving a pair of stub axles, means extending longitudinally of the stub axles for holding them together longitudinally while permitting them to rotate relatively to each other, a planetary gearing operatively connected with each of said stub axles, each of said planetary gearing comprising a pair of plates rigidly connected together to contact at certain points and spaced apart between said points, gears carried in the spaces between the plates, said plates being driven by the planetary gearing and in turn driving an axle shaft.

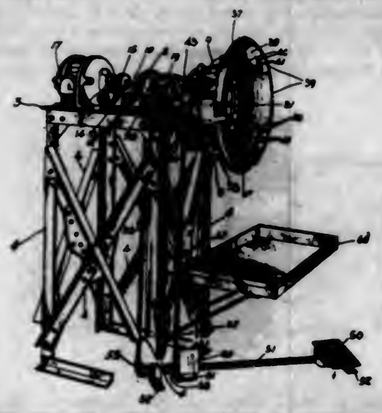
1,636,821. ADJUSTABLE CAN OPENER AND LIQUID PRESERVER. SOREN JENSEN, Los Angeles, Calif. Filed Aug. 31, 1926. Serial No. 132,603. 6 Claims. (Cl. 220—51.)

5. A can opener as claimed in claim 4, having in addition an adjustable limit motion, means secured to the block and restricting the outward movement of the movable plate.

1,636,822. ERASER-HOLDING DEVICE AND THE LIKE. J E JOHNSON, Chicago, Ill., assignor to The Wahl Company, Wilmington, Del., a Corporation of Delaware. Filed May 23, 1921. Serial No. 471,549. 4 Claims. (Cl. 120—38.)

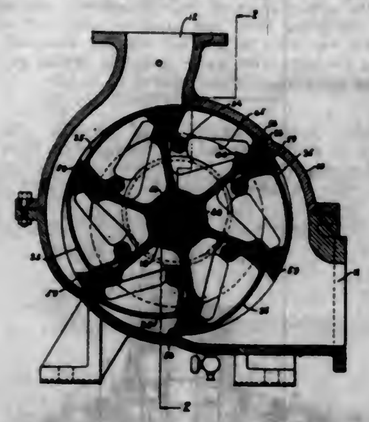
1. An eraser holder having means for gripping an eraser, and a cap adapted to enclose the end of said holder, the said means being further adapted to releasably lock said cap against longitudinal movement relative to said holder.

1,636,823. METHOD OF MARKING CAPSULES. KEITH K. KELLER, Minneapolis, Minn. Filed Dec. 11, 1926. Serial No. 154,158. 2 Claims. (Cl. 101—426.)



1. The method of marking a capsule with a visible insignia which includes the step of impressing upon the body of such capsule a heated die carrying a portion of wax like material, the impression of such die upon such capsule being insufficient to fracture or deform the capsule and the heat of such die being sufficient to cause a shallow depression in the material of such capsule.

1,636,824. FASTENER. ERNEST MELBERG, Norway, Iowa. Filed Aug. 23, 1926. Serial No. 130,979. 1 Claim. (Cl. 24—201.)



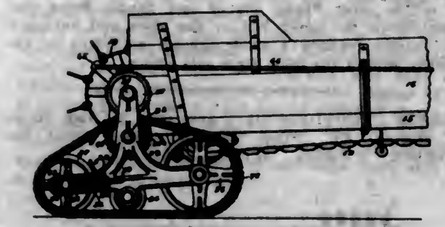
A fastener of the class specified, comprising a looped body having substantially parallel sides turned outwardly at the ends to form a head, the diverging parts being adapted to span a coil spring surrounding the body, a coil spring mounted on the body, and a flat key, mainly straight-sided, but beveled at the end and having a laterally turned head, the key being insertable in the loop and adapted to hold a fastened part between it and the head of the fastener.

1,636,825. MACHINE FOR TREATING TIRE CASINGS. GROVER C. MILLER, Los Angeles, Calif. Filed July 25, 1925. Serial No. 46,140. 14 Claims. (Cl. 91—60.)

1. A machine for lining tire casings comprising a rotatable member including an expansible group of sections adapted to be expanded to engage a tire casing and contracted to release the same, means for rotating said member including mechanism automatically operable in conjunction with the member for controlling the contraction and expansion of the sections.

1,636,826. PUMP. JOHN A. MORGAN, Los Angeles, Calif., assignor to The John A. Morgan Machinery Company, Los Angeles, Calif. Filed Dec. 6, 1924. Serial No. 754,298. 9 Claims. (Cl. 103—140.)

1. In a rotary pump, a tubular casing, a rotary mechanism in said casing including a hub having radial arms to provide a plurality of radial cavities, impeller vanes pivotally mounted to move entirely in said cavities, link means to move said vanes toward and from said tubular casing and side plates engaging the sides of said arms and the vanes to form chambers.

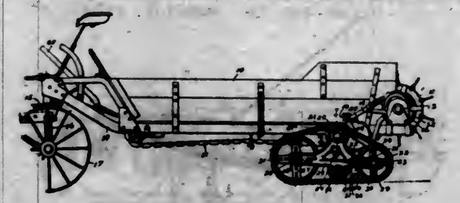


1,636,827. MONOGRAMMIC ADVERTISING APPARATUS. PREM NARAYAN, Bijnor, India. Filed Oct. 5, 1925, Serial No. 60,610, and in Great Britain Oct. 9, 1924. 10 Claims. (Cl. 40—52.)

1. A monogrammic advertising apparatus comprising a plurality of endless travelling belts, means for driving said belts, a plurality of buttons frictionally mounted on said belts, a plurality of fingers adapted to collect said buttons and to distribute them on the belts, electromagnets operating said fingers, a source of supply of electric current in circuit with said electro-magnets, a tape having the letters, figures, or designs forming the matter to be displayed in the form of a series of perfora-

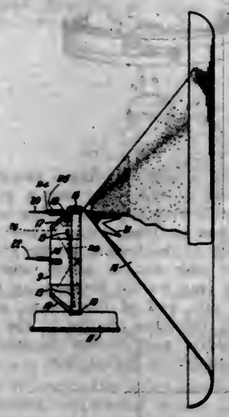
tions, an insulated element in circuit with said electro-magnets over which said tape passes, a plurality of brushes in circuit with the electro-magnets which contact the insulated element through the perforations in said tape, and means for causing said tape to travel past said contact making brushes.

1,636,828. TRACTION MOTOR. LEONARD B. NEIGHBOUR, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 10, 1921. Serial No. 499,866. 12 Claims. (Cl. 275—5.)



1. The combination with a vehicle frame and a rotary driven element mounted thereon, of means for driving said driven element comprising an endless chain having an elongated substantially straight portion engaging with the ground, front and rear wheels around which said chain travels, a frame in which said wheels are mounted and by which the weight of one end portion of the vehicle is sustained, said frame being pivoted to swing relatively to the vehicle frame about a transverse axis coincident with the axis of said driven element meanwhile maintaining the ground engaging portion of the chain in contact with the ground, and means mounted on and swinging with said pivoted frame and arranged to be engaged and driven by said chain, said means being operatively connected with said driven element for rotating the same.

6. The combination with a vehicle frame and a rotary driven element mounted thereon, of an endless chain having an elongated substantially straight portion constantly engaging with the ground, front and rear wheels supporting said chain, a frame in which said wheels are mounted and by which the weight of one end portion of the vehicle is sustained, said frame being pivotally suspended co-axially with said driven element at a point lying between the transverse vertical planes of the axes of said wheels, and a sprocket wheel mounted on the latter frame to swing therewith and driven by said chain, said sprocket wheel being operatively connected with said driven element.



1,636,829. MANURE SPREADER. LEONARD B. NEIGHBOUR, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 19, 1921. Serial No. 508,706. 3 Claims. (Cl. 275—5.)

1. The combination with a vehicle frame, and a rotary driven element mounted thereon, of means for driving said driven element comprising an endless chain having an elongated substantially straight portion engaging with the ground, front and rear wheels around which said chain travels, a frame in which said wheels are mounted and by which the weight of one end portion of the vehicle is sustained, said frame being pivoted to oscillate relatively to the vehicle frame about an axis disposed

transversely thereof at one side of the axis of said driven element, a driving wheel mounted at the center of oscillation of said pivoted frame, and a driving connection between said driving wheel and said driven element.

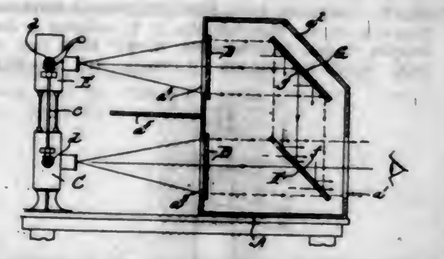
1,636,830. CEMENT COMPOSITION AND METHOD OF PREPARATION. ALEXANDER M. NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1924. Serial No. 740,746. 13 Claims. (Cl. 252—1.)

4. The method of preparing a cement composition which comprises heating a mixture of water and sodium potassium tartrate, and super-cooling said heated mixture.

1,636,831. SETTING TOOL FOR EXPANSION SHIELDS. RALPH E. OGDEN, Mountainville, N. Y., assignor to John Edward Ogden, Mountainville, N. Y. Filed Oct. 31, 1922. Serial No. 598,125. 6 Claims. (Cl. 29—88.2.)

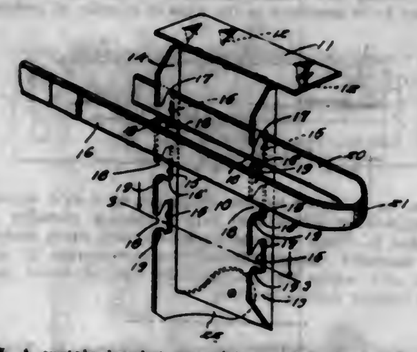
3. An expansion tool having a shank adapted to engage and actuate an expanding member and having a shoulder fixed on said shank and adapted to engage the element being expanded.

1,636,832. FISHING BAIT. JOHN B. PAGIN, South Bend, Ind., assignor to South Bend Bait Co., South Bend, Ind. Filed Oct. 30, 1925. Serial No. 65,872. 10 Claims. (Cl. 43—46.)



1. The combination with the forward end of a bait body, of a weight head carried thereby, said head being provided with an angling concave surface and its edge terminating coincident with the adjacent edge of the body.

1,636,833. PISTON RING. JOHN F. PANYARD, Detroit, Mich. Filed June 8, 1922. Serial No. 566,875. 1 Claim. (Cl. 74—109.)

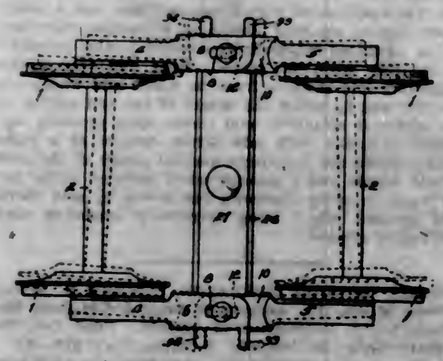


In piston packing, a piston having a groove for packing, packing in said groove comprising a pair of split expansible cooperating ring sections having helical meeting faces, one of said sections having a base flange substantially the width of the bottom of the groove seated therein, the other ring section seated upon the base flange of the first ring section between its helical face and the opposite side wall of the groove, one of said ring sections being rotatable relative to the other, and spring means engaging said section to exert rotatable pressure thereon counter its helical face.

1,636,834. ART OF EXHIBITING MOVING PICTURES. THOMAS K. PETERS and THOMAS C. BARTLAM, New York, N. Y. Filed Oct. 23, 1920, Serial No. 418,904. Renewed Jan. 11, 1926. 8 Claims. (Cl. 88—16.6.)

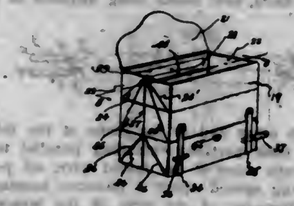
1. In a picture exhibiting machine, a plurality of screens, one of which is normally exposed to view, a plurality of projectors for throwing pictures on the screens, a transparent mirror in the plane of that screen which is normally exposed to view, and means for reflecting the pictures thrown on the other screen onto said transparent mirror.

1,636,835. COMBINED CURTAIN AND SHADE HOLDER AND ROD FOR USE THEREWITH. JOHN RASP, McKeesport, Pa. Filed Feb. 12, 1927. Serial No. 167,763. 6 Claims. (Cl. 156—22.)



5. A curtain bracket comprising a plate having flanges on its side edges, said flanges having coacting openings for the reception of a rod, the opening of one flange being vertically offset with relation to the coacting opening of the other flange, one of said flanges being continued below the lower end of the plate and having a continuation forming a shade bracket extending to the opposite side of the plate from said flanges.

1,636,836. TOOTHBRUSH. AUGUSTUS R. LEE READ, Covington, Ky. Filed May 10, 1926. Serial No. 108,093. 2 Claims. (Cl. 15—193.)



1. A tooth brush comprising an elongated body having a head portion provided with openings therethrough, said body having a longitudinal recess, a back having a ridge arranged in said recess for centering said back with respect to the body portion and having a head portion arranged to register with the head portion of the body, bristle tufts having loops arranged in the openings, and cementing material securing said back to said body.

1,636,837. CAR TRUCK. DAVID R. RICHARDS, St. Louis, Mo. Filed Aug. 14, 1926. Serial No. 50,190. 7 Claims. (Cl. 105—165.)

1. A side frame for four wheel car-trucks comprising two substantially like sections having slotted hinge connection at their inner ends for flexibly uniting said sections.

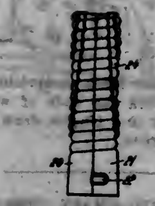
1,636,838. COLLAPSIBLE HAND BAG. MATHIAS F. ROSSE, Detroit, Mich. Filed Apr. 15, 1925. Serial No. 23,231. 3 Claims. (Cl. 190—43.)

1. A hand bag of the class described, comprising a foldable bottom and foldable side and end walls, for permitting the folding of the bag into a form to provide a portfolio; a separable member having a main body portion substantially the same size as the bottom of said hand bag and adapted to lie in engagement therewith, when placed in said hand bag; flaps swingably mounted on opposite sides of said main body portion, said flaps being jointly of greater length than said main body portion and foldable upon themselves, said flaps being adapted for raising into an upright position, when positioned in said hand bag for retaining the end walls of said hand bag in distended form, and for permitting the cover of said hand bag to be closed, said flaps being foldable upon themselves, to permit the closing of said hand bag to provide a hand bag of different sizes; clips mounted on said side walls for engaging said flaps when extended to upright position, said clips being adapted for engaging a double thickness of said flaps, when said flaps are folded upon themselves.

1,636,839. HEADER FOR PAILS. HERBERT SCHRADER, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Aug. 19, 1926. Serial No. 130,207. 5 Claims. (Cl. 113—25.)

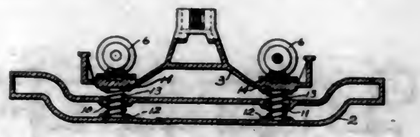
1. In a header for sheet metal containers, a stationary hollow head adapted to receive within its embrace the ends of a container to be headed, a shaft having an end extended into and rotatable in said head, a plate carried by said end of the shaft and rotatable within said head, gibs carried by the face of said plate and forming radial guideways, a member slidably mounted in each of said guideways, yieldable means normally maintaining said members in inwardly moved positions, cover expanding rollers carried by said members, a rod extending through said shaft, means carried by said rod and movable with the latter for actuating said members to carry said rollers into expanding relation to said cover, and means for actuating said rod, said rod and said shaft being relatively independent in operation.

1,636,840. ELECTRIC LOCOMOTIVE TRUCK. WILLIAM M. SHERMAN, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed June 9, 1926. Serial No. 114,744. 7 Claims. (Cl. 105—84.)



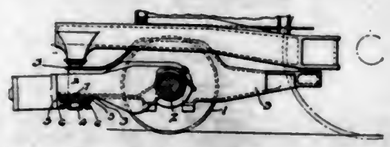
7. A one piece casting comprising an electric locomotive truck frame including wheel pieces, pedestals, cross ties, end rails with draft pockets, brake lever and hanger brackets, there being integral pole pieces provided on said cross ties and end rails.

1,636,841. SHUTTLE. LEWIS P. SPENCER and WILLIAM H. WILSON, New Bedford, Mass. Filed May 19, 1926. Serial No. 110,153. 10 Claims. (Cl. 139—222.)



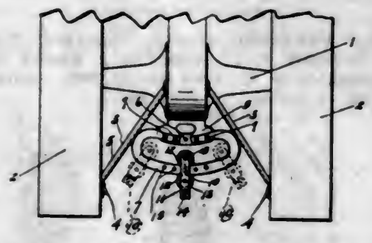
10. In combination with a shuttle having a cut-out, a porcelain member seated in the cut-out, means engaging the top of the member and the bottom of the shuttle to clamp the member in the cut-out, an upper member overlying the lower member and the clamping means thereof, and means to secure the upper member in position, said members having cooperating thread engaging means.

1,636,842. EXPANSION SHIELD. CHARLES C. TOMKINSON, Plainfield, N. J., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Dec. 20, 1922. Serial No. 607,966. 6 Claims. (Cl. 85—2.4.)



4. An expansion shield comprising a pair of sections, each section having secured to its outer surface intermediate and spaced from the longitudinal edges thereof a plurality of layers of excess metal.

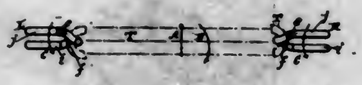
1,636,843. BOOSTER-MOTOR SUPPORT. CHARLES T. WESTLAKE, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 17, 1924. Serial No. 726,553. 10 Claims. (Cl. 105—139.)



1. In a locomotive, a trailer truck including an axle and a frame, a booster motor mounted on said axle and at spaced points on itself and on said frame so as to be free to move with said axle independently of movement of said frame.

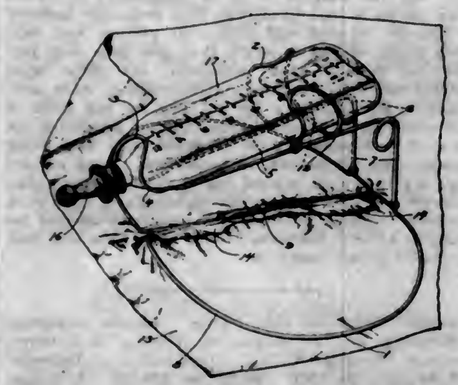
1,636,844. BOOSTER-MOTOR SUPPORT. CHARLES T. WESTLAKE, deceased, St. Louis, Mo., by Lilian A. Westlake, administratrix, Palestine, Tex., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Original application filed July 17, 1924, Serial No. 726,553. Divided and this application filed Nov. 10, 1926. Serial No. 147,483. 12 Claims. (Cl. 105—139.)

1. In a locomotive, a trailer axle, a booster motor operatively connected to said axle, and a leaf spring disposed substantially parallel with and spaced from said axle beneath said motor and supporting the latter.



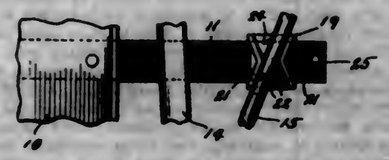
1,636,845. FLOATING TRACTOR HITCH. WILLIAM WIELAND, Bay City, Mich., assignor of one-half to John Kohler Mohr, Bay City, Mich. Filed Sept. 8, 1925. Serial No. 54,946. 4 Claims. (Cl. 280—33.44.)

1. A floating tractor hitch comprising a substantially circular one piece track the ends of which are adapted to be secured directly to a tractor draw-bar and a trolley mounted to float thereon.



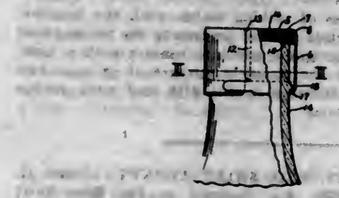
1,636,846. NONSKID CHAIN FOR AUTOMOBILES. FRED BOND, Montreal, Quebec, Canada, assignor to Fred Bond and Joseph Bond, Montreal, Canada. Filed May 19, 1926. Serial No. 110,169. 4 Claims. (Cl. 59—90.)

1. A self-locking connecting link for antiskid chains for automobile tires consisting of a single piece of hardened wire folded on itself midway of its length, the respective sides of the wire being offset in opposite directions at right angles to the plane of the fold and in close proximity to the latter, each side of the wire being bent to elongated hook form and the ends of the hooks terminating at the offsets, said hooks being disposed in planes



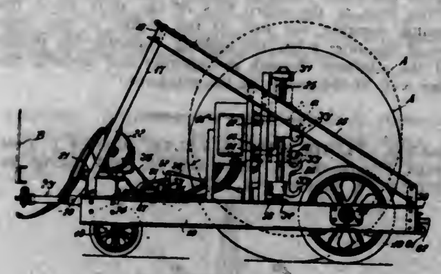
parallel to each other and to the plane of the fold and the bent back hook portions extending parallel to each other and to both sides of the folded wire, all portions of the link being spaced apart a distance substantially equal to the diameter of the wire of the largest link engaged.

1,636,847. NURSING-BOTTLE HOLDER. MARCIUS S. BULKLEY, San Francisco, Calif. Filed June 3, 1924. Serial No. 717,534. 5 Claims. (Cl. 248—65.)



3. A bottle holder comprising a wire frame having a large supporting base and a bottle supporting portion disposed above the base transversely thereof and including two elongated spaced portions of wire adapted to supportingly receive a bottle longitudinally therebetween, the said wire portions having means at the free end thereof for engaging the neck of a bottle and supporting means at the other end comprising spring coils connected to the base by upright wire portions, the construction being such that the free end of the bottle supporting portion is supported for resilient vertical movement, and means cooperating with the said wire portions remote from the free end thereof for cooperating with the body of the bottle.

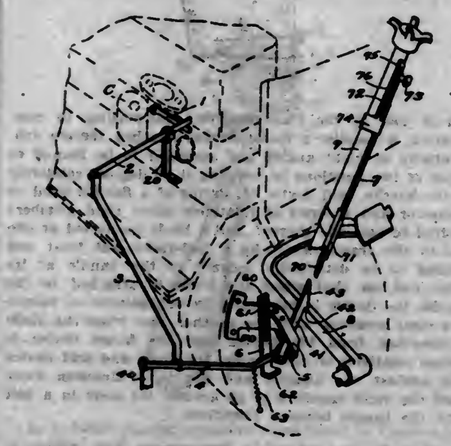
1,636,848. TWO-WAY BRAKE-BEAM SUPPORT CHAIR. EDWIN G. BUASS, Chicago, Ill., assignor to Chicago Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1924. Serial No. 734,203. 14 Claims. (Cl. 188—213.)



11. A reversible support for brake beams adapted to be slidably arranged on a track and engage the tension member of a brake beam, and removable means carried by the support and cooperating with the track to hold said support against displacement from said track.

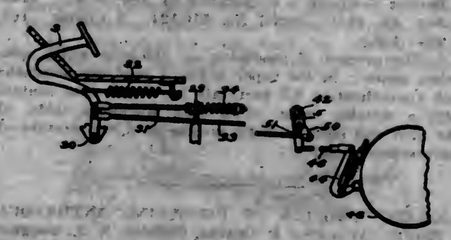
1,636,849. BOTTLE CAP. LESLIE R. N. CARVALHO, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a Corporation of Ohio. Filed June 9, 1924. Serial No. 718,756. 3 Claims. (Cl. 215—38.)

1. A cap for a container, comprising a button or top portion and a body portion formed of separate pieces of sheet metal; said button being formed with an inner annular downwardly projected bead adjacent the periphery of the button, and an outer annular bead surrounding and extending upward from said first mentioned bead, the outer wall of said outer bead being extended vertically downward to form a peripheral flange on the button extending into the body portion; said body portion being formed of a strip having its ends united in an interfolded seam terminating a short distance below the upper edge of said body, the upper edge portion of the body being curved inwardly and downwardly to embrace the outer bead of the button and frictionally hold said top and body portions together, permitting them to be assembled or separated solely by a relative endwise movement.



1,636,850. LIFTING TRUCK. WILLIAM C. CHILDRESS, Chicago, Ill., assignor to Mercury Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 7, 1924. Serial No. 704,667. 12 Claims. (Cl. 214—65.)

1. A wheeled truck comprising a U-shaped frame having two side members spaced apart to receive between them the article to be lifted, each of said side members being composed of two parallel bars spaced apart, transverse end members connecting said side members together at one end, a supporting wheel at each side of the frame mounted between the bars of said side members, laterally swinging wheels supporting the forward portion of the frame, a gear housing at each side of the frame mounted between the bars of said side members, upright screw-threaded shafts extending from said gear housings at each side of said frame, lifting members having threaded engagement with said shafts and movable vertically thereof by the rotation of said shafts, thrust bearings in said gear housings supporting said shafts, a bevel gear on each of said upright shafts within each gear housing, longitudinally extending shafts mounted on said side members between the parallel bar thereof, the rear ends of said latter shafts entering said gear housings, bevel pinions on said longitudinally extending shafts meshing with the bevel gears in said housings, worm wheels on the forward ends of said longitudinally extending shafts, a transverse shaft mounted on the front portion of said frame, worms on the ends of said transverse shaft meshing with said worm wheels, and means for rotating said transverse shaft.



11. A wheeled truck comprising a frame having two side members spaced apart to receive between them an article to be lifted, each of said side members being composed of bars spaced apart, a transverse end member connecting said side members together at one end, transverse members connecting together the rear ends of the side bars of each side member, channel strips secured to the latter transverse members, and a transverse bar fitted in and detachably secured to said channel strips.

1,636,851. AUTOMATIC CARBURETOR-FEED CONTROL. CHARLES W. COLLINS, Seattle, Wash. Filed Aug. 20, 1926. Serial No. 130,420. 6 Claims. (Cl. 192—3.)

5. In an automobile, the combination with gasoline supply controlling means, an operating lever for said means having one end adjacent a brake lever and a pawl carried by said lever and adapted to be engaged by the brake lever to operate said gasoline controlling means to supply gasoline by the releasing movement of the brake lever, and a member movable into position to engage said pawl to thereby prevent engagement thereof by the brake lever.

1,636,852. BRAKE-OPERATING MEANS. GUY E. COLLINS, Seattle, Wash., assignor to Charles W. Collins, Seattle, Wash. Filed Oct. 28, 1926. Serial No. 144,680. 2 Claims. (Cl. 188—140.)

1. In a brake operating mechanism for automobiles, a brake operating lever, two sets of brake actuating members connected with and extending from said brake lever, one of said sets of brake actuating members containing a lever arm composed of two pivoted members having limit stops making a delayed engagement whereby to delay the actuation of the brake until after the other set has been brought into action.

1,636,853. TOOL. CHARLES E. CONNER, Auburn, Me. Filed May 8, 1922. Serial No. 559,185. 6 Claims. (Cl. 145—33.)

2. A tool of the class described comprising, in combination, a handle, a frame device attached thereto substantially at right angles and arranged to be turned to either of two positions by twisting it 90 degrees relatively to the handle, said device consisting of a flexible band or connector and a series of relatively short rigid members secured to one side thereof, and a blade connected at one end to the frame device by a ball-and-socket joint and formed to be detachably secured to the handle at its other end, so that when the blade is attached to the handle the device is held rigid by engagement of successive rigid members with one another, and when the blade is detached from the handle and the frame device is turned relatively to the handle, the blade and said device fold against one another and flex in a direction away from the rigid members to go around the body in a belt with the handle hanging therefrom.

1,636,854. CATALYTIC OXIDATION OF AROMATIC HYDROCARBONS. AUGUSTUS E. CRAVER, Cliffside, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 14, 1921. Serial No. 514,903. 15 Claims. (Cl. 260—136.)

1. The process which comprises passing an aromatic compound, containing a CH_3 group, in the vapor phase in the presence of an oxygen-containing gas into contact with a catalyst comprising molybdenum and uranium.

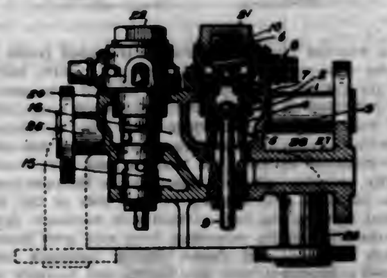
1,636,855. PRODUCTION OF AROMATIC ALDEHYDES. AUGUSTUS E. CRAVER, Cliffside, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 18, 1921. Serial No. 516,124. 3 Claims. (Cl. 260—136.)

1. The process of producing an aldehyde which comprises passing, in the vapor phase, 1 part pseudocumene and approximately 8.3 parts air by weight into contact with a metallic oxide, other than vanadium oxide, of the fifth and sixth periodic groups, at a temperature of approximately 550° C.

1,636,856. PROCESS OF PRODUCING ANTHRAQUINONE. AUGUSTUS E. CRAVER, Cliffside, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Dec. 5, 1921. Serial No. 520,142. 6 Claims. (Cl. 260—57.)

4. The process of producing anthraquinone, which comprises passing anthracene in the vapor phase and an oxygen containing gas into contact with a catalyst comprising oxides of uranium and molybdenum, the oxide of uranium predominating.

1,636,857. PRODUCTION OF MALEIC ACID. AUGUSTUS E. CRAVER, Cleveland, Ohio, assignor to The Barrett Company, a Corporation of New Jersey. Filed May 23, 1923. Serial No. 641,011. 9 Claims. (Cl. 260—116.)



1. In the process of making maleic acid, the improvement which comprises passing benzene in the vapor phase and an oxygen containing gas into contact with a catalyst, said catalyst containing a mixture of at least two oxides of metals included in the fifth and sixth groups of the periodic system.

1,636,858. SHIRT AND SHIRT POCKET. JOHN H. CRONIN, Louisville, Ky., assignor to The Enro Shirt Company, Louisville, Ky., a Corporation of Kentucky. Filed Nov. 16, 1925. Serial No. 69,287. 3 Claims. (Cl. 2—248.)

1. The method of attaching pockets to shirts with invisible stitches, which consists in forming a pocket, providing a pocket opening in the shirt, securing a reinforcing tape to the outer face of the shirt above the opening, securing one wall of the pocket to the outer face of the shirt below the opening, inverting the pocket and the reinforce through the opening and securing the other wall of the pocket to the reinforce.

1,636,859. FLUID-CONTROL VALVE. GEORGE P. DEMPSEY, Pittsburgh, Pa. Filed Aug. 23, 1926. Serial No. 130,735. 2 Claims. (Cl. 137—144.)

1. In valve mechanism for controlling the flow of fluid under pressure, the combination of fluid supply and fluid delivery passageways, two valves arranged one in each passageway, two pneumatically operated motor elements to which the two said valves are severally connected, and means for relieving simultaneously the pressure to which the said motor elements are upon one side subjected.

1,636,860. METHOD FOR THE PRODUCTION OF A COLD GLAZE UPON BUILDING MATERIAL, SUCH AS CONCRETE, SANDSTONE, CLAY, BRICKWORK, AND THE LIKE. KARL FRIEDRICH, Breslau, Germany. Filed Oct. 8, 1921. Serial No. 506,365. 1 Claim. (Cl. 91—68.)

A method for producing in the cold state a permanent thin glaze-like coating on building material consisting in preparing a mixture of cement, water and an emulsion of zinc soap, and in painting the building material with a thin coating of this liquid.

1,636,861. DENTAL FORCEPS. PIERRE BERTRAND JACQUES GRIVEAU, Paris, France. Filed Jan. 25, 1926, Serial No. 83,693, and in France Aug. 21, 1925. 1 Claim. (Cl. 32—34.)

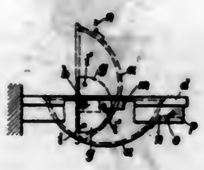
Dental-forceps for the extraction of the lower molar teeth of six to twelve years growth consisting of a pair of pliers with double jaws, each jaw comprising a middle notch between two gripping members integrally formed, said notch adapted to contain without damaging it the upper part of the inter-alveolar wall, while both gripping members seize the roots under the crown of the tooth.

1,636,862. PROPELLING PENCIL. EGON HARRINGER, Barcelona, Spain. Filed Mar. 12, 1923, Serial No. 624,626, and in Spain Dec. 29, 1922. 2 Claims. (Cl. 120—18.)

1. A magazine pencil all the parts of which are connected with one another without soldering, comprising in combination a casing, a rotatable sleeve having an annular groove at its rear end and longitudinal opposite slits in its forward end, a pushing pin in said rotatable sleeve, a cap closing the rear end of said casing, a coupling sleeve screwed into the front end of said cap, straight inner shoulders in the front end of said coupling sleeve, straight bearing faces on the rear end of said rotatable sleeve, an intermediate sleeve on the rear end of said rotatable sleeve bearing with its rear end on said coupling sleeve, a cylindrical piece on the forward end of said intermediate sleeve engaging with an annular groove of said rotatable sleeve, a slit rear end on said pushing pin and a cross head threadably engaging in said rotatable sleeve and said rear end of said pushing pin and engaging with the internal threads of said threaded sleeve.

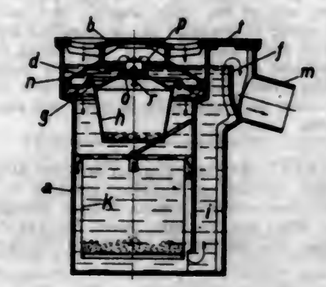
1,636,863. HAND PLANING MACHINE. GOTTFRIED JEHLE, Zurich, Switzerland. Filed Aug. 27, 1925. Serial No. 52,916. 3 Claims. (Cl. 144—117.)

1. A hand planing machine comprising in combination a casing open at one end, a handle on said casing, a knife cylinder of solid cross section, mounted on said casing, an axle of said knife cylinder journalled in the closed end of said casing so that its end projects from said casing, a flexible shaft driven from a suitable source of power, means for coupling said flexible shaft with said axle of the knife cylinder, two bearing faces on said casing tangentially to the same for guiding said machine on the workpiece one of said bearing faces being adjustable and consisting of a plate, bolts engaging with said casing fixedly holding said plate on said casing, and springs acting upon said bolts to press said plate against said casing.



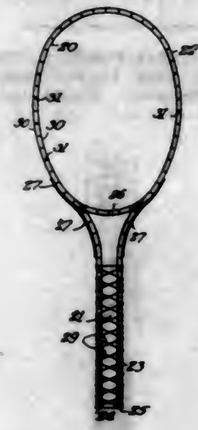
1,636,864. MECHANICALLY-MOVED TOY. ERNST KEPPNER, Nuremberg, Germany, assignor to the Firm Blechspielwarenfabrik Johann Distler, Nuremberg, Bavaria. Filed Oct. 23, 1926, Serial No. 143,652, and in Germany Jan. 13, 1926. 2 Claims. (Cl. 272—31.)

1. A mechanically operated toy comprising in combination a base plate, two toy figures on said base plate, a clockwork, a supporting arm for one of said toy figures rigid with and operated from said clockwork, a supporting arm for the other toy figure loosely connected to said clockwork, a two-armed adjusting lever, a pressure or brake plate on the outer end of one of the arms of said



adjusting lever, means for operating said adjusting lever from the outer side, a spring controlled slide shiftable on said loose supporting arm, a sickle-shaped two-armed coupling lever pivotally mounted on said fixed supporting arm, a pin on the inner end of said slide adapted to come into the range of said coupling lever, a brake arm at the free end of the second arm of said adjusting lever, a brake nose on said brake arm and adapted to act upon said coupling lever so that, if said adjusting lever is operated said brake arm releases said coupling arm and said slide is pushed back by said pressure or brake plate and said pin of said slide comes out of the range of said coupling lever whilst when said slide is released said coupling lever catches said pin and pulls said loose supporting arm gradually towards said fixed supporting arm until both supporting arms are stopped by said brake nose.

1,636,865. WASHING BASIN. ROBERT OSKAR KRASSELT, Leipzig, Germany. Filed Mar. 4, 1927, Serial No. 172,789, and in Germany Oct. 6, 1926. 3 Claims. (Cl. 4—169.)



1. Tippable washing-basin for public use, comprising in combination with a basin proper oscillatably mounted in a table plate by eccentric journals, a counting mechanism, means for operating said counting mechanism from the oscillating basin, and means for locking the basin in the position of use and in the emptying position said means to be unlocked wtih the aid of a special key.

1,636,866. BENZINE AND OIL SEPARATOR. ADOLF KUTZER, Leipzig, Stuns, Germany. Filed Feb. 26, 1926, Serial No. 90,809, and in Germany Mar. 6, 1925. 2 Claims. (Cl. 210—56.)

1. A sink-water trap for separating specifically lighter liquids, such as oil and benzine, from the sewage water, comprising in combination with the trap proper having a lid and also an overflow edge in one side, a dip bell downwardly projecting from the lid of said trap, a downwardly directed vertical partition in said trap separating the overflow edge of said trap from said dip bell said partition ending a certain distance above the bottom of said trap, a mud box in the lower portion of said trap, cross arms on the bottom edge of said dip bell, a vessel suspended on said cross arms designed for collecting the specifically lighter liquids and having its open top edge situated approximately on the same plane as said overflow edge of the trap, and a sluice insertion adjustably mounted in the open top end of said vessel for increasing the height of the lever of specifically lighter liquids under said dip bell.

1,636,867. TENNIS RACKET. ROY H. ROBINSON, Chicago, Ill. Filed June 26, 1924. Serial No. 722,453. 28 Claims. (Cl. 273—73.)

9. In a racket, a substantially oval head of molded material reinforced with an open-work stiffening frame, a handle connected to said head, and stringing woven through said head.

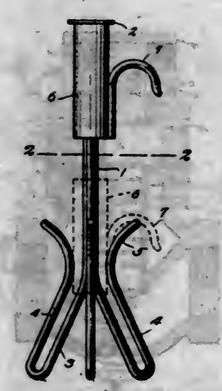
1,636,868. DOOR LATCH. WERNER SCHLEGEL, Pegau, Germany. Filed Jan. 2, 1926, Serial No. 78,985, and in Germany Jan. 7, 1925. 5 Claims. (Cl. 292—169.)

1. A spring-bolt latch comprising in combination a bolt designed to serve as latch bolt and as locking bolt and having a long notch and an indentation in its lower edge and a long notch and an indentation in its upper edge, a spring controlled tumbler normally engaging with said long notch in the upper edge of said bolt, a spring controlled bolt nut rotatably mounted under said bolt, two arms upwardly projecting from said bolt nut one at the front end and the other at the rear end said first arm engaging normally with said long notch in the lower edge of said bolt so that this bolt if serving as latch bolt is secured by said tumbler engaging with said long notch in the upper edge of said bolt, and a downwardly directed extension of said tumbler extending behind said bolt so that if said latch is rotated said second arm of said latch nut engaging with the indentation in the lower edge of said bolt lifts said extension and through it said tumbler and advances said bolt into the locking position said tumbler coming then into engagement with said indentation in the upper end of said bolt to securely hold said bolt in the locking position.

1,636,869. BRACELET FASTENER. KARL AUGUST SCHAEFER, Pforzheim, Germany. Filed June 5, 1926, Serial No. 113,945, and in Germany Apr. 19, 1926. 3 Claims. (Cl. 24—69.)

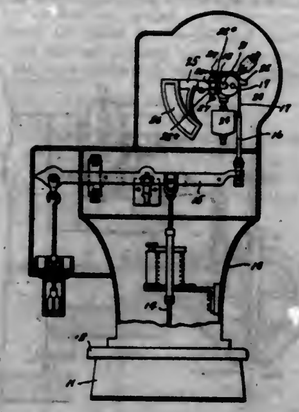
1. A contrivance for fastening bracelets or wrist bands comprising in combination with the bracelet or wrist band, an eye fixed to one end of the bracelet or wrist band, a U-shaped bow fixed to the other end of the bracelet or wrist band, a casing shiftably mounted on said U-shaped bow and having an indentation in the outer surface of each side wall, spiral springs in said casing acting upon said bow, an extension at the front end of the bottom plate of said casing, a hinge at the front end of said extension, a flap hingedly fixed on said extension by means of said hinge, a clamping piece at each side of said flap and of similar shape as said indentations in the side walls of said casing, said flap being designed to be inserted through said eye to pull said eye over said hinge when said flap is closed.

1,636,870. FOLDABLE COMB. HEINRICH SCHOLL, Pforzheim, Germany. Filed June 21, 1926, Serial No. 117,553, and in Germany Nov. 21, 1925. 1 Claim. (Cl. 132—15.)



A folding comb comprising in combination with the two halves, a double hinge connecting with one another said two comb-halves and sunk into the comb back which has a longitudinal groove in one of its surfaces, a slide of U-shaped section shiftably mounted on said comb back, and a rib on the inner surface of said slide and engaging with said groove in the comb back.

1,636,871. HOLDER FOR BALLS OF THREAD. ALBERT SEIBOLD, Muhlacker, near Pforzheim, Germany. Filed Sept. 17, 1926, Serial No. 136,183, and in Germany Sept. 15, 1925. 1 Claim. (Cl. 242—141.)

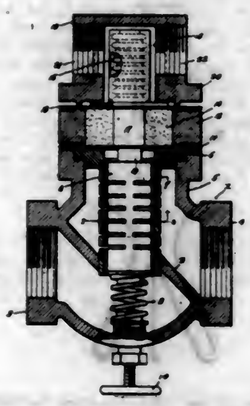


A holder for a ball of thread comprising in combination a central axle composed of two sleeves the lower sleeve being telescoped into the upper sleeve, a spiral spring in said sleeves for pulling the lower sleeve into the upper sleeve, a disk fixed by a screw on the top end of said upper sleeve, an eye on said disk, and a disk fixed by a screw on the bottom end of said lower sleeve.

1,636,872. DIPPING SHACKLE. GEORGE F. SEIDEL, FRITZ O. SALTS, and LOUIS E. WHITCOMB, Fremont, Nebr. Filed May 9, 1927. Serial No. 190,028. 3 Claims. (Cl. 17—44.)

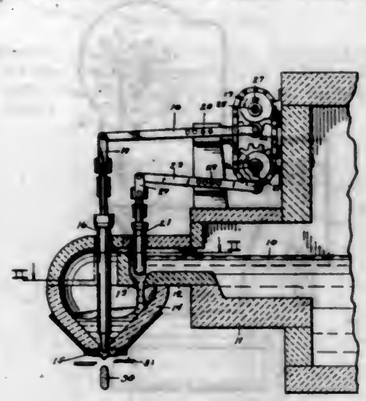
1. A shackle of the class described including a shank, poultry supporting loops at one end of the shank, a retaining sleeve slidable on the shank into and out of the loops, and a support engaging member carried by the sleeve.

1,636,873. ECCENTRICALLY-ADJUSTABLE CAM FOR SCALES. LOUIS S. SHIVELY, University City, Mo., assignor to The Weightograph Company, St. Louis, Mo., a Corporation of Missouri. Filed June 16, 1925. Serial No. 37,476. 10 Claims. (Cl. 265—61.)



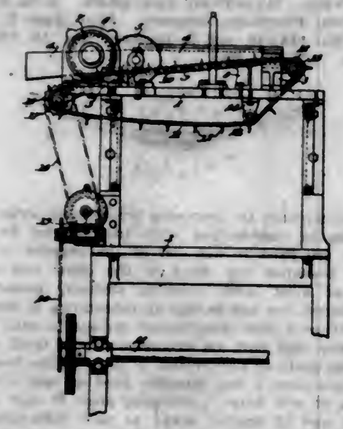
1. In a scale, the combination with a pivotally mounted weight indicating member, of a support in fixed relation with said indicating member, and a cam having a fixed segmental place carried by said support and fixedly adjustable laterally thereon for varying the eccentricity of said cam.

1,636,874. AUTOMATIC TEMPERATURE-ACTUATED REFRIGERANT-REGULATING VALVE. EARL ENGLER SNADER, Webster Groves, Mo. Filed June 9, 1926, Serial No. 114,726. 2 Claims. (Cl. 236—99.)



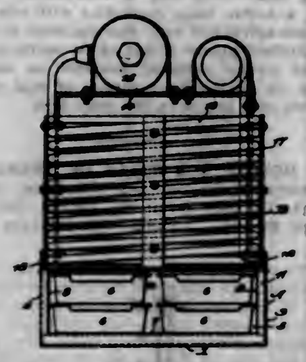
1. In an automatic regulating valve of the class described, a casing having a partition therein, a cylindrical valve guide extending through an opening formed in said

partition, said guide being provided with slots, a spring pressed valve sleeve slidably mounted in said guide and having slots cooperating with the first named slots, a



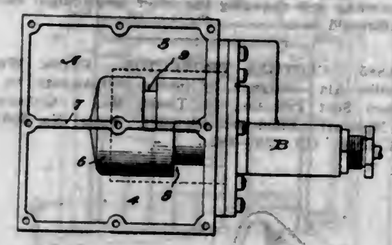
pair of spaced flexible diaphragms, a thermostat bearing on said valve sleeve through the medium of said diaphragms for moving the sleeve in a direction against the tension of the spring.

1,636,875. GLASS FEEDER. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 5, 1924. Serial No. 696,937. 5 Claims. (Cl. 49—55.)



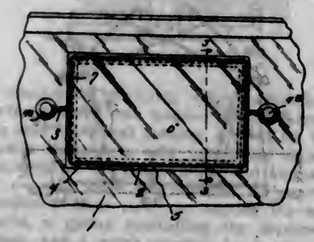
3. In glass feeding apparatus, the combination of a furnace for molten glass having an extension into which the glass flows from the body of the furnace, said extension having an outlet opening in the bottom thereof, a plunger projecting downward into the glass over said opening, a receptacle beneath said opening into which the glass flows from said opening, said receptacle having a discharge opening in the floor thereof, said receptacle entirely enclosing the first opening and having side walls converging downwardly toward the second outlet opening, a plunger projecting downward into the glass in said receptacle over the opening, and means to periodically reciprocate said plungers vertically and in synchronism.

1,636,876. CHUTE-CLEARING DEVICE FOR MATCH MACHINES. OREO E. SWARTZ, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Apr. 10, 1924. Serial No. 705,600. 2 Claims. (Cl. 198—173.)



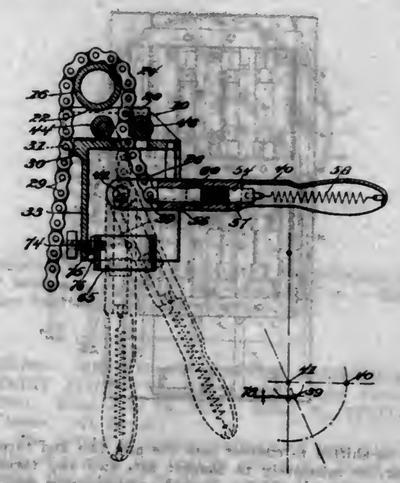
1. In a chute clearing device for match machines, the combination with a chute arranged to receive matches from the punch-out of the machine and provided with a slotted bottom, of a pair of travelling conveyor chains arranged beneath the chute bottom and provided at intervals with chute clearing fingers extending into the chute through the slots in the bottom thereof, the fingers of one chain being arranged for travel in advance of the fingers of the other chain, for the purpose specified.

1,636,877. REFRIGERATING APPARATUS. ALBERT E. THORNLEY, Pawtucket, R. I., assignor to Narragansett Machine Company, Pawtucket, R. I. Filed Apr. 30, 1926. Serial No. 105,691. 4 Claims. (Cl. 62—95.)



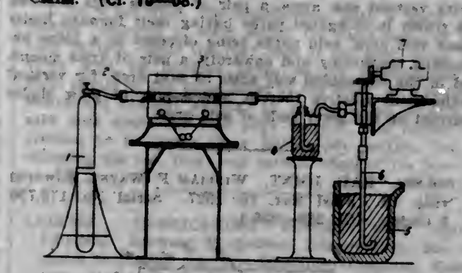
1. In combination with a refrigerating apparatus including a frame, a coil and vertical strips clamping the coil to the frame and having their lower ends projecting below the frame to provide supporting legs, a supporting base having a heat absorbing top and being formed to receive material to be cooled, said top having upwardly extending flanges to provide a tray so as to collect dripping from the refrigerating apparatus, the legs of the apparatus being removably received within the tray and supported thereby.

1,636,878. PUMP. ALBERT E. THORNLEY, Pawtucket, R. I., assignor to Narragansett Machine Company, Pawtucket, R. I. Filed June 3, 1926. Serial No. 113,416. 1 Claim. (Cl. 230—158.)



A refrigerating apparatus composed of a series of independent compression units each having a housing formed with a pump chamber, a horizontal partition in each housing having an upwardly extending portion forming the top of the pump chamber, the front side of each housing having an opening, a pump in each chamber slidable through the opening and formed to be freely received in the pump chamber, means connected to the pump and removably secured to the housing and adjacent said opening to hold the pump in its chamber and whereby upon removal of said means the pump may be slid out of the chamber, a vertical partition engaged with the horizontal partition and extending to the top of the housing and forming a pair of compressed fluid and oil receiving compartments, a cover for the housing engageable with the upper edge of the partition, said horizontal partition having openings on opposite sides of the vertical partition and communicating with the pump chamber, and means to interconnect the units whereby to conduct the fluid from one unit to the next adjacent unit so as to increase the compression stage-by-stage.

1,636,879. ANTIFROST VISION APPLIANCE. RUDOLPH TICHOTA, Dodge, Nebr. Filed Mar. 6, 1926. Serial No. 92,689. 1 Claim. (Cl. 20—40.5.)

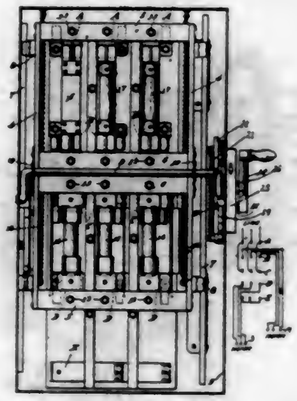


An anti-frost vision device comprising a resilient, normally concavo-convex open frame, suction cups disposed at opposite sides of and connected with the ends of said open frame, a second open frame of flexible packing material opposed to the first named open frame, and connected therewith; said packing frame being of greater width than the first named open frame, and a flexible transparent member or pane interposed between the first named open frame and the frame of flexible packing material and connected to said frame of packing material, the said first named open frame, the packing frame and the transparent member or pane being adapted to flex as a unit.

1,636,880. CLAMPING DEVICE. STILES H. TUCKER, Wollaston, and SAMUEL B. FIELD, Holbrook, Mass. Filed Sept. 16, 1924. Serial No. 738,024. 10 Claims. (Cl. 81—19.)

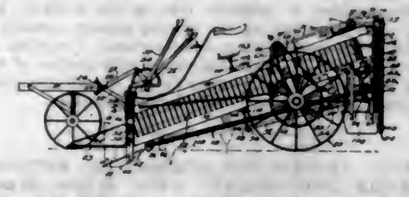
1. In a vise of the character described, in combination, a base provided with a clamping member, a chain adapted to extend over the article to be clamped, and means for tightening the chain to clamp the article against the clamping member upon the base, including a fixed member for holding one end portion of the chain and a pivoted member adapted to yieldably take up the slack in the chain upon movement of the pivoted member through a portion of its stroke, and means for rigidly connecting at a distance from the pivot the second end portion of the chain with the pivoted member before the pivoted member reaches its final operative clamping position.

1,636,881. PROCESS FOR PURIFYING OR REFINING METALS AND ALLOYS. DAVID RONALD TULLIS, Clydebank, Scotland. Filed Nov. 9, 1926, Serial No. 147,227, and in Great Britain Nov. 11, 1925. 1 Claim. (Cl. 75—58.)



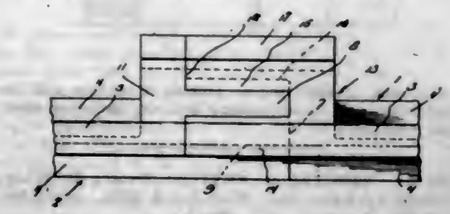
A process of purifying or refining aluminum and its alloys consisting in introducing into the metal or alloy boron trichloride.

1,636,882. ELECTRICAL SWITCH. GEORGE B. WADSWORTH, Covington, Ky. Filed Jan. 5, 1920. Serial No. 349,426. 6 Claims. (Cl. 200—8.)



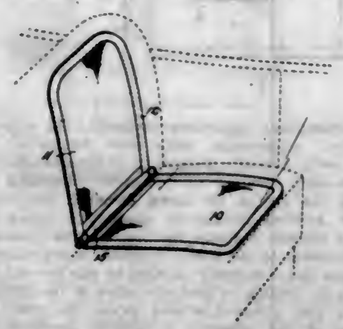
1. In an electric switch, the combination of a series of five sets of electric contacts arranged in line, three contacts in a set, with the fifth set strapped, and the first

set connected to the line and strapped to the third set, and the second and fourth sets connected to the load by separate wires, and a movable switch element, adapted



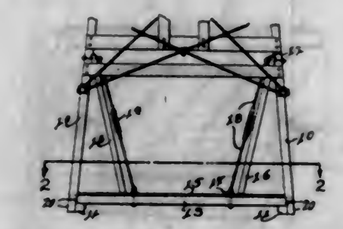
to be shifted to connect sets one and two and three and four, or selectively to connect sets two and three, and four and five, and to a neutral nonconnecting position.

1,636,883. BEET HARVESTER. GERRIT WANDSCHEER, Sioux Center, Iowa. Filed May 29, 1925. Serial No. 33,633. 8 Claims. (Cl. 55—108.)



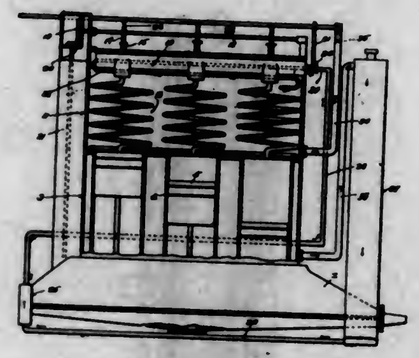
1. In a harvester, a vehicle having side frame members connected at their forward ends by a channelled arch with vertical side arms, a pair of endless belts mounted to travel in elongated paths having their forward limits near said arch, said paths being disposed in a plane extending rearwardly and upwardly, a pair of arms mounted in the channelled side arms of said arch, for vertical adjustment relative thereto, and a pair of plow blades carried by the lower ends of said arms.

1,636,884. RAIL JOINT. WILLIAM F. WAYNE, Edwardsville, Ill. Filed Mar. 16, 1927. Serial No. 175,750 1 Claim. (Cl. 238—235.)



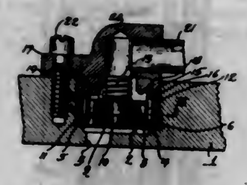
In a structure of the class described, a rail section having a relatively thick and wide base extension provided with an upstanding tongue on opposite sides of which are supporting ledges, a reinforcement at the juncture of the base and body of said rail section, a complemental rail section provided with a bifurcated portion, the furcations straddling said tongue and resting on said ledges, one furcation providing a wheel tread continuation, and the other furcation being provided with a depending web engaging the outer longitudinal face of the aforesaid base.

1,636,885. CLOTHES PROTECTOR. FRANK WELLS, Mobile, Ala., assignor, by mesne assignments, to Evr Klean Seat Pad Co., St. Louis, Mo., a Corporation of Missouri. Filed Oct. 10, 1921. Serial No. 506,615. 2 Claims. (Cl. 155—182.)



1. A clothes protector for seats, chairs and the like comprising seat and back sections each of which is composed of a single sheet of relatively stiff pliable material, edge protecting binding enclosing the lateral side and outer end edges of said sections and connecting said sections together at their lateral side edges only in the relationship in which said seat and back sections are spaced relatively a considerable distance apart, and a cloth fabric hinge member enclosing the adjacent edges of said sections.

1,636,886. BOTTOM-LEG CONSTRUCTION FOR WELL DERRICKS. DALLAS D. WERTZBERGER, Tulsa, Okla. Filed Sept. 20, 1924. Serial No. 738,736. 1 Claim. (Cl. 120—0.5.)



In a derrick structure, a lower platform, sills supporting said platform having crossed ends and portions extending beyond said crossed ends forming leg seats, legs rising from the platform and having lower shouldered ends connected to and bearing directly upon said sill extensions, struts inclined downwardly from two sides of each leg and bearing at their lower ends upon the platform adjacent to the side edges thereof, adjustable tension members between the legs and platform sills approximately parallel with the several struts, and eye bolts serving to anchor the ends of the tension members with the platform and the legs, the eye bolts of the legs serving also to connect the upper ends of the struts to the legs.

1,636,887. ENGINE. ROY WINDELL, Wilmington, Calif. Filed Sept. 16, 1926. Serial No. 135,873. 3 Claims. (Cl. 60—27.)

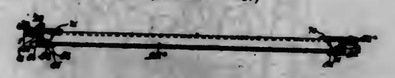
1. In an engine of the class described, a crank case, a cylinder block including cylinders, pistons slidable in said cylinders, a crank shaft in said crank case, operating connections between the cranks and the pistons, exhaust valves cooperable with said cylinders, and a cylinder head including a plurality of steam generating coils connected directly with said cylinders and heating means for said coils.

1,636,888. COMPRESSOR DISCHARGE VALVE. WILLIAM WISHART, Clinton, Iowa, assignor to Climax Engineering Company, Clinton, Iowa, a Corporation of Delaware. Filed July 20, 1925. Serial No. 44,745. 3 Claims. (Cl. 251—119.)

1. A compressor discharge valve comprising a gasket, an apertured valve seat member seated thereon, a valve guide in said valve seat member, a rivet for holding said valve guide secured to said valve seat member, a disk valve slidable on said valve guide and normally adapted to seat on said valve seat member, an apertured valve stop slidable on said rivet for limiting the movement of said valve, a spring controlling the movement of said valve stop, and a cover member for holding said valve seat member, said gasket and said spring in place.

1,636,889. HARVEST HAT. EDWARD WITTCOFF, St. Louis, Mo., assignor to Superior Hat Company, St. Louis, Mo., a Corporation of Missouri. Filed May 26, 1926. Serial No. 111,718. 4 Claims. (Cl. 2—175.)

1. A harvest hat comprising a crown and a relatively wide brim having its edge upturned, in combination with a wire extending around the brim adjacent to the edge thereof, substantially non-elastic edging enclosing said wire and the edge of the brim and secured to the brim, stiffening means extending from near one edge of one side of the brim across the brim and across the crown and conforming approximately to the shape of the crown and across the opposite side of the brim, and means in



connection with the brim in front of said stiffening means for holding a portion of the brim rolled in a different shape from adjacent portions of the brim.

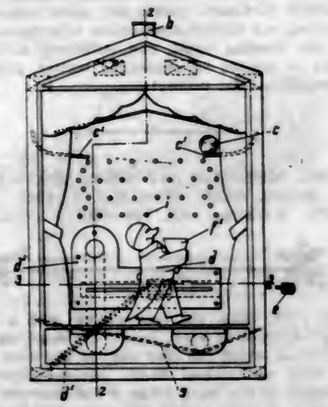
1,636,890. METHOD OF MAKING CONCENTRATED FRUIT JUICE. WALTER M. ZORN, East Cleveland, Ohio. Filed July 25, 1924. Serial No. 728,111. 4 Claims. (Cl. 99—5.)

1. The method of making concentrated fruit juice, consisting of pressing the fruit to extract the liquid juices, filtering the obtained liquid to remove the pulpy matter, concentrating the filtered liquid by freezing into a snow and removing the concentrated juices from the snow crystals by centrifugal action, heating such concentrated juice to a temperature below boiling, filtering such heated concentrate to remove pectin and other undesirable matter, cooling the filtered concentrate to a temperature just above the freezing point, and refiltering such cold concentrate to remove all suspended matter, and collecting such finally filtered concentrate.

1,636,891. METALLIC CAR DOOR. ALLAN S. BARROWS, Los Angeles, Calif. Filed Nov. 5, 1925. Serial No. 67,176. 3 Claims. (Cl. 189—46.)

1. In a car door, the combination with a main body portion composed of sheet metal, the sheet metal of said body portion, along the rear edge of the door, being provided with an integral flange section substantially at right angles to the main plane of the door; of a separate reinforcing element angular in cross section secured to said door along the rear edge thereof; and means, additional to the main sheet metal body portion, for reinforcing the top, front and bottom edges of the door.

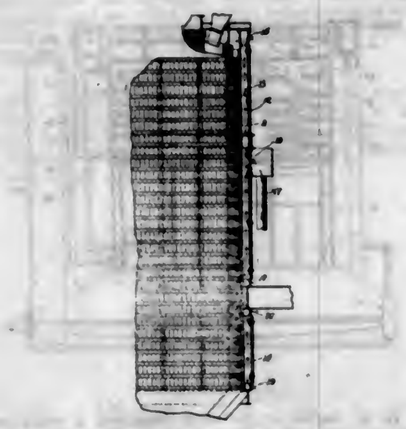
1,636,892. LUBRICATING SYSTEM FOR HOIST DRUMS. RICHARD G. BARTEN, Kansas City, Mo., assignor to English Brothers Machinery Company, Kansas City, Mo., a Corporation of Missouri. Filed Jan. 8, 1926. Serial No. 79,985. 1 Claim. (Cl. 308—109.)



In a lubricating system of the kind described, the combination with a drum having a hub provided with two oil chambers at its ends respectively and an oil supply chamber intermediate of said end chambers, said hub having an axial hole therethrough, and provided with means by which oil may be carried from said end chambers into said intermediate chamber by centrifugal force, when the drum rotates and by gravity when the drum is at rest, said hub having means by which oil may flow by gravity from the periphery of said intermediate chamber into said axial hole, when the drum is at rest said

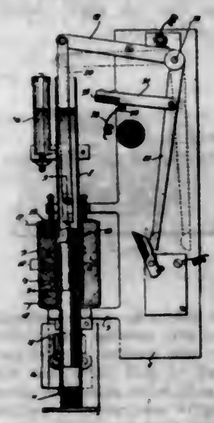
hub having means by which the intermediate chamber may have oil poured into it, the hub having means for indicating when a predetermined amount of oil has been

poured into the intermediate chamber, of a shaft rotatably fitted in said axial hole, and two collars mounted on said shaft in said end chambers respectively.



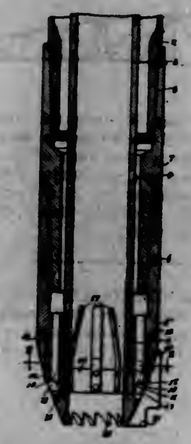
1,636,893. ABILITY GAME. ARTHUR BIEBERFELD, Berlin, Germany. Filed Jan. 2, 1926, Serial No. 79,021, and in Germany Mar. 24, 1925. 10 Claims. (Cl. 273—138.)

1. An ability game, comprising in combination with a casing having in its top end an inlet for balls, a vertical board in said casing having near its lower end an outlet hole for the miss balls and an outlet hole for the hit balls, an inclined guide on said board near the upper end underneath said inlet for the balls, deflecting pins on said board, a figure on the bottom of said casing underneath said pins, a catching device held by said figure, and means operated from the outer side of said casing and designed to move said figure to and fro to catch a dropping ball and to deliver the same to the outlet hole for the hit balls so that it rolls out of the casing.



1,636,894. COOLED FURNACE WALL. FRANK B. BIGELOW, Detroit, Mich., assignor to Bigelow Arch Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 31, 1927. Serial No. 179,771. 1 Claim. (Cl. 110—1.)

A furnace-wall having a protecting airjacket with lower, intermediate, and upper ports, and means to apply suction to said intermediate port only when the furnace is in service thereby drawing cooling air into the jacket through said lower and upper ports and out

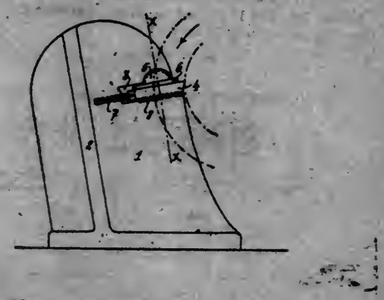


through said intermediate port, cooling air entering said lower port, traversing said jacket, and being delivered through said upper port by natural draft when the furnace is out of service but with the wall still hot.

1,636,895. ELECTRIC SWITCH. FRANZ A. BOEDTCHER, Bergenfield, N. J. Filed May 19, 1923. Serial No. 639,999. 3 Claims. (Cl. 200—97.)

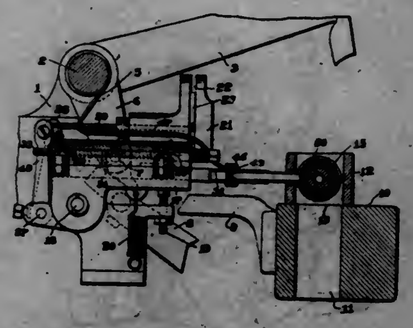
2. In an apparatus of the character described, switch mechanism embodying a pivoted lever, circuit closing means connected with the work arm of said lever, in combination with an upstanding cylinder closed at its lower end and containing a liquid, a solenoid coil embracing a portion of the length of said cylinder, a solenoid core within the cylinder and normally positioned in removing relation to the magnetic center of the coil, valvular means associated with said core to permit liquid in the cylinder to bypass the core during movement of the latter longitudinally of the cylinder to cushion the operations of the piston, and mechanical connections between the core and the power arm of said lever for securing these parts together.

1,636,896. CORE DRILL. LYNN F. BONNEY, Los Angeles, Calif., assignor to Oil Well Core Drilling Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 11, 1926. Serial No. 154,060. 4 Claims. (Cl. 255—72.)



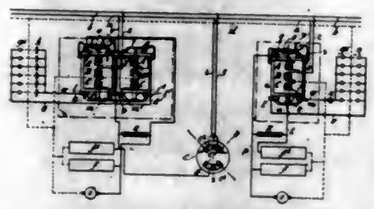
3. A core drill comprising a head, a core receiver secured to the head, means for securing a drill pipe to the head, said head being provided with a plurality of circumferentially spaced apart outer lugs, a cutter having a loose fit with said head, the head and cutter having cooperating torque thrust receiving faces, means for passing flushing fluid through the head and cutter, registering openings in said head and cutter tapering to contract outwardly, pins fitting said openings, and a member secured to said head engaging the inner ends of said pins for locking the same in place.

1,636,897. PRIMING DEVICE. HERBERT H. BRIDGE, Detroit, Mich. Filed Apr. 4, 1923. Serial No. 629,938. 2 Claims. (Cl. 123—187.5.)



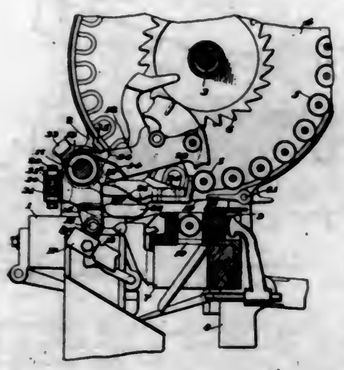
2. A priming device of the class described comprising a body portion adapted for assembly to a cylinder head, an angular fixed shoulder intermediate the ends of said body member, a screw threaded portion on the upper end of said body member, a second member having an open ended cup at its outer extremity and adapted on its lower end to be screwed to said body member, a web extended across the area of said second member intermediate its ends below the cup and having a screw threaded opening therein, a stem member adapted to extend through said opening and having screw threads thereon cooperating with the screw threads in said opening in a manner to permit of limited lateral movement of said steam and to make said stem vertically adjustable, and means on the lower end of said stem for closing the bottom of said body portion.

1,636,898. TOOL HOLDER FOR CUTTING OFF PIECES OF WORK. ETTORE BUGATTI, Molsheim, France. Filed Jan. 8, 1925, Serial No. 1,262, and in France Apr. 14, 1924. 1 Claim. (Cl. 82—36.)



A tool holder for cutting circular grooves comprising a main frame or base whose thickness is less than the width of the tool, transverse ribs for strengthening the said frame, a recess or slot formed in the said frame, a semi-cylindrical recess formed on one face of said slot, a semi-cylindrical member co-operating therewith, a key having a trapezoidal profile interposed between said semi-cylindrical member and the tool which is disposed in the said recess formed in the main frame, a rectangular key whereof one half enters the face of the tool and the other half enters the main frame, and a screw disposed in the inner end of the said recess in the main frame and forming a support for the end of the said tool.

1,636,899. FEELER MECHANISM FOR LOOMS. EDWARD A. CUNNIFF, Waltham, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 27, 1926. Serial No. 157,152. 6 Claims. (Cl. 139—284.)

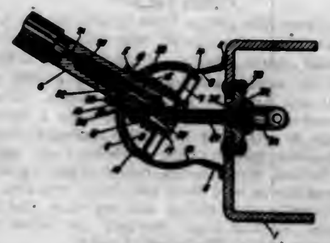


1. In a filling replenishing loom, the combination of a feeler stand supported from the loom frame at the replenishing side thereof, a feeler slide mounted on the feeler stand, a pivoted feeler member mounted on the feeler slide for side slipping movement towards the tip of the filling carrier and held from such movement by engagement with the filling on each detecting beat until substantial exhaustion thereof, a fixed feeler member carried by the feeler slide and extending rearwardly beyond the end of the pivoted feeler member opposite the conical winds of filling and held from engagement with the filling on detecting beats by the pivoted feeler member until substantial exhaustion of filling and thereupon adapted to be engaged by a surface within the shuttle on a detecting beat, means controlled by the pivoted feeler member for initiating replenishment of filling and means for withdrawing the feelers frontwardly on replenishment of filling.

1,636,900. ELECTROMAGNETIC SWITCH FOR CONTROLLING THE CIRCUITS OF TRAIN LIGHTING AND SIMILAR INSTALLATIONS. ALFRED HENRY DARKER, Upper Norwood, London, England, assignor to J. Stone & Company, Limited, Deptford, England, a Corporation of Great Britain. Filed Feb. 4, 1922. Serial No. 534,118, and in Great Britain Feb. 17, 1921. 4 Claims. (Cl. 175—375.)

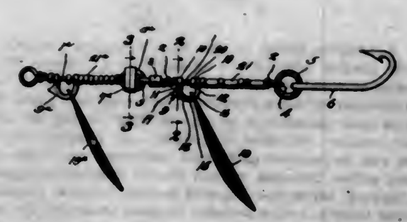
2. Electro-magnetic switching means for controlling consuming circuits of train lighting and similar installations, comprising duplex electro-magnets operatively connected with respective consuming-circuit switches and subject to line control, the said electro-magnets being each provided with a combination of closing, hold-on and demagnetizing coils as hereinbefore specified, and the arrangements being such that the simultaneous control of the closing and demagnetizing coils for bringing about their energization results in the closing of only one of said switches, substantially as set forth.

1,636,901. BOBBIN GUIDE FOR FILLING-REPLENISHING LOOMS. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 14, 1926. Serial No. 141,616. 12 Claims. (Cl. 139—251.)



1. In a filling replenishing loom, the combination of a rotary hopper for filling carriers, a transferrer for transferring a filling carrier from the hopper to the shuttle, a front bobbin guiding abutment against which the head of a filling carrier in the hopper rests when moved into transferring position, means normally acting to maintain the bobbin guiding abutment raised in the path of the filling carriers in the rotary hopper to arrest rotary movement of the hopper with the leading filling carrier in the hopper in transferring position and movable on replenishment of filling to permit downward movement of the bobbin guiding abutment from its normal raised position to guide the filling carrier into the shuttle.

1,636,902. CONSTRUCTION OF AEROPLANE WINGS. EMILE DEWOITINE, Toulouse, France. Filed July 8, 1924, Serial No. 724,855, and in France July 17, 1923. 3 Claims. (Cl. 244—31.)



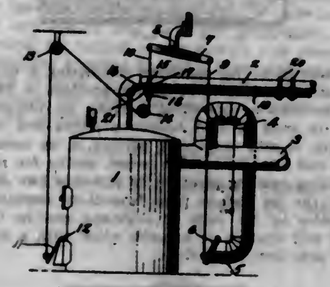
1. A structural frame for aeroplane wings comprising ribs formed of tubes, plates riveted to said tubes for the assembling of the latter, spars each of which consists of a box element having two sole plates formed of superposed sheet metal members cut in a point at the ends and riveted together, said sole plates being connected together by cheeks or webs.

1,636,903. BRAKE-CONTROL-LUBRICATING MEANS. ADIEL Y. DODGE, South Bend, Ind., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1924. Serial No. 705,192. 12 Claims. (Cl. 184—7.)

1. In mechanism, including a control shaft having a support comprising a ball joint having a sleeve member in which one end of said shaft is positioned, said shaft being formed with a bore, means for lubricating said mechanism consisting of a member slidably positioned in said bore and terminating in a socket, said member and socket having a passageway therethrough, a hollow ball ended member fitting in said socket, a support for said ball ended member and a lubricant fitting communicating with said hollow ball ended member for the purpose described.

1,636,904. SPOON HOOK. WILLIS D. ELWOOD, Colville, Wash. Filed Jan. 28, 1926. Serial No. 84,400. 4 Claims. (Cl. 43—28.)

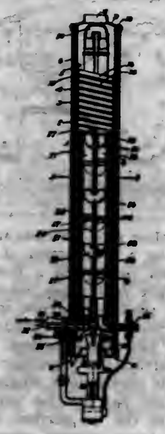
2. In a device of the class described, a connector, a hook assembled with the connector, a U-shaped carrier of double-walled construction comprising bearings journalled on the connector, the bearings being prolonged to form



pairs of oppositely disposed arms, each arm of one pair being connected to the corresponding arm of the other pair by a cross piece, the cross pieces being oppositely disposed, the cross pieces being curved where they join the arms of one pair, and being prolonged to form a point where they join the arms of the other pair, the outer edges of the cross pieces slanting inwardly from said curved portions to said point, a spoon pivotally mounted on said curved portions of the arms, and a bead loosely mounted on the connector and located between the bearings.

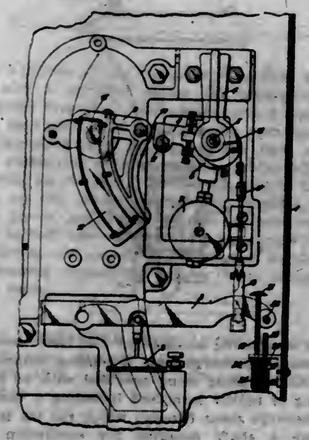
1,636,905. SHOE. ABRAM E. FALOR and FREDERICK H. MARTIN, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 14, 1924. Serial No. 719,971. 4 Claims. (Cl. 36—71.)

1. A soft-soled, rubber-and-fabric shoe having a locally thickened arch-supporting member within the confines of the upper of the shoe and integrally coalesced with the sole of the shoe.



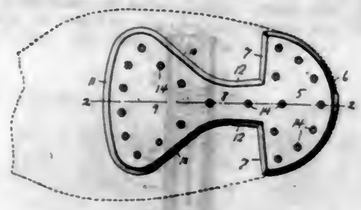
1,636,906. FURNACE REGULATOR. JOHN GOLDBERG, Hopkins, Minn. Filed Nov. 22, 1926. Serial No. 149,055. 3 Claims. (Cl. 236—86.)

1. The combination with a furnace having a draft door and a damper adapted to be closed by gravity, and a pipe for conducting heated fluid from the furnace, of an adjustably mounted lever, a connection between the lever and the damper, a connection, including a screw threaded portion, between the lever and the door, a thermostat attached to and adapted to be actuated by the heat of the contents of the pipe, and an adjustable lost motion connection between the thermostat and the threaded portion.



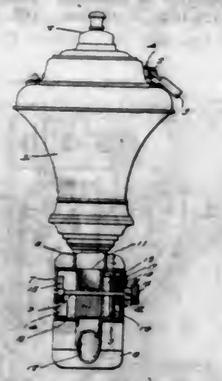
1,636,907. WATER HEATER. ALBERT L. HALL, Los Angeles, Calif., assignor, by mesne assignments, to August J. Hartfield, Huntington Park, Calif. Filed July 15, 1924. Serial No. 726,184. 4 Claims. (Cl. 122—250.)

1. A water heater comprising a casing, a pair of water heating coils in said casing, said coils being intercoiled between each other and connected at their upper ends, the lower end of one coil being connected to a water supply pipe, two tubes extending through said coils, the lower end of one tube being connected to the lower end of the other coil, the upper ends of said tubes being



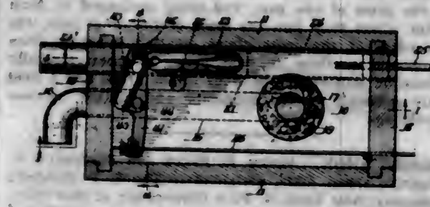
connected together, the lower end of the other tube leading from the casing, and a burner in the lower end of the casing.

1,636,908. SCALE. FRED B. HAMBLIN, St. Louis, Mo., assignor to The Weightograph Company, St. Louis, Mo., a Corporation of Missouri. Filed July 22, 1926. Serial No. 124,162. 8 Claims. (Cl. 265—62.)



1. In a scale, the combination with a weighing mechanism, of a screen having a scale image receiving zone and distinctively marked zones to indicate over and underweight, a chart having scale indications, means coordinated with the scale indications for displaying an indication in the over and underweight zones of the screen, and a pointer device located between the chart and the screen for centering the scale on the chart and for cooperating with the means on the chart for indicating the over and underweight operations of the chart.

1,636,909. METAL DANCING-SHOE SOME. WILLIAM JOHN HANBY, North Vernon, Ind. Filed Mar. 12, 1927. Serial No. 174,918. 1 Claim. (Cl. 36—73.)

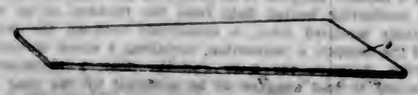


A metal dancing shoe sole attachment comprising an elongated plate having a toe portion of a substantially semi-disclike formation to provide a front arcuate edge and a pair of straight rear edges converging inwardly toward each other, a relatively narrow spine portion projecting rearwardly from the toe portion between the straight rear edges, said spine portion merging into a ball portion of substantially triangular formation, the rear edge of which is curved in a single arcuate formation, the width of the ball portion being substantially equal to the width of the toe portion, the periphery of the elongated plate being beveled outwardly from the bottom surface to the upper surface, and a tongue rising from the mid portion of the front arcuate edge.

1,636,910. TEA-DISPENSING MACHINE. JOHN HARDY, Brooklyn, N. Y. Filed Oct. 5, 1925. Serial No. 60,550. 1 Claim. (Cl. 221—106.)

In a tea dispensing machine of the class described, a hopper having a discharge neck, a housing connected with said neck, said housing being provided with an attaching flange, being of hollow form and including a downwardly inclined discharge spout through which the tea is adapted to gravitate a shaft mounted for oscillation in said housing, a drum on said shaft, said drum being provided with a tea receiving pocket in its periphery normally registering with said neck and adapted to be rotated through an approximate half circle to bring it into registration with said spout, spring means for automatically retaining the drum to maintain the pocket in registry with said neck, a disk mounted upon said shaft and located in said housing, said disk being provided with circumferentially spaced stop shoulders, and a resilient check device mounted on the adjacent end wall of said housing and embodying a pivotally mounted pawl cooperable with said shoulders.

1,636,911. TEMPO BOX. EDMOND A. HUGUET, Chicago, Ill. Filed May 15, 1926. Serial No. 109,294. 7 Claims. (Cl. 84—130.)



1. In a tempo regulator of the type described, the combination of a box formed with top, side and end walls, and a relatively thick bottom wall formed with a pair of air ducts in and lengthwise of its bottom wall communicating with ports opening into the interior of said box and with air conduits to a roll motor and a source of suction respectively, and a plunger valve slidable in one of said ducts across the port through which said valve-containing duct communicates with the interior of said box.

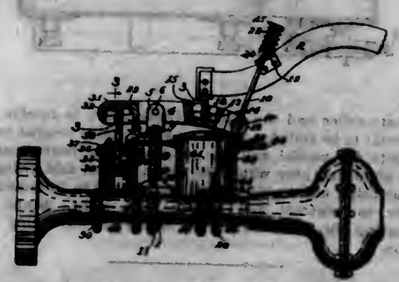
1,636,912. LEG STRUCTURE. ERNEST S. JOHNSON, Webster City, Iowa. Filed Feb. 5, 1923. Serial No. 616,944. 6 Claims. (Cl. 45—11.)

6. A supporting leg structure comprising a socket having a bottom comprised of bottom portions in two different planes and a connecting portion, an elongated slot having its ends in said bottom portions and extending the length of said connecting portion, a leg member having one end received in said socket, means for resiliently constraining said leg pivotally in either of two directions, whereby the leg in one position will be engaged on opposite sides by the ends of said slot and in the other position will contact on opposite sides with a surface of each of said bottom portions.

1,636,913. PAD FOR IRONING BOARDS. HARRY KOBRIN, New York, N. Y. Filed Nov. 19, 1926. Serial No. 149,345. 1 Claim. (Cl. 68—10.)

An ironing pad composed of a stiff paper base, a layer of cotton batting on said base, and a fabric cover overlying the batting and glued to said paper.

1,636,914. SNAP FASTENER. GROVER KOLLSTRAND, Providence, R. I. Filed Feb. 25, 1927. Serial No. 170,761. 2 Claims. (Cl. 24—234.)



1. In a snap fastener, a top plate provided with a slot, a depending beak integral with the plate adjacent the slot, depending ears upon the top plate, a bottom plate, vertical lugs upon the bottom plate, a plate traversing the ears and lugs, a transverse shoulder upon the bottom

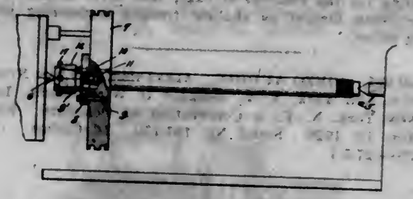
plate adjacent the plate, an acute angularly disposed arm upon the forward end of the plate engageable at its lower end with the beak and projecting above the top

plate through the slot, a finger on the free end of the arm engageable with the upper face of the top plate, and a spring upon the plate engaging both plates.

1,636,915. AIR-STORING SHOCK ABSORBER. ELVIN LANDON, Waterloo, Iowa. Filed May 17, 1926. Serial No. 109,737. 4 Claims. (Cl. 267—65.)

2. In combination in a vehicle, running gear and a frame member positioned for oscillatory movements adjacent the running gear and above it, a lever swiveled intermediate its ends on the running gear, a loose connection between one end of said lever and said frame, a dashpot mounted for limited movements on said running gear and containing a piston having a loose connection to the other end of said lever, and yieldable resilient connections between the first-mentioned end of said lever and said frame member.

1,636,916. GLASS WIPER. JULIUS H. LEHMAN, Bristol, Conn. Filed Oct. 20, 1926. Serial No. 142,961. 1 Claim. (Cl. 15—255.)



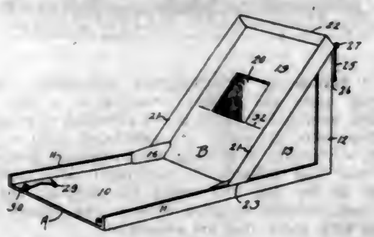
A glass wiper, comprising a housing U-shaped in cross section and mounted for movement over a glass, wipers mounted in the edges of the said housing and projecting beyond the edges thereof; an electric heating unit mounted in said housing, transverse tiewires extending between the sides of the housing, whereby the said heating-unit is exposed to radiate heat against the glass, and means for connecting the heating unit with a source of current.

1,636,917. PRINTING PRESS. ROBERT R. MCCORMICK, Chicago, Ill. Filed July 10, 1926. Serial No. 123,406. 17 Claims. (Cl. 270—5.)

1. A flexible unit printing press, comprising a row of printing units and folders arranged in a line on a common level and divisible into a plurality of groups the printing units of which are associated with a single folder, a plurality of printing units disposed laterally of said line and individually associated with particular groups in the line, and means for directing the webs from said laterally disposed units to the folders of the groups with which they are associated.

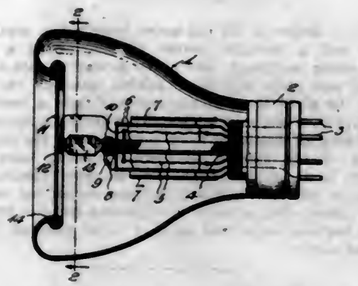
1,636,918. CENTERING DEVICE FOR PISTONS. KARL F. MCJILTON, Moberly, Mo. Filed Aug. 10, 1926. Serial No. 128,497. 2 Claims. (Cl. 82—43.)

1. In a device of the character described, a stationary center and a movable center for supporting a pump piston under treatment, said piston having a plate secured thereto, said plate and piston having openings, the opening in the plate being of the key-hole type, a removable bearing supporting member having a threaded opening, a bolt having an elongated head, positioned in the threaded opening of the bearing supporting member, said head adapted to be positioned in the key-hole opening and twisted to lock the bolt and bearing supporting member to the piston, and an adjustable bearing member mounted in the bearing supporting member to be engaged by the movable center.



1,636,919. PRESSURE-REGULATING VALVE. ARCHIBALD RUSSELL MILLER, Helensburgh, Scotland. Filed Mar. 30, 1927. Serial No. 179,513. 2 Claims. (Cl. 50—23.)

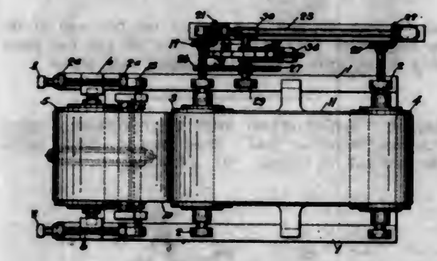
1. In a pressure regulating valve of the kind described, a conduit exposed to vacuum, a conduit in which the degree of vacuum is to be maintained constant, a threat



connecting said conduits, a valve controlling the effective cross sectional area of said throat, a diaphragm chamber, a flexible loaded diaphragm partitioning said chamber into a vacuum compartment and an atmosphere compartment, a passage connecting said vacuum compartment with the second-named conduit, and means for admitting atmospheric air to said second-named conduit to compensate for leakage past said valve, as and for the purpose set forth.

1,636,920. GAME. EUGENE C. NICHOLS, Sioux Falls, S. Dak. Filed Mar. 17, 1927. Serial No. 176,017. 5 Claims. (Cl. 273—105.)

1. A game comprising a horizontal base, an inclined cover member provided with an opening and a pocket formed behind said cover member and provided with an opening for the removal of bags, said cover member and base being formed as shallow troughs registering with each other.

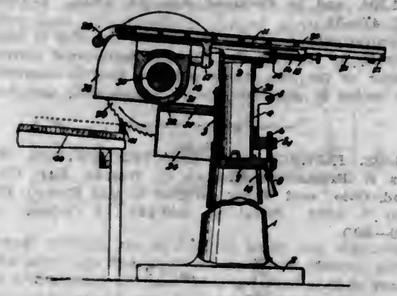


1,636,921. PIEZO AUDION. ALEXANDER MCLEAN NICOLSON, New York, N. Y., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 11, 1926. Serial No. 147,750. 10 Claims. (Cl. 250—27.5.)

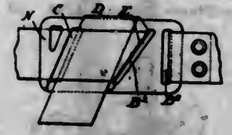
6. A piezo audion comprising an evacuated vessel, a plurality of electrodes, a centrally extending support for said electrodes and a piezo electric device mounted between the extremity of said support and one wall of said evacuated vessel and connected to certain of said electrodes whereby sound vibrations incident upon the exterior of said evacuated vessel operate to impress electrical charges from said piezo electric device upon said electrodes.

1,636,922. CIGAR-MAKING MACHINE. ALLEN NOEL, Columbus, Ohio. Filed Mar. 8, 1921. Serial No. 450,780. 2 Claims. (Cl. 131—44.)

1. In a cigar rolling machine and the like, a main frame, a series of three rollers mounted therein in parallel spaced relation, an endless traveling apron extending about the outermost rollers with its upper run engaging the intermediate roller, a supporting guide for the lower run of the apron extending substantially from one extreme roller to the other whereby such bottom run will be supported without sag, a supporting guide for the upper run of the apron between one of the extreme rollers and the intermediate roller to eliminate sag, the top run of the apron being formed into a bight between the intermediate roller and the other extreme roller to receive the material to be rolled, a swinging guide frame located intermediate the medial and the extreme roller contiguous to said bight and over which the apron passes, said swinging frame being adjustable toward and from the intermediate roller to contract and release said bight, means for actuating the guide frame and means for advancing said apron.



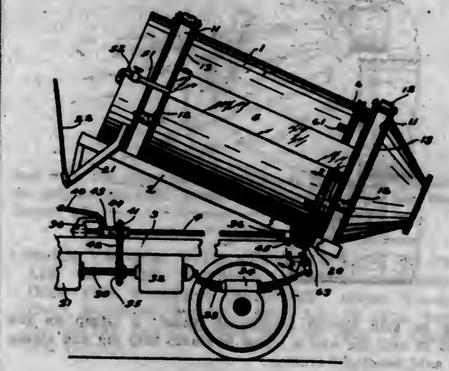
1,636,923. ELECTRIC HAMMER AND DRILL. NICHOLAS PISCIONERE, South Weymouth, Mass. Filed Mar. 12, 1925. Serial No. 14,993. 4 Claims. (Cl. 172—126.)



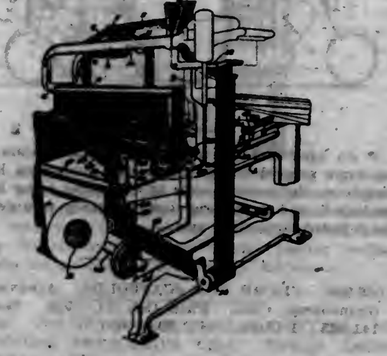
1. In an electric hammer embodying a split field casing, a field winding in the casing, a wound reciprocating piston within the casing, a tool holder in the lower end of the casing, electric switches and reversing elements in said casing; a steadying post, corresponding to a quadrate cross in cross section, mounted longitudinally through the center of the casing, and upon which the said piston is slightly mounted; means in the casing for absorbing the shock of the upward movement of the reciprocating piston; a tool holder adapted to be engaged by the piston in the lower portion of said casing; and means for rotating the tool-holder thru the reciprocating movement of said piston.

1,636,924. CUT-OFF SAW. THOMAS EARLE PORTER, Grand Rapids, Mich. Filed Apr. 28, 1924. Serial No. 709,334. 7 Claims. (Cl. 143—6.)

1. In a machine of the class described, a vertical support, a cylinder mounted in and extending above the upper end of the support, means for raising or lowering the cylinder, a guide carried by the upper end of the cylinder and having a downward inclination from front to rear, a table reciprocably mounted on said guide and movable in the same inclined plane therewith and a saw carried at the forward end of the table.



1,636,925. CLOSING DEVICE FOR BELTS. POL RAVIONEAUX, Neuilly-sur-Seine, France. Filed Nov. 10, 1924, Serial No. 748,962, and in France Nov. 23, 1923. 1 Claim. (Cl. 24—200.)

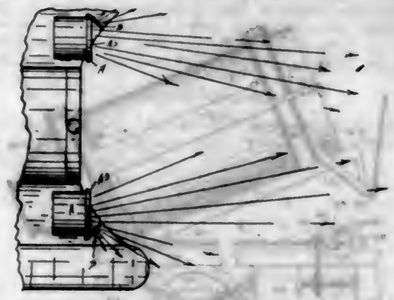


A buckle adapted to join the two ends of a belt, the said buckle comprising an input aperture adapted for the insertion of the said belt, an output aperture having a straight internal edge and adapted for the insertion of the said belt, an output aperture having a straight internal edge and adapted for the insertion of the end of the belt issuing from the said input aperture, a straight edge of the buckle making with the internal edge of the said output aperture such an acute angle that the free strand of the belt, after having been folded around the said edge has such a direction that it directly proceeds in the space comprised between the said apertures, the external edge of the said input aperture being straight, making an acute angle with the internal edge of the said output aperture and having an inclination which is substantially parallel to the free strand of the belt.

1,636,926. DRIVE FOR TRANSIT CONCRETE MIXERS. CHARLES L. REYNOLDS, Seattle, Wash., assignor to himself and William E. Smith, Seattle, Wash. Filed Oct. 20, 1926. Serial No. 142,874. 6 Claims. (Cl. 83—73.)

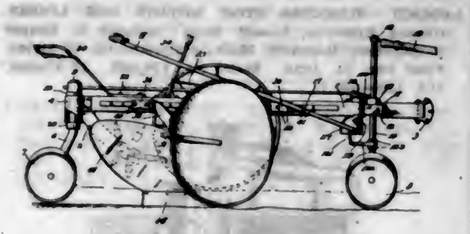
1. The combination with a road vehicle having a source of power mounted thereon, a dumping frame pivoted by its rear end upon the vehicle frame, a mixer including a movable mixer element supported upon said dumping frame, a rotary member coaxial with but movable independently of the pivot of said dumping frame, means operatively connecting said rotary member with the power source, and power transmission means operatively connecting said rotary member with said mixer element, and including a shaft journaled on the dumping frame.

1,636,927. HARNESS STOP MOTION FOR LOOMS. GEORGE RHEAULT, Lowell, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 31, 1926. Serial No. 158,248. 12 Claims. (Cl. 139—337.)



1. In a harness stop mechanism for looms, the combination of the shedding mechanism including harness connectors, a toothed detector member having a detecting movement in the direction of its length, a stop finger normally held out of engagement with the toothed detector member, means for effecting loom stoppage when the lengthwise movable detector member is arrested in its detecting movement, and means for causing the stop member to engage a tooth of the detector member and arrest its lengthwise movement when an abnormal condition occurs in the harness mechanism.

1,636,928. VEHICLE LIGHT LENS. OTTO STENZEL, Salt Lake City, Utah. Filed Apr. 24, 1926. Serial No. 104,206. 1 Claim. (Cl. 240—41.)



In a safety light for vehicles, the combination of a headlight; a frame on said headlight; another smaller frame to be secured to said first mentioned frame at an

angle of forty-five degrees to the front of said frame; a colored lens carried in said second mentioned frame; a

lug on said second mentioned frame; a clamp on the end of said lug and a screw to clamp said lug and clamp to said headlight frame.

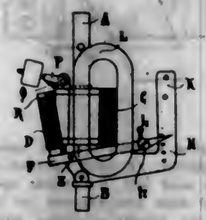
1,636,929. AGRICULTURAL MACHINE. THOMAS M. THOMPSON, Great Falls, Mont., assignor of one-half to Archie B. Wilson, Great Falls, Mont. Filed Mar. 31, 1926. Serial No. 98,876. 6 Claims. (Cl. 97—121.)

1. An agricultural machine comprising a beam, carrying arms secured to the beam and converging laterally therefrom, the meeting ends of said arms being hingedly connected, and a turning disk rotatably mounted upon the forward supporting arm.

1,636,930. CLAMP FOR SCAFFOLDS. ALFONSO VILA, Guanabacoa, Cuba. Filed Oct. 14, 1926. Serial No. 141,625. 1 Claim. (Cl. 304—40.)

A clamp for scaffolds comprising two plates extending in parallel and each having straight portions at its ends, one of which is longer than the other, and having at the middle a portion bent in a U-shape, and said U-shaped portions being oppositely located in regard to each other in order to leave an open space between them, said longer straight portions having raised projections oppositely located, screws loosely mounted through holes in the straight end portions of said plates and provided with tightening nuts, and screws mounted through threaded bores in projecting portions of said raised projections.

1,636,931. METHOD TO INCREASE THE CROPS OF PLANTS AND FRUITS. ALEX WENDLER, Charlottenburg, Germany, assignor to Julius Falck, Berlin-Tempelhof, Germany, and Charles Henry Huberich, the Hague, Netherlands. Filed Apr. 15, 1926, Serial No. 102,304, and in Germany Apr. 22, 1925. 1 Claim. (Cl. 47—58.)

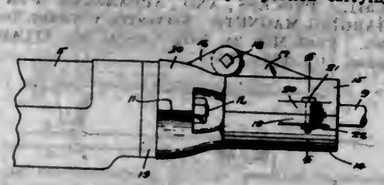


Improvements in method to increase the crop of plants and fruits by covering the soil with waterproof material as paper or the like, which contains electric conducting wires loaded by generators or by atmospheric electricity.

1,636,932. INTERLOCKING ELECTRIC SWITCH. WILBUR B. BURKE and EDWARD G. WEILER, East Cleveland, Ohio; said Weiler assignor to said Burke. Filed July 5, 1923. Serial No. 649,448. 3 Claims. (Cl. 200—50.)

1. In mechanism of the character described, the combination of an electric switch of the knife type, a pivotally hung door, a plunger adapted to project into the path of movement of said door, a link connecting said plunger with said switch, a stop on said door arranged to lie in the path of said plunger except in closed position of said door, and a latch adapted to engage with said link to retain said switch closed and said plunger projected.

1,636,933. RELAY. LOUIS JEAN GIRARD, Thionville at Suresnes, France. Filed Nov. 6, 1925, Serial No. 67,284, and in France Dec. 12, 1924. 10 Claims. (Cl. 175—336.)



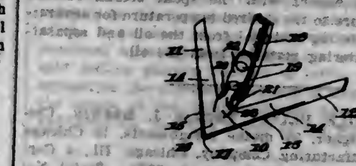
1. An electro-magnetic relay, comprising a stationary body portion; a magnet carried thereby and embodying an annular core provided with a lateral opening, and a winding encircling said core; an armature shaped to fit conformably in the core opening; a lever pivoted intermediate its ends to the stationary body portion of the relay below said core and carrying the armature on one end thereof; and an adjustable stop carried by said body portion for engagement by the other end of the lever to determine the normal position of the armature with relation to the core.

1,636,934. ROCK-DRILL HOLDER. WALTER H. GOODLAND and JOHN H. GOODLAND, Butte, Mont. Filed Feb. 9, 1921. Serial No. 443,561. 1 Claim. (Cl. 121—32.)

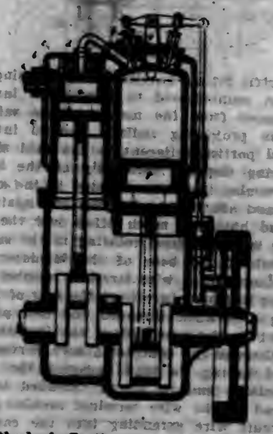
In a rock drill, a substantially annular head provided at its ends with internal shoulders and having diametrically opposite outstanding ears provided with holes for passage of fastenings for securing the head to the

cylinder of a machine, said head being further provided on its top with upstanding spaced lugs and being also equipped with a reduced forwardly projecting transversely curved portion forming one-half of a drill holder, a correspondingly shaped curved portion co-acting with said first named curved portion to complete the drill holder, said correspondingly shaped portion carrying an

external vertical rib having its inner end disposed between said lugs and pivotally connected thereto, both of said drill holding portions being provided at their meeting edges with lateral ears having alined holes for passage of fasteners for securing the two portions together, and a sectional longitudinally split bushing fitted into the drill holding portions and bearing against the outer one of the aforesaid shoulders.



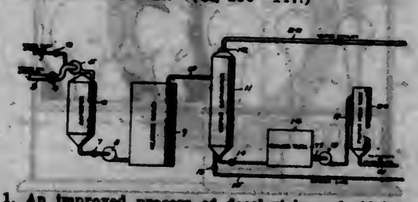
1,636,935. ONE-PIECE PLUNGER BODY. HENRY M. GREEN, Los Angeles, Calif.; Pacific Southwest Trust & Savings Bank, administrator of said H. M. Green, deceased, assignor to Patrick H. Bray. Filed July 20, 1925, Serial No. 44,851. Renewed May 31, 1927. 3 Claims. (Cl. 74—109.)



1. A pump plunger having a one piece tubular body having cylindrical portions provided with longitudinally spaced, annular, external shoulders and conical base portions opposed to the shoulders, and stacks of packing arranged between the shoulders and expansively acted upon by the said conical portions under load; said packing being free to work between the shoulders as the packing wears down.

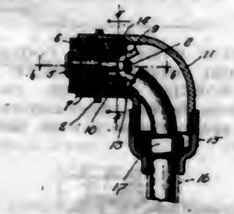
1,636,936. CULTIVATOR. FRANCIS GERMAN GREGOR, Rosetown, Saskatchewan, Canada. Filed Nov. 21, 1925. Serial No. 70,601. 1 Claim. (Cl. 97—207.)

A cultivator blade comprising a substantially V-shaped plate formed with a flat under surface and an outwardly and downwardly slanting upper surface, a curved central shank integral with the plate and having formed adjacent the blade in the forward surface thereof at each side substantially semi-circular recessed portions and a rounded ridge between said recesses whereby, in combination with the outwardly slanting top surface of the plate, the soil in operation is more readily and with less draft thrown off.



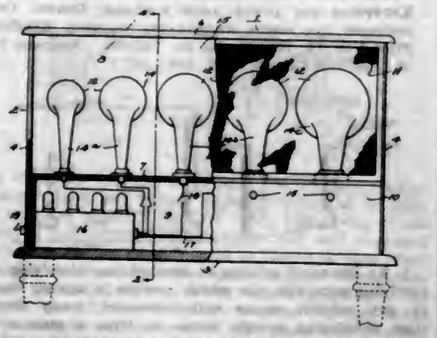
1,636,937. MOTOR WITH EXTRA COOLING OF THE AIR OR FUEL MIXTURE BEFORE ADMISSION INTO THE WORKING CYLINDER. OSCAR WALFRID HULT, Stockholm, Sweden. Filed July 25, 1924, Serial No. 728,232, and in Sweden Nov. 28, 1923. 5 Claims. (Cl. 123—70.)

1. The method of effecting a double cooling of a gaseous mixture to be used in an internal combustion engine, consisting in first compressing said mixture and simultaneously subjecting the same to a cooling action, then allowing the mixture to expand during further cooling and finally introducing the mixture into the engine.



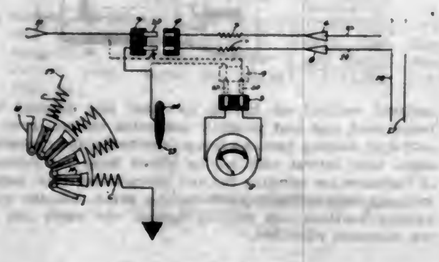
1,636,938. ART OF DECOLORIZING, CLARIFYING, AND PURIFYING PETROLEUM OILS. HAROLD LESTER KAUFFMAN and IRWIN ARTHUR CLARK, Denver, Colo., assignors, by mesne assignments, to said Kauffman. Filed Nov. 11, 1924, Serial No. 749,353. Renewed Feb. 25, 1927. 6 Claims. (Cl. 196—147.)

1. An improved process of decolorizing, clarifying and purifying petroleum oils which consists in mixing the oil by any suitable means with untreated, finely divided clays containing enough water to form a viscous, cohesive mass sufficiently fluid to be pumped through pipes, passing the mixture through a suitable heating device without heating the mixture to a temperature in excess



of the boiling point of the oil being treated, then steaming down the hot oil and clay mixture to a temperature somewhat in excess of the boiling point of water and drawing off the vapors with the spent steam, further cooling the mixture to the desired temperature for separating the spent filtering material from the oil and separating the spent filtering material from the oil.

1,636,939. ANGLE PLUG. THOMAS J. KERWIN, Chicago, Ill., assignor, by mesne assignments, to Chicago Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,733. 1 Claim. (Cl. 173—328.)



In an electric fitting, an elbow-shaped casing having its forward arm counterbored to provide an inner annular shoulder spaced from the mouth of the said arm and having a fin projecting radially inward into the said counterbored portion adjacent to the said shoulder, the shoulder being disposed forwardly of the bend of the casing; a tubular insulator socketed in the said counterbored arm and abutting at its rear end against the said shoulder and having a notch fitted over the said fin to prevent the insulator from rotating in the said arm, the forward part of the bore of the insulator being contracted in diameter; a wire terminal member slidably inserted in the insulator bore from the rear of the insulator and having a forward threaded end and presenting an eye adjacent to the rear end of the insulator; a screw extending through the contracted bore portion of the insulator and having its head engaging the forward end of the insulator and its shank threaded into the said threaded end of the wire terminal member; and an insulated circuit wire extending into the casing through the other arm of the casing and having a bared end extending through the eye of the terminal member and clamped against and kinked into the rear end of the insulator bore.

1,636,940. REPRODUCER FOR RADIO RECEIVING APPARATUS. THEODORE LINDENBERG, Columbus, Ohio. Filed Jan. 13, 1926. Serial No. 80,917. 3 Claims. (Cl. 181—27.)

1. A reproducer for radio receiving apparatus comprising a plurality of reproducing units, said units being formed to include amplifying sections, one of said sections having the walls thereof formed from wood, another section from metal and a third from a moulded composition material, and means permitting said units to be simultaneously energised.

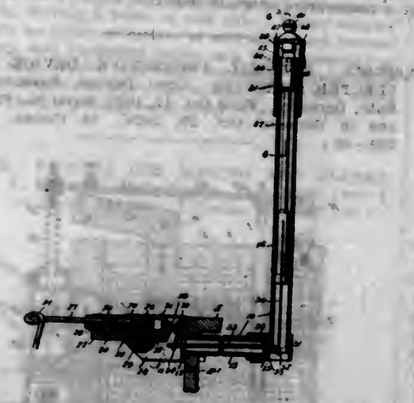
1,636,941. PROCESS AND APPARATUS FOR RECHARGING MAGNETS. SYLVESTER V. LOSBY, Detroit, Mich. Filed May 24, 1926. Serial No. 111,449. 2 Claims. (Cl. 175—21.)

1. In a process of recharging magnets of magnetos of the Ford type, the herein described steps which consist in passing through the field coil circuit an impulse from an alternating current to de-energise the magnets, and subsequently passing an impulse from the same alternating current to energise the magnets.

1,636,942. PROCESS FOR PREPARING WATER-SOFTENING MATERIALS. GEORGE W. PRATHER, Des Moines, Iowa. Filed Aug. 10, 1916. Serial No. 114,271. 4 Claims. (Cl. 23—111.)

1. The process for forming a filtering and water softening material which consists of drying a mineral having for its base a hydrated silicate of aluminum until practically all the uncombined moisture is driven off, reducing such mineral to particles of suitable size by mechanical means, then baking such mineral at a high temperature in the presence of sodium hydroxide (NaOH) until the hydroxide melts and thoroughly permeates the mineral and the particles are rendered hard and finally washing the mineral free of excess sodium hydroxide.

1,636,943. KNIT FABRIC. ROBERT ROTHMAN, Brooklyn, N. Y. Filed Feb. 5, 1925. Serial No. 7,006. 5 Claims. (Cl. 66—194.)

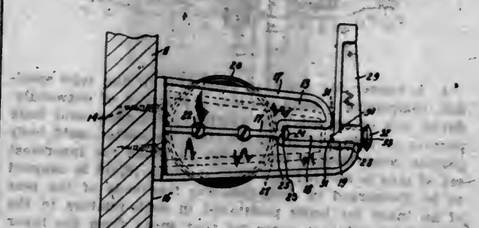


1. A knit fabric comprising a series of wales each consisting of interknitted loops, the thread from a loop of one wale being extended over at least one wale of the same course to form a float and interknit with a loop in a wale of the same course at least two loops distant from the first loop, the thread from a loop of the wale in the same course next the first wale being arranged in like manner and floated over the second loop to which the first thread is interknit whereby each loop is crossed by a plurality of float threads, each course also having a backing thread engaging all of the loops of the next succeeding course.

1,636,944. ANCHOR DAVIT. BEOR MAX SCHAUMAN, New York, N. Y., assignor to Margaret Woolman Cantwell, New York, N. Y. Filed July 6, 1926. Serial No. 120,774. 9 Claims. (Cl. 114—210.)

1. In combination, a carriage mounted for horizontal travel upon the deck of a vessel, a davit pivotally supported at one of its ends on said carriage, a sheave mounted in the other end of the davit, an anchor, and a flexible element trained over the sheave and connected with said anchor, means for locking the davit against tilting movement on the carriage during the travelling movements of the carriage but releasing the davit at the end of the movement of the carriage in one direction, means controlled by the weight of the anchor when the davit is released for pivotal movement to swing the davit upon the carriage to a horizontally extended position with respect thereto, means for actuating the carriage, and means for operating said flexible element to lower and raise the anchor relative to the davit.

1,636,945. STOP-MOTION DEVICE FOR SPINNING FRAMES. HENRY E. VAN NESS, Elmira, N. Y., assignor to Eclipse Textile Devices, Inc., Elmira, N. Y., a Corporation of New York. Filed Sept. 17, 1925. Serial No. 56,794. 29 Claims. (Cl. 117—32.)



1. A stop-motion device, which comprises a pipe-like frame, a trigger and a breaker at opposite ends of the frame, and elements located within the frame and movable longitudinally thereof to connect the trigger with the breaker.

1,636,946. PURIFICATION OF OILS. FRIEDRICH W. WEBER, Hackensack, N. J. Filed Mar. 18, 1926. Serial No. 95,900. 5 Claims. (Cl. 196—44.)

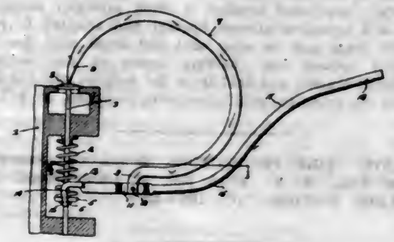
5. The method of purifying crude petroleum and the various distillates obtained therefrom by means of sulfuric acid, said method comprising agitating the oil, adding sulfuric acid to said oil forming a sludge thereby, separating the sludge from the acid oil mixture, agitating the acid oil mixture, adding to the agitated acid oil mixture a colloidal ferric chloride liquor, containing basic ferric chloride and the basic chlorides of rare earth metals, thereby precipitating ferric hydroxide, adding an excess of a practically saturated solution of sodium silicate to the reaction mixture, thereby immediately causing a voluminous heavy precipitate of silicon hydroxide and of the hydroxides of the rare earth metals, causing the combined metal hydroxides and the excess of the aforesaid sodium silicate solution to settle out from the oil, separating the aforesaid mixture of metal hydroxides and the excess of the sodium silicate solution from the oil, and distilling the same in any of the well known ways.

1,636,947. DOOR FASTENER. ARNOLD ZUKOR, New York, N. Y. Filed July 24, 1926. Serial No. 124,655. 1 Claim. (Cl. 292—194.)

The combination with a door frame and a door hinged thereto, of a bracket attached to the door adjacent its free vertical edge, said bracket being provided with a horizontal slot extending from the free end thereof toward its attached end, a ledge on said bracket forming a continuation of the lower edge of said slot and projecting beyond the body portion of said bracket, a bracket secured to the door frame in alignment with said first mentioned bracket, a latch pivotally mounted upon said second-mentioned bracket and adapted to rest on said ledge and to enter said slot when said door is partially opened, and coacting means on said second-mentioned bracket and said latch for keeping said bracket both in its operative and inoperative positions, at will.

1,636,948. TIRE PROTECTOR. HIRAM C. ANDERSON, New York, N. Y. Filed Dec. 3, 1924. Serial No. 753,644. 5 Claims. (Cl. 152—33.)

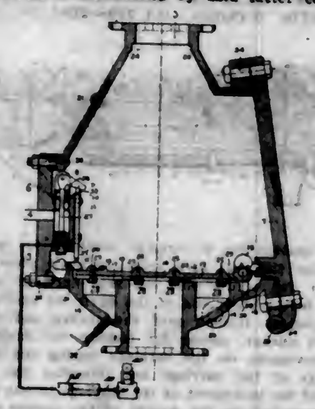
4. In a tire construction, the combination with a pneumatic tire, of an outer wheel structure supported thereby comprising a rim structure and cushioning means carried thereby, said rim structure comprising an outer rim member having a pair of annular flanges one of which is arranged to abut against a side of said tire when the other flange is slipped axially thereover, and an auxiliary



rim member comprising a pair of annular flanges and forming in conjunction with said outer rim member a substantially triangular section to act as a supporting abutment in co-operation with the outer rim member for said tire at the opposite side thereof and adjacent to the central plane of the tire.

1,636,949. SPRAYING APPARATUS. EDWIN M. BASSLER, Milwaukee, Wis. Filed Apr. 17, 1924. Serial No. 707,080. 11 Claims. (Cl. 299—63.)

1. A runner for spraying apparatus of the type specified, comprising a body portion, a plurality of outwardly-flared sets of spaced pins which project from said body portion at different distances from its center, said body portion comprising a central disk in which the innermost set of pins is secured and against which liquid is adapted to be discharged in operation, the free ends of the pins of an inner set being positioned in such relation to the pins of an adjacent outer set that spray from the inner set of pins will be discharged across the path traversed by the pins of said adjacent outer set.

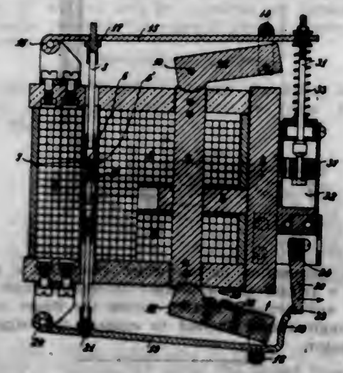


1,636,950. VALVE-SPRING LIFTER. RYNERR E. BROWN, Holdenville, Okla., assignor of one-half to Albert Stanley Bailey, Holdenville, Okla. Filed Aug. 19, 1926. Serial No. 130,233. 1 Claim. (Cl. 29—86.3.)

A valve spring lifter comprising a substantially C-shaped suspension member having a pointed end at its top adapted to rest upon a valve head, the opposite end of the member terminating in a downturned extremity, and said extremity being located at a point spaced from a line extending in alignment with the first named end, an operating lever pivotally connected at a point between its ends to the downturned extremity of said suspension member, said lever having means on its outer end for engaging a valve spring cup, the opposite end of the lever being directed upwardly, and terminating on a plane opposite the central portion of said C-shaped suspension member.

1,636,951. PIPE VALVE. HARRY CAMPBELL, Mariners Harbor, N. Y., assignor of twenty-five per cent to Roger Thompson Butts, twenty per cent to Ernest Wilson Butts, and twenty per cent to Robert Starr Allyn, New York, N. Y. Filed June 1, 1923. Serial No. 642,853. 13 Claims. (Cl. 169—23.)

1. A dry pipe valve comprising a casing having a water inlet at the bottom and a water outlet at the top, a water valve hinged in the casing for said inlet, said casing having openings on opposite sides, a cover plate for one of said side openings to permit access to said water valve, a cover plate for the opposite side opening, an air supply valve carried by said latter cover plate

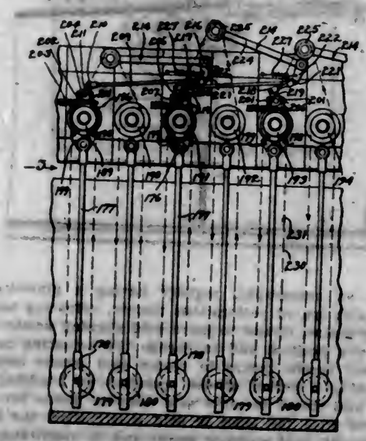


normally admitting air pressure on top of said water valve and means actuated by the opening of the water valve to close said air supply valve.

1,636,952. PROCESS OF PRODUCING ACETALDEHYDE. AUGUSTUS E. CRAVER, Cliffside, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Mar. 13, 1922. Serial No. 543,493. 6 Claims. (Cl. 260—138.)

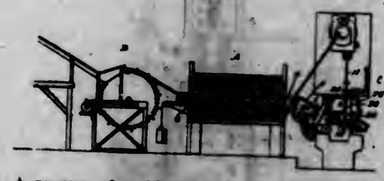
1. The process of producing acetaldehyde, which comprises passing ethyl alcohol in the vapor phase and an oxygen-containing gas into contact with vanadium oxide at a temperature of about 300° C.

1,636,953. THERMAL PROTECTIVE DEVICE FOR ELECTRIC CIRCUITS. OTTO DREYER, Essen-on-the-Ruhr, Germany. Filed Oct. 17, 1925, Serial No. 62,979, and in Germany Oct. 20, 1924. 18 Claims. (Cl. 200—88.)



1. A thermoelectric controller for electric circuits embodying an electro-magnet, an armature influenced thereby, thermally controlled means for locking and releasing said armature, and a retarder governing the movement of said armature upon the release thereof.

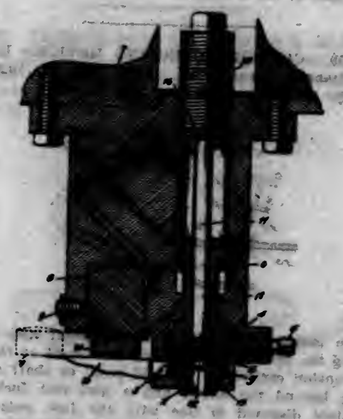
14. A thermoelectric controller for electric circuits comprising a pair of comparatively strong and weak electro-magnetic coils, armatures influenced thereby, thermally controlled means for locking at least the armature of said comparatively strong electro-magnetic coil from action



and releasing the same so as to be attracted by its coil, a retarder governing the action of the armature of said comparatively strong coil, and a mechanical locking device for holding from action the armature of said comparatively weak coil, said mechanical locking device being releasable by the movement of the armature of said comparatively strong coil upon the release thereof.

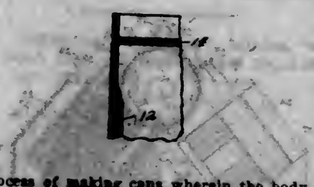
1,636,954. AUTOMATIC FILM-TENSIONING MECHANISM. FRANK E. GARBUTT, Los Angeles, Calif. Filed Mar. 2, 1926. Serial No. 91,697. 6 Claims. (Cl. 271—2.3.)

1. In a film apparatus, the combination of: pairs of upper and lower rollers having a film wound thereabout; means for driving a roller of said pairs; brakes adapted to operate on rollers of certain of said pairs; and tensioning levers, said tensioning levers each being connected to two of said brakes, and said tensioning levers being operated by said film when the tension of said film varies so as to change the rotational speed of said rollers.



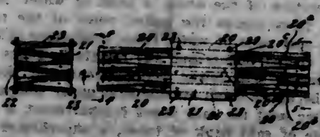
1,636,955. PROCESS FOR MAKING NUT BLANKS. JOHN F. GOLDING, Philadelphia, Pa. Filed Oct. 2, 1924. Serial No. 741,267. 7 Claims. (Cl. 10—86.)

1. A process of making nut blanks from metal, which consists in heating the metal to make it sufficiently soft to be cut smoothly, and then cutting the metal along all the vertical sides of the nut blank to be produced and removing the exterior trimming to form the desired smooth faces of the blank and also, during the restrainment of the metal from outward flow by the side cutting means, cutting the metal from the middle of the blank to form a smooth perforation.



1,636,956. PROCESS OF MAKING NUT BLANKS. JOHN F. GOLDING, Philadelphia, Pa. Filed Apr. 24, 1926. Serial No. 104,477. 3 Claims. (Cl. 10—86.)

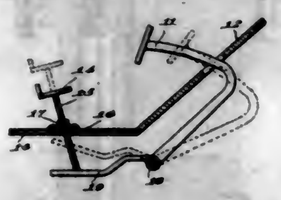
2. A process of making nut blanks from metal, which consists in heating the metal to make it sufficiently soft to be cut smoothly, and then cutting the metal along all the vertical sides of the nut blank to be produced and removing the exterior trimming to form the desired faces of the blank, and removing the metal from the middle of the blank to form a perforation, and restrict-



ing the outflow of the metal from within the blank, and regulating the amount of metal in the body of the blank by causing the cutting of the sides of the blank to begin prior to the beginning of the formation of said perforation.

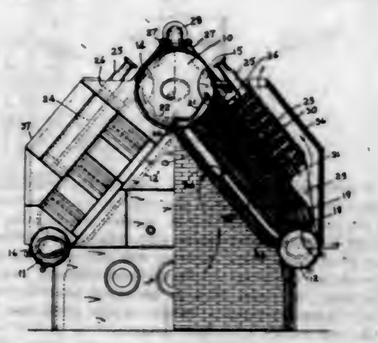
1,636,957. CREASED FLANGE. JAMES A. GRAY, San Francisco, Calif., assignor to American Can Company, New York, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,121. 6 Claims. (Cl. 113—116.)

1. A process of making cans wherein the body and end are provided with flanges adapted to be interfolded to form an hermetic seam, which consists in forming a cylindrical body of sheet metal with the edges secured together in a side seam, creasing the material across the side seam at the point of flange-bend whereby the inner overlapping part may stretch in being bent to provide the body-flange, forming a flange on said body, and seaming the end in place on said body.



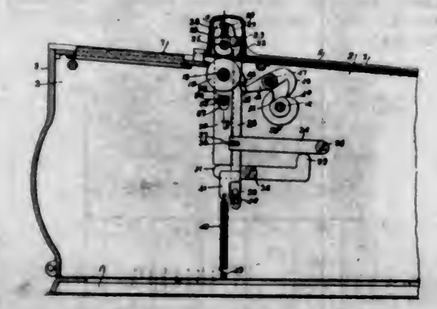
1,636,958. HEAT-TRANSFER DEVICE. ISAAC HARTER, Dongan Hills, N. Y., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 7, 1922. Serial No. 580,002. 18 Claims. (Cl. 257—166.)

4. A heat-transfer device comprising a pair of symmetrically and oppositely disposed channels separated by a heat-conducting wall, each of said channels having each



end generally triangular in cross-section and progressively changing to a rectangular cross-section for a portion of the length of channel between the ends, one of the channels having an entrance at one end and an exit at the other end, each located on the side of the channel at the base of the triangular section.

1,636,959. CLUTCH-PROTECTING DEVICE. CHARLES M. HIBBETS, Claude, Tex. Filed Aug. 23, 1926. Serial No. 131,069. 8 Claims. (Cl. 74—81.)

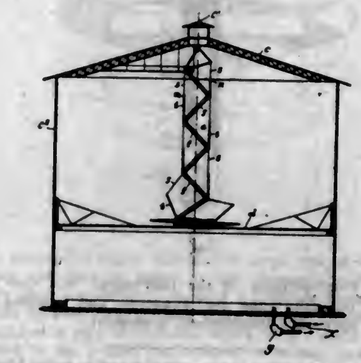


1. In combination with a clutch pedal and a shaft forming the fulcrum of swinging movement of the pedal, an extension carried by the said pedal or shaft and projecting beyond the shaft, and a heel rest including a rest plate disposed in line with the foot pedal to receive the heel of a foot when the forward portion of the foot rests on the foot pedal, and a rigid stem depending from said plate, said stem being shiftable lengthwise with the heel plate and resting at its lower end upon the said extension of the clutch pedal or shaft.

1,636,960. WATER-TUBE BOILER. WILLIAM D. HOXIE, Westerly, R. I., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Dec. 20, 1920. Serial No. 431,975. 2 Claims. (Cl. 122—478.)

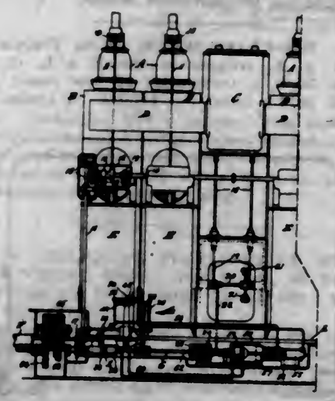
1. A steam boiler comprising an upper drum having a compartment therein and shorter than the length of the drum and smaller in cross-section than the cross-section of the drum, a lower drum having a compartment therein extending longitudinally of the drum for substantially the full length thereof and smaller in cross-section than the cross-section of the drum, a bank of water tubes arranged in rows across the boiler, some of the tubes of one of the rear rows of water tubes connecting said upper and lower compartments and the remaining tubes of said row connecting said lower compartment and the water space of the upper drum outside said upper compartment, a feed water inlet for said upper compartment, a furnace on one side of said bank of tubes, a superheater on the side of said bank opposite the furnace, said superheater having tubes longer than the length of said upper compartment and extending transversely across the water tubes, and baffling arranged to direct the furnace gases into and across the upper end of said bank, then across the superheater tubes and then again across the water tubes.

1,636,961. AUTOGRAPHIC REGISTER. PHILIP A. JACKSON, Dayton, Ohio, assignor to The Egry Register Company, Dayton, Ohio, a Corporation of Ohio. Filed May 27, 1926. Serial No. 112,145. 7 Claims. (Cl. 282—21.)



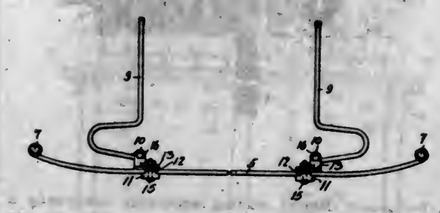
1. In an autographic register having a plurality of sheets with spaced perforations therein, actuating means, aligning means, means to move said aligning means into inoperative position and to engage the actuating means with said sheets, means to render said means inoperative during a period of the operation of handling the sheets, and means to move said aligning means into engagement with the holes in said sheets when the holes pass beneath said aligning means and to simultaneously render said actuating means inoperative, and a common actuator for operating said several means.

1,636,962. HYDRAULIC MOLDING PRESS. CONRAD C. JACOBSON, Glen Ridge, N. J., assignor to John Robertson Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 2, 1926. Serial No. 99,284. 3 Claims. (Cl. 25—91.)



1. A hydraulic molding press comprising a molding chamber open at opposite ends, plungers adapted to enter such ends, and hydraulic cylinders and rams for moving said plungers, combined with indicating means comprising indicators connected to move with the respective plungers, and a stationary part traversed by said indicators, whereby to show the movements within the molding chamber of the respective plungers.

1,636,963. SCALING MEANS FOR USE IN GASOMETERS INCLOSING A VERTICALLY-SLIDABLE BODY. KONRAD JAOSCHITZ, Mainz, Germany, assignor to Maschinenfabrik Augsburg-Nuernberg A. G., Nuremberg, Bavaria, Germany, a Corporation of Germany. Filed July 7, 1923, Serial No. 650,020, and in Germany Feb. 5, 1923. 10 Claims. (Cl. 48—176.)



10. A scaling means for a gasometer consisting of a tank having a crown provided with a manhole, and a slidable closure within said tank arranged to rise and fall therein; comprising a collapsible member depending from said crown to said closure and automatically extensible and foldable as said closure moves downwardly and upwardly within said gasometer, and tread members on said collapsible member to provide access to said closure through said manhole at all times.

1,636,964. REVERSING AND STARTING MECHANISM FOR INTERNAL-COMBUSTION ENGINES. OLAV ESKIL JORGENSEN, Forest Hills, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 26, 1924. Serial No. 752,492. 12 Claims. (Cl. 60—16.)

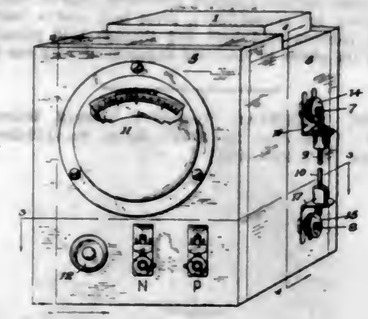
1. In a reversible internal combustion engine, the combination with operating devices that are actuated at different crank angles in the reverse operation, of a rotating shaft controlling the crank angle at which such devices are operated, said shaft being mounted to move longitudinally, and means by which the longitudinal movement of said shaft rotates said shaft to change the operating crank angle of said devices for reverse operation of the engine.

1,636,965. VEHICLE BUMPER. WILLIAM R. MCGOWEN, McKees Rocks, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 10, 1926. Serial No. 101,083. 2 Claims. (Cl. 293—55.)

1. The combination with a pair of vertically spaced bumper bars, of a fitting comprising a face plate having flanges engaging an edge of each of the bars to hold the same against relative vertical movement in one direction, a backplate having a projection engaging the other edges of the said bars, the said projection being shorter in length than the thickness of said bars, an offset portion on said backplate in position to engage the rear surfaces of the bars, vertically spaced perforated lugs on said offset portion for supporting a pivot bolt, and a bolt extending between said bars and through said plates for holding the plates in clamping engagement with the bars.

1,636,966. PEDESTAL. DARIUS V. MARTIN, Wildwood, N. J. Filed June 29, 1926. Serial No. 119,290. 7 Claims. (Cl. 273—102.)

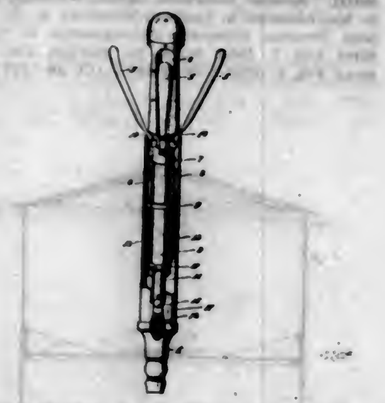
1. In a game in which a ball is thrown with the object of knocking targets from a support, a pedestal adapted when hit by a thrown ball to deflect the ball downwardly or to one side including a standard having its side faces



diverging from the front toward the rear, and a platform on the standard adapted to support the targets on its upper face and having its under face diverging from the edge of the upper face.

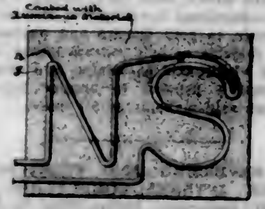
1,636,967. PERMANENT-MARCEL-WAVE APPARATUS. ELSIE PERRY, New York, N. Y. Filed May 13, 1926. Serial No. 108,756. 6 Claims. (Cl. 132—33.)

1. Permanent Marcel waving apparatus comprising a flat support having notches along its opposite edges in combination with a tape tightly securing a strand of hair in wavy form against the support.



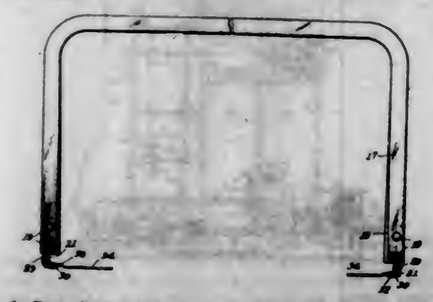
1,636,968. COIL TESTER. FRANK PUCILLO, Bridgeport, Conn. Filed Mar. 7, 1924. Serial No. 697,450. 1 Claim. (Cl. 175—183.)

A spark gap as an article of manufacture, comprising a support, a pair of studs projecting laterally in spaced relation from one side wall of said support, a pair of angle brackets adjustably mounted on said studs for rotative and lateral sliding adjustment, the free ends of said brackets extending laterally from said support, rod members adjustably mounted in the free ends of said brackets, and a spark plug holding clamp mounted on said support between and at one side of the plane of the said studs.



1,636,969. DOUCHE NOZZLE. JAY ROSE, Brooklyn, N. Y., assignor, by mesne assignments, to Henry Eisenstadt, Brooklyn, N. Y. Filed May 14, 1919. Serial No. 297,062. Renewed Mar. 3, 1927. 17 Claims. (Cl. 128—244.)

1. A douche nozzle comprising a tube, a plurality of dilators movably supported on said tube in position to lie wholly within the cavity to be irrigated and terminating short of the end of the tube, an actuating member for said dilators carried by said tube in position to lie wholly without said cavity, connections between said dilators and said actuating member comprising means for shifting the

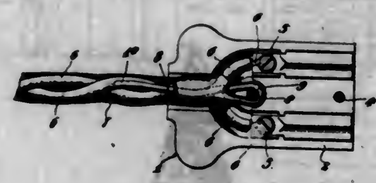


dilators longitudinally of the instrument, and cam projections on said tube for engaging and opening the dilators upon said longitudinal movement.

1,636,970. PROCESS AND APPARATUS FOR LIGHTING. NATHAN SULZBERGER, New York, N. Y. Filed May 12, 1922. Serial No. 560,500¼. 2 Claims. (Cl. 176—16.)

1. A process for producing displays, comprising subjecting to the influence of light a luminescent surface and maintaining certain parts of said surface at different temperatures whereby a greater or less luminescity is produced at the points subjected to varying temperatures, thus bringing out pre-determined designs.

1,636,971. BAG-FRAME HINGE. HUGO TUECKMANTEL, Newark, N. J., assignor to The T. & L. Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Oct. 12, 1926. Serial No. 141,044. 4 Claims. (Cl. 16—128.

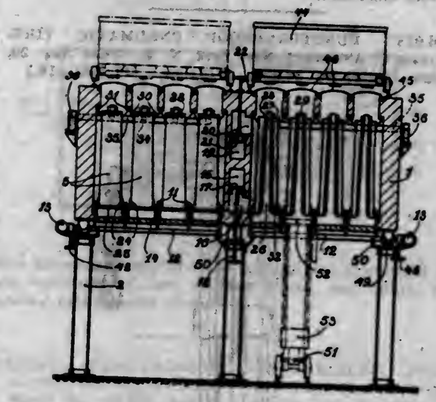


1. Bag frame hinges comprising two plates having right angled extensions on portions of their outer edges, a joint plate pivotally engaging said plates intermediately, and stops on said joint plate limiting the movement of the plates to a parallel position.

1,636,972. GARMENT HANGER. SENA MAE WARD and EUNICE S. SUTTON, New York, N. Y. Filed May 29, 1925. Serial No. 33,699. 1 Claim. (Cl. 223—62.)

A garment hanger having one edge contoured to fit within and hold in shape a yoke garment, and the opposite edge contoured to support a yokeless garment, and having between said edges a longitudinally extending slot to support a pair of trousers, and a hook having a shank pivoted to the hanger and adapted to extend transversely thereof beyond either of the said edges to support the said plate with either of the edges at the top, the hook pivoted to the hanger between the slot and the first named edge so that when the last named edge is uppermost the hook shank will extend across the slot to prevent the insertion of trousers in the slot, thus serving as an indication of the proper arrangement of the hanger for yoke garments.

1,636,973. EXTENSION CORD FOR ELECTRICAL APPLIANCES. JESSEE M. WHITE, Philadelphia, Pa. Filed Feb. 10, 1925. Seial No. 8,116. 3 Claims. (Cl. 173—322.)

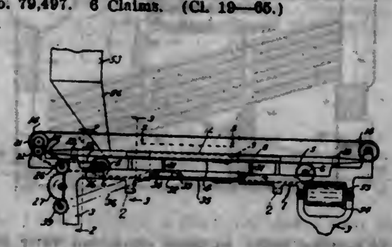


1. In combination with a terminal plug having wires connected thereto, a covering braided around the wires; a looped cord having one end connected with the covering and having an end secured within the same, and means for connecting the loop to the plug.

1,636,974. SELECTIVE FLOTATION OF MINERALS FROM CRUDE ORES. OBA WISER, El Paso, Tex. Filed June 21, 1926. Serial No. 117,639. 6 Claims. (Cl. 209—167.)

1. The process of selective flotation of ores containing lead, zinc and iron sulfides, which consists in first subjecting the ore pulp containing ore in divided condition to the action of a dulling agent comprising sulfurous acid, in proportion corresponding to less than one and one-half pounds and more than one twentieth pound of sulfur per ton of ore, and then subjecting the ore pulp while in approximately neutral condition, to flotation and to float the lead sulfide while retaining the zinc and iron sulfides largely in the pulp.

1,636,975. RETORT OVEN FOR LOW-TEMPERATURE CARBONIZATION. PIERRE CHARLES ZUYDERHOUDT, Brussels, Belgium; Madam Fanny Zuyderhoudt executor of said Pierre Charles Zuyderhoudt, deceased. Filed Sept. 27, 1924, Serial No. 740,238, and in Belgium Oct. 22, 1923. 19 Claims. (Cl. 202—9.)



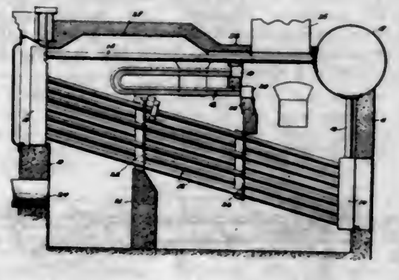
1. In a retort oven for low temperature carbonization, the combination of a plurality of chambers connected in an endless series, means for heating said chambers, a battery of retorts in each of said chambers, means for connecting each chamber with the two adjoining chambers, an air inlet and a gas outlet for each chamber, and under said chambers a discharging room at least as high as said retorts.

1,636,976. LUBRICATING COMPOSITION AND PROCESS FOR MAKING THE SAME. STEPHEN RENÉ ADLER, New York, N. Y. Filed May 27, 1925. Serial No. 33,293. 3 Claims. (Cl. 87—9.)

2. A composition of matter for lubricating the screw posts of musical instruments and similar devices, the constituent ingredients of said composition consisting of a vegetable oil, petroleum jelly, precipitated chalk and powdered graphite, and sodium hydroxide solution, the vegetable oil being saponified by the sodium hydroxide solution and partly precipitated by the calcium compound formed by the double decomposition between the powdered chalk and the sodium hydroxide solution.

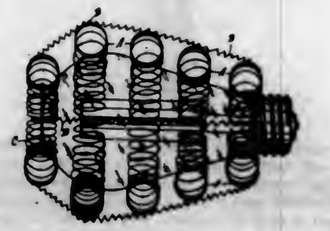
1,636,977. METHOD AND APPARATUS FOR SUPPLYING FIBROUS MATERIAL IN ALIGNED CONDITION. EVALD ANDERSON, Alhambra, Calif., assignor to International Precipitation Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 5, 1926. Serial No. 79,497. 6 Claims. (Cl. 19—65.)

1. The method of supplying fibers of nonconducting material in aligned condition, which comprises subjecting a fibrous aggregate of such material in divided con-



dition to an electrostatic field so as to effect alignment of the fibers in a direction substantially parallel to the lines of force of such field, and then removing such fibers from the region of the electrostatic field and delivering the fibers while maintaining their aligned condition for subjection to a subsequent operation requiring such alignment.

1,636,978. PUNCTUREPROOF PNEUMATIC TIRE. HIRAM C. ANDERSON, New York, N. Y. Filed Aug. 29, 1925. Serial No. 53,337. 2 Claims. (Cl. 152—18.)

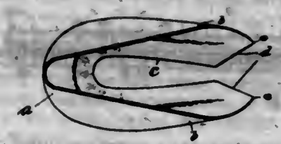


1. A tire casing consisting of a resilient member reenforced at its inner surface adjacent to its tread by an annular member bearing securely against the resilient member, said annular member being substantially of arcuate cross section adjacent to said tread portion, the tread portion being relatively heavy and the sides of the casing being hollowed out to provide inwardly opening annular side pockets disposed between said sides and the circle formed by extending the arc of the annular member, the annular member having annular side flanges entering the pockets and bearing against the body of the casing and in the direction of the tread portion thereof.

1,636,979. WASTE HEAT BOILER. HARRY SPENCER BENNETT, Bethlehem, Pa., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 14, 1920. Serial No. 381,332. 8 Claims. (Cl. 122—7.)

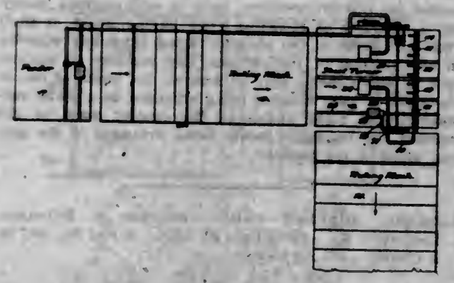
1. In a steam boiler, an upper steam and water drum, horizontally inclined water tubes and connections between the same and said steam and water drum and comprising horizontal water and steam circulators, a baffle extending across the tubes, a roof located above said circulators, the portion of the roof above said baffle being elevated substantially above the circulators and providing a free unobstructed space between the circulators and the roof, and a superheater entirely located beneath said circulators, but not extending across the space above the first pass, whereby the gases from the first pass sweep upwardly over the circulating tubes into said space and thence downwardly over said circulating tubes and over the superheater tubes to the second pass.

1,636,980. LIGHT-GLOBE PROTECTOR. LA FAYETTE BENNETT, Salt Lake City, Utah. Filed Dec. 7, 1925. Serial No. 73,620. 2 Claims. (Cl. 240—102.)



1. A light globe protector consisting of pieces of fine spring wire formed as coil springs with the ends of the wire fastened together giving each coil spring an annular band form; other pieces of fine spring wire formed as spiral springs, with some of the convolutions of the spiral springs engaging some of the convolutions of the coil springs to space them apart; and a wire band within the annular coil spring at one end of the protector.

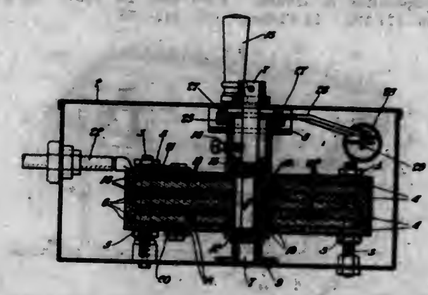
1,636,981. ARTIFICIAL TREE. HARRY L. BERMAN, Baltimore, Md. Filed Feb. 1, 1927. Serial No. 165,189. 4 Claims. (Cl. 41—15.)



1. An imitation tree composed of a triangular form of corrugated board and a rope cover, said rope being attached to said form at the apex, tightly wound at the apex and wound less tightly and spirally from the apex to the bottom of the form, tucked in at the bottom of the form and unsecured to the form between the apex and bottom.

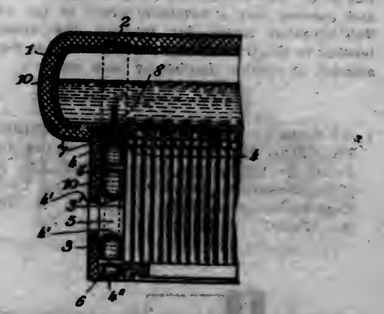
1,636,982. SHOE COUNTER. GEORGE E. BRITTAIN, Lynn, Mass., assignor to Louis H. Harriman, trustee, Haverhill, Mass. Filed May 3, 1920. Serial No. 106,266. 6 Claims. (Cl. 36—68.)

1. A shoe counter moulded in U-form corresponding to the heel part of a shoe having an oblique shank portion extending rearward from the ball portion, each of the side portions of the counter being formed to extend throughout a substantial portion of the length of said oblique shank portion and having an inturned flange portion formed for engagement with the shoe bottom and extending continuously with its lower edges, the end portions of said flange having their edges extending forwardly in divergent relation and being formed to meet the top edges of the sides of the counter at points corresponding to the edge of the bottom.



1,639,983. SHEET-STOP MECHANISM FOR RULING MACHINES AND THE LIKE. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Original application filed Apr. 8, 1926, Serial No. 100,699. Divided and this application filed July 19, 1926. Serial No. 123,577. 6 Claims. (Cl. 271—50.)

1. In apparatus of the character set forth, the combination with a sheet stop, of means for moving sheets to a position against the stop, normally inactive means located above the sheet moving means and in spaced relation thereto in advance of the stop for preventing the rebound of the sheets from the stop when carried thereagainst by the moving means, and means for causing the rebound preventing means to become active after a sheet has passed the same an engaged the stop.

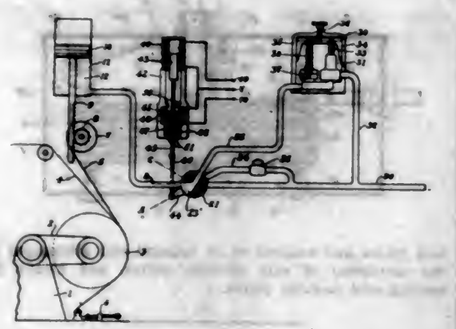


1,636,984. MULTIPLE-BREAK ELECTRIC SWITCH. LADURA ALEXANDER BROWN, Uniontown, Pa. Filed July 3, 1926. Serial No. 120,884. 5 Claims. (Cl. 200—145.)

1. A multiple-break electric switch, comprising a plurality of stationary plates formed of insulating material arranged parallel with and in contact with each other, said plates having their abutting faces relieved to form recesses, a plurality of movable plates formed of insulating material and mounted in said recesses, said movable plates being movable in a plane parallel with said stationary plates, metallic contact members mounted in each of

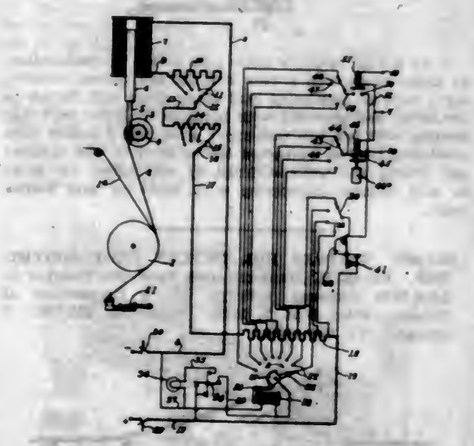
said plates and adapted to be engaged and disengaged by the movement of said movable plates, and means for moving said movable plates.

1,636,985. HIGH-PRESSURE STEAM BOILER. JACOB BUCHLI, Winterthur, Switzerland. Filed June 29, 1925, Serial No. 40,297, and in Germany Feb. 9, 1925. 3 Claims. (Cl. 122—94.)



1. In a high pressure water tube boiler, in combination, an upper drum, and a rear wall for the firebox comprising a member embracing said upper drum and shrunk to the latter and provided with bores in its lower part registering with bores in said upper drum, and a hollow body consisting of two connected halves fixed to said member and having flat walls stiffened by stay tubes, the bores in said member registering with bores in said hollow body.

1,636,986. TRIPPER FOR DUPLEX BELT CONVEYERS. FRANK B. CALDWELL, Oak Park, Ill., assignor to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 7, 1926. Serial No. 133,793. 6 Claims. (Cl. 198—186.)



1. In a belt conveyer, a power belt and a wear sheet carried thereby and in frictional contact therewith, a tripper frame arranged intermediate the ends of the belt, and separate idler pulleys on the tripper frame over which the power belt and the wear sheet separately travel.

1,636,987. **FLUID-PRESSURE WEB CONTROLLER FOR PRINTING PRESSES.** ALLAN J. CLINE, Chicago, and JACOB A. HOLLANDER, Forest Park, Ill., assignors to Cline Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 26, 1927. Serial No. 171,130. 14 Claims. (Cl. 242—75.)

1. A web-tension regulator for printing presses or the like comprising a friction strap pressing against the web-roll to be controlled, such strap being secured at one end and passing over a rotatable drum at the other end, a fluid-actuated motor for rotating the drum to apply tension to the friction strap and means for regulating the amount of tension applied by such motor.

1,636,988. **SOLENOID WEB CONTROLLER FOR PRINTING PRESSES.** ALLAN J. CLINE, Chicago, and JACOB A. HOLLANDER, Forest Park, Ill., assignors to Cline Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1927. Serial No. 171,497. 11 Claims. (Cl. 242—75.)

1. A web-tension regulator for printing presses or the like comprising a friction strap pressing against the web-surface to be controlled, such straps being secured at one end and passing over a rotatable drum at the other end, a solenoid-motor for rotating the drum to apply tension to the friction straps and means for regulating the current-flow through the solenoid.

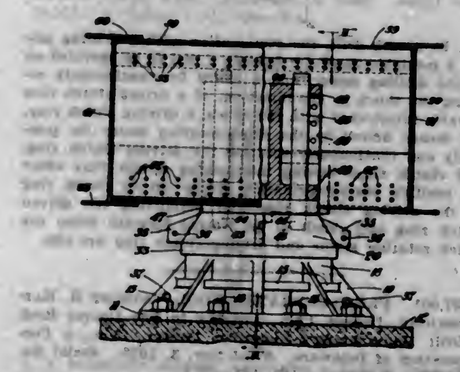
1,636,989. **OVEN.** RUDOLPH BICKWORTH, Dortmund, Germany. Filed Aug. 24, 1921, Serial No. 494,973, and in Germany Dec. 11, 1913. 4 Claims. (Cl. 263—28.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In an annealing oven a movable partition composed of a plurality of blocks of refractory material connected to form a flexible curtain and rotary means for winding and unwinding such curtain.

1,636,990. **ANTISKID CHAIN FOR AUTOMOBILES.** ROBERT O. FRONTS, Juniata, Pa., assignor of one-half to George A. Melson, Juniata, Pa. Filed Jan. 27, 1927. Serial No. 164,049. 2 Claims. (Cl. 24—232.)

1. A connector for the cross side chains of automobile anti-skid chains comprising a pair of sections connected for relative rotation, each of said sections including a plurality of radiating arms having hooks at their ends, the hooks of the sections facing oppositely whereby in one position of the sections they combine to produce eyes in which chains may be secured, the hooks of one of the arms of each member being arranged in a plane substantially at right angles to the general plane of the member, the remaining hooks being arranged in the general plane of the member.

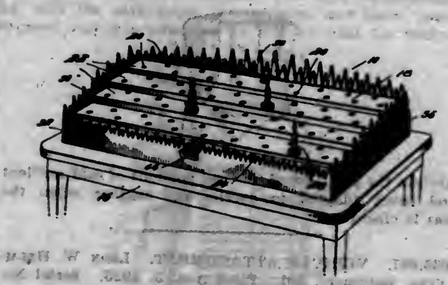
1,636,991. **DISPLAY CARD.** BERNARD A. FUEGLEIN, Louisville, Ky. Filed Feb. 20, 1926. Serial No. 89,729. 3 Claims. (Cl. 211—34.)



2. A display card consisting of an upper and lower disc concentrically pivoted to each other, the lower disc having colored sections on one side, the reverse side divided into corresponding sections with indicia of color, the said indicia corresponding to the color on the obverse side, the upper disc provided with a segmentary cut away section, shoulders projecting from said upper disc on each side of the said section, said shoulders projecting beyond the under disc and indicating the location of said section in the upper disc relative to the reverse side of the lower disc.

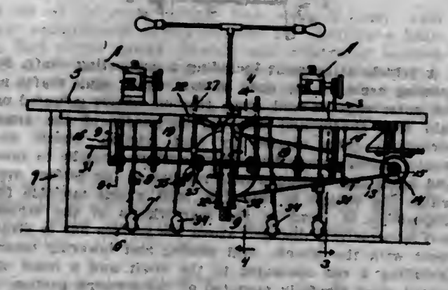
1,636,992. **TRAVELER FOR TWISTER RINGS.** GEORGE H. GILLIGAN, New Bedford, Mass., assignor to U. S. Ring Traveler Company, a Corporation of Rhode Island. Filed Nov. 22, 1926. Serial No. 149,837. 1 Claim. (Cl. 118—61.)

In a traveler for vertical twister rings, a substantially flat shank having its opposite ends bent outwardly at an oblique angle to said shank in directions opposite to each other and forming substantially flat bearing surfaces across the width thereof which in use prevent canting of the traveler, and terminal lips integral with said bearing portions oppositely directed upon the same side of the shank and laterally inclined relatively thereto.



1,636,993. **TURNTABLE CENTER.** CHAUNCEY MARSH GOODRICH, Windsor, Ontario, Canada. Filed Dec. 28, 1926, Serial No. 156,686, and in Canada Dec. 14, 1926. 18 Claims. (Cl. 104—46.)

1. In a turntable center structure, including the combination with a turntable proper and a rotatable center bearing member adapted to be vertically removed from its operable position without first lifting or jacking up the turntable proper, of vertically removable or insertable centering and locking pins extending through the turntable proper and into said center bearing member.



1,636,994. **VOTIVE STAND.** JAMES B. GERRNAN, Ashton, R. I. Filed Aug. 20, 1926. Serial No. 131,060. 14 Claims. (Cl. 67—36.)

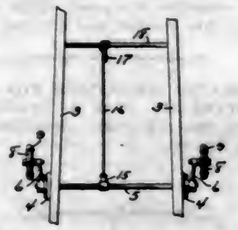
1. A votive stand or candelabrum comprising, in combination, a substantially air tight container having a plurality of spaced holes through the top thereof to receive the candles or rigid light holders, a fence around the top to catch falling candles and an air tight door, a drip pan normally contained with the said container underneath said holes and removable through said air tight door, a coin box concealed within the container

having a coin slot accessible from without the container, and a candle receptacle concealed within said container accessible other than through said drip pan door.

1,636,995. **DRIVING MECHANISM FOR SEWING-MACHINE BATTERIES.** JOHN R. HANSON, Alexandria, Minn. Filed June 29, 1926. Serial No. 119,340. 1 Claim. (Cl. 74—26.)

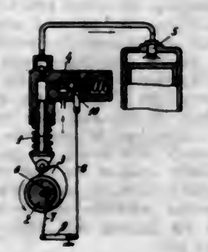
In a driving mechanism for sewing machine batteries, a supporting table of elongated construction upon which machines are arranged on opposite sides of the center thereof, a pair of brackets supported by the table top and depending downwardly therefrom having their upper and lower ends secured together in abutting relation and their intermediate portions in spaced parallel relation, a master gear disposed between the spaced parallel portions, means for journaling the master gear between said spaced parallel portions so that its axis extends horisontally and transversely of the table, horizontal shafts, one for each machine, having their inner ends journaled in the brackets, other brackets depending from the table for supporting the outer ends of the shafts, gears on the inner ends of the shaft for engaging both faces of the master gear, driving connections between the shafts and their respective machines, said means for journaling the inner ends of said shafts being in the form of cams, means for rotating the cams to normally hold the gears on the shafts out of engagement with the master gear, and manual control means for forcing said shaft gears in contact with the master gear.

1,636,996. **BOTTLE CLOSURE.** WILLIAM EDWARD HASKELL, Jr., Springfield, Mass. Filed Apr. 1, 1924. Serial No. 705,462. 11 Claims. (Cl. 215—96.)



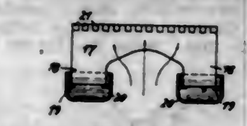
1. A bottle closure of flexible material comprising a top part and a depending flange or skirt portion, the skirt portion having a pleat therein providing for expanding the same, and a split resilient band extending about and

fixedly secured to the material of the skirt portion at either side of said pleat with its end portions located adjacent the pleat, said resilient band acting to yieldably



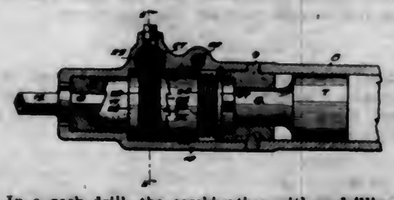
maintain the pleat closed, the end portions of said resilient band being adapted to overlie one another when the pleat is closed.

1,636,997. VEHICLE ATTACHMENT. LEON W. HELMLING, Baltimore, Md. Filed Aug. 3, 1925. Serial No. 47,901. 1 Claim. (Cl. 180—15.)



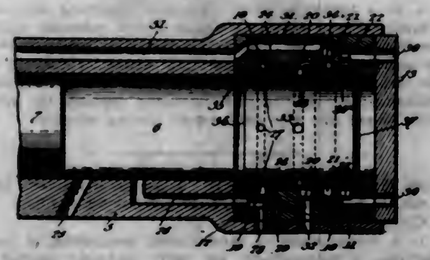
A vehicle attachment including a supporting shaft, depending arms at the ends of said shaft, stub shafts at the outer ends of said arms, friction wheels mounted on said stub shafts and disposed outwardly of the arms, peripheral calks carried by said friction wheels and means having connection with the shaft whereby to raise and lower the friction wheels relative to the surface over which the vehicle is traveling, said wheels movable for disposition in front of the rear wheels of the vehicle and inoperatively disposed above the surface but in alinement with the wheels, said raising and lowering means including a rod connected to the shaft and a hand operated lever pivotally mounted at the forward portion of the vehicle and in close proximity to the steering mechanism.

1,636,998. FUEL CONTROL IN INTERNAL-COMBUSTION ENGINES. HUGO JUNKERS, Dessau, Germany. Filed Nov. 17, 1921, Serial No. 515,987, and in Germany, June 1, 1921. 9 Claims. (Cl. 123—140.)



1. Means for regulating the delivery of fuel in internal combustion engines comprising a fuel pump cylinder and piston, controlling means in said pump for causing the end of the effective strokes to coincide with the end of the pump stroke, an engine crank shaft, a rotating member driven by said crank shaft for driving said pump piston and shiftable in its plane of movement, a regulating device, means connecting said member and regulating device for shifting said member in the plane of its movement so as to drive said pump piston with strokes of varying ends with regard to the engine crank circle, and means for keeping the commencement of delivery of said pump constant with respect to the engine crank circle.

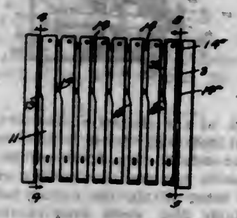
1,636,999. LIQUID-FUEL FURNACE. HUGO JUNKERS, Aachen-Frankenburg, Germany. Filed Jan. 15, 1925, Serial No. 2,599, and in Germany Mar. 7, 1924. 5 Claims. (Cl. 158—96.)



1. Liquid fuel burner comprising a liquid fuel supply and a grate bar of capillary structure extending substantially in horizontal position above and spaced from said fuel supply, a substantially vertical extension of said bar also having capillary structure extending into said fuel supply and serving to feed liquid fuel to said bar.

1,637,000. ROCK DRILL. AUGUST H. KATTERJOHN, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Feb. 2, 1922. Serial No. 533,555. 4 Claims. (Cl. 121—7.)

1. In a rock drill, the combination with a drilling motor, a rotatable chuck for holding a tool to be operated on by the drilling motor, and a motor for continuously rotating the chuck in one direction, of a driven clutch ring movably interlocked with the chuck, a driving clutch ring, and means driven by the chuck-rotating motor for positively and continuously rotating the driving clutch ring, said clutch rings having interlocking means that effect the positive constant rotation of the driven clutch ring by the driving clutch ring and permitting the driven clutch ring and chuck to be rotated forward when the clutch rotating motor and driving clutch ring are idle.



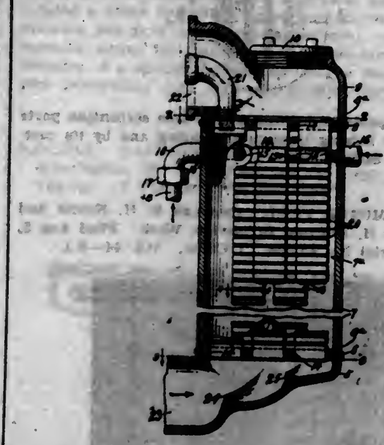
1,637,001. FLUID-OPERATED TOOL. AUGUST H. KATTERJOHN, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Nov. 3, 1925. Serial No. 66,578. 6 Claims. (Cl. 121—26.)

4. In a fluid operated tool, the combination with a cylinder member and a reciprocatory piston hammer therein, of a valve chest having a valve chamber and an annular

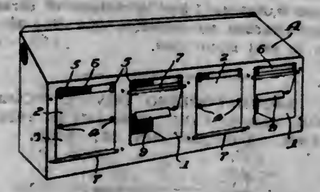
groove surrounding it, and a reciprocatory automatic tubular distributing valve located in the chamber and having a flange located and reciprocating in the groove, said cylinder member having a passageway opening into the groove on one side of the flange and said valve having a port opening into the groove on the same side of the flange as the passageway, and said piston hammer having its rear end successively movable across and closing and opening the passageway and port, said groove also having an exhaust port opening therefrom on the same side of the flange as the passageway and port and having a cross sectional area less than that of the passageway and port.

1,637,002. SPACING ARRANGEMENT OF BEE FRAMES. HERMAN KOEPP, Wallowa, Oreg. Filed Nov. 12, 1923. Serial No. 674,354. 2 Claims. (Cl. 6—10.)

1. A bee frame having end bars, each bar being cut away at its lower part on one edge to reduce its width to the thickness of honeycomb, the unreduced portion of the bar providing a cheek, and means projected from the opposite edge at its upper part for spacing one frame from another frame.



1,637,003. SAXOPHONE CORD. ALBION SLAYTON LANG, Jamaica Plain, Mass. Filed Dec. 9, 1925. Serial No. 74,251. 3 Claims. (Cl. 224—5.)



1. A saxophone support comprising a flexible supporting member constructed to present an upper loop to encircle the neck of the player, and a lower loop, one of said loops being a double loop, a hook supported by the lower loop on which a saxophone is adapted to be hung, a cord-locking slide at the junction of the loops, by the adjustment of which the length of the cord is changed, said slide comprising two telescopic members, each having an aperture extending transversely therethrough, the cord passing through both apertures three times, and a spring acting on said members and tending to disalign said apertures and thereby grip the cord.

1,637,004. HEAVY-OIL VAPORIZER. FREDERICK C. LINDSEY, Milwaukee, Wis. Filed Apr. 25, 1923. Serial No. 634,629. 2 Claims. (Cl. 48—102.)

1. In an oil vaporizer, the combination of a hollow body comprising an upper compartment, a lower compartment, and an intermediate compartment, the latter having an oil inlet and an oil vaporizer outlet, the latter provided with an oil vapor conducting tube, this intermediate compartment having a tubular oil vaporizing member extending therethrough into open communication with the said upper compartment and lower compartment and into proximity to said oil inlet for receiving oil on its outer surface from said oil inlet; said lower compartment having an inlet for receiving a heating fluid which passes through said vaporizing member into said upper compartment; said upper compartment having a heating outlet which forms part of a heat-retaining passage and surrounds and encloses a part of said gas-conducting tube for the purpose specified.

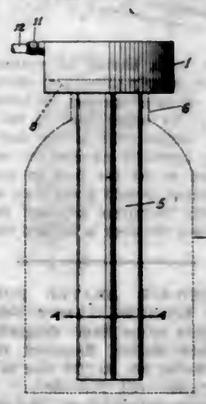
1,637,005. TRAP NEST AND FRONT THEREFOR. EDWARD H. MITCHELL, Quincy, Ill. Filed Nov. 13, 1924, Serial No. 749,759. Renewed June 10, 1927. 10 Claims. (Cl. 119—49.)

1. A trap nest front having an entrance opening, an upper door section loosely pivoted at its upper edge near the upper edge of said opening, a lower door section loosely pivoted at its upper edge to the lower edge of the upper door section, the lower door section being adapted to swing upwardly against the outer side of the upper door section to set the door in trapping position, and a trigger secured to said lower door section and projecting downwardly therefrom adjacent the aforesaid entrance opening when the door is in said trapping position.

1,637,006. FRESH-AIR HEATER FOR INTERNAL-COMBUSTION ENGINES. ARTUR NOLDEN, Ronsdorf, Germany, assignor to the Firm: Bergische Elektrizitäts-Gesellschaft Gebr. Nolden, Ronsdorf, Germany. Filed Mar. 6, 1926, Serial No. 92,795, and in Germany Sept. 29, 1925. 1 Claim. (Cl. 219—38.)

In an internal-combustion engine, the combination of a casing of short length forming part of the fresh-air conduit for the engine, a serpentine pipe of elongated round cross-section arranged like a grate in and surrounded by

said pipe, and an electric resistance non-conductively mounted in said pipe, the latter being cast at its ends as well as at its serpentine arcs in the body of said casing



and thus capable of heating by its free serpentine parts the fresh-air flowing through the casing and by its cast-in parts the casing itself.

1,637,007. MOTOR FUEL. CHARLES E. H. NORTH and AUGUSTUS H. HUDSON, Bremerton, Wash. Filed Aug. 5, 1925. Serial No. 48,393. 1 Claim. (Cl. 44—9.)

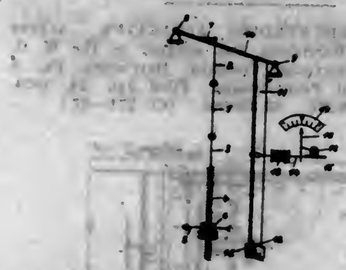
A motor fuel comprising in combination a mixture of gasoline and 0.05% to 1.5% by volume of carbon tetrachloride, said carbon tetrachloride operating to suppress detonation in said motor fuel.

1,637,008. LIQUID-COOLING DEVICE. CLARENCE E. OLMSTEAD, Modesto, Calif. Filed July 26, 1926. Serial No. 124,939. 3 Claims. (Cl. 257—199.)

1. A liquid cooling device comprising a pan, said pan consisting of an outer ring, a bottom plate disposed intermediate the top and bottom of the ring, and a skirt depending from around the plate to the lower edge of the ring and arranged relative to the ring to form spaced vertical passages therebetween, a well closed on the bottom, open to and depending from the plate, and a pipe extending from one side of the pan into the well to adjacent the bottom thereof, the lower end of the pipe being open and the upper end being adapted for connection to a hose.

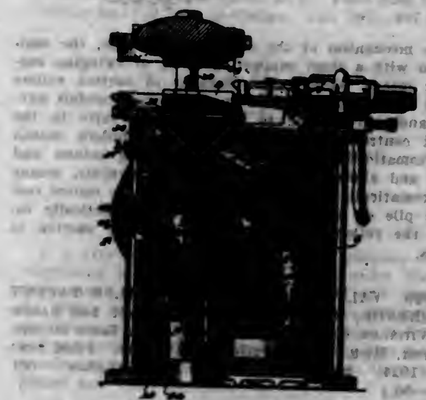
1,637,009. COMBINATION LOCK. GEORGE B. POINDEXTER, Seattle, Wash., assignor of one-half to George E. Miller, Bremerton, Wash. Filed Apr. 6, 1925, Serial No. 20,993. Renewed Apr. 20, 1927. 2 Claims. (Cl. 200—45.)

1. In a lock of the character described, a cylindrical casing, a dial rotatably fitted within one end of the casing, a non-rotatable disk fitted within the casing in spaced relation to the dial, a plurality of relatively rotatable disks fitted within the casing between the dial and non-rotatable disk, studs fixed to the dial and rotative disks whereby rotative movement of the dial may be communicated to the rotative disks; said rotative and fixed disks having eccentric openings adapted to be brought into alinement, a switch stem disposed co-axially of the casing to extend through the disks and dial and operable to rotate the dial, a plate fixed to the stem and a stud fixed to the plate normally retaining the stem against longitudinal movement except when said disk openings have been alined to receive the stud.



1,637,010. GAME APPARATUS. ALFRED ARNOLD REES, New Haven, Conn. Filed July 14, 1926. Serial No. 122,899. 6 Claims. (Cl. 273—161.)

1. In a device of the character described, a support designed to be influenced by the movement of an operator's hand, a pendulum mounted on the support, a member carried by the pendulum and extending above the support to respond to movement of the pendulum, and a dial bearing symbols toward which the pendulum is adapted to swing under the influence of the movement of the operator's hand.



1,637,011. TESTING OF MECHANICAL STRENGTH. ALFRED SCHOPPER, Leipzig, Germany. Filed Dec. 2, 1925, Serial No. 72,783, and in Germany Apr. 12, 1924. 1 Claim. (Cl. 265—19.)

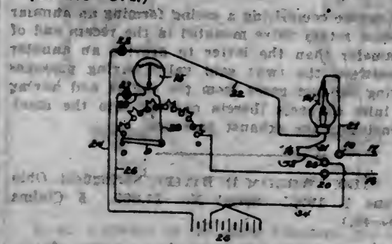
Testing device comprising test piece straining means, an elastic rod-shaped member, one end of said member being secured against longitudinal motion, the other end being free to move longitudinally, means for securing said other end against movement in a transverse direction, means adapted to transmit power from said straining means onto a point near the first mentioned end of

said member in such manner as to exert a bending action on said point and registering means connected with said member substantially midway between the ends of said member.

1,637,012. LUBRICATING SYSTEM FOR ROCK-DRILL SHARPENERS. ARTHUR H. SKAER and OMAR E. CLARK, Denver, Colo., assignors to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Aug. 11, 1923. Serial No. 656,984. 11 Claims. (Cl. 76—5.)

1. In a drill sharpening apparatus, the combination with a base or support, of relatively movable coacting dies mounted on the support, a lever fulcrumed on the support, a motor, an operating connection between the motor and the lever, including a link having a bearing on the lever, an operating connection between the lever and one of the dies, including a link having a bearing on the lever, means for supplying lubricant to the fulcrum of the lever, and passageways for transmitting lubricant from the fulcrum to the bearings of both links.

1,637,013. METAL-PUNCHING APPARATUS. GEORGE P. THOMAS, Glenshaw, Pa. Filed July 1, 1925. Serial No. 40,821. 12 Claims. (Cl. 164—115.)

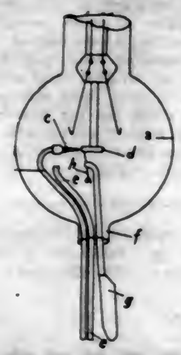


1. In a metal punching apparatus, the combination of a reciprocable punching head provided with a punch, means for reciprocating said head, a work table, a carriage borne by said table for moving a blank transversely of the path of reciprocation of said punching head, a perforated templet attached to and movable with said carriage, a finder-pin manually movable into engagement with a perforation of said templet, mechanical driving connections extending from said head-reciprocating means to said carriage adapted after said punch has perforated a blank to initially meve said carriage a limited distance less than a full spacing interval, and manually operable means for further moving said carriage the remainder of a spacing interval to bring a succeeding templet perforation into registration with said finder-pin.

1,637,014. GAS BURNER. AUGUSTUS F. THOMPSON, Huntington, W. Va. Filed Dec. 2, 1926. Serial No. 152,151. 2 Claims. (Cl. 158—104.)

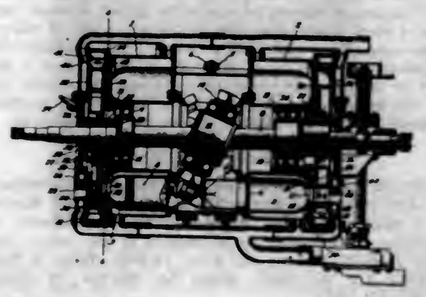
1. In a burner of the type set forth, an elongated mixing-chamber consisting of two tubes joined at their ends, one of these tubes being provided with a series of burner-holes along its length and the other being provided with a gas-and-air inlet at a point in its length, and a gas-and-air injector-tube connected with said inlet, this tube at the point of juncture with the inlet being laterally enlarged to form a chamber, for the purpose set forth.

1,637,015. CURRENT RECTIFYING AND CONTROLLING SYSTEM. BRUCE THOMAS UNDERS and EDWARD NATHANIEL HARRIS, Jackson, Tenn.; said Harris assignor of forty-five one-hundredths of the entire right to John H. Johnson and Sons, Jackson, Tenn., a Firm. Filed Apr. 27, 1923. Serial No. 635,164. 8 Claims. (Cl. 171—274.)



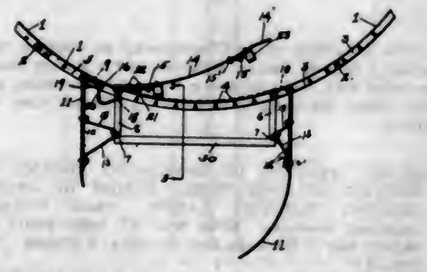
1. In a battery charger, comprising an electron tube having a filament and an electrode, and a battery placed in circuit with said tube and a source of alternating current, means for initially exciting the filament from the battery.

1,637,016. PROCESS OF REPLACING BROKEN OR MOLTEN HOLDING WIRES INSIDE OF INCANDESCENT ELECTRIC LAMPS. FRANZ VOGLHUT, Augsburg, Germany. Filed Sept. 17, 1925, Serial No. 56,842, and in Germany Oct. 11, 1924. 6 Claims. (Cl. 176—7.)



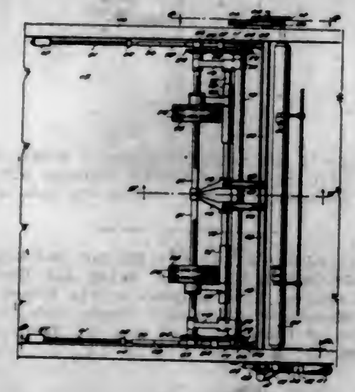
1. The method of replacing holding wires in the glass button of an incandescent lamp comprising a bulb having a lower anchoring glass button and a similar upper button

positioned interiorly thereof, said buttons being arranged on the longitudinal axis of the lamp bulb, which consists



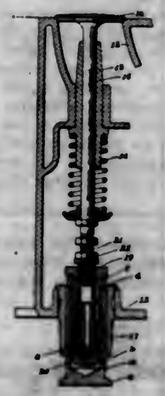
in opening said bulb at substantially its lowest point and in line with said axis, and directing a flame upon a button at right angles to said axis.

1,637,017. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. JOHN O. ALMEN, Seattle, Wash., assignor to Almen-Crosby Motors Company, Inc. Filed Aug. 10, 1920. Serial No. 402,565. 7 Claims. (Cl. 123—58.)



1. In an engine comprising a casing forming an annular valve recess, a rotary valve mounted in the recess and of smaller diameter than the latter to provide an annular manifold between the two; said valve having passages for delivering exhaust gases from the engine and having circuitous inlet channels therein opening into the manifold and enclosing the exhaust passages.

1,637,018. SILO. WILLIAM D. BAYLEY, Springfield, Ohio. Filed June 1, 1925. Serial No. 34,002. 5 Claims. (Cl. 189—46.)



1. In a door structure for silos, a curved door frame, a flexible door formed on a shorter curve than said door frame, means for hinging the inner edges of said door to said frame, the outer edge of said door being slightly bent toward said frame, and means for drawing the edges of said door against said frame and locking the same in that position.

1,637,019. SHEET-FEEDING APPARATUS. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1924. Serial No. 688,275. 35 Claims. (Cl. 271—27.)

1. In mechanism of the character set forth, the combination with a sheet supporting table, of swinging supporting means thereover, a plurality of suction rollers carried by the supporting means, a suction conduit having branches connected to the rollers, a valve in the conduit controlling the suction on both rollers, means for automatically elevating the supporting means and rollers and allowing them to move downwardly, means for automatically opening the valve when the rollers rest on the pile of sheets, and means for automatically rotating the rollers when elevated and while suction is thereon.

1,637,020. VALVE MECHANISM AND VALVE TAPPET THEREFOR. STEPHEN I. FERETS, Detroit, and RALPH H. WHISLER, Halfway, Mich., assignors to Essex Motors, Detroit, Mich., a Corporation of Michigan. Filed June 21, 1921. Serial No. 479,568. 10 Claims. (Cl. 123—90.)

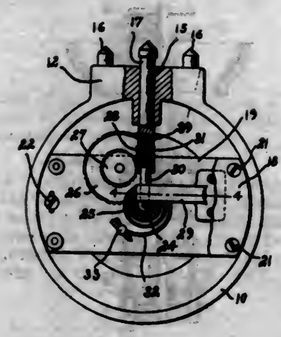
4. A poppet valve mechanism having one of its moving elements composed of a plurality of parts some of which are of metals having different coefficients of expansion,

said parts being constructed and arranged to cause said element to remain a substantially constant length under the expansion and contraction of the several parts.

1,637,021. METHOD OF MAKING MULTIFOCAL LENSES. FRANK FRASER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 7, 1924. Serial No. 730,614. 3 Claims. (Cl. 49—82.1.)

1. The process of making a multifocal lens comprising making a cavity having a curved contour in a piece of glass having a relatively low fusing temperature, making a segment having a curvature on one side that is different in its two major meridians and having a relatively high fusing temperature, placing the segment in the cavity with the curved surfaces opposite each other, and applying heat to fuse the surface of the curved cavity to conform and adhere to the unfused segment.

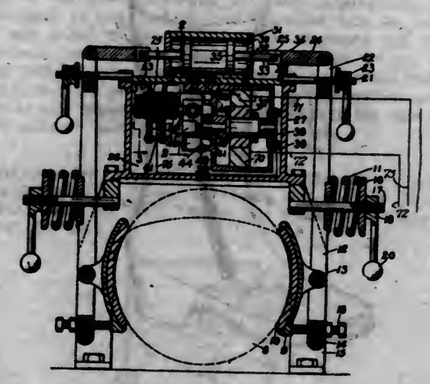
1,637,022. PAPER GUIDE FOR TYPEWRITERS. VINCENT GAGE, Washington, D. C. Filed July 24, 1926. Serial No. 124,708. 3 Claims. (Cl. 197—127.)



1. A typewriter paper guide for the purpose described comprising a member having an open-sided clamp for engagement with the pressure roller rod of a typewriter, the clamp being provided with a rib for engagement in the usual groove in the lower side of such rod, and an inclined guiding member supported by the first mentioned member to extend over the space between the typewriter platen and the said rod.

1,637,023. REACTION PRODUCT OF SULPHUR DICHLORIDE AND PRIMARY ARYLAMINES. RICHARD HERZ, Frankfort-on-the-Main, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 31, 1921, Serial No. 497,435, and in Germany Apr. 11, 1914. 8 Claims. (Cl. 260—23.)

5. Process for the production of aromatic substances containing sulphur, nitrogen and chlorine which comprises reacting upon a primary arylamine compound having at least one amino group and one unsubstituted hydrogen in ortho position thereto with a quantity of disulphur dichloride amounting to from two to ten molecules thereof for each amino group at a temperature below the boiling point of the disulphur dichloride.

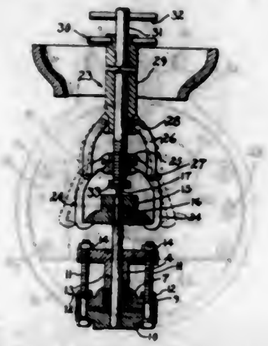


1,637,024. LENS MEASURE. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 25, 1925. Serial No. 25,785. 5 Claims. (Cl. 33—172.)

1. In a device of the character described, a casing, an indicator carrying shaft mounted within said casing, a reciprocating plunger carried by said casing and having a recess in one end thereof, means for changing the reciprocating movement of the plunger to rotary movement in said shaft, a bracket within said casing, a pin

secured to said bracket and partially received within said recess and spring means contained within said recess and bearing against said pin for normally urging the said plunger away from said bracket.

1,637,025. BRAKE MECHANISM. HAROLD V. MCCORMICK, Cincinnati, Ohio, assignor to The Warner Elevator Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 7, 1925. Serial No. 73,629. 8 Claims. (Cl. 188—170.)



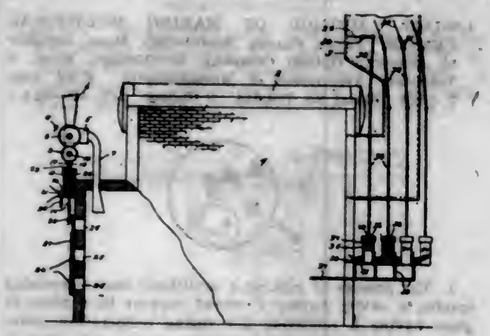
5. In a device of the class described the combination with a cylinder and piston of a fluid tank, a body of fluid in the tank, conduit means providing communication between said body of fluid and the cylinder, a normally open valve permitting discharge of the cylinder into the tank, a fluid pump operable for moving fluid from the tank to the cylinder, electrically operated means for actuating the pump and electrically operated means in continuous electrical connection with the pump actuating means for closing the valve when the pump actuating means is energized.

1,637,026. MEANS FOR REPACKING VALVES. GEORGE F. MERRILL, Ware, Mass. Filed June 25, 1926. Serial No. 118,545. 1 Claim. (Cl. 29—84.)

The method of repacking a valve from a distance comprising removing the glands and holding nuts by means that loosen them and hold them from dropping, placing

a guide extension over the end of the valve stem, and sliding an annular packing member and gland along the

extension and valve stem into the packing recess and replacing the nuts with means that will prevent their dropping while they are being inserted in place.

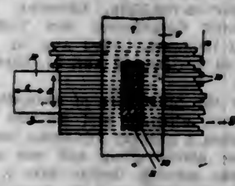


1,637,027. OVERSHOE. WALTER E. PIPER, Sudbury, Mass. Filed Mar. 12, 1926. Serial No. 94,295. 2 Claims. (Cl. 36—5.)

2. That improvement in the art of manufacturing rubber overshoes, which consists in making the upper with a smooth, unbroken surface over the instep and front portion, and positioning an interlocking metallic slide fastener along the inner side portion of the upper on a diagonal line extending from a point over the forward part of the arch of the overshoe up to a point substantially midway of the front and rear portions of the top of the overshoe and in such a position that the flexing of the shoe during walking will be without a breaking strain on the interlocking metallic portions of the fastener.

1,637,028. FUEL-FEEDING MECHANISM. CHARLES H. QUINN, San Francisco, Calif. Filed Oct. 9, 1924. Serial No. 742,727. 6 Claims. (Cl. 110—101.)

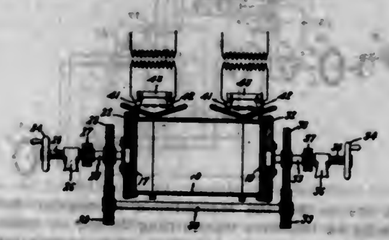
2. In furnace feeding mechanism, a series of fuel and air feeding units and means for throwing said units into operation and actuating them conjointly, each unit comprising a fuel feeding device, a secondary air supplying device, a stack draft control device, an operative connection between said air supplying device and said means



for throwing the unit into operation, and an operative connection between the former connection and the stack draft control device.

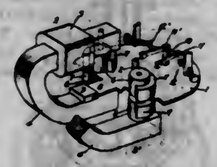
1,637,029. COMPOSITION RIM FOR OPHTHALMIC MOUNTINGS. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Original application filed Jan. 24, 1925, Serial No. 4,526. Divided and this application filed May 28, 1925. Serial No. 33,437. 2 Claims. (Cl. 88—41.)

2. A blank for a composition lens rim for an ophthalmic mounting comprising a disc of flat composition stock having a central opening and a marginal opening between its end portions, the portion surrounding the openings being in the form of a spiral strip having its end portions substantially concentric.



1,637,030. METHOD AND MEANS FOR FEEDING ARTICLES. CONRAD THYSSEN, Aachen, Germany. Filed June 18, 1924. Serial No. 720,879. 11 Claims. (Cl. 163—1.)

1. The combination with a track for feeding cylindrical articles in a row to a working place, of a device for alining the ends of the articles to be worked upon, comprising pressure members arranged on both sides of the row of cylindrical articles, one of the pressure members being formed by one of the track walls and the other pressure member consisting of a plunger adapted to be moved through a recess of the other track wall into and out of engagement with the cylindrical articles and designed to yieldably press and hold the articles against the first-said track wall, and means for imparting an endwise shifting motion to some or all of the articles held between the pressure members for bringing the ends to be worked upon into one common line.

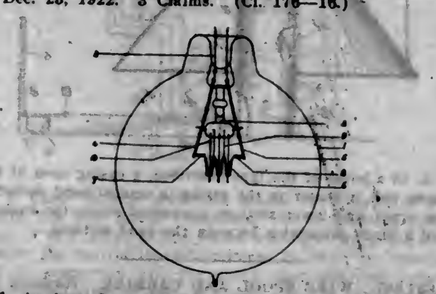


3. A method of aligning particular ends of cylindrical articles where such articles are being fed in a continuous row in mutual contact, consisting in providing a relative lateral movement between successive groups of articles and an aligning member to simultaneously align the similar ends of the articles of a group while exerting a pressure upon the articles of the group to a degree sufficient to prevent movement of the articles of that group as a result of their frictional contact with each other.

1,637,031. ELECTRIC WELDING. HARRY W. TOBEY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 10, 1923. Serial No. 656,730. 1 Claim. (Cl. 219—4.)

A machine for welding together sections of a metallic vessel flanged at their meeting edges, comprising a pair of shafts having their adjacent ends spaced apart, a pair of vessel supporting members one on each of said adjacent ends, a pair of rotatable electrodes arranged to contact with opposite sides of the raised seam formed by said flanges and to roll along said flanges in response to rotation of said vessel by said supporting members, and means for moving said supporting members to clamp the sections of said vessel together and to aline said seams with said electrodes.

1,637,032. PROTECTIVE DEVICE. OLIVER C. TRAVER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1922. Serial No. 560,687. 8 Claims. (Cl. 175—294.)



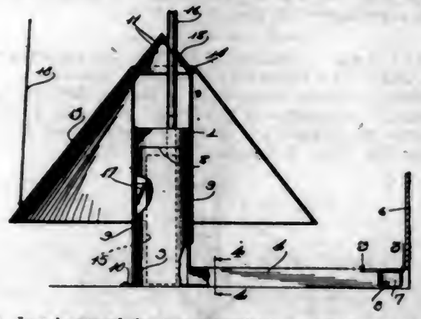
7. A protective system comprising two transmission lines, means for interrupting the circuits of said lines, circuit controlling means adapted to be operated to control said interrupting means, a disk rotatable in each of two directions to control said circuit controlling means selectively, a plurality of shaded pole electromagnetic elements inductively associated with said disk and arranged to exert opposing torques thereon, one of said elements comprising an energizing winding in series relation with one of said lines and another of said elements comprising an energizing winding in series relation with the other of said lines, said elements being adapted upon the occurrence of a change in the intensity of the current in one of said lines such that the ratio of the greater of the currents in the two lines to the smaller thereof exceeds a predetermined value to rotate said disk in a direction to move said circuit controlling means to control the circuit interrupting means in the line carrying the greater current.

1,637,033. COMPOSITE ELECTRIC CONDUCTOR. DAVID BASCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 5, 1925. Serial No. 35,262. 3 Claims. (Cl. 173—13.)

1. An article of manufacture, comprising a foundation metal, a coating of nickel thereon and a coating of aluminum superimposed on said nickel coating.

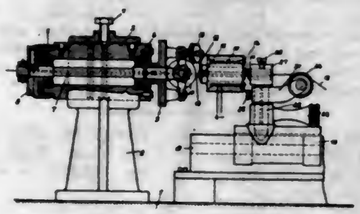
1,637,034. COILED-FILAMENT INCANDESCENT LAMP. JAN BERGMANS, Eindhoven, Netherlands, assignor, by mesne assignments, to General Electric Company, a Corporation of New York. Filed Dec. 4, 1923, Serial No. 678,515, and in the Netherlands and France Dec. 23, 1922. 3 Claims. (Cl. 176—16.)

1. An incandescent lamp comprising a sealed envelope containing a pair of leads, a coiled metal filament, and a pair of cylindrical mandrels of metal substantially as refractory as said filament and telescoped into the ends of said coiled filament, each of said mandrels and the adjoining end of said filament being welded to one of said leads whereby said mandrels project from said leads end to end and in the plane thereof, an intermediate portion of said filament being suspended between the ends of said mandrels and in the plane of said leads.



1,637,035. APPARATUS FOR TREATING THE HAIR AND SCALP. JAMES C. CASEY, Cedar Falls, Iowa. Filed Mar. 12, 1927. Serial No. 174,877. 4 Claims. (Cl. 34—26.)

1. In a device of the character described, an open ended chamber, means within said chamber for creating a spirally progressive current of air while passing under pressure therethrough abutting the inner wall thereof, a hollow open ended flexible chamber having one open end closely mounted upon the open delivery end of the first-

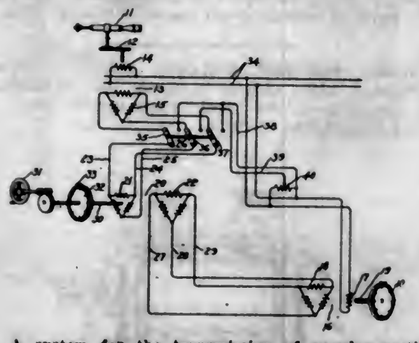


mentioned chamber, and means for closely adjustingly fitting the other open end of the second-mentioned chamber around the head of a person to inclose the scalp within it, and whereby the second-mentioned chamber is inflated with air under greater than atmospheric pressure.

1,637,036. CHICKEN BROODER AND HOVER. PETER C. CLEMMENSEN, Atlantic, Iowa, assignor of one-third to George G. Jeck, Atlantic, Iowa. Filed Apr. 19, 1926. Serial No. 102,994. 2 Claims. (Cl. 119—32.)

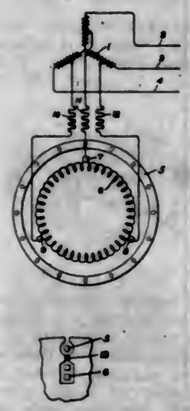
1. In a hover of the type described, a casing open at its upper end, a heater in the casing, a conical hood embodying upper and lower sections supported above the casing, and a hinge connection between the hood sections.

1,637,037. WIRE SPOOL AND CARRIER. HENDRIK DE JONG, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed Dec. 2, 1924, Serial No. 753,521, and in the Netherlands Jan. 25, 1924. 8 Claims. (Cl. 153—64.)



1. A coil winding machine comprising a rotary winding head, a wire spool having a spindle with a tapered pivot at one end and a conical bearing at the other end, a bearing on said head for said pivot, and a resiliently mounted pivot on said head to engage the bearing in said spindle.

1,637,038. ROTARY SWITCH. FRANK C. DE REAMER, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Nov. 30, 1925. Serial No. 72,123. 4 Claims. (Cl. 200—63.)



1. An electric switch comprising an insulating base with a central chamber having ratchet notches in the inner wall thereof, stationary contacts detachably seated in alternate notches, a movable pole piece adapted to engage said stationary contacts, and an insulating disk disposed in said chamber transversely thereof and pressing radially outward at its periphery against the said stationary contacts to bind them in place against the walls of their respective notches.

1,637,039. SYSTEM FOR THE TRANSMISSION OF ANGULAR MOTION. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Dec. 5, 1924. Serial No. 754,226. 5 Claims. (Cl. 177—351.)

1. A system for the transmission of angular motion comprising an inductive transmitting device, an inductive receiving device, a source of alternating current supply connected to said devices, connections between said devices including inductive means for introducing corrections, said inductive means being provided with relatively adjustable windings, and means for disconnecting said transmitting device and for connecting said inductive means to said supply source.

1,637,040. SELF-EXCITED INDUCTION MOTOR. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1924. Serial No. 691,795. 4 Claims. (Cl. 172—280.)

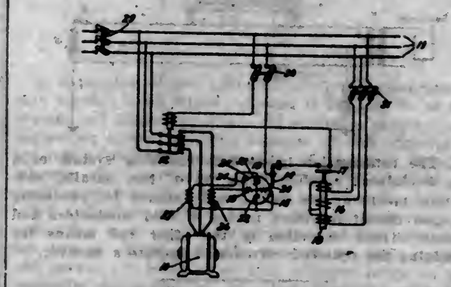
1. An induction motor comprising primary and secondary core members, a primary winding on said primary core member, a secondary winding wound in a set of slots near the periphery of said secondary core member, and an exciting winding inductively associated with said primary winding for supplying the magnetising current of said motor and wound in a set of slots located beneath said peripheral slots, the radial slots in the two sets being interconnected by slits to increase the magnetic reluctance of the core therebetween.

2. An induction motor comprising primary and secondary core members, a primary winding on said primary

core member, a secondary winding wound in a set of slots near the periphery of said secondary core member, and a commutator winding inductively and conductively associated with said primary winding for supplying the magnetising current of said motor, said commutator winding being wound in a set of slots located beneath said peripheral slots, said commutator winding being connected only to and supplying magnetising current only to said primary winding.

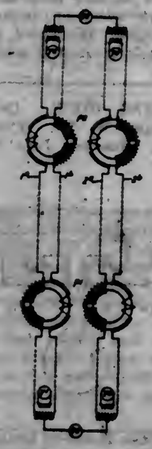
1,637,041. INDUCTION MOTOR. JOHN I. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1924. Serial No. 691,796. 4 Claims. (Cl. 172—280.)

1. An induction motor comprising cooperating relatively movable primary and secondary members, a commutated winding on said primary member, said secondary member comprising a slotted magnetic structure carrying a pair of squirrel cage windings and an exciting winding, the latter being excited from said commutated winding, the windings on the secondary being placed at different radial depths in the slots thereof with the exciting winding beneath and separated from each other by intermediate air gaps in the magnetic structure.



2. An induction motor comprising cooperating relatively movable primary and secondary members, a commutated winding on said primary member, said secondary member comprising a slotted magnetic structure carrying a squirrel cage winding and an exciting winding, the latter being excited from the commutated winding on the primary member, the windings on the secondary member being placed at different radial depths in the slots thereof with the exciting winding beneath and spaced apart by intermediate air gaps in the magnetic structure.

1,637,042. COMBINED AUTOMATIC AND MANUAL CIRCUIT CONTROLLER. LEONARD P. HUTT, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 13, 1926. Serial No. 154,606. 18 Claims. (Cl. 200—70.)



1. In a circuit controlling device, the combination of movable means for controlling the circuit, at least three separate operating means therefor, and connections between each operating means and the movable circuit controlling means for effecting movement of the circuit controlling means from one circuit controlling position to another circuit controlling position, the connections of at least a plurality of said operating means being arranged to permit the said operating means to effect return movement of the circuit controlling means from said other circuit controlling position to said one circuit controlling position.

1,637,043. PHASE-FAILURE PROTECTION. BENJAMIN W. JONES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 28, 1925. Serial No. 53,176. 6 Claims. (Cl. 175—294.)

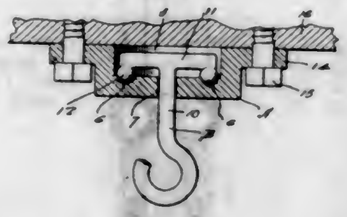
1. Phase failure protective means for polyphase circuits, the said means comprising two cooperating parts, one of said parts having series windings and mechanism under the control thereof arranged to effect the opening of the connection with the circuit upon less than normal phase excitation of said windings, and the other of said parts having windings connected in shunt relation with said circuit which control the closing of the connection with the cricuit when normal phase energization of the circuit is restored.

1,637,044. LOADING SYSTEM FOR TELEPHONE LINES. HANS JORDAN, Karlshorst, Germany, assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1923, Serial No. 625,869, and in Germany Mar. 28, 1922. 3 Claims. (Cl. 178—45.)

1. A loading system for phantomed telephone lines comprising coils, each of which has two windings of unequal number of turns, the sum of the number of turns in the two windings being such as to give the desired inductance for the main circuit when the two coils are connected in opposite sides thereof and act in

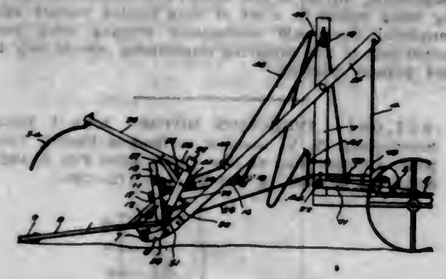
the same sense, and the difference in the number of turns of the two windings being such as to give the desired inductance for one side of the phantom circuit when the two coils are acting in opposite senses in the two conductors constituting one side of the phantom circuit.

1,637,045. RADIO RECEIVING SYSTEM. EDWARD W. KELLOGG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 15, 1922. Serial No. 552,868. 6 Claims. (Cl. 250—11.)



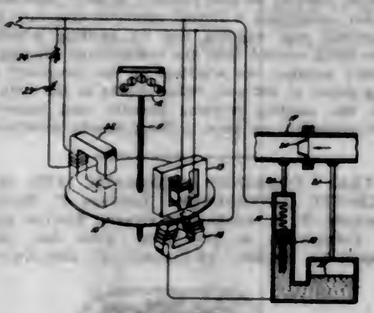
1. The combination in a radio receiving system of a long horizontal antenna made up of two parallel conductors, means at one end of said antenna for producing an open circuit reflection in one of said conductors and a short circuit reflection in the other and means for combining the reflected currents to operate a receiver.

1,637,046. DECORATIVE LIGHTING OUTFIT. VINCENT M. MONTSINGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 22, 1922. Serial No. 556,086. 2 Claims. (Cl. 173—263.)



1. An electrical connection comprising a double wire trunk conductor, double wire branch conductors crossing said trunk conductors and with wires of like polarity electrically connected at said crossing, insulating means disposed between the wires of unlike polarity at said crossings, and insulating compound molded about said crossed conductors and insulating means.

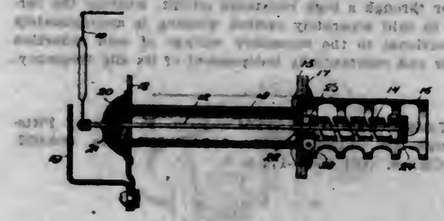
1,637,047. SWINGING HOOK. BENJAMIN FRANKLIN MOORE, Parkersburg, W. Va. Filed Mar. 13, 1926. Serial No. 94,465. Renewed June 11, 1927. 1 Claim. (Cl. 248—64.)



A device of the class described including a bracket having a recess, the bottom of which is provided with a slot and a pair of dished out seats aligned transversely of the slot and spaced therefrom, and a hook comprising a T-shaped shank to include a stem and a cross head, the cross head terminating in depending balls restable in the seats, said head being insertable into the recess through the slots.

1,637,048. HAY-HARVESTING APPARATUS. OLE B. PAULSON, Great Falls, Mont. Filed Jan. 5, 1926. Serial No. 79,349. Renewed June 20, 1927. 6 Claims. (Cl. 214—131.)

1. The combination of a rake having an upright back portion, a rock shaft journaled on said back portion, swingable retaining means carried by said rock shaft and disposed and movable above the rake, an arm fixed to and extending laterally from the rock shaft, movable means on the rake constructed and arranged to automatically engage the rock shaft arm when the retaining means is raised and thereby detachably secure said retaining means in raised position, and means connected with said movable means whereby the latter may be moved for the release of the retaining means by a person remote from the rake.

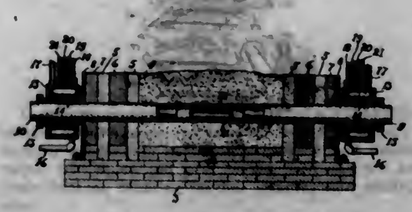


1,637,049. ELECTRIC METER. WILLIAM H. PRATT, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 17, 1926. Serial No. 155,498. 6 Claims. (Cl. 171—264.)

1. An integrating meter of the induction type in which the damping force is supplied by electromagnetic means energized from an alternating current supply and means for automatically controlling the damping force thus supplied in response to changes in frequency for compensating the meter for frequency errors.

1,637,050. TEMPERATURE INDICATOR. WILLIAM A. RANKIN, Oak Park, Ill., assignor to Edison Electric Appliance Company, Inc., a Corporation of New York. Filed Apr. 12, 1921. Serial No. 460,727. 3 Claims. (Cl. 73—118.)

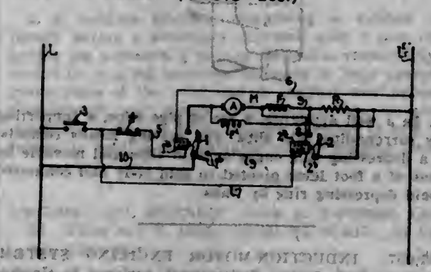
1. An oven thermometer comprising a hollow support adapted to be secured in an aperture in an oven wall, a spindle extending through said support, thermo-responsive means mounted on the inner end of said support connected to turn said spindle, indicating means including an arm fastened to and extending radially from the outer end of said spindle, an index member attached to and extending angularly from the free end of said arm, a casing attached to the outer end of said support enclosing said arm and index member, said casing having a curved edge wall provided with an opening adjacent which said index member is movable.



1,637,051. DIAL FOR RADIO APPARATUS. FREDERICK W. RENWICK, Camden, N. J. Filed Feb. 16, 1925. Serial No. 9,906. Renewed Feb. 12, 1927. 9 Claims. (Cl. 74—38.)

1. As a new article of manufacture, a radio apparatus dial having a projecting bushing portion, and a weighted body mounted on the projecting portion of the bushing.

1,637,052. PROCESS OF PRODUCING METALLIC CARBON. CONWAY ROBINSON, Baltimore, Md., assignor to Westinghouse Electric & Manufacturing Company, New York, N. Y., a Corporation of Pennsylvania. Filed Aug. 1, 1921. Serial No. 489,107. Renewed Dec. 15, 1925. 6 Claims. (Cl. 204—64.)

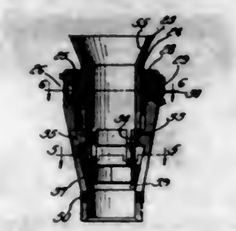


1. The process of producing elemental metallic carbon, which consists in subjecting a substance containing carbon to a high temperature in the presence of cellulose, removing all substances except the true elemental carbon thus produced, and subsequently working said elemental carbon into a dense, coherent, homogeneous mass in an inert environment.

1,637,053. TILTING TRAY. JOHN SCHUMACHER, Sr., Los Angeles, Calif. Filed Nov. 26, 1921. Serial No. 517,624. 4 Claims. (Cl. 105—270.)

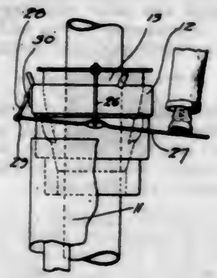
1. Apparatus of the character disclosed, comprising a tray member upon which material is adapted to be supported, and supporting means for said tray member; said supporting means including separate pivotal supports respectively disposed eccentrically of the tray member, whereby the tray member may be supported in one position by both of said supports, and supported in another and tilted position by one of said supports; said supporting means including uprights and said tray member having arbors revolubly received by said uprights, and means for locking the tray member either in substantially horizontal or in tilted position; said tray member comprising a frame and a tray provided with an edge rail to maintain the material in position upon the tray when the tray is in tilted position; said uprights being spaced apart and each comprising two members, and said means for releasably locking said tray being disposed between the members of said uprights.

1,637,054. CONTROLLER FOR ELECTRIC MOTORS. EDWIN W. SEDGWICK, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 5, 1925. Serial No. 54,641. 4 Claims. (Cl. 172—288.)



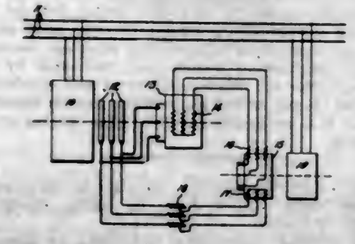
1. In a motor control system, the combination with an electric motor, of an electro-responsive line switch for controlling the circuit of said motor, an electro-responsive accelerating switch for said motor, means for controlling the energizing circuit of said line switch and for also establishing a maintaining circuit therefor upon closure thereof, and a plurality of operating windings associated with said accelerating switch and controlled by said means to provide for delayed closure of said accelerating switch upon closure of said main switch and for immediate opening of said accelerating switch upon opening of said main switch.

1,637,055. CASING HEAD. AUGUST L. SEGELHORST, Whittier, Calif. Filed June 12, 1923. Serial No. 644,868. 6 Claims. (Cl. 166—14.)



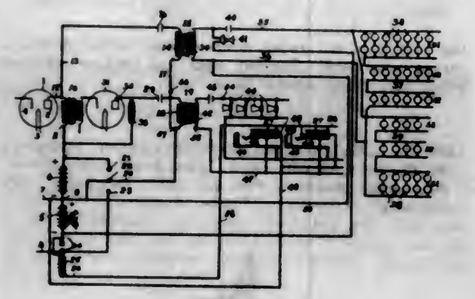
1. In a packing organization comprising an upwardly-expanding sleeve carrying circumferential threads, the combination of: a body constituting a casing head which is directly engageable by said sleeve and has a down-

wardly diminishing opening through which a shaft may extend; a compressible member composed of cooperating and resiliently disposed annular slip segments, also downwardly diminishing within said body, and disposed concentrically with respect to said shaft, and arranged to be



compressed into gripping contact with said shaft; and means at the end of said sleeve for compressing said member in said downwardly diminishing opening, the lower end of said sleeve being provided with means causing an inward slippage of said compressible member relatively thereto during compression.

1,637,056. SLIP HANDLER. AUGUST L. SEGELHORST, Whittier, Calif. Filed Apr. 7, 1924. Serial No. 704,743. 10 Claims. (Cl. 24—263.)

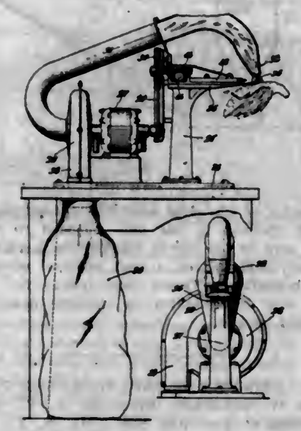


4. In a well appliance, a set of pipe slips, a supporting body surrounding said slips, and moving means comprising a depressing ring engaging said slips and movable by means of a foot lever pivoted to said body and connected to said depressing ring by links.

1,637,057. INDUCTION-MOTOR EXCITING SYSTEM. WALTER SEIZ, Baden, Switzerland, assignor to General Electric Company, a Corporation of New York. Filed Apr. 6, 1926, Serial No. 100,154, and in Germany May 14, 1925. 3 Claims. (Cl. 172—274.)

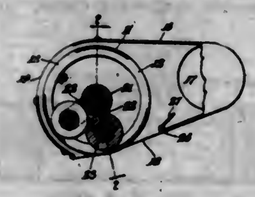
2. In combination, an induction motor, a commutator machine connected in cascade therewith, an exciter for furnishing the excitation of said first mentioned commutator machine, said exciter comprising a commutator machine having a series compounding winding and a separately excited winding, said last mentioned winding being excited from the secondary voltage of said inducton motor through a high resistance circuit, whereby the current in said separately excited winding is approximately proportional to the secondary voltage of said induction motor and substantially independent of its slip frequency.

1,637,058. RADIO SYSTEM. PAUL F. SHUBY, Pittsburgh, Pa. Filed Nov. 10, 1922. Serial No. 600,057. 3 Claims. (Cl. 179—171.)



1. In a radio receiving system a relatively large number of receiving elements, and a transformer having the said receivers in circuit therewith, the receivers being grouped in series and parallel relations to make the impedance they impose in the circuit approximate that of the secondary of the transformer.

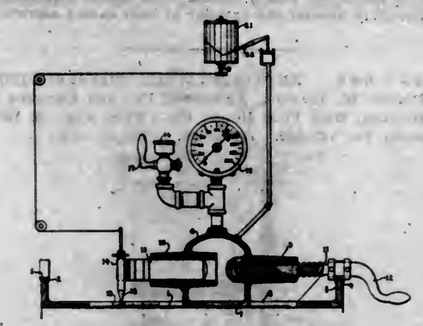
1,637,059. ELECTRIC CONNECTER. ALBERT H. SIMMONS, Oak Park, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Mar. 25, 1924. Serial No. 701,850. 6 Claims. (Cl. 173—332.)



1. An electric connecter comprising cooperating insulating members, contacts secured between said insulating members, a cylindrical cross bar, conductors connected to said contacts and wrapped around said cross bar, flexible supporting means for said conductors pivotally engaging said cross bar, and plates securing said cross bar and supporting means to said insulating members while providing for rocking movement of said supporting means on said bar.

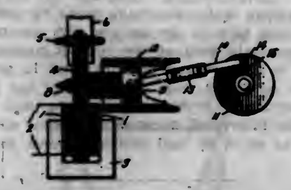
1,637,060. APPARATUS FOR PLUCKING FOWLS. AARON SIMONS, New York, N. Y., assignor of one-fourth to Nathan Weinberg and one-fourth to Issay Weinberg, Brooklyn, N. Y. Filed Sept. 5, 1925. Serial No. 54,643. 25 Claims. (Cl. 17—11.)

1. A fowl plucking device including a reciprocatory member, a pair of relatively movable feather gripping members carried thereby, and means for opening said gripping members when said first mentioned member is in open position and closing them when it is in another position.



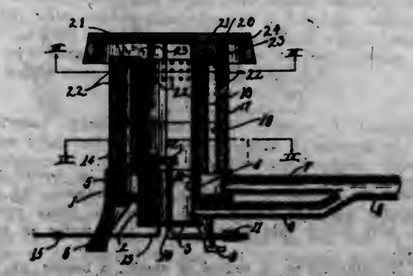
1,637,061. FOWL-PLUCKING DEVICE. AARON SIMONS, New York, N. Y., assignor of one-fourth to Nathan Weinberg and one-fourth to Issay Weinberg, Brooklyn, N. Y. Filed Feb. 12, 1926. Serial No. 87,733. 16 Claims. (Cl. 17—11.)

1. A fowl plucking device including a curved blade rotatable about the approximate center of curvature, and a member adapted to be engaged thereby and disposed between said blade and said center, said member and said blade forming coacting feather gripping and pulling members.



1,637,062. TESTING APPARATUS FOR SOLENOIDS AND THE LIKE. HERMAN J. TAYLOR, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 18, 1920. Serial No. 428,866. 3 Claims. (Cl. 265—2.)

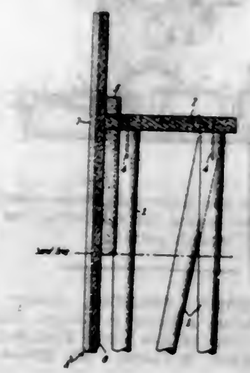
1. Apparatus for testing solenoids and other power devices comprising an indicator, means for subjecting the same to influence in accordance with the force developed by such device tending to effect relative move-



ment of its parts and adjustable means associated with said last-mentioned means for controlling the degree of reative movement of such parts.

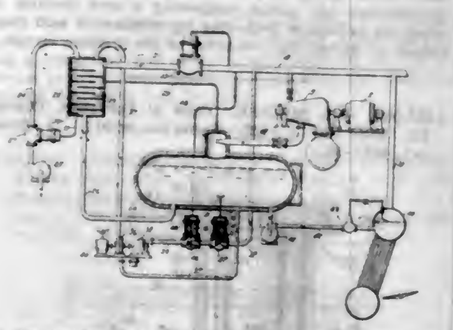
1,637,063. ELECTRIC WELDING. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 25, 1924. Serial No. 745,890. 4 Claims. (Cl. 219—4.)

2. A welding machine comprising a welding transformer having a secondary provided with a pair of projecting leg members, a pair of electrodes respectively connected to said leg members arranged to bear against opposite sides of the work and to conduct welding current therethrough and means comprising a core movable between the secondary projecting leg members of said transformer to control the reactance of the welding circuit.



1,637,064. OIL BURNER. OLOF A. TOPPTEEN, Chicago, Ill. Filed Nov. 5, 1925. Serial No. 66,917. 11 Claims. (Cl. 158—86.)

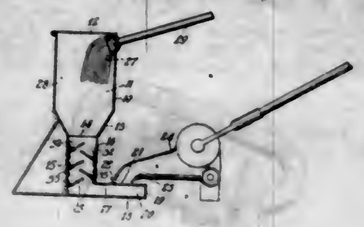
1. An oil burner comprising a chambered end section, fuel supply means connected therewith, air supply pipes connected with said end section to supply air to the chambers of said end section, a hollow apertured casing section connected with said end section to receive the air



from said end section chambers, and a closed baffle end section adjacent the apertured end of said casing section to direct the flames issuing from said casing section downwardly around the exterior of said casing section.

1,637,065. RETAINING-WALL CONSTRUCTION. SAMUEL W. TRAYLOR, Allentown, Pa., and CHARLES H. RUGGLES, West Palm Beach, Fla. Filed Aug. 25, 1926. Serial No. 131,352. 6 Claims. (Cl. 61—39.)

1. A retaining wall comprising posts forming pilasters at the exposed face of the wall, a slab construction extending along said wall at the rear of and attached to said posts to support and to hold them in position and to serve as an upper wale to determine the position of the wall structure between said posts, and preformed curtain slabs interposed between said posts and engaging said posts so as to be held thereby against the slab construction.

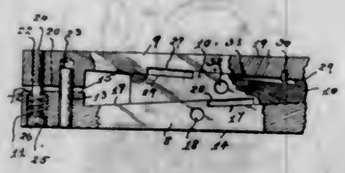


1,637,066. STEAM ACCUMULATOR PLANT. FRITZ WETTSTEIN, Summit, N. J., assignor to Ruths Accumulator Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Mar. 4, 1926. Serial No. 92,161. 23 Claims. (Cl. 122—35.)

1. In combination, a source of steam, a heater, an accumulator, means to circulate water between the accumulator and the heater, and means to bring steam from said source into contact with said water in said heater.

7. In combination, a source of steam, a heater, an accumulator, means to conduct steam from said source to said heater, means to circulate water between the heater and the accumulator and means to control the rate of circulation in response to variations in pressure of steam in said source and in response to variations of temperature in said accumulator.

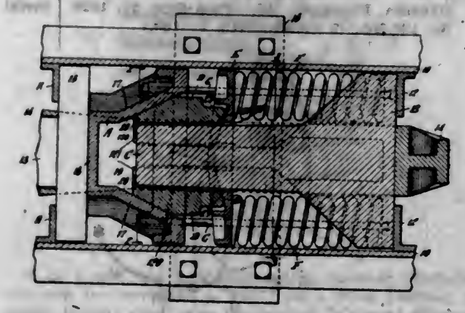
1,637,067. VACUUM CLEANER. HERMAN WIECKHORST, Brooklyn, N. Y. Filed May 18, 1926. Serial No. 109,835. 3 Claims. (Cl. 15—104.)



1. A device of the class described comprising a hopper having an opening in one side adapted to receive the head of a mop or the like, a hinged door normally closing said hopper, baffle plates, a neck integral with said hopper and beneath the same, and means for detachably mounting said baffle plates in inclined position in the neck of said hopper.

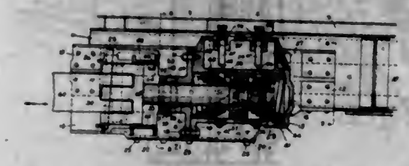
1,637,068. PROCESS OF TREATING FOOD PRODUCTS. WALTER W. WILLISON, Brooklyn, N. Y., assignor to Thermokept Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 2, 1924. Serial No. 690,297. 5 Claims. (Cl. 99—8.)

1. The method of preparing food products which comprises subjecting the selected food product to a high degree of vacuumization and while so subjected supplying liquid to immerse said food product, then breaking said vacuum to cause the liquid to penetrate and surround the cell structure of the food product, and thereafter subjecting said liquid filled product to a high temperature for conversion of the starch content.



5. A food product consisting of a vacuum treated starchy food compound wherein the starch has been hydrolyzed, the air removed from the food product and the product self-sealed by a portion of the starch.

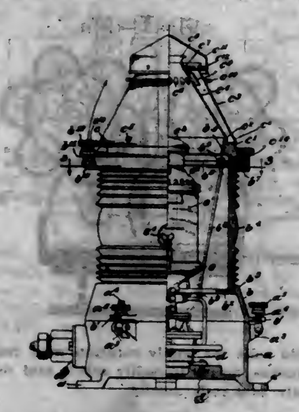
1,637,069. LOCKING DEVICE FOR PRINTING FORMS. ADOLPH J. BLAZEK, Baltimore, Md. Filed Jan. 25, 1923. Serial No. 614,719. 3 Claims. (Cl. 254—42.)



1. In a locking device for printing forms the combination with two bars each having a series of longitudinally-extending inclined bearing-faces on their confronting inner sides, and at the end beyond said series of inclined faces one of said bars having a pin-recess and a bolt and the other bar having a bolt-head recess and a pin,—said pin entering the pin-recess of the first named bar and the head of said bolt being confined in the bolt-head recess of the second-named bar, one of said two bars having perforations for an operating tool and a wedge-bar having longitudinally extending inclined faces at its opposite sides to engage the inclined faces on the two bars and said wedge-bar also having perforations for engagement by an operating tool.

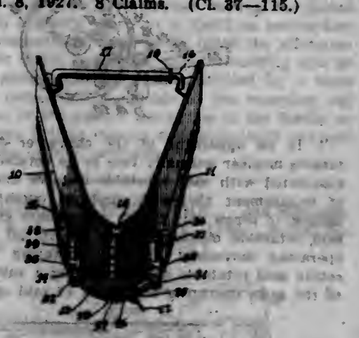
1,637,070. FRICTION SHOCK-ABSORBING MECHANISM. ABILD M. BRENNE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 21, 1925. Serial No. 51,607. 2 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with a follower having a longitudinally disposed friction post thereon, said post having friction surfaces on the opposite sides thereof, each surface comprising two longitudinally disposed flat faced sections, said sections converging laterally outwardly; a follower having a pair of opposed interior flat wedge faces, said followers being movable relatively toward and away from each other; friction shoes at each side of the post, each having a friction surface composed of two flat faced sections correspondingly disposed to the flat sections of the surface of the post at the same side of the mechanism and co-operating therewith, and each also having a flat wedge face co-operating with said follower wedge face at the same side of the mechanism; and twin arranged spring resistance means at opposite sides of the post opposing movement of the friction shoes.



1,637,071. DRAFT GEAR. EDWARD F. CAREY, Chicago, Ill. Filed Oct. 10, 1925. Serial No. 61,717. 20 Claims. (Cl. 213—43.)

1. A draft gear comprising a housing containing a piston chamber, a piston reciprocable in said chamber, springs on opposite sides of said piston, an air and liquid chamber, ports connecting both chambers and in communication with opposite sides of said piston, and manually operable valve means within said liquid and air chamber adapted to control one of said ports.

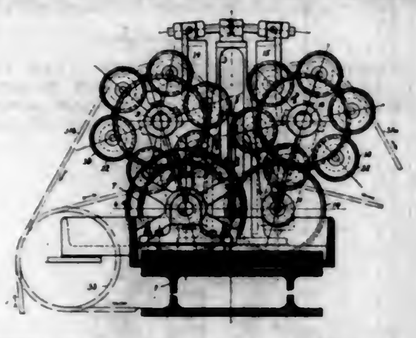


1,637,072. BEACON LAMP. ARTHUR V. CONOVER, New York, N. Y., assignor to Interflash Signal Corporation, New York, N. Y., a Corporation of New York. Filed June 5, 1926. Serial No. 113,843. 4 Claims. (Cl. 240—7.5.)

1. In a beacon lamp, a base section, means to secure the section to a support, means to mount a source of light in the base section, an intermediate section removably secured to the base section comprising top and bottom portions, a lens carried therebetween, stays extending between the top and bottom portions and securing the lens therebetween, a top section pivoted to the intermediate section to provide ready access to the light

source, a chimney carried by the top section and a baffle carried by the chimney to prevent the flow of water into the lamp.

1,637,073. SCRAPER. ALFRED B. ESSELTINE, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1924, Serial No. 752,292, and in Canada Mar. 24, 1924. Renewed Jan. 8, 1927. 8 Claims. (Cl. 37—115.)



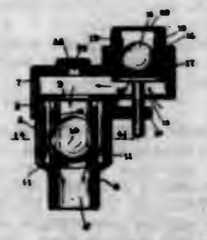
1. A scraper provided with forwardly extending walls movable laterally with respect to each other, toggle means at the rear end of the scraper having connection with both of said walls, and a tail rope having movable connection with said toggle adapted to produce balanced draft on said walls in one position of said toggle means, and to produce unbalanced draft in another position of said toggle means.

1,637,074. EDGING MACHINE. HENRY J. GAISMAN, New York, and CONRAD SCHUMACHER, Lynnbrook, N. Y., assignors to Autostrop Patents Corporation, Dover, Del., a Corporation of Delaware. Filed Mar. 23, 1923. Serial No. 627,093. 10 Claims. (Cl. 51—37.)

1. An edging machine comprising a rubbing medium, means to rotate said medium bodily at one side of an article to be edged into and out of contact therewith, and means to rotate said medium axially in contact with the article during bodily rotation of the medium, the said bodily and axial rotations of said rubbing member being continuous before, during and after contact with the article.

8. An edging machine comprising means to guide a strip to be edged, an arm movably supported adjacent to

said guiding means, means to adjustably retain said arm with relation to said guiding means, edging rolls, means

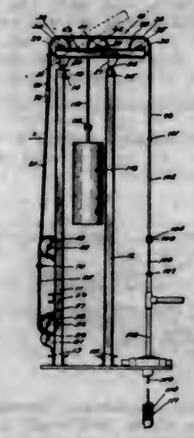


to support said rolls for bodily rotation with respect to said guiding means, means to bodily rotate said rolls, and means to rotate said rolls axially.

1,637,075. COPYHOLDER. PETER GRABLER, Rocky River, Ohio, assignor of one-half to Charles E. Day, Lakewood, Ohio. Original application filed Jan. 16, 1925, Serial No. 2,720. Divided and this application filed Mar. 11, 1926. Serial No. 94,075. 18 Claims. (Cl. 192—12.)

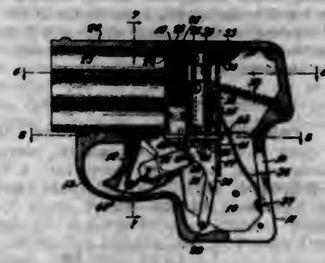
1. In an apparatus of the character described, a rotatable member normally free to be rotated, clutch means associated with said rotatable member and normally out of engagement therewith, and an operating means arranged to throw said clutch means into engagement with said rotatable member during the initial portion of the operating movement of said operating means and to rotate said rotatable member during a subsequent portion of the same operating movement of said operating means.

1,637,076. SAFETY VENT VALVE. JULIUS P. HEIL and ARTHUR BORCHARDT, Milwaukee, Wis. Filed Feb. 9, 1923. Serial No. 618,165. 4 Claims. (Cl. 277—61.)



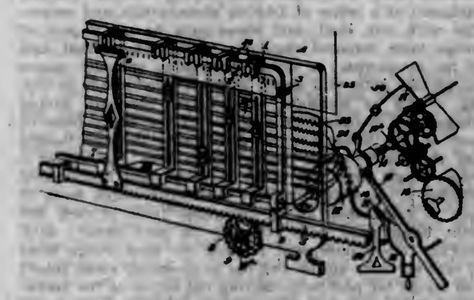
1. A safety vent valve, comprising a main valve casing open at its upper and lower ends, a supplemental valve casing mounted on the upper end portion of said valve casing and having a valve outlet opening above the main casing and an inlet valve opening offset therefrom and an outlet opening above the offset opening, a valve positioned in the main casing for closing the valve opening adjacent thereto but being normally in open position, a comparatively light weight valve closing the inlet opening, a valve plug mounted in the supplemental casing opening above the inlet opening and having an outlet opening formed therein and a valve closing said outlet opening.

1,637,077. FACIAL-STEAMING APPARATUS. ANNA E. HERRERA, Baltimore, Md. Filed Sept. 21, 1926. Serial No. 136,765. 5 Claims. (Cl. 4—165.)



1. A facial steaming device comprising a veil of a shape to be folded about the body, and providing an upper part arranged to fit and be sustained about the forehead of the user, said veil carrying a transparent portion arranged when in position to permit of inspection of the face of the wearer, the lower portion of the veil being extended sufficient to enclose a steaming appliance.

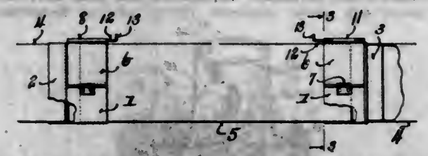
1,637,078. LONG-STROKE PUMPING MECHANISM. FRANK F. HILL, Los Angeles, Calif. Filed Aug. 3, 1925. Serial No. 47,773. 8 Claims. (Cl. 74—14.)



1. An apparatus of the class described comprising: a supporting structure adapted to be mounted in a derrick substantially to one side of the well axis thereof; a flexible reciprocator movably supported by said supporting structure, said flexible reciprocator comprising a plurality of flexible members adapted to travel over pulleys supported by said supporting structure; means for attaching one end of said flexible reciprocator to a polish rod in said derrick; mechanism for reciprocating said reciprocator supported by said supporting structure, said mechanism comprising a rotatable drive member, a rotatable driven member, an endless member extending around said drive and driven members, and means for driving said drive member in order to continuously move said endless member; and means for poising said reciprocator to said endless member, said reciprocator being reciprocated by said endless member.

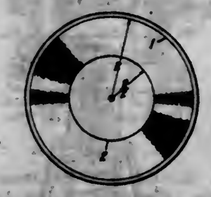
1,637,079. GAS GUN. JOSEPH W. KARNER, Jr., New York, N. Y. Filed Nov. 7, 1924. Serial No. 748,316. 9 Claims. (Cl. 42—1.)

6. In a gun, the combination of a hammer pivotally mounted for movement to and from a firing position, a spring bearing directly on the hammer in spaced relation to its pivotal mounting for swinging the same about its pivotal mounting and for moving the hammer on its firing movement, said hammer having a plurality of firing positions and trigger actuated mechanism operatively connected for placing the spring under tension and for moving the hammer successively into its several firing positions and means controlled by the movement of said mechanism into its final position for releasing the same automatically from the hammer and for permitting the spring to react on the hammer and move the same into its firing position.



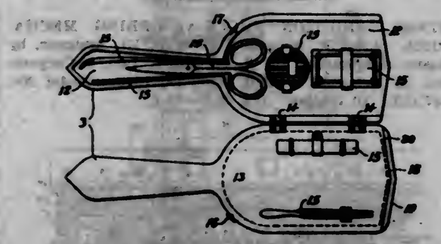
1,637,080. ELECTRIC SIGNAL TRANSMITTER. CHARLES H. KESSEE, New York, N. Y. Filed Dec. 16, 1924. Serial No. 756,262. 4 Claims. (Cl. 177—380.)

1. In a variable signal transmitter having in combination a means arranged to start and to stop the operation of said transmitter, a series of switches arranged in a straight path, each one of said switches consists of a member carrying one contact, a second member slidably arranged in said first named member carries a second contact, a spring button, provided to move and to adjust said second member in said first named member to various selective positions to provide means to change the distance between said first and said second named contact and a bridging contact carried by a suitable driving mechanism in said straight path to bridge said members by the starting of said signal transmitter with said means.



1,637,081. COUPLING. JOSEPH L. LEMMOND, Green Bay, Wis. Filed Feb. 14, 1927. Serial No. 168,005. 3 Claims. (Cl. 285—194.)

1. A coupling for a pipe comprising a body portion having an outwardly projecting pipe receiving member, said body portion being semi-cylindrical and having a narrow continuation thereof extending from one edge of the semi-cylindrical body portion to the other edge thereof,

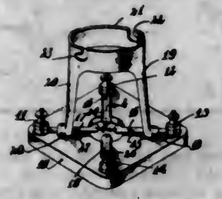


a pair of gate sections hinged to the body portion and extending part way around the coupling, and means for drawing the gate sections towards each other.

1,637,082. SOUND-RECORDING METHOD. JOSEPH P. MAXFIELD, Wyoming, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 17, 1925. Serial No. 2,971. 8 Claims. (Cl. 274—46.)

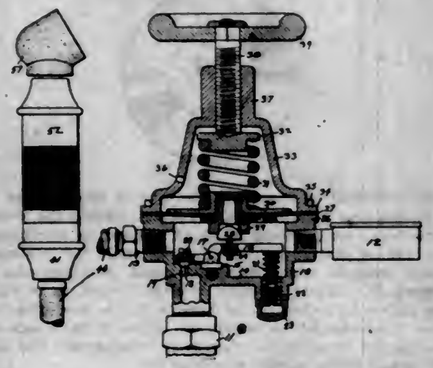
1. A method of increasing the time of effective run of a phonograph record which comprises cutting the sound variations into a record blank at a speed in revolutions per minute substantially equal to 60 times the minimum linear speed at which successful sound recording can be effected in a given recording material divided by π times the radius in inches of the outside of the recording cut from the center of the record, the radius of the inside recording cut being limited thereby to substantially one-half the radius of the outside recording cut.

1,637,083. HAIRBRUSH WITH COMB. ABE MELTZER, New York, N. Y. Filed Sept. 16, 1926. Serial No. 135,743. 11 Claims. (Cl. 132—85.)



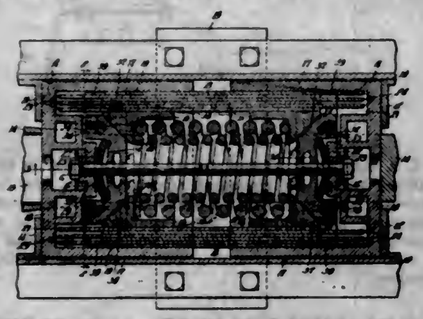
1. A hair brush having a body for the brush, a brush member having an elongated auxiliary back, said body having a channel wider at its bottom and of the width of said back, and said back being configurated to fit said channel and adapted to slide longitudinally into and out of said channel for mounting and demounting the brush member.

1,637,084. RADIO TUBE SOCKET. GUADALUPE MENDEZ, Dawson, N. Mex. Filed Jan. 22, 1926. Serial No. 88,008. 5 Claims. (Cl. 173—328.)



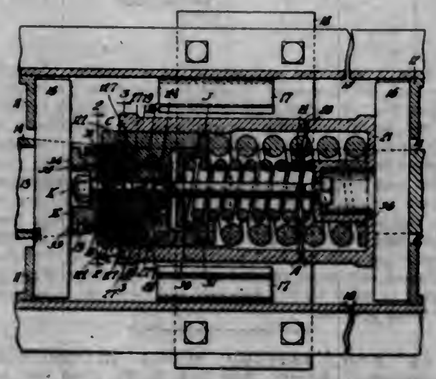
1. In a vacuum tube socket, a base of suitable material, electric terminals secured to the said base, and contact clips extending from the said terminals to points concentric thereto, the said clips supported on adjusting bars

which rest within grooves in the said base and are adapted to be moved therein to regulate the tension of the said clips, standards secured to the said base and



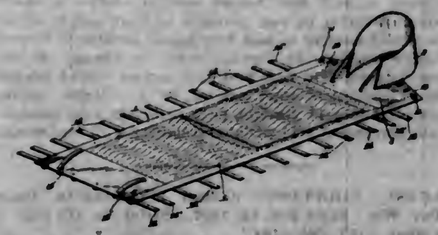
free from current carrying contact with the clip members, the said standards supporting a collar centrally located over the free ends of the said contact clips.

1,637,085. PRESSURE REGULATOR. ARTHUR M. NICHOLS, Tigard, Oreg. Filed Jan. 4, 1926. Serial No. 79,083. 3 Claims. (Cl. 50—10.)



2. The combination of a pressure reducing valve and a vibrating valve in series with said reducing valve having a pressure resisting element therein adapted to establish a differential between the reduced pressure and the delivered pressure.

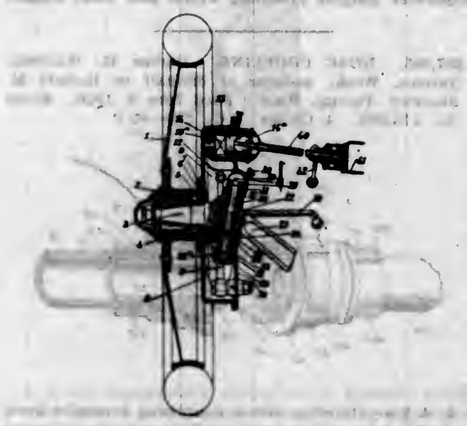
1,637,086. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed June 25, 1923. Serial No. 647,433. 10 Claims. (Cl. 213—33.)



1. In a friction shock absorbing mechanism, the combination with a follower acting member; of friction means held against lateral movement, said friction means and follower member being relatively movable longitudinally of the mechanism; a spring resistance; a friction wedge pressure creating system including a plurality of wedge friction shoes co-operating with said friction means, a sectional wedge and spreading means interposed between said follower and wedge for effecting expansion of the latter upon relative approach of the follower and wedge, said spreading means being held against collapse between said follower and wedge during compression of the mechanism, and co-acting means on said wedge and follower for limiting the relative movement thereof, whereby, the expansion of the wedge is limited.

1,637,087. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 23, 1923. Serial No. 658,874. 7 Claims. (Cl. 213—34.)

1. In a friction shock absorbing mechanism, the combination with a friction shell having interior friction surfaces; of a series of friction shoes within and cooperable with said shell, said shoes each having a pair of wedge faces disposed angularly to the longitudinal axis of the mechanism; a spring resistance; spreader means co-operable with said shoes, said spreader means including a pair of elements, one of said elements having wedge faces co-operating with one of the wedge faces of each of said shoes, and correspondingly inclined thereto and the other element having wedge faces disposed at a keener angle than the wedge faces of said first named element co-operating with the remaining wedge faces of each of said shoes, all of the wedge faces of each element being fixed with reference to each other; antifriction rollers interposed between the keen wedge faces of said spreader means and the co-operating shoes faces; and means for positively limiting the action of the keener wedge faces when a predetermined frictional resistance is encountered.

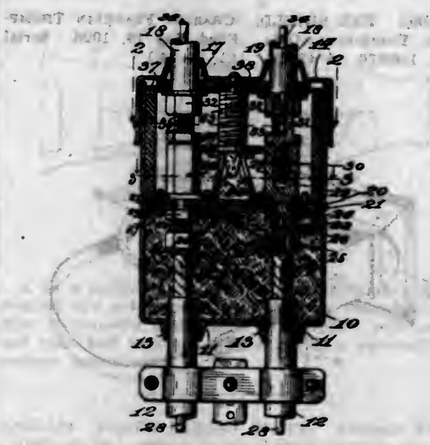


1,637,088. PAD FOR INFANTS. BESSIE PADOLSKY, Philadelphia, Pa. Filed Mar. 2, 1925. Serial No. 12,589. 1 Claim. (Cl. 5—343.)

A pad for infants comprising a sheet of suitable material having substantially parallel rows of fastenings adjacent to the longitudinal edges thereof and a shoulder

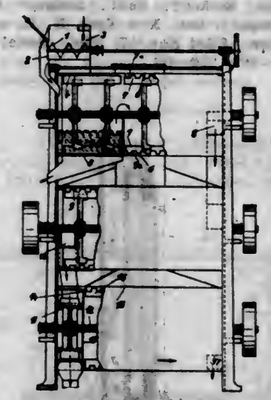
portion at the upper end thereof, the lower portion of said sheet being adapted to be folded over varying amounts and transverse to the length of the pad to enclose the feet and cover the body of an occupant and forming an overlay section of variable length attachable in several positions by said fastenings to the underlying section of the pad, an open pocket formed on the underlying section of the pad and containing a removable impervious member, padding disposed between said impervious member and the inner surface of the pad, and cooperating fastening means on said shoulder portion and the opposite end of the pad for securing them together.

1,637,089. FRONT-WHEEL MOUNTING. HENRI PERROT, Paris, France, assignor to Bendix Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 25, 1922, Serial No. 584,324, and in France Dec. 7, 1921. 5 Claims. (Cl. 280—96.1.)



1. In a front wheel for motor vehicle, the combination of a wheel spindle, a disc provided on said wheel spindle, two symmetrical bosses on said disc and provided with long inner bushings having the same inner diameter, a cylindrical steering spindle rotatably mounted in said bushings, a tight plug on the lower part of the lower bushing, a thrust bearing upon the said lower bushing and means comprising a disc constituting in combination with said first named disc a tight casing around said thrust bearing and a brake housing, said last disc having an opening leading to the upper bushing, a cap pivotally mounted on the upper bushing, an oiler secured to said cap, a cover arranged between said oiler and said cap and closing the opening and an axial conduit in said steering spindle and connecting the inside of said cap with the inside of the said plug.

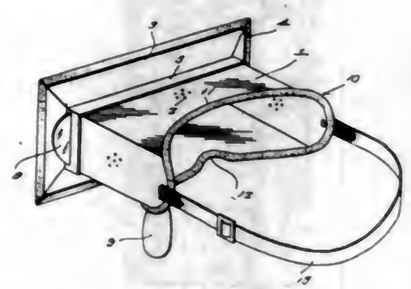
1,637,090. AUTOMATIC DISCONNECTING POT HEAD. ALEX C. RUMBLE, Los Angeles, Calif., assignor of one-half to William Edward Lauer, Los Angeles, Calif. Filed Nov. 5, 1926. Serial No. 146,374. 10 Claims. (Cl. 200—51.)



1. In a disconnecting pot-head, a housing formed in two parts, each of which is adapted to receive a pair of cables, means within the pot-head for detachably connecting the terminals of the conductors in said cables and means associated with said pot-head for normally exerting pressure on the parts thereof tending to separate the same and effect a disconnection of the parts that connect the conductors within said cables.

3. In a disconnecting pot-head, a housing, a cover therefor, said housing and cover being provided with openings for the accommodation of cables, socket members secured to the conductors of the cables entering the housing, contact plugs secured to the cables entering the cover, which contact plugs are adapted to be removably positioned in the socket members when the cover is

properly positioned on the housing, short-circuiting springs arranged within the housing and connected to the socket members therein and means carried by the cover for normally holding said contact members out of engagement with each other.

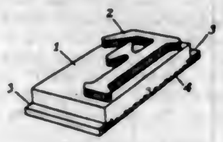


1,637,091. PROCESS FOR THE REMOVAL OF THE CEREALINS AND DRYING OF GRAIN MOISTENED FOR THIS PURPOSE. STEFAN STEINMETZ, Berlin, Germany. Filed Nov. 6, 1926, Serial No. 146,697, and in Germany Oct. 19, 1925. 1 Claim. (Cl. 83—28.)

A process for removing the "cerealine" from grains, which consists in soaking the grains in a single uninterrupted process and during positive motion of the same, washing said grains, thereupon exposing said grains under exclusion of ventilation to an interior friction, so as to raise the temperature in the vicinity of the grains to such an extent, that the water carried along with the grains will become lukewarm and thus be able to soften the cerealin and partly dissolve the same, thereupon rubbing and sucking off the so loosened and detached shells

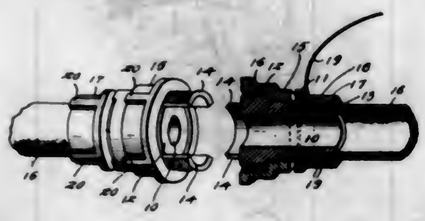
in the known way from the grains, again washing the grains with pressure water, polishing said grains in a polishing machine; and liberating said grains by action of centrifugal force from the moisture adhering thereto.

1,637,092. EYE SHIELD. CHARLES FRANKLIN THOMPSON, Youngstown, Ohio. Filed May 19, 1926. Serial No. 110,176. 1 Claim. (Cl. 2—14.)



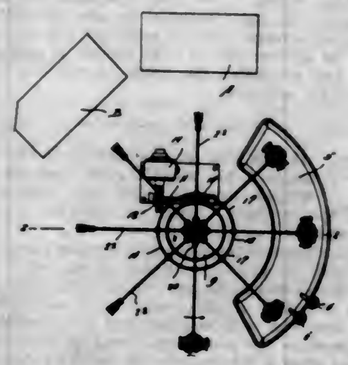
As a new article of manufacture, an eye shield of the class described comprising a substantially rectangular member forming a passage, the inner end of said rectangular member being shaped to bear against the forehead and upper portion of the face of the wearer, cushioning means associated with said inner end, an outwardly flared member connected with the outer end of said rectangular member, said flared member being provided with a marginal protecting strip, a guide carried by said flared member, a glass slide mounted in said guide, a handle carried by said rectangular member, and a head strap also carried by said last named member.

1,637,093. INDEX-GLASS INCLOSURE. KENNETH C. TOMLINSON, Berkeley, Calif., assignor to American Meter Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 17, 1926. Serial No. 148,947. 1 Claim. (Cl. 220—82.)



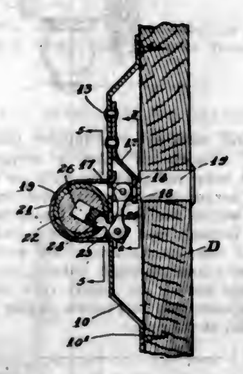
An index glass inclosure for meters comprising an index box frame; oppositely interfitting flanged frames, the flange of one frame being crimped down upon the back of the other frame; an index glass confined between said frames; gaskets associated with said glass and frames, and means for holding and hermetically sealing said frames with said index box frame.

1,637,094. PRINTING DIE. HAROLD R. WADE and LEE M. HARLEY, Pittsburgh, Pa., assignors to Jas. H. Matthews & Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 15, 1927. Serial No. 168,316. 1 Claim. (Cl. 101—379.)



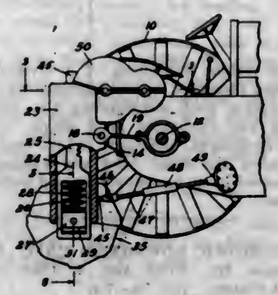
A printing die consisting of a block of rubber containing an inlay of metal, such block bearing on its face the character to be printed, and being formed at its ends with opposite basal flanges, and said inlay being of attenuated form, with opposite folded-over margins, such folded-over margins extending within said basal flanges.

1,637,095. HOSE COUPLING. OLIVER H. WALTERS, Tacoma, Wash., assignor of one-half to Herbert M. Shockley, Tacoma, Wash. Filed June 3, 1926. Serial No. 113,560. 4 Claims. (Cl. 285—82.)



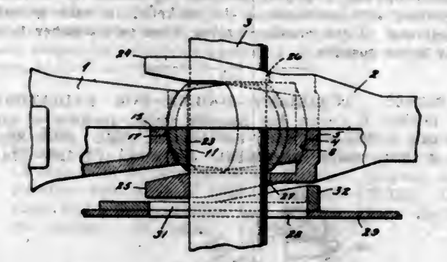
1. A hose attaching means comprising a coupler head, a flexible hose end engaged on the coupler head, means rotatable on the hose end for winding a flexible element on the hose end within the said rotatable means, and means for holding the end of the flexible element with respect to the hose end.

1,637,096. POULTRY-DIPPING MECHANISM. JOHN ALLEN, Greensburg, Ind. Filed Apr. 26, 1927. Serial No. 186,704. 6 Claims. (Cl. 17—11.)



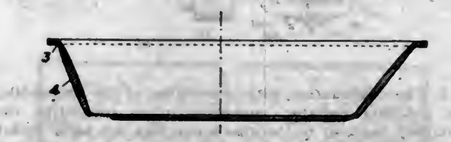
1. In a fowl dipping apparatus of the character described, a dipping tank, a plurality of movable and pivotal arms arranged adjacent said dipping tank, the outer ends thereof adapted for receiving the fowl to be dipped, means for moving the arms with respect to the tank and means for normally supporting the fowl carrying ends of the arms in position above the tank, said means being constructed to permit the downward movement of the fowl carrying ends of the arms when within the confines of the tank resulting in the dipping of the fowl within the tank.

1,637,097. LOCK. ARTHUR E. ANAKIN, Long Beach, Calif., assignor, by mesne assignments, to Safeway Lock Company, a Corporation of Nevada. Filed Jan. 15, 1925. Serial No. 2,530. 11 Claims. (Cl. 70—46.)



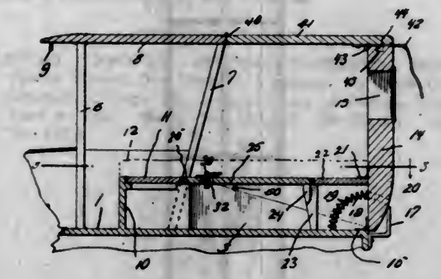
1. A lock comprising a sliding bolt, a rotatable shank, a crank pivoted to said shank, means forming a universal connection between said crank and said bolt, and a keeper for said bolt.

1,637,098. PULVERIZER. THOMAS J. BARNES, Azusa, Calif. Filed Feb. 6, 1925. Serial No. 7,317. 1 Claim. (Cl. 97—40.)



In combination with a tractor, a transverse brace secured to the draw bar attaching means of the tractor, brackets secured to the axle housing of the tractor and to said brace, supporting boxes for pulverizing devices rigidly secured to said brace, a shaft journaled in said supporting boxes, and pulverizing devices mounted upon said shaft.

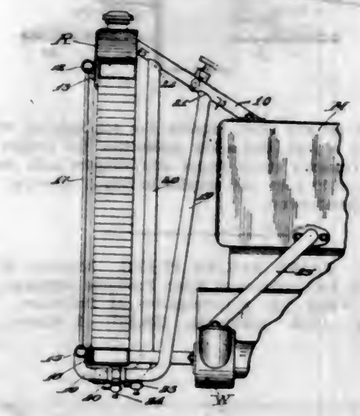
1,637,099. DRAFT RIGGING. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Jan. 30, 1925. Serial No. 5,763. 17 Claims. (Cl. 213—69.)



1. In a railway draft rigging, the combination with a coupler, of a yoke, and a key connecting the coupler and yoke to transmit draft forces and support said coupler and yoke, said yoke and coupler having a universal connection therebetween.

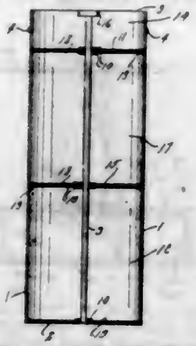
1,637,100. PAPER BAKING PLATE. ANDREAS BOTHE, Oreland, Pa., assignor to Kleen Products Company, Inc., North Wales, Pa., a Corporation of Delaware. Filed Aug. 11, 1926. Serial No. 128,667. 1 Claim. (Cl. 53—6.)

A baking plate consisting of a single rectangular sheet of paper compressed into dish shape and having a bowl, a rim rectangular in outline, a smooth interior surface, and rounded corners, the fibers of the paper by redistribution affording the smooth interior surface and the rectangular shape and the rounded corners.



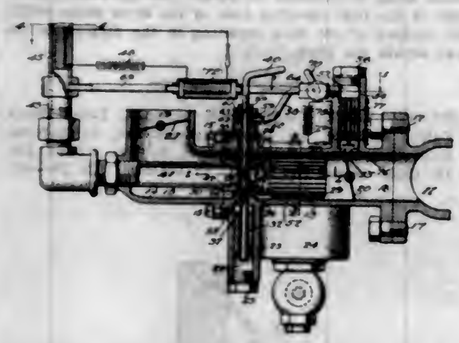
1,637,101. CONVERTIBLE AUTOMOBILE BODY. FRANK BUNEVAC, South Bend, Ind. Filed Aug. 16, 1926. Serial No. 129,419. 2 Claims. (Cl. 296—23.)

1. An automobile body having a top, an auxiliary top hinged to said top, a hinged and swingable rumble member having arcuate apertures and adapted in one position to cooperate with the auxiliary top in forming a rear coachlike portion, and spring means for facilitating up-



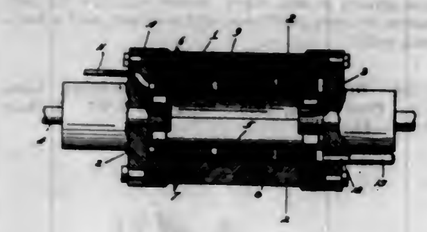
ward movement of the rumble member; the said spring means comprising coiled springs abutting against the bottom of the body and the inner side of the rumble member, and arcuate supports carried by the bottom of the body and retaining said spring means in working position and arranged to be socketed in said arcuate apertures of the rumble member when said member is in its lower position.

1,637,102. AUXILIARY COOLER FOR RADIATORS. ROBERT J. COALE, Los Angeles, Calif., assignor of one-half to Henry Kimber, Los Angeles, Calif. Filed Sept. 4, 1924. Serial No. 735,831. 4 Claims. (Cl. 123—174.)



1. The combination with a radiator of an automobile, an auxiliary radiator, connecting pipes connecting the auxiliary radiator to the pipe connecting the water jacket to the automobile radiator of the automobile motor, and a valve disposed in the pipe connecting the water jacket to the automobile radiator between the points of connection of said connecting pipes, whereby water may pass directly from the water jacket into the automobile radiator or be caused to flow through the auxiliary radiator and then into the automobile radiator.

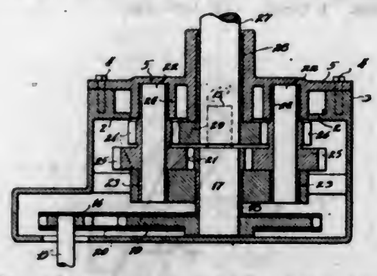
1,637,103. EGG BEATER. FRANK E. CORWIN, Toledo, Ohio. Filed Sept. 20, 1926. Serial No. 136,524. 3 Claims. (Cl. 259—72.)



1. A vessel having a receiving section, an agitation section, and a classifier diaphragm therebetween, said agitation section including intermediate its extent a foraminous interceptor.

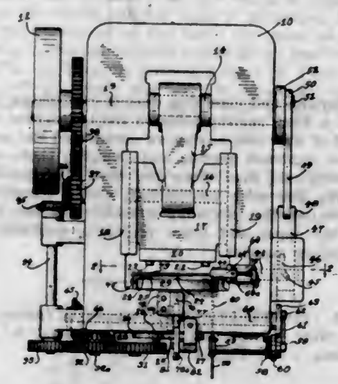
1,637,104. CARBURETOR. FRANCIS G. CRONE, Buffalo, N. Y. Filed Apr. 23, 1925. Serial No. 25,255. 3 Claims. (Cl. 261—41.)

1. A carburetor comprising a tubular body, having a mixture outlet, a main air inlet, a bridge across the interior of said body and provided with an opening, and a fuel chamber arranged in line with said bridge, a choke tube arranged within the opening of said bridge, a fuel nozzle passing through said body, bridge and choke tube and having the inlet at its lower end arranged within said fuel chamber and provided within said choke tube with jet openings and an air supply tube communicating with said choke tube, said fuel nozzle having a screw connection with said choke tube.



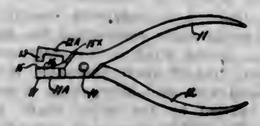
1,637,105. TURBINE. WALTER M. CROSS, Kansas City, Mo. Filed Aug. 20, 1924. Serial No. 733,082. 2 Claims. (Cl. 253—69.)

1. A steam turbine consisting of a divided casing, a rotor positioned therein, a second supplementary pressure-tight reenforcement shell surrounding the complete turbine assembly and fabricated as a single unitary shell having end enclosures, bearings in the end enclosure adapted to carry the rotor, inlet and exhaust ports in the reenforcement shell for supplying and exhausting the power medium.



1,637,106. ELECTRIC LOW-SPEED UNIT. OTTO CULLMAN, Chicago, Ill. Filed Aug. 4, 1926. Serial No. 127,074. 4 Claims. (Cl. 74—7.)

1. A housing, a plurality of central shafts rotatably journaled in said housing, a plurality of additional shafts rotatably journaled in said housing, a sprocket wheel and a gear pinion rigidly mounted on one of said central shafts, gear wheels and gear pinions rigidly mounted on said additional shafts, said gear wheels arranged to mesh with said gear pinion, a gear wheel rigidly mounted on the remaining one of said central shafts and arranged to mesh with the gear pinions on said additional shafts, in combination with a motor shaft arranged to extend into said housing, a sprocket pinion rigidly mounted on said motor shaft, a sprocket chain arranged to connect said sprocket pinion and said sprocket wheel, and means

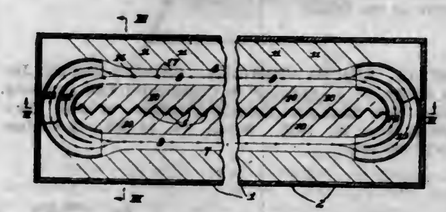


to adjust said sprocket pinion laterally and means to adjust it to a determined distance from said sprocket wheel.

1,637,107. RIVET-MAKING MACHINE. MARTIN DWYER and RICHARD J. BOYLE, Waterbury, Conn. Filed Mar. 18, 1926. Serial No. 95,594. 13 Claims. (Cl. 10—11.)

6. In a machine for heading and trimming rivets, a body member, a dial rotatably mounted in said body member, means for intermittently rotating said dial to carry a rivet successively into heading and trimming positions, a reciprocating member for heading and trimming said rivets, means for quenching said rivet between the heading and trimming operations, said dial having a plurality of inner dies for holding the rivets while being headed, quenched, and trimmed, said dial having a plurality of outer dies extending through said dial, means for delivering a strand of rivet wire through said outer dies, and a cam-operated reciprocating slide co-acting with said outer dies for shearing off rivet blanks from said rivet wire.

1,637,108. WATCHMAKER'S PLIERS. SIDNEY GRUBER, St. Paul, Minn. Filed July 19, 1926. Serial No. 123,343. 2 Claims. (Cl. 81—6.)

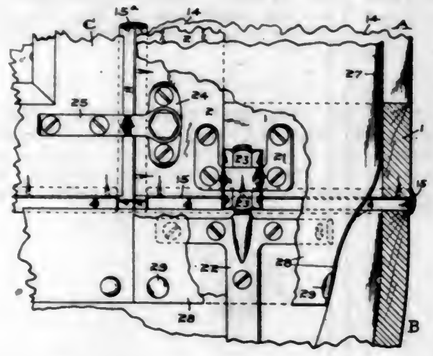


1. A plier of the class described comprising two pivotally connected members each comprising an integral handle and a jaw, one of said jaws formed with a wedge-shaped extremity directed toward the other jaw, the other jaw having a slitted portion to receive said wedge when the pliers are closed, an upright longitudinal flange on the outer part of the slitted jaw in spaced parallel relation to the slit, said flange having a transverse extension across the jaw to form a square corner for insertion of the end of a watch spring while the jaws are open, and means for selectively spreading or closing the slitted part of the lower jaw.

1,637,109. DIE FOR WIRE DRAWING, ETC. FRANK HONIG, Oak Park, Ill., assignor to Cyclo Corporation, Chicago, Ill., a Corporation of Illinois. Original application filed June 9, 1921, Serial No. 476,115. Divided and this application filed Oct. 16, 1924. Serial No. 743,968. 17 Claims. (Cl. 205—29.)

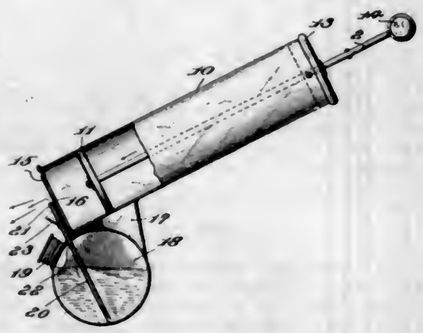
1. A die comprising a steel supporting body and a tungsten body containing a hardening agent press-cast onto and consolidated with the supporting body.

1,637,110. STORAGE BUILDING. HENRY HORNBOSTEL and WILLIAM J. STRASSBURGER, Pittsburgh, Pa. Filed June 13, 1925. Serial No. 36,768. 4 Claims. (Cl. 20—1.13.)



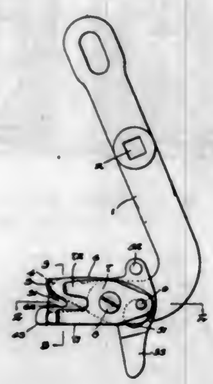
1. A multiple-story storage building for vehicles provided with a plurality of concentric interrupted spiral ways in spaced apart relation and relatively long intermediate levels connecting said ways to constitute runways for a single line of traffic between the cooperating terminals of said spiral ways, the run-ways connecting the opposite terminals of said spiral ways being in staggered relation, and having a zig-zag partition wall extending longitudinally of said building.

1,637,111. PROCESS OF MANUFACTURING DIES. FRANK HONIG, Oak Park, Ill., assignor to Cyclo Corporation, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1921. Serial No. 476,115. 23 Claims. (Cl. 76—107.)



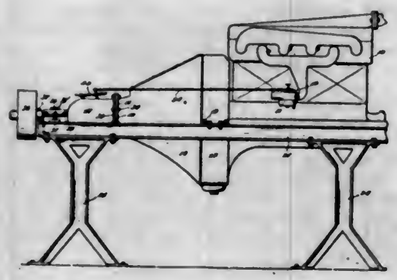
1. The process of making a die which comprises bringing a molten body comprising tungsten and a hardening agent into contact with a supporting body of steel and welding the two together and subjecting the tungsten body to pressure during the period of solidification.

1,637,112. AUTOMOBILE TOP. CHARLES C. HULL and MATTHEW R. HULL, Connersville, Ind. Filed Mar. 22, 1920. Serial No. 367,771. 16 Claims. (Cl. 296—103.)



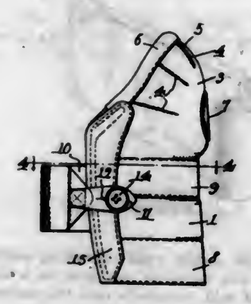
1. A new article of manufacture consisting of a demountable L shaped wooden frame made up of longitudinal and transverse roof struts and vertical side struts nbutting against said longitudinal struts and rigidly and permanently joined thereto, and T shaped metal reinforcements overlapping the joints between the roof and the side struts and cooperating therewith to resist distortion of the frame.

1,637,113. LIQUID ATOMIZER. CHARLES HURLEY, Jersey City, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 24, 1925. Serial No. 71,133. 2 Claims. (Cl. 299—88.)



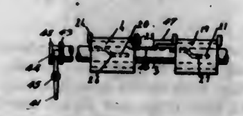
1. In an atomizer for liquids including a substantially closed container for the liquid to be atomized, a liquid delivery tube open at both ends and passing through the wall of said container and constituting the only opening of said container while in use, said tube extending substantially across the container to opposite sides thereof, and having a relatively small continuously open aperture through the wall at a point within the container and in close proximity to the point where said tube passes through the wall of said container, and means to create a liquid-delivering suction in said tube and to atomize the liquid delivered at the outer open end thereof.

1,637,114. WEFT-PARTER DEVICE FOR LOOMS. SIMEON S. JACKSON, Hyde Park, Mass., assignor to The Stafford Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1923. Serial No. 674,836. 1 Claim. (Cl. 139—264.)



Weft-parting and clamping devices comprising, in combination, a fixed parting blade, a fixed clamping member composed of fiber and having an open-ended slot or notch, a movable combined parting and clamping blade or member between said fixed blade and fixed fiber member and cooperating therewith respectively, and a tension spring having rearwardly extending branches bearing laterally against the upper and lower projecting portions of the fiber clamping member.

1,637,115. POWER PLANT. WILLIAM L. JEFFREYS, Riverton, Nebr. Filed Aug. 21, 1925. Serial No. 51,719. 4 Claims. (Cl. 123—1.)

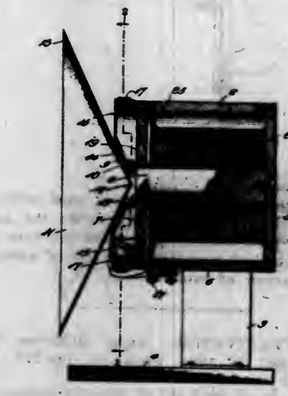


1. In a power plant, the combination of an engine having a drive shaft, a transmission housing enclosing said shaft, a throttle valve controlling the flow of fuel to the engine, a casing fixed to the rear end of said housing, a power take-off shaft journaled through said casing and engaged with said drive shaft, a power transmitting device carried by the latter shaft, a governor mounted within the casing upon said take-off shaft and operable by said shaft, and an operative connection between the governor and said valve for regulating the speed of the engine.

1,637,116. KNEE PAD. MILTON W. KELLEY, Austin, Tex. Filed Mar. 8, 1927. Serial No. 173,695. 3 Claims. (Cl. 2—24.)

1. A knee pad comprising a trough-shaped body folded upon itself and stitched together along a longitudinal line near its lower end to form a projecting knee-cap cup at the upper end of the body, the upper end of the body being folded upon itself and stitched together along a plurality of inwardly extended lines to form a rearwardly inclined upper wall for the knee cap cup; and means for securing the pad on the knee of the wearer.

1,637,117. MOTOR BRAKE. JOHANN KIRCHENSTEINER, Wetzikon, Switzerland. Filed Nov. 19, 1923, Serial No. 675,752, and in Germany May 29, 1923. 2 Claims. (Cl. 123—97.)

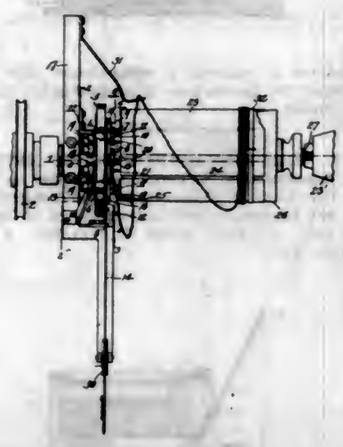


2. In an engine of the type in which the engine acts as an explosion engine and a motor brake, the combination of a plurality of cylinders, overhead valves, a shaft with grooves movable lengthwise, levers for operating the valves mounted on the shaft, eccentrics with pins, guided inside of the grooves of the shaft, the eccentrics mounted inside of the hubs of the levers for operating the exhaust valves, means for shifting the shaft lengthwise whereby the exhaust valves are kept open more or less for relieving the resistance of the compression of the motor brake, a cam shaft movable lengthwise, cams to actuate the inlet and outlet valves, while the engine is operating as a motor, auxiliary cams adapted to in turn actuate the exhaust valves to make said engine act as brake, as soon as the cam shaft is shifted lengthwise.

1,637,118. MOTOR-BRAKE FOR AUTOS. JOHANN KIRCHENSTEINER, Wetzikon, Switzerland. Original application filed Nov. 13, 1923, Serial No. 675,752, and in Germany May 29, 1923. Divided and this application filed Feb. 17, 1925. Serial No. 9,801. 1 Claim. (Cl. 123—97.)

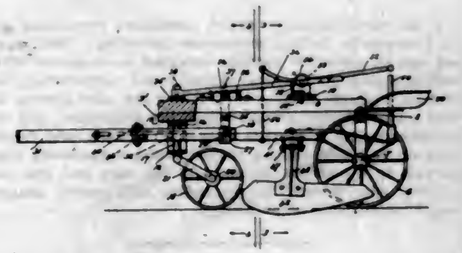
The combination in an explosion engine, comprising an exhaust valve, a cam to actuate said valve while the engine is operating as a motor, auxiliary cams adapted to in turn actuate the exhaust valve to make said engine act as brake, plate with offsets catching the exhaust levers so that the exhaust valves cannot be closed if decreasing resistance is required, a wedge-shaped slide as rest for the plate for the purpose of regulating the resistance of one cylinder.

1,637,119. ELECTROMAGNETIC SOUND REPRODUCER. FREDERICK A. KOLSTER and SIGURD A. SOLLIE, Palo Alto, Calif., assignors to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Jan. 18, 1927. Serial No. 161,824. 6 Claims. (Cl. 179—115.)



1. An electromagnetic sound reproducer comprising an electromagnetic driving mechanism including a field magnet and an armature winding arranged to cooperate with said field magnet, a conical shaped sound reproducing diaphragm, a frame member surrounding the apex portion of said conical shaped sound reproducing diaphragm, and an annular flexible membrane extending between said frame member and said conical shaped sound reproducing diaphragm in a position intermediate the apex and free peripheral edge thereof for suspending said conical shaped sound reproducing diaphragm.

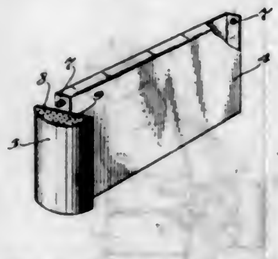
1,637,120. HOLDER FOR FLATIRONS. ANNA J. LARSON, Naugatuck, Conn. Filed Feb. 23, 1927. Serial No. 170,145. 1 Claim. (Cl. 68—27.)



A holder for a flat iron handle comprising an elongated pad of soft flexible material, said pad being folded lengthwise in overlapping relation adjacent its longitudinal central axis and having its front and rear end edges each separately connected together to enclose the front and rear end portions of the handle and separable coacting fasteners for securing the longitudinal side edges of the pad.

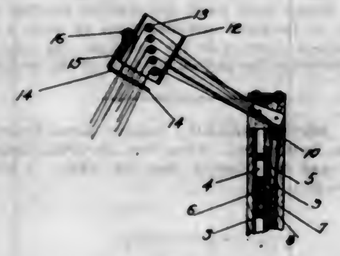
1,637,121. COIL-WINDING METHOD AND APPARATUS. DIMMITT ROSS LOVEJOY, New York, N. Y., assignor to Lovejoy Development Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 25, 1925. Serial No. 58,570. 6 Claims. (Cl. 140—92.2.)

1. The method of winding helical wire coils, comprising, winding and crimping the wire in the form of a turn with an even number of sections per turn and then winding it in helical form, the perimeter of which is equal to an odd number of said sections.



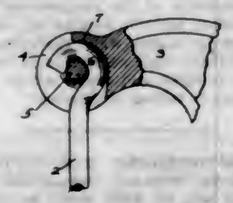
1,637,122. CULTIVATOR. AMBY MCENTEE, Westfield, Me. Filed Oct. 28, 1926. Serial No. 144,778. 5 Claims. (Cl. 97—237.)

1. In a cultivator, a wheeled frame, a loop-shaped braket secured to the front end portion of the frame, a vertical shaft mounted in the said bracket, a slidable bar mounted on the frame to the rear of the said bracket and having end portions which project below the frame, a draft pole pivotally connected with the said end portions and projecting freely through the loop-shaped bracket and engaging pivotally with the said vertical shaft, said draft pole being free to move vertically and longitudinally in the loop-shaped bracket, and two beams for supporting cultivator blades arranged one on each side of the draft pole and operatively connected with it.



1,637,123. HUMIDIFIER. JOHN L. MCKAY, Minneapolis, Minn. Filed May 22, 1926. Serial No. 111,076. 1 Claim. (Cl. 237—78.)

A humidifier comprising a thin, deep water receptacle having at its top a vent, and a wide water supply tank secured to one end of said receptacle and having a filling opening and a conduit connecting said receptacle and tank at the bottoms thereof, said receptacle being adapted to be inserted into a radiator between the columns of



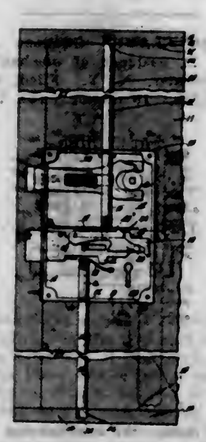
its coils with the supply tank extending across one end of the radiator and engaging the same as a stop to limit the movement of said receptacle into the radiator.

1,637,124. AMUSEMENT DEVICE. LEON J. MORIN, Taunton, Mass. Filed Feb. 10, 1927. Serial No 167,309. 2 Claims. (Cl. 273—138.)

1. A game comprising a frame having a plurality of runways therein, indicia-bearing blocks slidably disposed within said runways, said blocks having strangs attached thereto and leading therefrom, and means associated with said frame for commingling said strands, said indicia-bearing blocks being resiliently connected to said frame.

1,637,125. ROD CONNECTION FOR PUMP HANDLES AND THE LIKE. HARRY B. NELSON, Saginaw, Mich., assignor to Nelson Brothers Co., Saginaw, Mich., a Corporation of Michigan. Filed Mar. 27, 1928. Serial No. 628,013. 1 Claim. (Cl. 287—103.)

In a joint for the handles and plunger rods of pumps, a bifurcated head on said pump handle, said head having side walls spaced apart, a pintle cast integral with the walls of said head and spanning the space therebetween, an interiorly curved shoulder member connecting the upper parts of said walls and spanning part of said space

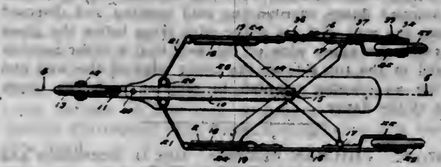


to a point directly above said pintle, a pump rod and a U-shaped hook on said rod partly surrounding said pintle, and abutting against and actuated by the curved under side of said shoulder member when the handle is in use.

1,637,126. HAT BANDEAU. JENNIE M. NELSON, St. Paul, Minn. Filed May 27, 1925. Serial No. 33,143. 1 Claim. (Cl. 2—185.)

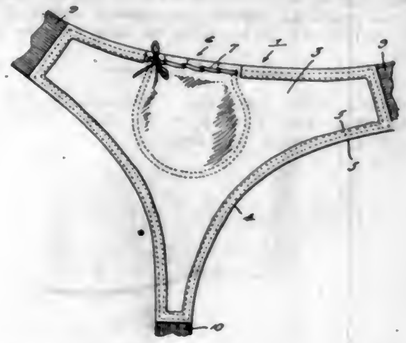
A hat bandeau comprising a substantially quadrangular shaped section of netting material having a head contacting surface which is convex between its upper and lower edges and concave between its opposite side edges, and in which the upper portion is spaced from the hat when the lower edge portion is attached to the hat.

1,637,127. THREE-WAY DOOR LOCK. STANLEY L. ORNOSKI, Throop, Pa. Filed Mar. 19, 1926. Serial No. 95,963. 1 Claim. (Cl. 70—29.)



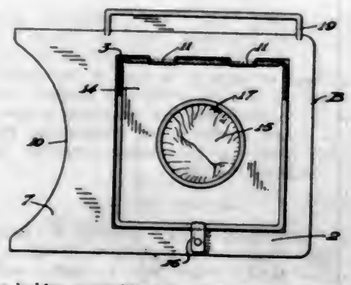
In a three-way door lock, the combination with a keeper plate for fixed attachment to the jamb of a door opening, of a lock casing for mortised attachment to the edge of the door, a key operable bolt operatively mounted in the casing and adapted to engage with the keeper plate, vertical bolts mounted in the lock casing with very remote extremities positioned to penetrate into the upper and lower jambs of said door opening, yieldable means to which the adjacent ends of said vertical bolts are connected to retain the remote ends thereof from penetration into said upper and lower jambs, and gravity lever pivoted in said casing and having a heel in the path of the wing carried by the key for the purpose of actuating the lever, said lever having a lateral lug overlying the key operated bolt and provided with means engaging under the yieldable means of one of the vertical bolts for actuating it when the lever is tilted, the key operated bolt having means to ride under the lateral lug when the lever is tileted, and means on the lower edge of the key operated bolt for operating against the yieldable means of the other vertical bolt for actuating the latter into the lower jamb.

1,637,128. NAIL PACKAGE. WILLIAM B. PALMER, Highwood, Ill. Filed July 29, 1926. Serial No 125,784. 2 Claims. (Cl. 206—46.)



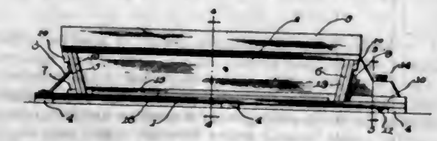
1. A package of nails to be held in the mouth, comprising a number of nails grouped in compact form, and free from any interspacing and separating means, and a contractible binder confining and maintaining the nails in frictional contact as the package dwindles by withdrawal of the nails therefrom.

1,637,129. WHEELED TOY. GEORGE E. PRITCHETT, Butte, Mont., assignor of one-fifth to Joseph A. Sampson, Butte, Mont. Filed Mar. 8, 1926. Serial No. 93,289. 3 Claims. (Cl. 280—87.5.)



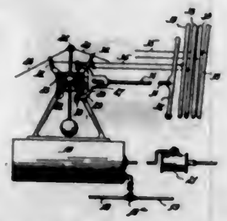
3. A wheeled toy including a frame, a steering wheel mounted on one end of the frame, a platform mounted on the frame, bars disposed at the sides of the platform, a link pivotally connected to an end of a bar and pivotally connected to the frame, ground wheels on the other ends of the bars, and crossed levers pivotally connected to the frame and each having an end pivotally connected to a side bar and the other end slidably engaged with the opposite side bar.

1,637,130. TRUSS. WILLIAM D. RAY, La Fayette, Ga. Filed May 11, 1926. Serial No. 108,324. 2 Claims. (Cl. 128—96.)



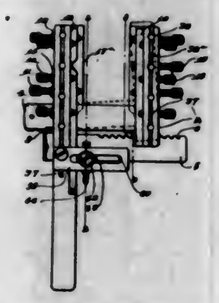
1. As a new article of manufacture, an appliance of the class described comprising a pliable body including an adjustable pad in the form of a pocket adapted to receive a quantity of absorbent material, said body being of a configuration to form a plurality of radiating extensions, to the top ones of which the ends of a body encircling belt may be connected, and to the lower one of which, a leg strap may be connected.

1,637,131. BAG HOLDER. JOHN RIGBY, New Bedford, Mass. Filed Apr. 7, 1927. Serial No. 181,756. 1 Claim. (Cl. 83—26.)



A bag holder comprising a casing open at its front and having the intermediate portion of its top side depressed forming a well, the top side being provided with an opening which communicates with the interior of the casing, an annular flange surrounding said opening and disposed within the well with its upper edge lying below the plane in which the upper edge of the well lies, a cover member hinged to the top side at the upper edge of the well and having an opening adapted to register with the upper edge of the flange.

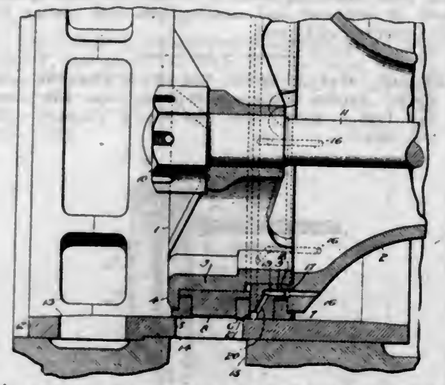
1,637,132. CHICKEN FEEDER. REX O. SCHROEDER and GUST FORSLUND, Yankton, S. Dak. Filed June 29, 1926. Serial No. 119,401. 9 Claims. (Cl. 119—53.)



1. A feeder comprising end walls converging downwardly, one being adjusted towards and away from the other, side walls between said end walls and having their ends parallel thereto, and means to releasably secure the movable end wall stationary with the side walls wedged between the end walls and thereby held in a set position with their lower ends in predetermined spaced relation to each other.

1,637,133. SAFETY DEVICE FOR VEHICLES. WILLIAM W. TEW, Brundidge, Ala. Filed June 7, 1926. Serial No. 114,242. 1 Claim. (Cl. 244—25.)

Safety devices for vehicles operating automatically when the vehicle assumes an inclination beyond a predetermined angle, comprising a set of motor-driven propellers and valves for supplying fluid pressure to the motors, the propellers being mounted on the vehicle and arranged thereon to bring the vehicle to a balanced position on operation of said propellers, a weighted pendulum fulcrumed intermediate its ends in a supporting frame, wires connecting the upper end of the weighted pendulum to the aforesaid valves for operating the latter, a sliding yoke-frame having shoes engaging the pendulum above and below the fulcrum, and auxiliary wire connections to levers for operating the valves independent of the pendulum.



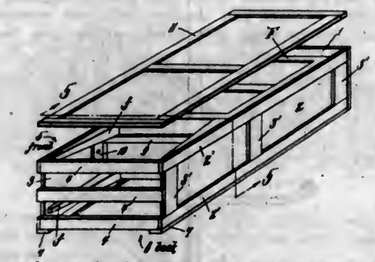
1,637,134. WORK CLAMP. CHARLES A. VIDINGHOFF, Rochester, N. Y., assignor of one-half to Arthur R. Patterson, Rochester, N. Y. Filed June 20, 1923. Serial No. 646,628. 16 Claims. (Cl. 77—62.)

1. In a work clamp, the combination with a pair of clamping jaws, means adjustably connecting said jaws, and a tie piece for the ends of said jaws, of means for adjustably connecting said tie piece to the jaws embodying screws passing through the tie piece and into the jaw ends, the tie piece being provided with a longitudinally extending slot through which one of the screws passes, and an adjustng screw carried by the tie piece and engaging the screw in the slot.

1,637,135. VALVE MECHANISM. WILLIAM B. WHITSITT, Baltimore, Md. Filed Dec. 4, 1924. Serial No 753,871. 2 Claims. (Cl. 121—142.)

1. In a valve construction for steam engines, the combination with a valve chamber, of a piston valve therein, a plurality of main ports connecting said valve chamber to the adjacent cylinder, said piston valve being adapted to control admission and exhaust of steam to and from said main ports, said piston valve comprising a spool member, follower members, and ring members interposed between the spool and each of said followers, said spool

and adjacent ring members being perforated to provide for the admission of supplemental steam to one of said main ports when the same is closed by said piston valve.



1,637,136. FENCE. ARTHUR H. BALL, Buffalo, N. Y. Substitute and continuation of application Serial No. 412,425, filed Sept. 24, 1920. This application filed Aug. 30, 1926. Serial No. 132,648. 4 Claims. (Cl. 256—52.)

1. A fence comprising a post, a support having a neck projecting laterally from the post and an enlarged head arranged at the outer end of said neck, and a clamping plate between the inner side of which and the outer side of the post a fence wire is adapted to be clamped and which is provided with a slot having a narrow longitudinal portion adapted to receive said neck, and a wide part at one end of said longitudinal portion and adapted to be traversed by said head and said plate being provided on opposite sides of the longitudinal portions of said slot with inclined faces which are adapted to engage with the inner side of said head and produce a wedging effect for pressing the fence wire against said post.

1,637,137. METHOD OF PACKAGING ARTICLES OF FURNITURE AND THE LIKE AND PACK OR SHELL INCASEMENT THEREFOR. RALPH M. BUCK, Richford, Vt., assignor to Atlas Plywood Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 16, 1924. Serial No. 732,459. 6 Claims. (Cl. 217—52.)

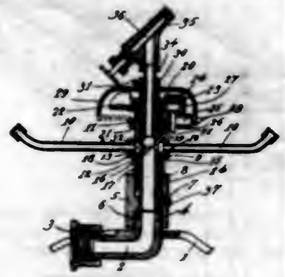
1. A shipping pack for an article having a plurality of finished faces and at least one unfinished face, comprising a shell enclosing corresponding finished faces of the article and open from front to rear, means carried by and adjacent the open back of said shell and attached to and supporting the article within the shell with its unfinished face disposed towards the open rear of the

shell, and constituting a partial rear closure of said shell, and a front closure adapted to be removably fastened over the open front of said shell.

1,637,138. METHOD OF PRODUCING A POLISHED SURFACE ON GRANITE BLOCKS. ELROY ALBERT CHASE, Northfield, Vt. Filed May 24, 1922. Serial No. 563,414. 7 Claims. (Cl. 51—278.)

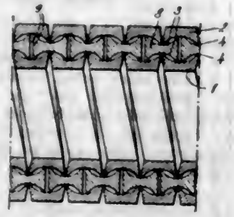
1. The method of producing a polished surface on granite blocks which consists in providing each granite block with an approximately plane regular surface coextensive with one face thereof, in subjecting said single granite block as a complete unit separately and successively to a coarse grinding operation, and a fining-up operation over said entire surface, said coarse grinding operation being carried out in a machine especially adapted for coarse grinding and said fining-up operation being carried out in a different machine especially adapted for fining-up, said granite block being moved from the first machine to the second machine after the coarse grinding operation thereon, and each granite block being individually and firmly supported as a separate unit in each machine and throughout each operation thereon, and the edges of said block being at all times free from embedding material.

1,637,139. PROCESS OF MAKING YARN AND THE LIKE. HENRY B. CLOW and HARRY L. CLOW, Lakeport, N. H. Filed Apr. 16, 1926. Serial No. 102,570. 8 Claims. (Cl. 19—105.)



1. The process of making yarn, or the like, which comprises providing a plurality of slivers each of a different color, laying said plurality of slivers together in parallel relation to form a lap of slivers having a repeated longitudinal color pattern, carding said lap to form fleece that is definitely striped transversely in the color pattern of said lap, forming rovings from longitudinal slittings of said fleece, and spinning said rovings into yarn.

1,637,140. LAWN SPRINKLER. WALTER H. COLES, Troy, Ohio, assignor to The Skinner Irrigation Company, Troy, Ohio, a Corporation of Ohio. Filed July 16, 1923. Serial No. 651,806. 2 Claims. (Cl. 299—70.)

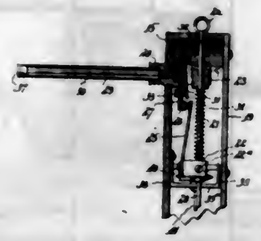


1. In a lawn sprinkler, an axial tube capable of conveying water, rotatable sprayer members journaled on said tube and receiving water therefrom, the sprayer members being rotated by means of water pressure so conveyed, an adjustable sleeve member on said axial tube, a spring member under tension actuated by said sleeve member, a movable bearing member receiving resistance

energy from the tension of said spring, a hub member on said tube and carrying the sprayers and having a bearing surface in contact with said movable bearing member, a fixed bearing member in contact with an opposite bearing surface on said hub member, said hub member being rotatable between said fixed and movable bearing

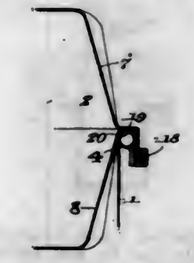
members, tension between all these bearing surfaces being adjustable by means of said sleeve member to prevent leakage of water between these members under varying pressure and also to regulate the speed of rotation of said sprayer members under varying water pressure, for the purpose described.

1,637,141. FLEXIBLE TUBING. HERBERT COOPER, Brooklyn, N. Y. Filed Aug. 9, 1922. Serial No. 580,626. 5 Claims. (Cl. 137—75.)



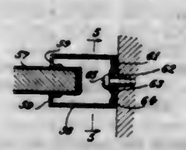
1. Flexible tubing composed o a plurality of coils provided in their opposed faces with channels of arcuate cross section having edges of tapering cross section, said coils being so related that the edges of the channel of each turn of each coil lie in contact with the edges of the channel of contiguous turns of the same coil and also in contact with the central portion of the channel of two adjacent turns of an adjoining coil.

1,637,142. GEARING. CHARLES M. EBERLING, Cleveland, Ohio, assignor to The Eberling Machines Sales Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 2, 1926. Serial No. 91,724. 1 Claim. (Cl. 74—41.)



A gear for the purpose described consisting of a one-piece metal casting comprising a relatively thin circular web having its peripheral edge symmetrically beveled from opposite sides thereof, radially extending teeth of greater width than said web arranged in spaced relation around the edge of said web with the connected ends of said teeth extending inwardly beyond the limit of said bevel of said edge and merging into said casting for strengthening said teeth.

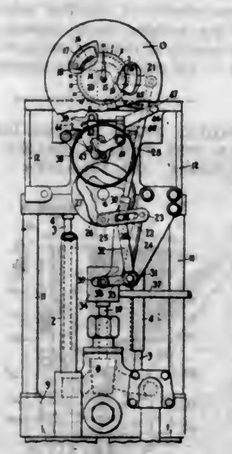
1,637,143. GAS-BURNER VALVE-OPERATING DEVICE. ALFRED J. FRASER, El Paso, Tex. Filed Jan. 21, 1926. Serial No. 82,828. 4 Claims. (Cl. 126—351.)



1. Valve operating mechanism for the gas burner of a water-heater comprising a reciprocating valve operating rod having a lug thereon, a spring actuating the rod to close the valve, a lever for operating the rod against the action of the spring to open the valve, and means for operating said lever; together with a catch carried by the lug on the valve-rod and engaging a fixed member for holding the valve open, a spring-finger engaging the catch for releasing the same, and a thermostat operating the spring-finger.

1,637,144. ALUMINUM DINNER PAIL. JOHN C. FRITZGES, Parsons, Pa. Filed Dec. 15, 1926. Serial No. 154,931. 7 Claims. (Cl. 220—23.)

1. In a sheet metal dinner pail, the combination with a body, of a combined top and receptacle comprising sections having an outstanding seamed joint overlying and embracing the edge of the body.



1,637,145. TOILET INCLOSURE. MAXWELL S. HART and LOGAN E. PAGE, New Britain, Conn., assignors to The Hart & Hutchinson Company, a Corporation of Connecticut. Original application filed Nov. 11, 1925. Serial No. 68,328. Divided and this application filed Apr. 20, 1926. Serial No. 103,360. 5 Claims. (Cl. 189—34.)

1. In a partition construction, a panel member, a hollow wall post adapted to fit against the wall of a room, said wall post having a flat base to be secured in

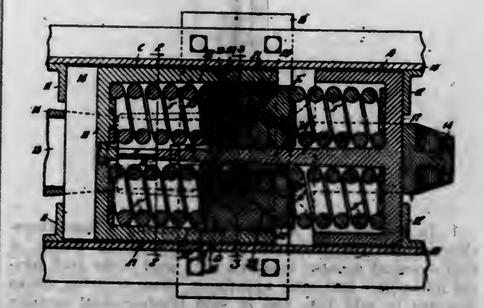
contact with said wall, said base having a pair of slots, and a pair of rotary locking clips secured to said wall and adapted to be rotated in said slots to lock said post to said wall.

1,637,146. LIQUID-DISPENSING APPARATUS. WILLIAM T. HATMAKER and EARL E. EICKMEYER, Dayton, Ohio, assignors to The National Recording Pump Company, Dayton, Ohio, a Corporation of Ohio. Filed June 21, 1924. Serial No. 721,484. 22 Claims. (Cl. 221—103.)

7. In a dispensing apparatus the combination with a pumping mechanism, a register associated therewith, and an actuating device for said register, of means for connecting said actuating device with said pumping mechanism comprising a part movable into a position to render said connecting means inoperative, and means for actuating said part.

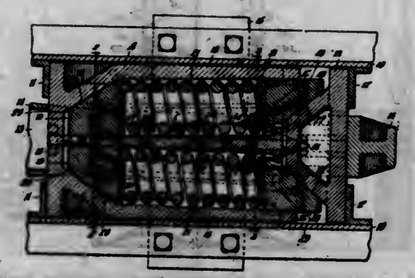
1,637,147. TUBE FOR PERMANENT WAVING. WILBUR S. LEWIS, Cleveland, Ohio, assignor to The Le Mur Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 6, 1925. Serial No. 48,590. 13 Claims. (Cl. 132—36.2.)

1. A container, for enclosing a strand of hair during the application of heat in a permanent waving process, comprising a sheet of paper, a sheet of metal foil, said sheets being secured together in tubular form, and heat insulating means for enclosing the edge of one end of said metal foil.



1,637,148. RESILIENT SHACKLE. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 12, 1923, Serial No. 662,214. Renewed Jan. 12, 1927. 8 Claims. (Cl. 213—208.)

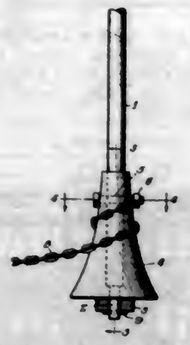
1. In a resilient shackle of the character described, the combination with yoke means adapted to be connected with one vehicle to transfer the pulling and buffing strains thereto, said yoke means being adapted to abut said vehicle at a place other than at its point of connection thereto; of another yoke means adapted to be connected to an adjacent vehicle to transmit pulling and buffing strains thereto; cushioning means operatively interposed between said two yoke means; and connecting elements for effecting connection of said shackle to said vehicles, each of said elements extending through both of



said yoke means, said yoke means being movable relatively to said connecting elements to compress said cushioning means in buff and draft.

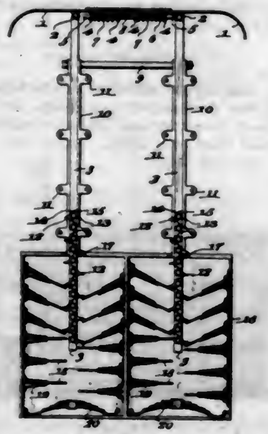
1,637,149. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 21, 1925. Serial No. 51,602. 6 Claims. (Cl. 213—31.)

1. In a friction shock absorbing mechanism, the combination with a pair of relatively movable shells, one of said shells having interior curved friction surfaces and the other having a fixed friction element thereon disposed centrally of the mechanism; of a set of friction elements co-acting with said interior friction surfaces; a second set of friction elements co-acting with said central element, said sets of friction elements having co-acting wedge faces; and a spring resistance element co-operating with each set of friction elements.



1,637,150. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 12, 1925. Serial No. 55,917. 12 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with front and rear relatively movable follower acting elements, one of said elements having exterior

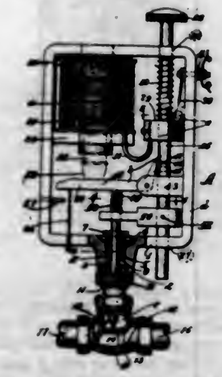


wedge faces thereon and the other element being provided with interior wedge faces; of a friction shell adapted to move with one of said follower elements; a friction post relatively to which said last named follower element is movable; friction shoes having wedge faces, certain of said shoes having frictional engagement with said post and having the wedge faces thereof co-operating with the wedge faces of one of said follower elements, the remaining friction shoes having frictional engagement with the shell and having the wedge faces thereof co-operating with the wedge faces of the other follower element; and means for yieldingly resisting movement of the friction shoes.

1,637,151. BRAKE-CHAIN-OPERATING MEANS. MARTIN L. HOWELL, Freedom, Pa. Filed Jan. 16, 1926. Serial No. 81,669. 5 Claims. (Cl. 254—149.)

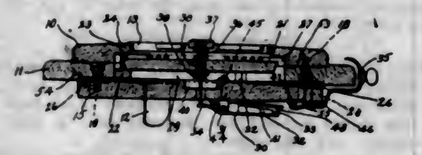
1. In combination, a brake staff having a hole therethrough for the insertion of chain securing means, a frusto-conical member mounted upon said brake staff having its smaller extremity uppermost, chain securing means disposed in said hole and in said frusto-conical member to cause said brake staff and frusto-conical member to turn as a unit, and a chain secured to said chain securing means.

1,637,152. AUTOMOBILE BUMPER. JOHN ADAM KEHARR, Rockport, Ind. Filed Dec. 14, 1926. Serial No. 154,676. 4 Claims. (Cl. 293—55.)



1. A slidably mounted bumper for automobiles, provided with spring actuated wings or plates arranged to progressively resist the movement of the bumper to compensate for the blow or impact.

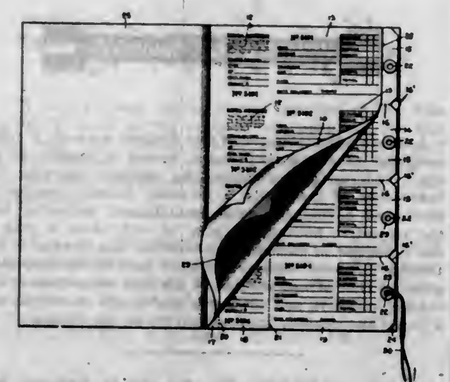
1,637,153. MEDICAMENT CARRIER. JAMES A. LAWTON, Middletown, Conn. Filed Oct. 23, 1926. Serial No. 143,685. 6 Claims. (Cl. 132—84.)



1. As an article of manufacture, a dental cleaner which comprises a carrier adapted to be drawn into the interproximal spaces between the teeth and having a pocket carrying a medicament or cleaning material, a wall of the pocket being adapted to be broken by pressure so that the medicament or cleaning material will be carried by the carrier to the surfaces to be cleaned.

1,637,154. VALVE. FRANK R. MARK, Los Angeles, Calif. Filed June 8, 1923, Serial No. 644,251. Renewed June 6, 1927. 5 Claims. (Cl. 137—139.)

3. A device of the character disclosed, including a latch stem, a valve stem adapted to open and close a valve, a pivoted latch member adapted to cooperate with the latch stem to maintain the same in a given position, a rigid connection between the latch stem and the valve stem, and a resilient connection between such latch arm and such rigid connection aforesaid; there being a no voltage release solenoid above such latch arm, such solenoid being provided with a drop core, said solenoid being in a normally closed electrical circuit when the valve stem is unseated, an opening of such electrical circuit dropping the solenoid core to strike the latch arm, releasing the latch stem and seating the valve stem.

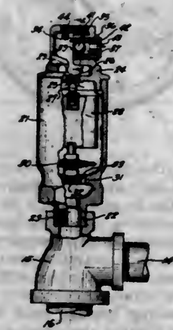


1,637,155. ELECTRIC STOVE. JOHN E. MARSDEN, Philadelphia, Pa. Filed Jan. 14, 1926. Serial No. 81,178. 4 Claims. (Cl. 219—37.)

1. An electric stove comprising a body having a plurality of coaxial rings of refractory material, one of the rings being below the other and supporting the same, there being a space disposed centrally of said rings, legs supporting the lower ring, a plate of refractory material positioned below the lower ring and co-operating therewith to form a plurality of air ducts therebetween and

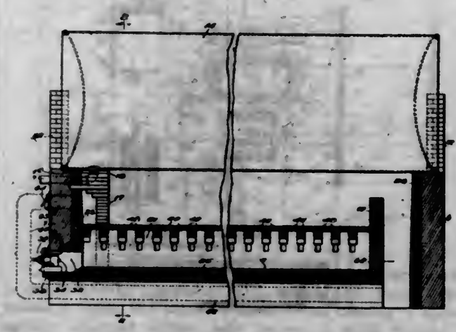
leading to said central space, an electrical heating coil in the space aforesaid, a switch for said coil positioned below the refractory plate and supported thereby, said switch comprising a member movable vertically under actuation of an article placed upon the upper ring to be heated by the heating coil, and a metallic guard cooperating with the upper ring to support said article and prevent damage to the upper ring, said guard permitting heat to pass from the heating coil to the article, the vertically movable member projecting above the plane of the guard.

1,637,156. MANIFOLD RECORD BOOK. AARON J. MIRSKI, New York, N. Y. Filed Mar. 5, 1925. Serial No. 13,057. 1 Claim. (Cl. 282—23.)



A bound book comprising a group of pages made up of a sheet divided by a plurality of weakened lines of fold into units comprising a binding strip, an owner's receipt check and an identifying tag having a reinforced eyelet and a superimposed duplicate sheet for permanent binding therewith in the form of a book, said duplicate sheet being of a shorter width than said first mentioned sheet, to permit said eyelets to nest beyond the edge thereof.

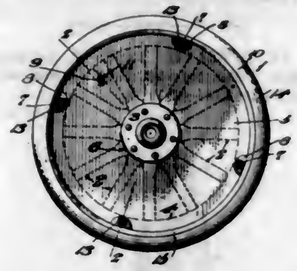
1,637,157. BATHING SUIT. WILLIAM OSBORNE, Jr., Philadelphia, Pa. Filed Sept. 12, 1924. Serial No. 737,258. 1 Claim. (Cl. 2—67.)



In a one-piece bathing garment, an upper body portion provided with a trunk portion, a central gusset of the same length at the front and rear of the garment for the crotch portion thereof and extended to the garment waist-line at front and back at which waist-line portion the gusset is both fore and aft of a width smaller than at its place of juncture with the crotch part of the trunk portion, the inner edges of the trunk legs and the edges of the said gusset converging upwardly with the outer edges of the trunk legs also converging upwardly, the said gusset being arranged to yield or stretch in a vertical direction in contradistinction to the lateral yield or stretch of the trunk legs, said gusset being secured at its edges throughout its entire length front and back to the contiguous trunk legs to form a garment permanently closed at its front and rear.

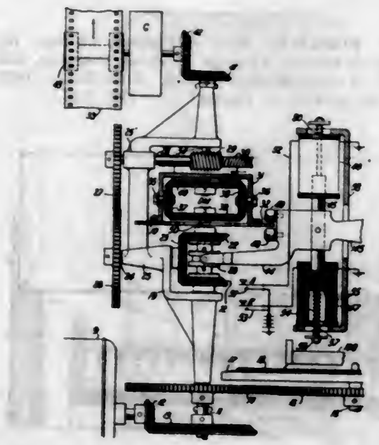
1,637,158. VENT VALVE. LEWIS F. OSTRANDER, Milwaukee, Wis. Filed May 22, 1926. Serial No. 111,044. 10 Claims. (Cl. 236—62.)

1. In a venting device of the character described including a casing having an outlet opening and valve mechanism for opening and closing said opening, an auxiliary air exhaust chamber communicating with the interior of said casing by way of the outlet opening thereof, a ball valve associated with said chamber and opening upon a predetermined rise in the pressure therein to provide a communication between the same and the atmosphere, and guiding means for said ball valve, said means being inclined upwardly in the direction of the opening movement of said ball valve a relatively slight amount with respect to the horizontal.



1,637,159. FURNACE. IVON S. PIETERS, Chicago, Ill., assignor to Pilbrico Jointless Firebrick Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1925. Serial No. 67,844. 7 Claims. (Cl. 196—116.)

1. In combination, a furnace setting having an internal chamber, a still shell exposed to said chamber, and a pair of fire boxes disposed within said chamber and

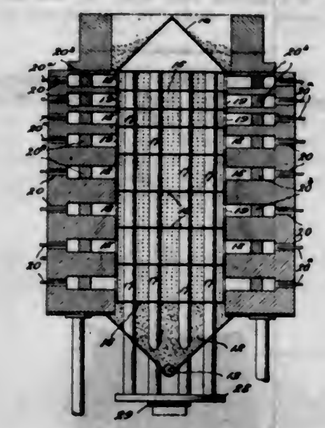


having side walls provided with openings into the furnace chamber therethrough for directing the flames from said fire boxes against each other and into said internal chamber without direct impingement upon the still shell.

1,637,160. WHEEL CONSTRUCTION FOR MOTOR VEHICLES. WILLIAM H. RAPEPORT, Philadelphia, Pa. Filed Aug. 22, 1925. Serial No. 51,762. 1 Claim. (Cl. 301—37.)

In a device of the character stated, a motor vehicle wheel, including a hub, apertured felly and spokes, a rim carrying a tire fitted to said felly, a thin, flat, rectilinear disc having an unbroken, outer periphery fitting within said rim, and circumferentially apertured to register with said felly apertures and centrally apertured for insertion over said hub, annular concentric stiffening ribs formed upon said disc and arranged concentric with said central aperture, bolts passing through said felly and disc for clamping said disc against the outer wall of said felly in perpendicular alignment with said spokes, lugs on the outer ends of said bolts for holding said disk and rim on said felly, and nuts on said bolts, said disc being clamped between said lugs and felly, and being disconnected from said hub.

1,637,161. SYNCHRONIZING MECHANISM. CHARLES D. RICHARD, West New Brighton, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,788. 8 Claims. (Cl. 74—7.)

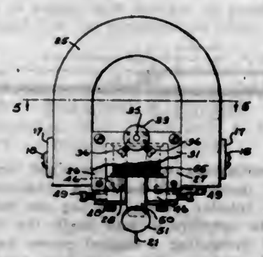


1. In a reproducing machine, a sound record, a picture record adapted to be moved in synchronism therewith, a gear mechanism therefor, including a normally ineffective driving member, a pair of electromagnets successively operable for moving said member in positions for imparting movement to said mechanism in opposite directions, a pair of keys for controlling the energization of said magnets, circuits each including one of said magnets and one of said keys, and means for automatically returning the driving member in position ineffective with respect to the gear mechanisms for controlling the extent of the synchronizing movement of said picture record.

1,637,162. ROLLER SUSPENSION FOR SHADE AND DRAPERY SUPPORTS. LULA H. ROBINSON, Dallas, Tex. Filed Dec. 26, 1925. Serial No. 77,705. 2 Claims. (Cl. 156—27.)

1. In an adjustable shade and drapery support, a roller composed of alined shells each having a housing at its outer end, a tubular connecting member receiving the inner ends of the shells, a rotatable tubular member in each shell having the outer ends thereof extending into the respective housings, a plug in each shell, a plug in the outer end of each tubular member, coil springs in the tubular members connected at their ends to the respective plugs, flexible straps secured to the said outer ends of the tubular members and at points within the housings, and a shade and drapery support carried by the straps.

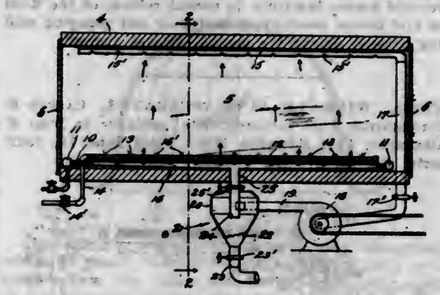
1,637,163. ORE FURNACE. FRANCIS M. SIMONDS, New York, N. Y., assignor of one-half to A. Fillmore Hyde, New York, N. Y. Filed Feb. 19, 1925. Serial No. 10,164. 1 Claim. (Cl. 263—29.)



1. In an ore treating furnace, a number of separate distributing chambers arranged in a vertical series and having perforated peripheral walls, means for supplying different qualities of gas to the various distributing chambers, a second perforated ore confining wall surrounding the distributing chambers to form a space for descending ore, and means for conveying gases away from said second wall.

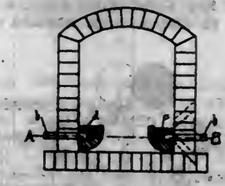
1,637,164. SCORED VENEER AND METHOD AND MEANS OF MAKING SAME. GEORGE W. TALBOT, Bloomington, Ind. Filed May 22, 1925. Serial No. 32,220. 4 Claims. (Cl. 144—309.)

1. A scored veneer having cutout channels on one side and cutout beads on the other of corresponding size and shape, said veneer having straight unscored and unbeaded portions between said channel-beads of suitable areas to form container members when the veneer is bent at the channel-beads.



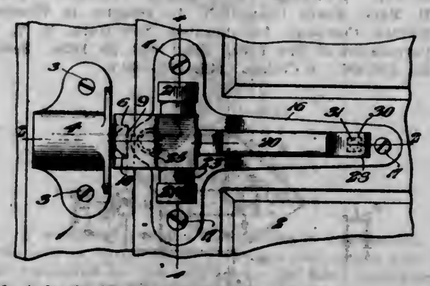
1,637,165. ELECTRICAL PICK-UP DEVICE FOR PHONOGRAPH RECORDS. LINCOLN THOMPSON, Naugatuck, and JOSEPH B. MARSHALL, Westport, Conn., assignors to The Bristol Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 13, 1927. Serial No. 183,377. 5 Claims. (Cl. 179—100.1.)

1. An electrical transmitter for phonographs, comprising: a magnetized metal frame having an interruption at one end, and a pair of separated pole pieces at the opposite end; a transmitting coil of wire carried by the magnetized frame; a reed member torsionally secured at the interrupted portion and extending outwardly through the coil and the air gap between the pole pieces and adapted to be attracted thereby but maintained normally substantially equidistant therefrom by its torsion support, said reed terminating at its outer end in a socket for retaining a stylus whereby said reed may be vibrated as a whole between the said poles when the stylus is engaged by the grooves of a phonographic record.



1,637,166. DRY KILN. CARL G. ULLIN, Centralia, Wash. Filed Aug. 18, 1926. Serial No. 129,931. 2 Claims. (Cl. 34—46.)

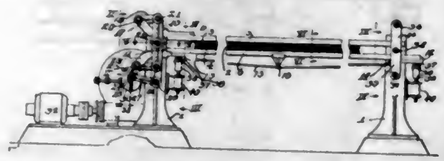
1. In a dry kiln, the combination of air inlet and outlet conduits provided in spaced apart relation within the kiln chamber, pipe connections between the conduits, a blower to effect the circulation of air between said conduits within the chamber and said pipe connections, means to moisten the air within the chamber, a separator associated with said pipe connections for removing moisture from the air passing through the pipe connections, said separator having an exhaust opening into the



atmosphere exteriorly of the kiln, and valves for regulating the passage of air through said pipe connections and into the external atmosphere, selectively.

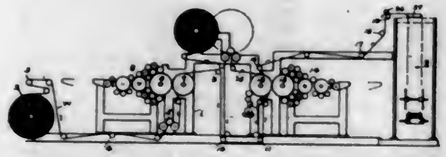
1,637,167. ELECTRICAL HEATING BODY FOR HIGH TEMPERATURES ESPECIALLY FOR CERAMIC METALLURGICAL PROCESSES AND CHEMICAL PROCESSES. FERDINAND WECKERLE, Munich, Germany, assignor to Studiengesellschaft für Wirtschaft u. Industrie m. b. H., Munich, Germany. Filed Aug. 24, 1925, Serial No. 52,198, and in Germany Aug. 28, 1924. 1 Claim. (Cl. 204—64.)

In an electric furnace, an open gutter for receiving a heating body of silicate adapted to be reduced by heat to a liquid conductor, and taps communicating with said gutter and extending into said liquid body to permit of the volume thereof being changed at will to vary its resistance.



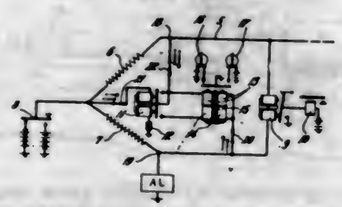
1,637,168. DOOR FASTENER. GUNTHER PHILIP WILD, Philadelphia, Pa. Filed Apr. 9, 1925. Serial No. 21,780. 5 Claims. (Cl. 292—254.)

1. A latch device of the character stated comprising a keeper having opposed bevelled edges, said keeper being mounted upon the jamb of a door and having a spiral spring arranged within said keeper, a plate having a fixed detent carried by a door and normally adapted to abut against the inner bevelled face of said keeper, a spring pressed detent mounted upon a vertical axis of



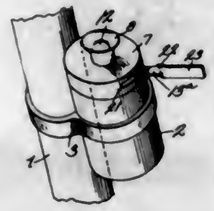
said plate and adapted to swing in a horizontal manner and normally abutting against the opposite face of said keeper whereby outward movement of said detent will move said keeper inwardly to permit release of the fixed plate and means penetrating said door and engaging said spring pressed detent for manual release thereof.

1,637,169. WIRE-CLEANING APPARATUS. CASPER E. YOUNGCHILD, Port Edwards, Wis., assignor to John E. Alexander, Port Edwards, Wis. Filed June 13, 1925. Serial No. 36,857. 12 Claims. (Cl. 92—50.)



12. The combination with the wire of a Fourdrinier paper machine, of a brush mechanism extending transversely of said wire and adapted to contact both faces of said wire, and means for causing relative movement transversely of said wire between said brush mechanism and wire to effect a scrubbing action.

1,637,170. ASSOCIATING AND DELIVERY MECHANISM. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed June 14, 1926. Serial No. 115,721. 12 Claims. (Cl. 270—10.)

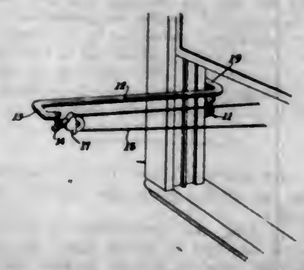


1. In a delivery, the combination of means for forwarding folded products, of a pair of receivers to which the products are forwarded, and means for operating the receivers to deliver the products so that the fold line of a plurality of products is in reverse position relatively to the fold line of a plurality of adjacent products.

1,637,171. DUPLEX TELEGRAPH SYSTEM. JOHN H. BELL, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 20, 1924. Serial No. 740,487. 6 Claims. (Cl. 178—69.)

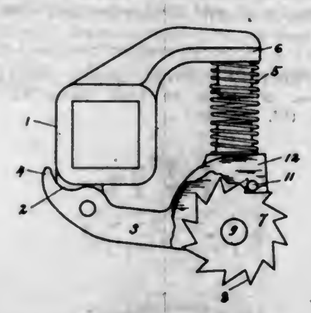
1. In a telegraph system, a pair of ratio arms, a real and an artificial line connected to opposite ends of said ratio arms, transmitting and receiving mechanisms associated therewith, a relay having a pair of windings, each of said windings being normally disconnected from its associated circuit, indicating means controlled by said relay, and switching means responsive to each reversal of said transmitting mechanism for alternately connecting the windings of said relay between the points of connection of said real and artificial lines.

1,637,172. CIGARETTE EXTINGUISHER. RAYMOND E. BURRESS, Crockett, Calif. Filed Aug. 17, 1926. Serial No. 129,837. 3 Claims. (Cl. 131—51.)



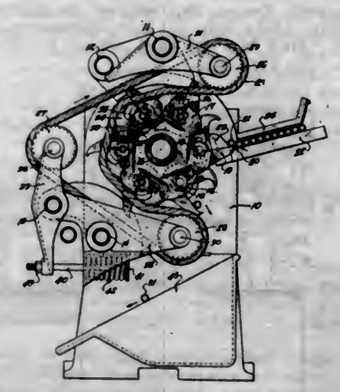
1. A cigarette extinguisher comprising a receptacle, a cap removably mounted on said receptacle, a cigarette receiving spout carried by said cap, a knife pivotally mounted within the cap and movable across the spout, a limiting plate within the cap beneath the knife, spring means for normally forcing said knife to closed position and a plate carried by said knife and extending downwardly, said plate forming means whereby upon the movement of the knife to closed position the severed end of a cigarette will be moved off the limiting plate.

1,637,173. ARMATURE SECURING AND CENTERING MEANS. MARCEL R. CAMORS, New Orleans, La. Filed Nov. 29, 1926. Serial No. 151,579. 3 Claims. (Cl. 64—29.)



1. The combination with a combined armature and generator or motor shaft having a transverse aperture therein, of a tubular member having one end slotted to aline with the aperture in said shaft, the other end of said member presenting a conical recess and a spring-tensioned element having a conical projection and adapted to constantly abut said conical recess for centering said tubular member on said shaft.

1,637,174. LINE ATTACHMENT. FRANK B. CARLAND, Elmhurst, N. Y. Filed Jan. 12, 1925. Serial No. 1,797. 5 Claims. (Cl. 68—3.)

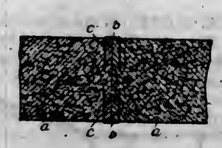


1. In a line attachment, the combination of a bracket having a pivot receiving member, a portion of which is removed to form an open space having limiting side walls; a movable member pivotally mounted in said pivot receiving member; the pivot of said movable member having an element affixed thereto and projecting through the open space in said pivot receiving member; means for attaching a line to the free end of said movable member; means for holding said movable member in adjusted positions relative to the bracket; said element cooperating with the sides of the open space in said pivot receiving member to define the limiting positions of said movable member.

1,637,175. FEED DEVICE FOR JOINTERS. EDGAR D. CHURCH, Saginaw, Mich., assignor to Jackson & Church Company, Saginaw, Mich., a Corporation of Michigan. Filed July 17, 1925. Serial No. 44,320. 3 Claims. (Cl. 144—242.)

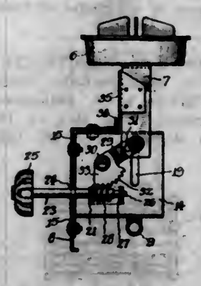
1. In combination, a spring-pressed finger for finger-jointers, a circularly adjustable tooth-carrying member on said finger, and releasable means carried by said finger and adapted to engage said member to normally prevent rotation thereof, for the purposes set forth.

1,637,176. WORK FEEDING AND CLAMPING MEANS FOR METAL-WORKING MACHINES. FRANK M. DAVIS, Milwaukee, Wis. Filed Nov. 3, 1924. Serial No. 747,527. 8 Claims. (Cl. 10—166.)



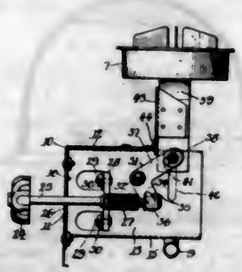
1. In a metal-working machine, the combination of a movable work carrier, toggle clamping mechanism movable with the work carrier, a cutting tool, and a yieldable tension band travelling with the work carrier during the cutting operation and operatively engageable at intervals with the toggle clamping mechanism for clamping the work on the carrier.

1,637,177. BANDEAU. NELLIE EICHEL, St. Louis, Mo. Filed Aug. 21, 1925. Serial No. 51,565. 1 Claim. (Cl. 2—190.)



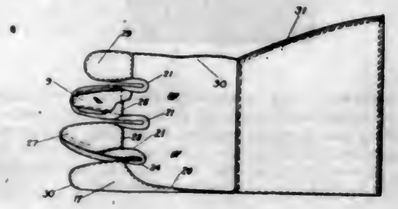
A pliable non-resilient bandeau for hats, comprising a casing of pliable textile material, a pliable strip of material within the casing and having substantial rigidity in the direction of its width, and pin members passing through one wall of the casing and each secured to the strip at two points one above the other, the hat engaging portions of the pins extending upwardly adjacent to the outer face of the casing.

1,637,178. HINGED EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed Oct. 19, 1925. Serial No. 63,365. 1 Claim. (Cl. 94—18.)



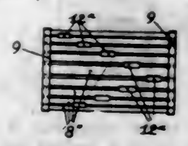
An expansion joint comprising sections of preformed strips of compressible material joined with their ends in confronting and abutting relation by staples, said staples being imbedded in the crown and base of the sections, the prongs thereof bridging the ends of the sections substantially as/and for the purpose described.

1,637,179. BURNER-REGULATING MECHANISM. CHARLES M. FITCH, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Oct. 21, 1925. Serial No. 63,815. 7 Claims. (Cl. 158—42.)



1. A wickless oil burner comprising, in combination, a stove body, a burner bowl, a vertical fuel supply pipe, a pipe connected to and carried by the bowl telescoping with the vertical supply pipe, a vertically movable support for the bowl, a pivoted arm having a pin and slot connection with said support, a shaft rotatable in the stove body, a worm on said shaft, and a worm-wheel segment rigid with said pivoted arm, said segment being formed about the pivot center of the arm, and said segment being in mesh with the worm.

1,637,180. BURNER-REGULATING DEVICE. CHARLES M. FITCH, Kankakee, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a Corporation of New York. Filed Nov. 2, 1925. Serial No. 66,136. 2 Claims. (Cl. 158—42.)



1. A wickless oil burner comprising, in combination, a stove body, a burner bowl, a vertical fuel supply pipe, a pipe connected to and carried by the bowl telescoping with the vertical supply pipe, a vertically movable support for the bowl, a pivoted lever having a pin and slot connection with said support and a shaft having rotatable screw-threaded engagement with a fixed portion of said stove body and having operative connection with said pivoted lever.

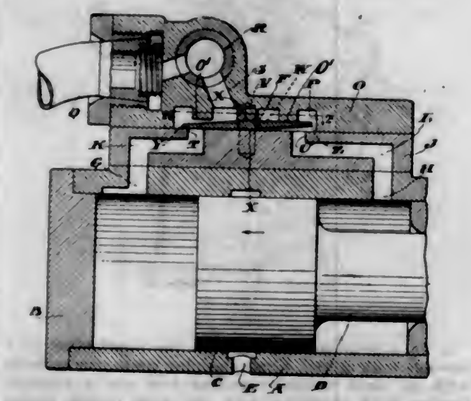
1,637,181. WORK GLOVE. HERMAN GILLIAN, Columbus, Ohio. Filed Mar. 1, 1926. Serial No. 91,405. 1 Claim. (Cl. 2—161.)

A glove lining unit having integral front, back and digit portions, a palm facing having integral digit fronts, facing fourchettes at the finger crotches connected to the finger front facing to terminate intermediate of the length of the fingers, and facing finger back tips connected to the finger front facing and extending away from the tips of the fingers to the fourchettes and short of extending to the region of the finger crotches.

1,637,182. ROTOR FOR ELECTRICAL MACHINES. ARTHUR GLAUBITZ, Mulheim-Ruhr, Germany, assignor to the Firm: Thyssen & Co. Aktiengesellschaft, Mulheim-Ruhr, Germany. Filed May 17, 1926, Serial No. 109,679, and in Germany Dec. 28, 1922. 6 Claims. (Cl. 171—206.)

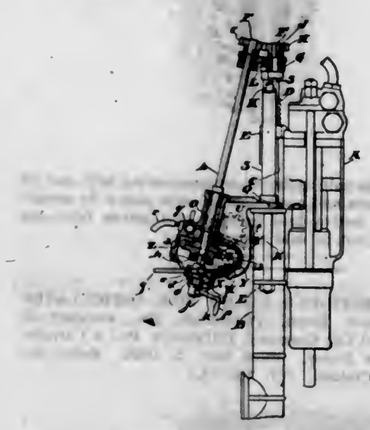
1. In a rotor for electrical machines, the combination of a slotted core, coil holders inserted in the periphery of the latter, keys extending between the heads of said coil holders, pole-pieces and coils inserted between said coil holders, and a damping-winding inserted between said keys and coils and consisting of a damper cage of which at least large sections are prepared previous to its mounting in the rotor.

1,637,183. VANITY BOX. JAMES B. GRIFFIN, Waterbury, Conn. Filed May 20, 1926. Serial No. 110,389. 8 Claims. (Cl. 132—83.)



6. In a vanity box, a hollow base member, a ring member located therein, said ring member and the rim of said base member defining a powder-containing chamber, a sliding plate having a depending outer flange fitting within said ring member, spring means for pressing said plate upwardly, said ring member having openings normally closed by said plate to permit powder to pass out upon the top of said plate when the latter is depressed.

1,637,184. FRICTION CLUTCH. JOSEPH ARTHUR GUAY, Lynn, Mass. Filed Oct. 19, 1925. Serial No. 63,397. 7 Claims. (Cl. 192—68.)

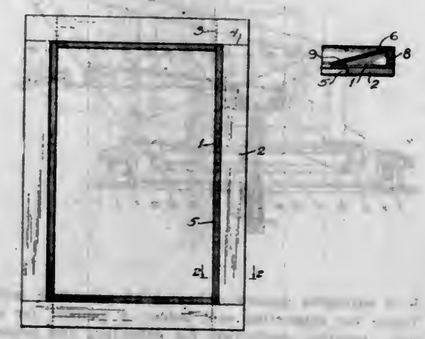


1. A clutch plate comprising two spaced parallel disks, interleaving fingers on the peripheries of the disks which connect said disks together, the ends of said fingers projecting beyond the surfaces of the disks, clutch facings held by the projecting ends of said fingers, and yielding means located between said disks.

1,637,185. DISK VALVE FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 20, 1925. Serial No. 31,486. 1 Claim. (Cl. 121—22.)

A fluid actuated rock drill comprising a cylinder and reciprocating piston, a free exhaust port located centrally of the cylinder and controlled only by the piston, a valve box having a valve seat and a shallow circular bore forming a valve chamber located at the side of the cylinder, said valve box being formed with a flange forming a stop for the valve, a plate valve in the form of a thin flat oscillating circular disk having a relatively broad area in said box, said valve disk having clearance at opposite edge portions and being uniformly tapered from its median diameter towards said opposite edge portions, the valve lying in direct contact with the valve seat along said median line to form a fulcrum, said valve having notches at the ends of its median diameter, pins entering said notches to hold the valve against rotation about its longitudinal axis, and to locate the valve box with respect to the cylinder, and inlet ports for the cylinder controlled only by said valve.

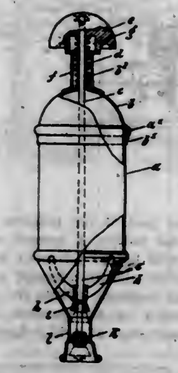
1,637,186. FEED-SCREW MOTOR FOR ROCK DRILLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 19, 1926. Serial No. 82,272. 2 Claims. (Cl. 121—9.)



1. The combination of a rock drill, a shell therefor, a feed screw rotatable in the shell and operatively connected to the rock drill, rods supported by the shell and extending rearwardly thereof, a bearing bracket on the free end of the rods to support one end of the feed screw, a rotary motor, a motor bracket supported by the rods, a shaft adapted to be rotated by the motor and supported at one end by the bearing bracket, and gears on corresponding ends of the feed screw and the shaft meshing with each other to transmit the rotary movement of the motor to the feed screw for imparting retrograde movement to the rock drill with respect to the shell.

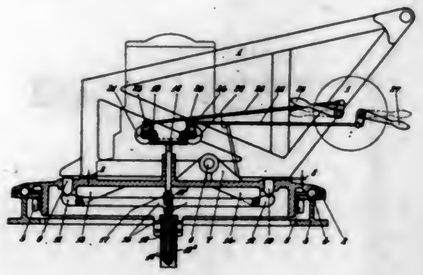
1,637,187. GASEOUS FUEL. JOHN HARRIS, Cleveland, Ohio, assignor to James R. Rose, Edgeworth, Pa. Filed May 28, 1923. Serial No. 642,090. 1 Claim. (Cl. 48—3.)

A gaseous fuel for cutting and welding purposes, consisting of a mixture of acetylene with not materially less than 5% and not materially more than 20% by volume of benzine vapor.



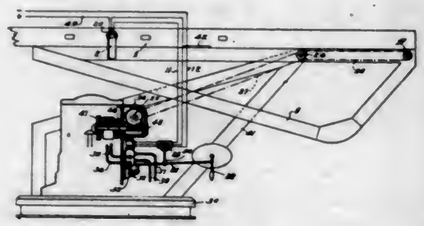
1,637,188. PICTURE-FRAME CONSTRUCTION. VALDEMAR E. HANSEN, Chicago, Ill. Filed June 7, 1926. Serial No. 114,206. 1 Claim. (Cl. 40—152.)

A picture frame comprising a plurality of pairs of strips joined at their ends to form a polygonal frame and having each side member composed of back and front rectangular strips of cardboard glued together face to face, said front strips being wider than said back strips, the outer side edges of said strips being in registry so as to form a recess at the inner sides of said edges for a glass, a mat, and a picture, one strip of each pair being as much shorter than the other strip as the width of the adjacent corresponding strips, said side members being joined by overlapping and gluing together the protruding



ends of opposite strips so that the end edges of the shorter strips abut against the side edges of the adjacent longer strips, a beveled facing of cardboard on said front strips for imparting rigidity thereto, and a flexible covering material surrounding said frame members and glued thereto for holding said beveled front and back strips securely together.

1,637,189. POWDERED-SOAP-DISPENSING DEVICE. HUGO HELBERGER, Munich, Germany. Filed Jan. 26, 1927, Serial No. 163,634, and in Germany Oct. 22, 1925. 4 Claims. (Cl. 221—62.)



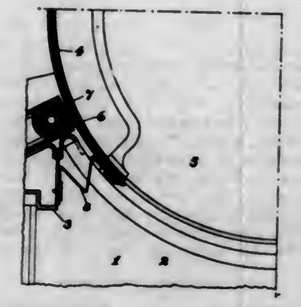
1. A powdered soap dispensing device, comprising a container, a removable cover for the container said cover having a tube projecting therefrom, a plunger operable in said container and guided in said tube, a button at one end of the plunger said button having a cavity therein, and a spring encircling said tube and having one end engaging the cover and its other end within said cavity.

1,637,190. SAFETY DEVICE FOR PORTABLE POWER-OPERATED FIRE ESCAPES. FRANZ HETZELBERGER, Ulm-on-the-Donau, Germany, assignor to C. D. Magirus, Aktiengesellschaft, Donau, Germany, a Corporation of Germany. Filed Aug. 29, 1925, Serial No. 53,443, and in Germany May 12, 1925. 7 Claims. (Cl. 228—8.)

1. A salvaging apparatus having an extensible ladder, a frame for supporting said ladder, a support for said frame, operating mechanism for extending and telescoping said ladder, operating mechanism for elevating and lowering said ladder, and means operated by movement of the supporting frame out of its normal position for stopping said operating mechanisms.

1,637,191. AUTOMATIC CONTROL FOR VEHICLE SUPERSTRUCTURES. FRANZ HETZELBERGER, Ulm-on-the-Donau, Germany, assignor to C. D. Magirus, Aktiengesellschaft, Donau, Germany, a Corporation of Germany. Filed Aug. 29, 1925, Serial No. 53,444, and in Germany June 3, 1925. 10 Claims. (Cl. 228—8.)

1. An electrical control for ladders, comprising a contact carried by the ladder, a second contact pendulously suspended from said ladder adjacent said first mentioned contact, an etlectric circuit adapted to be closed by the contacting of said contacts, means for rotating the ladder and means actuated by the current in said circuit for controlling the operation of said rotating means.



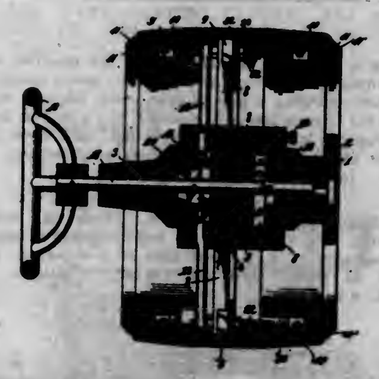
1,637,192. PERCUSSIVE TOOL. FRANCIS A. JIMERSON, Athens, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 26, 1926. Serial No. 131,651. 2 Claims. (Cl. 121—11.)

1. A pneumatic percussive tool comprising a cylinder having motive fluid supply ports communicating with the front and rear ends of said cylinder and centrally disposed exhaust ports, a hammer piston adapted to reciprocate in said cylinder, a front head to receive the shank of a tool to be struck by said hammer piston, means controlled by the shank of said tool to permit escape of motive fluid from the end of said cylinder and a centrally

disposed port in said cylinder communicating with one of said supply ports and controlled by said piston to permit the escape of motive fluid back of said piston from one of said ports and to said exhaust port.

1,637,193. VESTIBULE GUARD FOR ARTICULATED CARS. FELIX KOCH, Pittsburgh, Pa., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 2, 1926. Serial No. 91,826. 8 Claims. (Cl. 105—4.)

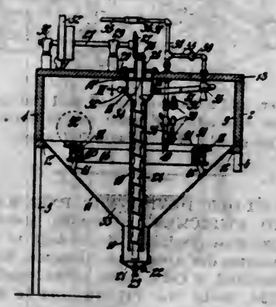
1. In an articulated car comprising a plurality of bodies, a vestibule member between the adjacent ends of two of said bodies, weather proofing means between said member and bodies, and guard means extending between said member and bodies across the point of contact of said weather proofing means interiorly of said bodies.



1,637,194. SUPPORT FOR FOLDING DOORS. JOSEPH C. KOOP, Newark, N. J. Filed Nov. 2, 1923. Serial No. 672,332. 2 Claims. (Cl. 16—88.)

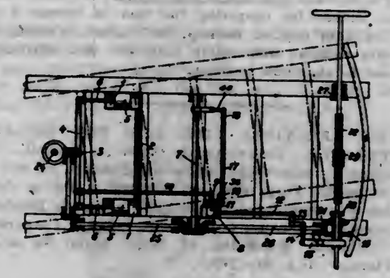
1. A guide for folding doors, said doors comprising a socket including a top plate and a bushing, a sleeve passing through in screw threaded engagement with the bushing, a stem slidable in the sleeve and having a shoulder to abut on the lower end of the sleeve, a spring abutting on the top plate and extending into the sleeve

and held thereby in engagement with the top of the stem, a rail with a groove therein, and a ball in the groove and seated in the shoulder of the stem.



1,637,195. TIRE-BUILDING MACHINE. JOHN W. KUHN, Akron, Ohio. Filed Apr. 13, 1926. Serial No. 101,758. 14 Claims. (Cl. 154—10.)

1. In a machine of the class described, a wheel including a tire building band, and a ring of lesser external diameter than said band disposed at each edge of said band and partly within its periphery.

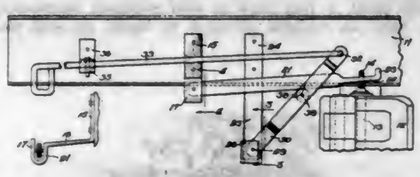


1,637,196. SAND-BLASTING MACHINE. FREDERICK LAU, Carmel, N. Y. Filed Nov. 21, 1923. Serial No. 676,073. 7 Claims. (Cl. 51—15.)

6. An apparatus of the character described comprising, a container for the sand, said container having downwardly tapered walls and a cylindrical portion at the bottom thereof, a tube within the container and projecting into said cylindrical portion, a screw within the tube for moving the sand upwardly therein to a discharge point, a ring fixed in said container surrounding said tube, an annulus mounted to travel on said ring,

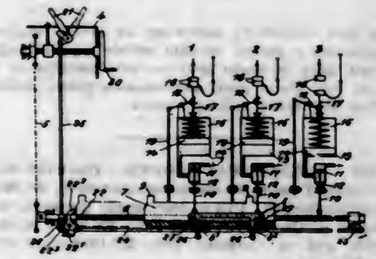
a rack gear carried by said ring, an article support on said annulus, a pinion on said article support engaging said rack gear, a worm gear on said annulus, a worm engaging said worm gear, and common power means for actuating said worm and said screw.

1,637,197. MECHANICAL LADDER. HERMANN MATTES, Ulm-on-the-Donau, Germany, assignor to C. D. Magirus Aktiengesellschaft, Ulm-on-the-Donau, Germany, a Corporation of Germany. Filed June 29, 1925, Serial No. 40,205, and in Germany Feb. 2, 1925. 10 Claims. (Cl. 228—8.)



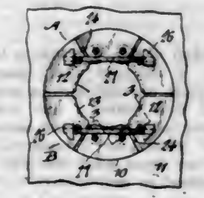
1. In a mechanical ladder, a frame, a ladder pivotally mounted thereon, a threaded shaft journaled in said frame, a pair of gears on said shaft, a pinion adapted to selectively engage said gears, a nut mounted on said shaft, and engaging said ladder, and means actuated by movement of the ladder for automatically disengaging the pinion from the gears when the nut has reached a predetermined position on said shaft.

1,637,198. UNCOUPLING DEVICE. JOHN MCMULLEN, Buffalo, N. Y. Filed May 22, 1920. Serial No. 383,390. 12 Claims. (Cl. 213—166.)



1. In an uncoupling device for railway cars, the combination with a car coupler and its coupling pin, of a pin-

operating lever pivotally carried by the car independently of the coupler, a pivoted lift lever for actuating said pin-

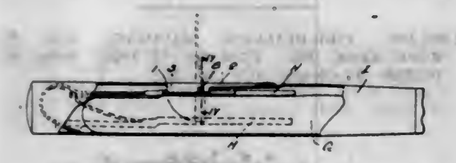


operating lever, and a hand-operated pull rod connected to said lift lever and adapted when pulled outwardly from the side of the car to actuate said lift lever.

1,637,199. CUT-OUT DEVICE FOR PNEUMATICALLY-OPERATED SWITCHES. GOTTLIEB MEYFARTH, Geneva, Switzerland, assignor of one-half to the Firm: Société Anonyme des Ateliers de Sécheron, Secheron, Geneva, Switzerland, a Corporation of Switzerland. Filed Nov. 4, 1924, Serial No. 747,712, and in Switzerland Nov. 22, 1923. 6 Claims. (Cl. 200—18.)

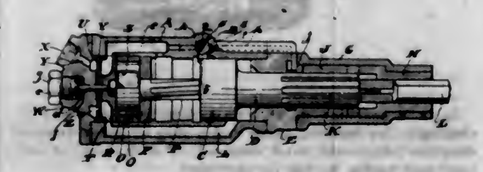
1. In an apparatus of the class described, a plurality of control members, a movable carriage, a cam associated with the carriage and adapted to actuate the said control devices, means for operating the cam to release a plurality of said control devices, and means whereby the said cam remains inoperative until the said carriage is returned to an initial position.

1,637,200. FLEXIBLE PIPE SLIP FOR DRILLING APPARATUS. FREDERICK J. O'BRIEN, Titusville, Pa., assignor, by direct and mesne assignments, of one-half to Titusville Forge Company, Titusville, Pa., a Corporation of Maryland, and one-half to Emsco Derrick & Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 18, 1926. Serial No. 82,070. 3 Claims. (Cl. 24—263.)



3. A casing slip of the character described, comprising a plurality of radially-spaced sectors, upper and lower horizontal links pivotally connecting adjoining sectors, and plates arranged in the spaces between said sectors, the upper and lower edges of said plates having notches engaging the corresponding links.

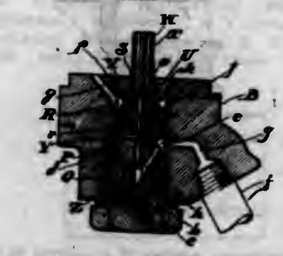
1,637,201. SHOULDER STRAP. AUGUST OBERSTEBRINK, Brooklyn, N. Y., assignor to Mohawk Textile Mills, Inc., Newark, N. J., a Corporation of New Jersey. Filed Feb. 8, 1926. Serial No. 86,897. 3 Claims. (Cl. 241—12.)



1. As a new article of manufacture, a shoulder strap for women's undergarments comprising a body portion of warp knitted fabric adapted to rest on the shoulder of the user, and integral knitted splayed ends for attachment to the garment at the front and back of the shoulder.

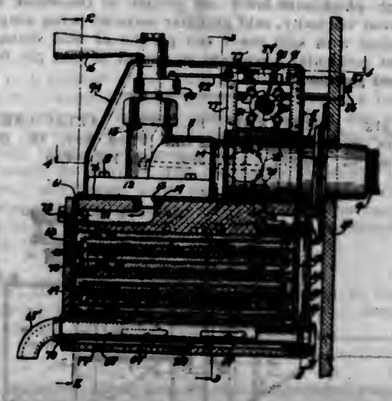
1,637,202. SELF-FILLER LEVER DEVICE FOR FOUNTAIN PENS. WILLIAM A. RAPPEPORT and CHARLES HARDY, New York, N. Y. Filed Dec. 30, 1922. Serial No. 609,871. 7 Claims. (Cl. 120—46.)

1. In a self-filling fountain pen, an ink reservoir shell, a self-filler lever carried by said shell, means carried by the shell providing a pair of open ended bearings within which the lever is pivotally mounted, and a squeeze spring engaging the lever to at all times hold said pivot parts against dislodgment from said open ended bearings.



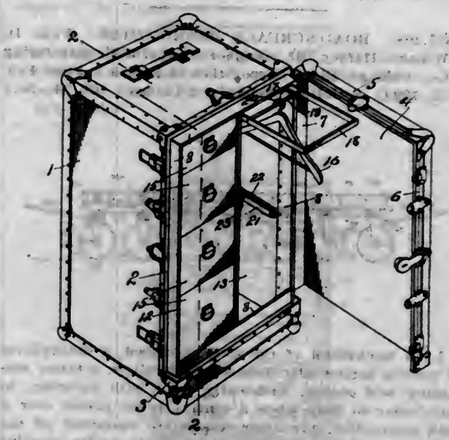
1,637,203. BLOWING DEVICE. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 26, 1926. Serial No. 144,335. 2 Claims. (Cl. 121—6.)

1. In a fluid actuated rock drill, the combination of a cylinder having inlet passages and a free exhaust port, a hammer piston in the cylinder controlling the exhaust port, a fluted extension on the hammer piston, a valve chamber, a valve in the chamber controlling the inlet passages, a conduit in the cylinder leading from an inlet passage to communicate with the flutes of the extension



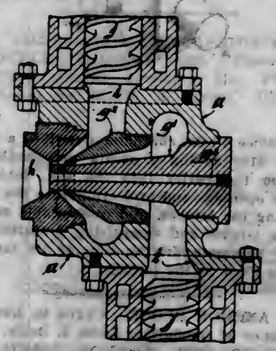
forwardly of the cylinder, and means in the cylinder for closing the exhaust port and for simultaneously permitting an uninterrupted flow of pressure fluid through the conduit and through the fluted extension.

1,637,204. TUBE CONNECTION FOR ROCK DRILLS. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 18, 1926. Serial No. 149,127. 1 Claim. (Cl. 121—10.)



In a fluid actuated rock drill, the combination of a cylinder, a back head for the cylinder having a recess, a tapered seat in the bottom of the recess, a pair of concentrically arranged tubes extending through the cylinder and into the recess, a flared portion on the outer tube to cooperate with the tapered seat for forming a fluid tight joint, a flange on the inner tube, a tapered plug seated in the flared end of the outer tube and loosely encircling the inner tube, a packing between the tapered plug and the flange, and a water plug screwed in the recess bearing on the flange to compress the packing and to hold the tapered bore and the flared portion of the outer tube firmly on their seats, said water plug having an aperture to receive the rearward end of the inner tube for holding said inner tube concentrically with respect to the outer tube.

1,637,205. FLUID-HEATING FAUCET. KARL TRAMP, Chicago, Ill. Filed June 2, 1926. Serial No. 113,161. 5 Claims. (Cl. 219—30.)



1. A fluid heating faucet comprising faucet mechanism including a standard tubular rear portion having a valve ball therein, a front portion detachably mounted on said rear portion and having fluid outlet means and handle means for sliding said ball longitudinally in said tubular rear portion, and heating mechanism mounted on said front portion and having a channel for conducting fluid from said outlet means to and fro through said heating mechanism.

1,637,206. WARDROBE TRUNK. VIRGIL WEEKS, Kansas City, Mo. Filed Aug. 10, 1925. Serial No. 49,299. 1 Claim. (Cl. 190—28.)

In a wardrobe trunk, a body having a side opening, an outwardly projecting ledge portion at the lower end of said opening, flanges extending outwardly from the front edge of the body of the inner sides respectively of the upper end and sides of said opening, the side flanges extending to said ledge portion, and a flange extending upwardly from the inner side of said ledge portion between said side flanges, and a cover for said opening adapted to cover said ledge portion flange and having at its upper end and side edges flanges adapted to respectively overlap and cover said end and side flanges of the body, the cover being hinged to said body and having the edges of its flanges abutting against the adjacent edges of said body, when the cover is closed.

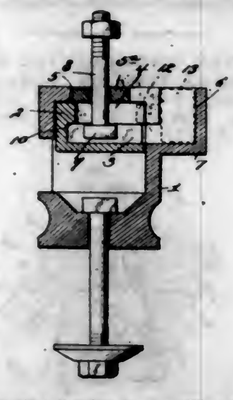
1,637,207. RUBBER AND LIKE FORCING MACHINE, EXTRUSION PRESS, AND THE LIKE. WALTER PERCY WHITEHOUSE, Gravesend, England. Filed May 21, 1923, Serial No. 640,559, and in Great Britain May 31, 1922. 2 Claims. (Cl. 18—14.)

1. A machine for the manufacture of sheet materia. i.. tubular or flat form from plastic material such as rubber, comprising a series of grooved conical extrusion nozzles, spiral grooves in the faces of said nozzles for extruding the plastic material in strip form, the grooved nozzles be-

ing concentric, whereby the strips may be extruded in concentric layers, means for supplying the plastic material to the nozzles, and means for uniting the strips edgewise as they leave the nozzles.

1,637,208. ROAD-SURFACE RESMOOTHER. FRED D. WILSON, Harvey, Ill., assignor to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1924. Serial No. 694,527. 2 Claims. (Cl. 94—50.)

1. In mechanism of the class described, a multiplicity of tandem horizontally disposed road rollers, a frame sustaining said rollers, sufficiently rigid with reference to each other so that when a central roller passes over a road obstruction, the other rollers are sustained off the road thereby throwing the weight of the entire machine on the one roller, means pivoting certain of the rollers on vertical axes and a series of diagonally disposed connecting rods between said pivoted rollers so arranged that manually rocking one pivoted roller on its vertical axis simultaneously so rocks all the pivoted rollers that the machine can move in a curve.

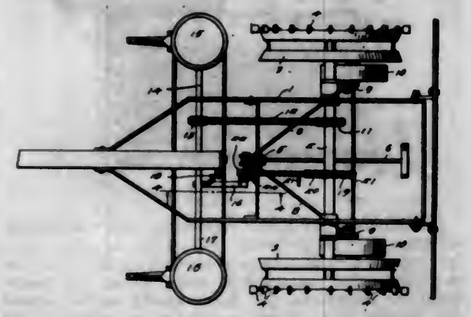


1,637,209. ELEVATOR. BERT WOODS, Tulsa, Okla. Filed May 16, 1925. Serial No. 30,796. 2 Claims. (Cl. 294—91.)

1. In a device of the character described a body having a slot and also having a cavity and inclined opening leading from the cavity into the slot, latches slidably fitted in the openings and projectible into the slot, springs for projecting the latches, and controllable means for retracting the latches and comprising a shiftable latch releasing rod having a driving cam at its inner end and driven cams fixed to the latches.

1,637,210. ANCHOR BLOCK. CLYDE G. BETTS, Warren, Pa., assignor of one-half to Louis J. Betts, Warren, Pa. Filed July 27, 1926. Serial No. 125,278. 9 Claims. (Cl. 72—105.)

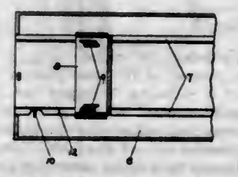
1. An anchor block including relatively movable members, one embracing the other, said members together being provided with a key-hole slot, the wider portion of said slot being in the embracing member and the narrower portion in the embraced member, the walls of said narrower portion being undercut to form a channel having overhanging flanges, communicating with the wider portion of said slot, said embraced member being rotatable



within the embracing member to a position in which said channel is out of registry with the wider portion of said key-hole slot.

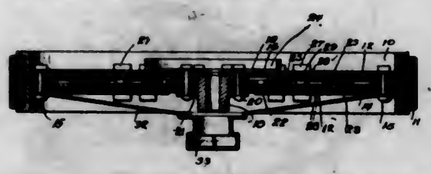
1,637,211. TALLY. BENJAMIN BERNARD BLEY, Waco, Tex. Filed July 3, 1926. Serial No. 120,410. 1 Claim. (Cl. 35—90.)

In a tally, a block having a top member having a chamber underneath said top member, said top member having a vertical perforation formed therein, a pin having a shank movable vertically in said perforation and having a head at the upper end of the shank, the lower end portion of said shank being turned laterally in said chamber, and granular material within said chamber through which said lower end portion of the shank may be moved vertically, said granular material being adapted to engage with said lower end portion of said shank to prevent accidental downward movement of said pin from a raised position.



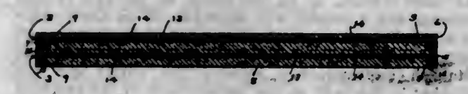
1,637,212. CHECKROW PLANTER ATTACHMENT. JOHN P. BODDIGER, Polo, Ill. Filed Nov. 19, 1926. Serial No. 149,371. 3 Claims. (Cl. 111—42.)

1. A check row attachment comprising in combination with a planter having an axle with the ground engaging wheels fixed thereto, an arm fixed to the seed dropping



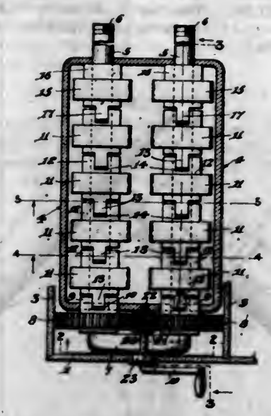
shaft of the planter, a bracket fixed to the intermediate portion of the planter, upper and lower sprocket wheels journaled upon the bracket, a sprocket wheel fixed to the axle of the planter, a sprocket chain trained around said sprocket wheels, and having a vertical run disposed between said upper and lower sprocket wheels, buttons carried by the sprocket chain, said arm having a free end portion extending into the path of movement of the buttons at the vertical run of the chain.

1,637,213. FOCUSING INDICATOR FOR CAMERAS. CARL BORNMANN, Binghamton, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed May 13, 1926. Serial No. 108,871. 1 Claim. (Cl. 95—45.)



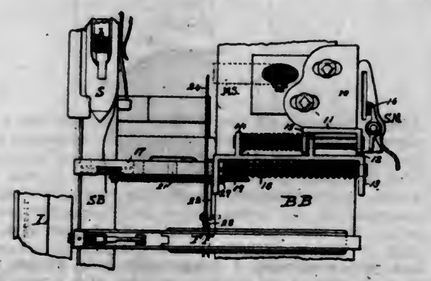
A camera comprising a body adapted to receive a sensitized medium in either one of two parallel planes, a platform, and a front slidable thereon for focusing, stop means on said platform for said front at a single predetermined point of fixed focus in relation to one of said planes, and an indicator mark on said platform for said front at a single predetermined point of fixed focus in relation to the other of said planes.

1,637,214. ELASTIC SUSPENSION WHEEL. DENIS P. J. BURGUIÈRES, Louisa, La., assignor of one-fourth to Godfrey Christ, Louisa, La. Filed Sept. 9, 1926. Serial No. 134,536. 2 Claims. (Cl. 152—28.)



2. A resilient wheel comprising a rim having spaced inwardly extending flange plates, a hub having a hub plate lying between the flange plates, a resilient disc connecting the rim and hub to normally support the latter centrally in the wheel, and a circular row of bolts secured through the resilient disc, the flange plates and the hub plate, said flanges plates and hub plates having alternate large and small openings about the bolts for connecting alternate portions of the resilient disc to the flange plates and the hub plate.

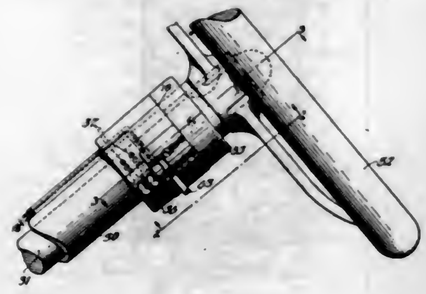
1,637,215. CONCRETE SLAB. FREDERICK D. COPPOCK, Greenville, Ohio. Filed Nov. 23, 1926. Serial No. 150,269. 3 Claims. (Cl. 94—12.)



1. A slab comprising a metallic armor in the form of a frame having the sides and ends thereof provided with spaced pairs of superposed slits and with the material freed by each pair of slits extended inwardly to provide a coupling piece, reinforcing bars having depending ends positioned between the coupling pieces and the frame whereby the bars are connected in position, said bars arranged within the frame inwardly with respect to the top and bottom edges thereof, and a non-metallic plastic body surrounded by said frame, having said bars embedded therein and further flush with the top and bottom edges of the frame.

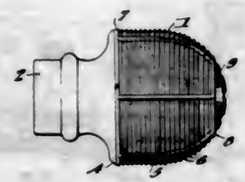
1,637,216. WATER-COOLED GRATE. WILLIAM H. CUNNINGHAM and JAMES T. ROWAN, Pittsfield, Mass. Filed Jan. 12, 1926. Serial No. 80,849. 1 Claim. (Cl. 122—374.)

In a furnace grate structure a plurality of spaced, stationary, parallel tubes constituting water heating conduits extending through the fire box of the furnace and having a communicating connection therebetween at their front ends positioned forwardly of the fire box of the furnace, a shiftable set of grate dogs mounted on each tube within the fire box, each dog of a set consisting of an inverted equilateral triangular shaped body portion having an axial opening for the passage of a tube and further including oppositely extending tubular extensions axially aligning with the opening thereof, said extensions having means providing radial intermeshing connections between adjacent dogs, meshed gears mounted upon the tubes outside of said fire box and each including a hub extended inwardly through the front fire box wall and provided with means for engaging the forward intermeshing connection of the tubular extension of the adjacent dog, and means for oscillating one of said gears whereby to operate the sets of grate dogs.



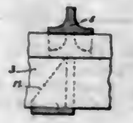
1,637,217. THREAD CUTTER AND STOP MOTION FOR WEFT-REPLENISHING LOOMS. DÉSIRÉ DACKMINE and HECTOR MONIER, Lewiston, Me. Filed Jan. 30, 1926. Serial No. 84,880. 9 Claims. (Cl. 139—264.)

1. The combination in a thread cutter and holder for weft replenishing looms, of a movable carrier frame for a cutter bar, a cutter bar maintained in reciprocal engage-



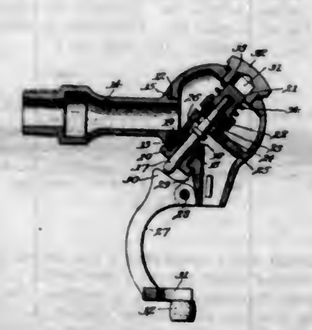
ment with the frame, a spring which engages the cutter bar and the frame, a thread cutter pivoted on the cutter bar, a rod which engages with the cutter, a spring and a stop on the rod for engagement with the movable carrier frame, a latch pivoted on the movable carrier frame for engagement with the cutter bar, and means for releasing the latch operatively connected with the weft replenishing mechanism of the loom.

1,637,218. SIGNAL-CONTROL MECHANISM FOR AUTOMOBILES. WILLIAM A. ECKERT, Buffalo, N. Y. Filed July 9, 1924. Serial No. 725,060. 14 Claims. (Cl. 200—59.)



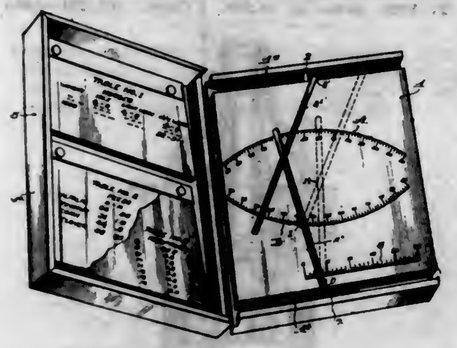
1. A direction signaling mechanism for automobiles having a rotary member and a stationary support adjacent to said member, comprising a carrier adapted to be mounted on said rotary member and provided with a circumferential locking channel, and an enlarged clearance chamber in a part of said channel, a switch lever adapted to control a signal circuit and pivoted on said support and having an outer arm adapted to be operated manually and an inner arm adapted to swing through said clearance chamber and to be held against turning in one direction or another direction by engagement of its inner arm with the bottom of said channel on one side or the other of said clearance chamber, and a restoring dog yieldingly mounted within said chamber and adapted to clear said lever and permit said carrier to turn in one direction relatively to said lever but to engage said lever and eject the same from said clearance chamber upon moving the carrier in the opposite direction.

1,637,219. HYDROMETER BULB. LEO EDELMANN, Chicago, Ill., assignor to E. Edelmann & Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1925. Serial No. 49,673. 5 Claims. (Cl. 230—169.)



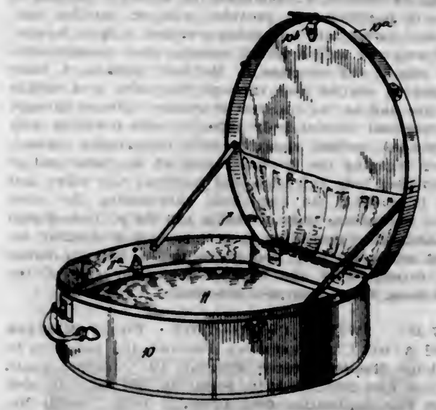
1. A bulb comprising a compressible body having attachment means at one end and provided with a plurality of circumferential and longitudinal ribs over its outer surface with the longitudinal ribs crossing and breaking the circumferential ribs.

1,637,220. CROSS-JOINTED METAL BAR. STEPHEN J. GARY, New York, N. Y., assignor of one-half to John E. Lewis, New York, N. Y. Original application filed Mar. 18, 1925, Serial No. 16,450. Divided and this application filed Aug. 28, 1925. Serial No. 53,156. 5 Claims. (Cl. 287—51.)



1. In a cross-joint for metal bars, a T-shaped bar formed with a portion of the base pressed out for receiving the base of a co-acting T-shaped bar, and a pair of pressed out braces formed with a gripping channel member at their meeting edges, the material forming the braces being pressed out of the web from the base and at an angle thereto to a point near the edge of the web whereby all of the material of the bar will be retained for bracing the web of the bar at the crossing and also the co-acting crossing bar fitted into the openings provided by the pressed out portions.

1,637,221. RECEPTACLE-ACTUATED FAUCET. CHESTER W. HATHAWAY, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 17, 1925. Serial No. 63,123. 1 Claim. (Cl. 251—116.)



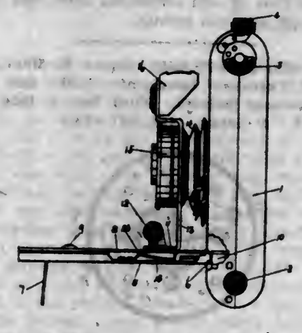
A faucet comprising a body of substantially spherical form having an integral depending nozzle and an inlet opening, the axis of which is substantially at right angles to the length of the nozzle, the interior of the body being divided into two chambers, communicating, respectively, with said inlet and nozzle, by a partition including a wall which extends inwardly from the edge of the inlet opening, at an inclination to the axis of said opening, and a second wall extending at an acute angle to said first wall across the inner end of the nozzle, said second wall being provided with an opening adapted to establish communication between the nozzle and the chamber in the body on the opposite side of the partition from the nozzle, a valve controlling flow through said opening and having its stem projecting from the body, a spring acting to maintain the valve in position to close said opening in the partition, and means adapted to be engaged by a vessel positioned beneath the nozzle for moving the valve in opposition to the spring.

1,637,222. CALCULATING DEVICE. LYNN H. HEMPLEMAN, Twin Falls, Idaho. Filed Aug. 12, 1926. Serial No. 128,732. 6 Claims. (Cl. 235—89.)

2. A calculating device for the purpose described, comprising a board having two degree scales marked thereon, with the geometric centers thereof located at opposite edges of said board, grooves extending along said edges, blocks slidably mounted in said grooves, indicators associated with said degree scales and pivotally mounted on said blocks.

1,637,223. HATBOX. JOSEPH A. HOLTZMAN, Baltimore, Md. Filed Mar. 5, 1926. Serial No. 92,608. 3 Claims. (Cl. 206—8.)

1. A hat box comprising a tubular open ended body portion, a permanent horizontal partition dividing the same into upper and lower compartments, independent lids supported by hinges at the free ends thereof, and fastened by the conventional suit case locks, the upper compartment adapted to receive a removable spacer to support a tray, and the lid thereof adapted to carry the tray to form an independent compartment, the partition adapted to detachably support a hat from on its bottom face whereby the lower compartment may be used as a hat box and container for other articles.

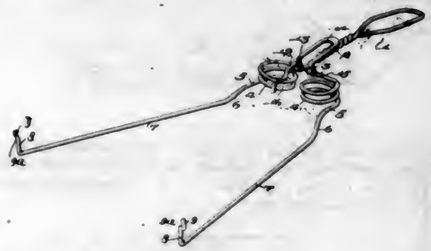


1,637,224. MANUFACTURE OF SCREW PROPELLERS. HENRY LEITNER, Croydon, England. Original application filed Apr. 24, 1926, Serial No. 104,449, and in Great Britain July 9, 1924. Divided and this application filed Dec. 8, 1926. Serial No. 153,411. 6 Claims. (Cl. 29—148.)

1. A process of manufacture of a screw-propeller blade from a solid block or blank of metal of approximately the shape of the blade, consisting in machining one side of the blank flat, securing the blank with the machined surface downward on the bed of a shaping machine with the end designed to form the tip of the blade higher than

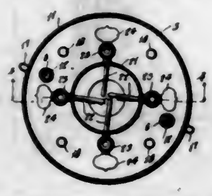
the other end, shaping the upper surface of the blade by cutters travelling longitudinally of the blade and at the same time rocking the blade by a corresponding movement of the machine bed.

1,637,225. CAMERA-FRONT CATCH. LEW W. LESSLER, Johnson City, N. Y., assignor to Ansco Photoproducts, Inc., Binghamton, N. Y. Filed Feb. 24, 1926. Serial No. 90,832. 4 Claims. (Cl. 95—46.)



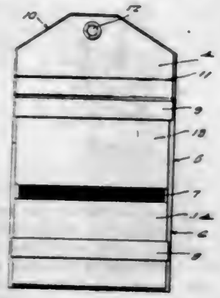
1. In combination with the platform of a camera, a slidable rail thereon, a sliding front on said rail, a spring catch on said platform engageable with said front when said rail is extended, and means on said rail for disengaging said catch from said front when said rail is returned.

1,637,226. WIRE-SPLICING TOOL OR WRENCH. ALBERT J. LEWIS, Burr Oak, Mich. Filed Jan. 21, 1926. Serial No. 82,706. 1 Claim. (Cl. 140—119.)



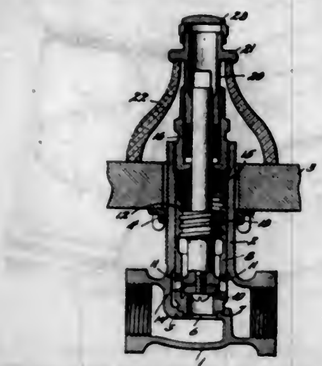
In a wire splicing tool or wrench for applying a splice sleeve connector to wires, the combination of a handle made up of symmetrical sides with head embracing portions open at the outer ends, a twisting head with hubs extending into said embracing portions provided with a ratchet at its periphery and a radial slot to cooperate with said open head embracing means, said slot being enlarged into engaging slots at its inner end to slide lengthwise of a connector sleeve, a pawl or dog pivoted between the sides of said handle with a laterally projecting thumb piece, and a spring for holding the same into engagement with the ratchet wheel, coacting substantially as described for the purpose specified.

1,637,227. PAN LIFTER. ALBERT R. MCDANIEL, Johnstown, Nebr. Filed June 18, 1926. Serial No. 116,925. 8 Claims. (Cl. 294—33.)



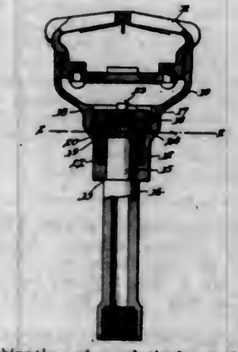
1. A pan lifter comprising a pair of supporting arms adapted to extend across the bottom of a pan underneath the pan, means at the outer ends of said arms for engaging with the rim edge of the pan, coil springs joined to the inner ends of said supporting arms, and a handle connected with said coil springs.

1,637,228. OIL DISPENSER. CLYDE E. MELVILLE and AUSTIN C. PETERSON, Sacramento, Calif.; said Peterson assignor to said Melville. Filed Feb. 2, 1926. Serial No. 85,577. 4 Claims. (Cl. 221—74.)



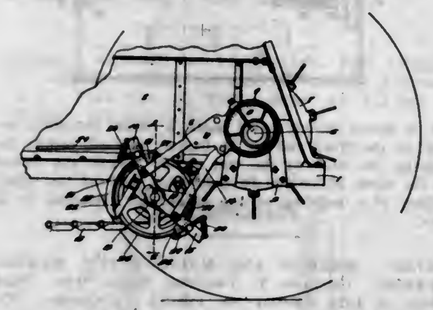
1. In an oil dispenser, a base embodying a storage tank divided vertically into a plurality of oil compartments, an oil delivery pipe extending upwardly from each compartment, a dispensing nozzle for each pipe disposed above the tank, and a compressed air supply pipe having a horizontal portion in the upper end of the tank communicating with each compartment.

1,637,229. CASE FOR CIGARETTE PAPERS. FELIX MERENSKY, Leavenworth, Kans., assignor of fifty per cent to George Merensky, Detroit, Mich. Filed Apr. 26, 1926. Serial No. 104,716. 1 Claim. (Cl. 150—39.)



As a new article of manufacture, a container for a book of cigarette papers, said container comprising hingedly connected backing members of symmetrical design and closing flap, said container being constructed from an inner ply of relatively stiff material, water proofed sheet material placed against the outer side of the stiff material, a facing and covering for said water proofing material, and a lining for said stiff material.

1,637,230. VALVE FOR BUILT-IN PLUMBING FIXTURES. LUCIEN W. MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 21, 1925. Serial No. 63,929. 1 Claim. (Cl. 251—156.)

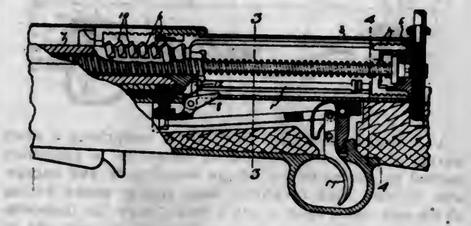


In a valve of the character described, the combination of a casing comprising a main body portion provided with inlet and outlet openings, separated by an interior partition provided with an opening, and a lateral tubular extension which is exteriorly threaded and provided adjacent its outer end with an interior thread, a nut engaging the exterior thread on said tubular extension and adapted to be turned thereon into close engagement with a wall or body, a tube within the lateral body extension having its inner end communicating with the opening in the said partition and provided with an interior compression thread, said tube being provided with an interior valve seat and with a lateral opening that communicates with one of the openings in the body portion, a valve adapted to control flow through the valve seat within the tube and having its stem extending outward through the tube and tubular body extension and provided with a threaded section engaging said compression thread, a plug engaging the interior thread at the outer end of the tubular body extension and confining the valve seat tube in position, an escutcheon surrounding the outer end of the tubular body extension and the portion of said retaining plug projecting therefrom, and a member engaged with said plug and providing an annular flange that extends over and engages the outer end of the escutcheon, for the purpose described.

1,637,231. SWIVEL CONNECTION. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Original application filed Nov. 12, 1919, Serial No. 337,492. Divided and this application filed June 12, 1924. Serial No. 719,555. 4 Claims. (Cl. 285—163.)

1. The combination of a relatively stationary member, a revoluble member mounted on said stationary member, a retaining nut threaded to said stationary member, and non-rotatable means interlocked with said stationary member directly beneath said nut to prevent turning contact of the revoluble member with the nut.

1,637,232. MANURE SPREADER. LEONARD B. NEIGHBOUR, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 3, 1924. Serial No. 703,920. 1 Claim. (Cl. 192—8.)



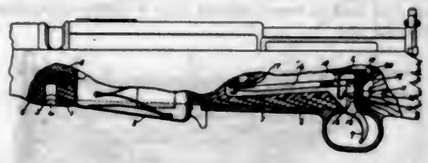
In a feeding device, the combination of a rotary shaft, a second rotary shaft mounted parallel therewith, a bearing for the second shaft, means to actuate the first shaft, mechanism connecting said shafts and operated by the first shaft to actuate the second shaft, a recess in said bearing adjacent said mechanism, a member secured rigidly on said second shaft having lugs extending from its periphery, lugs included in said mechanism extending into said recess in contact with the lugs on said member whereby said second shaft is rotated by operation of said mechanism, rolling elements within said recess adapted to automatically contact with the side thereof and momentarily check the rotation of said second shaft beyond its normal speed, and means to automatically release said contact when the normal speed of said second shaft is restored.

1,637,233. SMALL ARMS. GEORGE NORMAN, Small Heath, Birmingham, England, assignor to The Birmingham Small Arms Company Limited, Birmingham, England. Filed Nov. 17, 1926, Serial No. 148,953, and in Great Britain July 9, 1925. 8 Claims. (Cl. 42—3.)

1. In a firearm, a receiver having internal locking abutments, a locking bolt movable longitudinally in said receiver and having peripheral locking abutments, said locking bolt being also rotatable to cause engagement of its locking abutments with the locking abutments of the receiver, said bolt also having a peripheral projection and said receiver having a cam groove cooperative with said projection to cause rotary movement of the bolt during a part of the longitudinal movement of the latter, means tending to move said locking bolt forwardly, a member longitudinally movable in said receiver and associated with said bolt, a spring associated with said member and said bolt and tending to move said member and bolt in opposite directions, said member and said bolt having interengaging means adapted, during the rearward movement of the bolt under the influence of a firing recoil and consequent rotary movement of the bolt by engagement of its projection with said cam groove, to move said member toward the rear end of said bolt and compress said spring and lock said member to said bolt and, when said bolt is moved forwardly, to unlock said member from said bolt and permit said spring to expand.

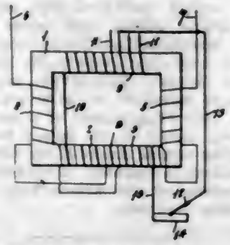
1,637,234. AUTOMATIC FIREARM. GEORGE NORMAN, Small Heath, Birmingham, England, assignor to The Birmingham Small Arms Company, Limited, Birmingham, England. Filed Nov. 17, 1926. Serial No. 148,954, and in Great Britain July 9, 1925. 11 Claims. (Cl. 42—3.)

1. In a firearm comprising a breech body, a breech bolt in said body having means adapted, when said bolt is partially rotated on its axis, to engage complemental means in the breech body for locking said bolt in closed position and a firing pin longitudinally movable in the breech body, a sear for holding said firing pin in cocked position and trigger for releasing said sear, means for simultaneously locking the breech bolt against rotation and the sear against release, said means comprising a rod extending longitudinally of the breech body and mounted to rock at a right angle to its length, said rod having portions movable, respectively, into and out of the path of rotary movement of the breech bolt and into and out of the path of movement of a part of the sear when the locking means of the breech bolt are in engagement with the locking means of the breech body and said rod is rocked in opposite directions, and means projecting exteriorly of the breech body adjacent the trigger for rocking said rod.



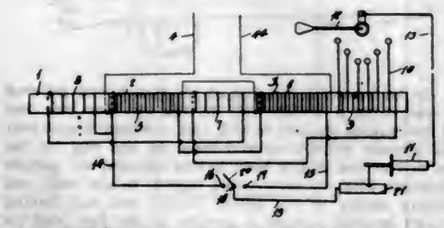
1,637,235. AUTOMATIC FIREARM. GEORGE NORMAN, Small Heath, Birmingham, England, assignor to The Birmingham Small Arms Company Limited, Birmingham, England. Filed Nov. 17, 1926, Serial No. 148,955, and in Great Britain July 9, 1925. 3 Claims. (Cl. 42—3.)

1. In an automatic fire-arm of the type herein referred to, comprising a breech body having an open rear end and interrupted threads in said end, a hollow breech bolt longitudinally slidable in said body, an end cap for the open end of the breech body having interrupted threads engageable with the interrupted threads in the body, and a return spring in the hollow breech bolt and having one end bearing against a portion of the bolt and its other end bearing against the cap, means whereby the return spring can be held or locked in compression within the hollow breech bolt, in order to facilitate the assembling and stripping of the parts of the gun, said means comprising internal lugs on the end cap and lugs formed on the outer end of the breech bolt, said latter lugs being adapted to engage with the former lugs, when



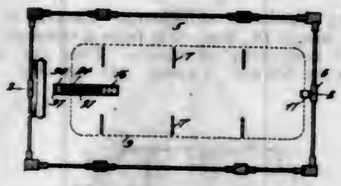
the said bolt is drawn to its rearward position and the end cap is turned to cause its interrupted threads to disengage from the interrupted threads in the breech body.

1,637,236. SMALL ARM. GEORGE NORMAN, Small Heath, Birmingham, England, assignor to The Birmingham Small Arms Company Limited, Birmingham, England. Filed Nov. 17, 1926, Serial No. 148,956, and in Great Britain July 9, 1925. 4 Claims. (Cl. 42—69.)



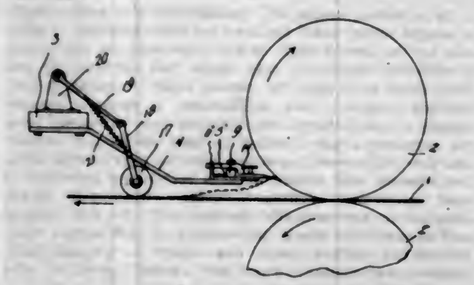
1. A trigger guard for small arms, comprising a plate having at its front end a hook formation, a projection carried by the underside of the breech body and engageable by said hook formation, said trigger guard having at its rear end a hook, a catch mounted on the underside of the breech body and engageable with the rear end of the trigger guard, and a trigger pivoted on said catch.

1,637,237. TRANSFORMER FOR ELECTRIC-ARC CUTTING AND WELDING APPARATUS. FREDERICK CARLISLE OWEN, Fayetteville, N. C. Filed Apr. 15, 1926. Serial No. 102,235. 7 Claims. (Cl. 171—119.)



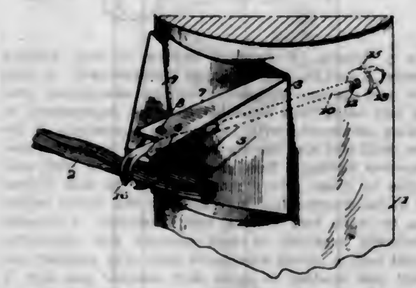
1. A transformer having a rectangular core providing but a single metallic magnetic path, a primary winding distributed around three adjacent legs of the core and having a reversed coil, and a secondary winding comprising two sections, one section being wound on the middle one of said three legs, and the other section being wound on the opposite or fourth leg of the core.

1,637,238. ELECTRICAL TRANSFORMER. FREDERICK CARLISLE OWEN, Fayetteville, N. C. Filed May 1, 1926. Serial No. 106,112. 2 Claims. (Cl. 171—119.)



1. A transformer comprising a straight core providing an open magnetic circuit, a primary winding having coils arranged in spaced relation on the core, and a secondary winding having coils interlinked with the primary winding, a coil located between the coils of the primary winding, and coils located outwardly beyond the coils of the primary winding.

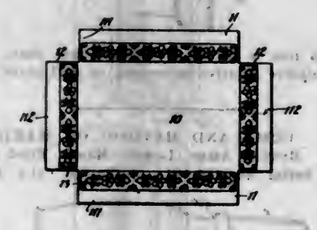
1,637,239. CASKET-RETAINING DEVICE FOR HEARSES. WILLIAM B. PARSELS, Pleasantville, N. J. Filed Oct. 1, 1926. Serial No. 138,930. 7 Claims. (Cl. 296—18.)



1. A hearse having panel posts, a casket retaining element in the front end of the hearse, a block, means for securing the block at the rear of the casket, and means on the block adjustable to embrace a part of the upper surface of a molding of the casket for clamping it in place.

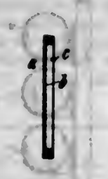
1,637,240. METHOD AND MACHINE FOR MAKING PAPER. CHARLES V. PROCTOR, Biron, Wis. Filed Sept. 2, 1926. Serial No. 133,201. 4 Claims. (Cl. 92—38.)

1. In combination with a paper making machine having a web and rolls engaging said web, a support, a supporting arm projecting from said support, a cutter blade slidably and adjustably mounted on said supporting arm for contact with the periphery of said roll in a predetermined manner, a presser roller, and means movably and rotatably supporting said presser roller on said support for engagement with said web to press a paper strip into firm engagement with said web.



1,637,241. CABLE GUARD. IRVING E. QUIST, Warren, Minn. Filed Oct. 6, 1926. Serial No. 139,944. 4 Claims. (Cl. 256—55.)

1. A bracket for use in supporting a guard cable on a post comprising a body plate designed to snugly fit the post, converging side plates carried by said body and having a cable seat at their outer ends, and means for connecting said side plates.

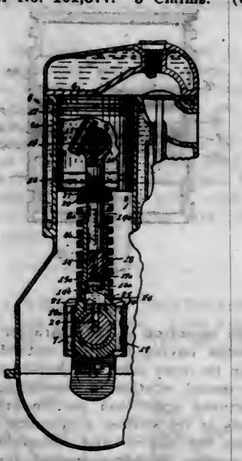


4. A bracket for use in supporting a guard cable on a post comprising a curved body plate designed to snugly fit the post, converging side plates integral with the body plate and tapering toward their outer ends, the outer ends of the side plates being formed with a cable seat, and integral wings formed on the upper and lower edges of the side plates, the wings of the opposed side plates overlapping and being secured together.

1,637,242. METHOD OF PRODUCING THE SHELLS OF METAL BOXES. ALFRED F. REILLY, Attleboro, Mass. Filed Nov. 29, 1926. Serial No. 151,493. 2 Claims. (Cl. 113—116.)

1. In a method of producing shells for vanity cases and similar articles, the steps of producing from sheet material a blank presenting panels along the edges thereof producing ornamental zones on said panels inward of the outer edges of the panels, removing the surplus material laterally outward of said ornamental zones and then bending up the said panels.

1,637,243. NONRESONANT DIAPHRAGM. EUGEN REISZ, Berlin-Dahlem, Germany. Filed Dec. 1, 1926, Serial No. 152,026, and in Germany Nov. 12, 1925. 6 Claims. (Cl. 179—122.)

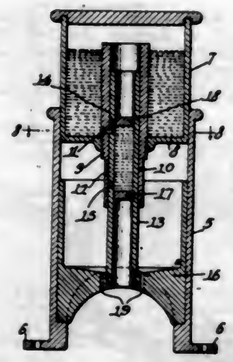


4. A non-resonant diaphragm, comprising a thin piece of elastic material having finely reduced conducting material secured to one face with the particles thereof disconnected from each other.

1,637,244. STOCKING AND THE MANUFACTURE THEREOF. ROBERT W. SCOTT, Babylon, N. Y., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed Jan. 14, 1925. Serial No. 2,407. 3 Claims. (Cl. 66—182.)

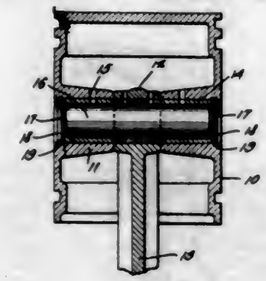
3. The mode herein described of knitting a stocking upon a circular knitting machine, said mode consisting in first producing the leg portion of the stocking by round-and-round knitting upon all of the needles, then putting out of action needles around one half of the machine and also a group of needles adjoining the same at each side of the machine, then producing the heel by to-and-fro knitting and narrowing and widening upon the remaining restricted segment of needles, then reintroducing the needles originally put out of action and producing the foot web by round-and-round knitting, then putting out of action needles around one half of the machine as before, and then producing the toe by to-and-fro knitting and narrowing and widening upon the remaining half of the needles.

1,637,245. IMPULSE EQUALIZER FOR INTERNAL-COMBUSTION ENGINES. GEORGE H. SCULLY, Los Angeles, Calif., assignor of one-third to Charles O. Middleton, sr., Beverly Hills, Calif. Filed Apr. 12, 1926. Serial No. 101,377. 5 Claims. (Cl. 123—78.)



1. In an internal combustion engine, a crank, a piston, a fluid conveying connecting rod connecting said crank and piston; said rod comprising relatively movable parts providing a pumping chamber therebetween, and means whereby a sudden thrust imposed on said piston will cause said rod to pump oil through the rod to lubricate the piston.

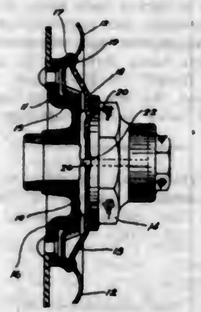
1,637,246. EXTERMINATOR. ELLICK J. SEAVER, Beloit, Wis. Filed Sept. 11, 1926. Serial No. 134,858. 2 Claims. (Cl. 43—131.)



1. In a device of the character described, a body portion, a tank mounted in the upper portion of the body portion, a movable tank under the first mentioned tank,

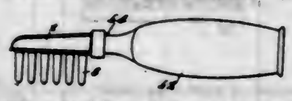
a measuring pipe carried by the movable tank and adapted to receive material from the first mentioned tank,

said pipe adapted to deposit material into the movable tank, and said movable tank having openings to permit material to discharge therefrom.



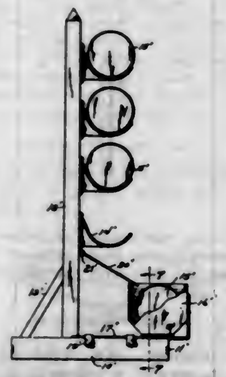
1,637,247. PISTON PIN. CALEB H. SNYDER, Winnsboro, La. Filed Oct. 26, 1925, Serial No. 64,884. Renewed June 13, 1927. 1 Claim. (Cl. 74—108.)

A wrist pin mounting of the character described comprising a piston having inwardly extending sleeves arranged within its inner sides and having their inner ends arranged in spaced relation, a connecting rod having a circular apertured upper end portion arranged between the inner ends of the sleeves, a plurality of bushings arranged within the sleeves and connecting rod and including registering oil ports therein for receiving the splashed oil, a pair of disks arranged at the opposite ends of the wrist pin within the bores of the sleeves, and split rings arranged immediately in advance of the disks for preventing their accidental displacement within the sleeve bores whereby the wrist pin will be floated within a bath of oil and preventing its end play whereby the cylinder walls of a motor may not be scored.



1,637,248. LOCKING MECHANISM. JOHN W. WHITE, Buffalo, N. Y. Filed Nov. 24, 1922. Serial No. 603,078. 3 Claims. (Cl. 301—9.)

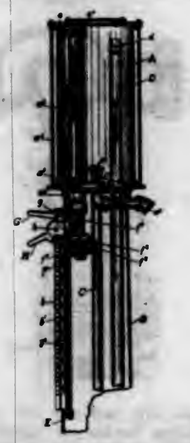
3. Locking mechanism for connecting the disc of a disc wheel to the hub thereof comprising an annular plate and a nut on said hub contacting with said plate, means for holding said plate against rotation on said hub, comprising a tongue on said plate and a keyway in said hub with which said tongue engages and means functioning



when said nut is tightened against said plate for preventing relative rotative movement of said plate and said nut.

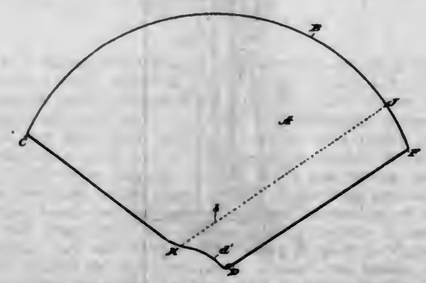
1,637,249. COMB AND METHOD OF MAKING THE SAME. BUTLER AMES, Lowell, Mass. Filed Sept. 15, 1926. Serial No. 135,561. 8 Claims. (Cl. 132—13.)

1. A comb comprising a body portion divided longitudinally, a series of hollow teeth secured to one of said portions, a spring pressed valve mounted in each tooth independently of said body, each hollow tooth having a rib near its base constituting an exterior shoulder abutting against the body section and an abutment for the spring held by the interior of said rib in each tooth.



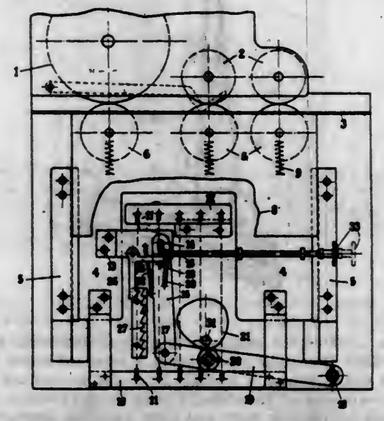
1,637,250. GRAIN SPROUTER. CHARLES W. ARHINO, Laurel, Iowa. Filed Aug. 7, 1925. Serial No. 48,891. 7 Claims. (Cl. 47—14.)

2. In a grain sprouter comprising supporting bases, standards carried upon the upper sides thereof, supporting brackets arranged upon the standards, sprouting receptacles carried by the brackets, and a soaking tray carried by the supporting bases.



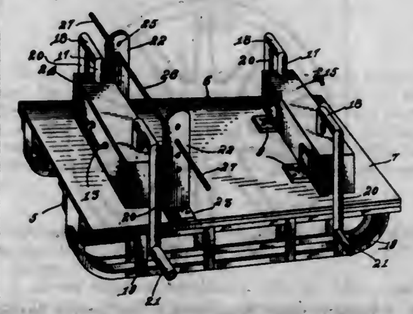
7. A grain sprouter of the character described comprising supporting bases, standards carried thereby, a plurality of companion arcuate shaped brackets arranged at spaced intervals and upon the forward sides of the standards, a multiplicity of perforated sprouting drums carried by the brackets, removable cover caps for the drums, a soaking tray supported upon the upper sides of the bases, angular supporting strips carried upon the bases slidably mounting the soaking tray thereon, and a drip plate hingedly secured to the forward sides of the bases and having its lower edge extended within the soaking tray at an inclination with respect to the adjusted position of the soaking tray.

1,637,251. LIQUID MEASURING AND DISPENSING APPARATUS. LINNAEUS E. BAKER, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Jan. 5, 1926. Serial No. 79,338. 4 Claims. (Cl. 221—100.)



1. In combination with a liquid measuring and dispensing apparatus having an elevated container, means for supplying liquid to said container, a vertically slidable serve-tube whose upper end communicates with said container, stop means for setting the vertical height of said serve-tube from time to time before serving liquid from said container, and a serve-valve to control the flow of liquid dispensed; a lever to control said setting-means, a lever to open said serve-valve, and co-acting means on said levers adapted to so interlock them that the lever which opens the serve-valve can function only when the setting-means is set in a position to serve liquid and so that when in this position and the serve-valve open the setting-lever can not be shifted to change the position of the setting-means.

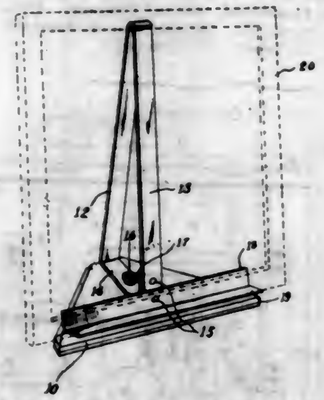
1,637,252. BLANK FOR CONICAL VESSELS. CECIL F. DAWSON, Easton, Pa., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Feb. 9, 1924. Serial No. 691,705. 2 Claims. (Cl. 229—1.5.)



1. A blank for forming conical vessels, said blank having an arcuately curved edge and two substantially straight edges intersecting each other and said curved edge, the radial center of said curved edge lying within the blank, said substantially straight edges making substantially equal angles with radii to their respective points of intersection with the curved edge, and one of said substantially straight edges having an inward bend near and extending to the point of intersection of said edges, the blank being adapted to be bent to conical form about the radial center of the curved edge thereof as the central point of bending.

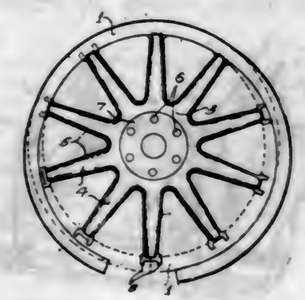
1,637,253. MECHANISM FOR FEEDING LETTERS OR OTHER MAIL TO PREPAYMENT MACHINES. WILHELM FRIEDRICHS, Berlin, Germany. Filed Apr. 10, 1924, Serial No. 705,641, and in Germany Apr. 19, 1923. 5 Claims. (Cl. 271—62.)

2. Mechanism for feeding mail matter to a pre-payment machine, comprising stamping means, a vertically reciprocable table beneath said stamping means, a pull rod for moving said table downwardly, and means for moving said table upwardly, the upward travel being limited in accordance with the thickness of the matter to be fed, a pawl on said table, a rack fixed relative to the main frame of the machine, and means forcing said pawl into engagement with said rack when said table reaches its upper limit for locking said table against further upward travel.



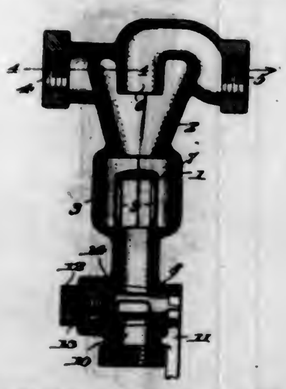
1,637,254. BOLL-WEEVIL EXTERMINATOR. ETIENE FRANK GOMEZ, New Orleans, La. Filed June 20, 1924. Serial No. 721,334. 3 Claims. (Cl. 43—127.)

1. A boll weevil exterminating machine comprising a metallic table, runners for supporting said table, a series of hollow chambers arranged upon the table at points adjacent the opposite ends thereof, ovens slidably mount-



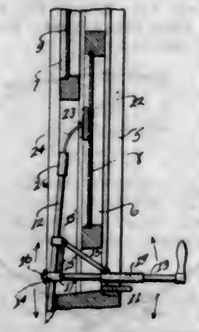
ed within said chambers, fume distributing pipes carried by each of said chambers and having the inlet ends thereof communicating with the ovens and the discharge ends thereof arranged beyond the opposite longitudinal edges of the table, and means interposed between said chambers for removing from the plants the insects.

1,637,255. EASEL. NOAH ELLSWORTH HARRIS, Dickinson, N. Dak. Filed Sept. 20, 1926. Serial No. 136,638. 1 Claim. (Cl. 40—146.)



An easel of the character described comprising a substantially triangular shaped base, a standard rising therefrom and including a straight limb and an inclined limb, the lower end of the straight limb being extended transversely across the base and then extended upwardly at a point rearwardly of the forward edge of the base and against the inclined limb, fastening means connecting the adjacent ends of the limbs together, and an angle bar reposing on the base immediately in advance of the inclined limb and secured to the latter by the same means which connect the ends of the limbs together, the horizontal flange of said angle bar being inclined upwardly from its point of connection with the base for the purpose specified.

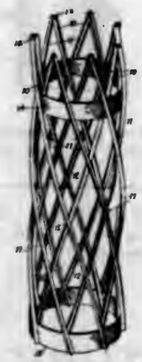
1,637,256. STEEL VEHICLE WHEEL. AMES ROWLES JAYNE, Chicago, Ill., assignor to American Steel Wheel Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 21, 1925. Serial No. 17,248. 5 Claims. (Cl. 301—67.)



3. A metallic wheel comprising a rim section having a single line of elongated apertures around its circumference, a pair of abutting wheel-halves having radial spoke portions, each spoke portion of each wheel-half being provided at its outer end with a pair of elongated projecting lugs spaced apart the width of the outer end thereof and which extend through said elongated apertures of the rim section, each of said elongated apertures being sufficiently wide transversely to receive a pair of contacting lugs, one on each wheel-half, the free ends of said lugs of opposite wheel-halves being bent oppositely to each other upon the outer side of the rim section to clamp the rim section and wheel-halves together.

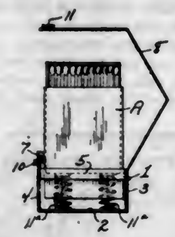
1,637,257. CENTRIFUGAL DIRT COLLECTOR. SYLVESTER L. JOINER, McGregor, Tex. Filed Apr. 7, 1926. Serial No. 100,465. 3 Claims. (Cl. 183—82.)

1. A centrifugal dirt collector for air brake systems comprising a casing having an upper dust separating chamber and a lower dust collecting chamber provided at the bottom with a central tubular outlet forming a discharge opening for the dust, a drain cock for controlling the discharge of the dust through the said outlet, and a substantially horizontal deflecting guard located in the upper portion of the dust collecting chamber below the mouth or inlet opening of the same and being of greater diameter than the mouth or inlet and provided with supporting means located beyond and out of line with the discharge opening so as not to obstruct with the free passage of the dust and dirt into the same, said guard permitting the dust to be discharged from the dust collecting chamber without removing the guard therefrom.



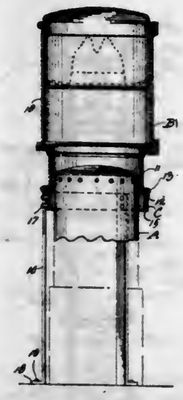
1,637,258. WINDOW-CLEANING DEVICE. WILLIAM ISIRO KATOW, Los Angeles, Calif. Filed Feb. 26, 1926. Serial No. 90,866. 1 Claim. (Cl. 15—220.)

In a device of the character described, a bar, an implement secured to said bar and contacting with the surface of a window, said implement comprising a plate, a



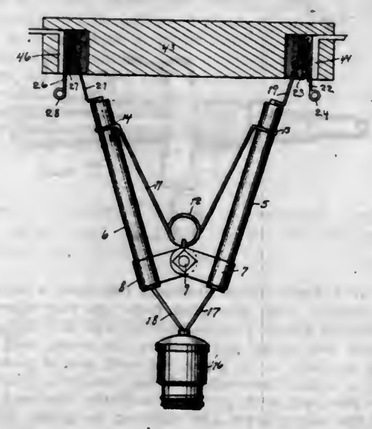
wiping element secured thereto, a lever pivoted to said bar, a handle secured to said lever, a tubular member slidable on said lever, a collar surrounding said bar, a link interposed between said collar and said tubular member, and a second link between said collar and the lever connected at one end to the pivotal connection of said bar and said lever.

1,637,259. METAL POLE. ADOLPH W. MALONE, Fillmore, Utah, assignor of one-third to Albert H. Vestal, Anderson, Ind., and one-third to Alvah M. Lockwood, Houston, Tex. Filed June 2, 1927. Serial No. 196,111. 5 Claims. (Cl. 189—24.)



1. A post formed of two groups of spirally disposed members, one group wound right hand and the other group wound left hand, each member having legs whose edges are connected with the edges of the corresponding legs of the other members at crossing points, substantially as set forth.

1,637,260. MATCH-BOX HOLDER. CARL MARCH, Chicago, Ill. Filed Sept. 8, 1926. Serial No. 134,316. 2 Claims. (Cl. 206—31.)

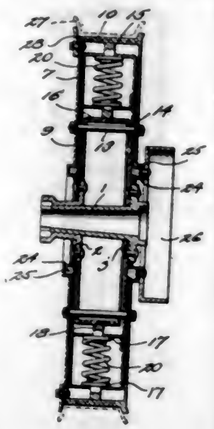


1. A match box holder of the character described comprising a body, including end walls, one of said end walls being of greater length than the other, guide means between said end walls, a match box interposed between said end walls and said guide means, said match box including a cover and a slidable match carrier therefor, a flexible strip covering the end walls and bottom with one end fixed to the upper portion of the long end wall, spring means between said bottom and the bottom of the carrier respectively for arranging said carrier to open position and said flexible strip being adapted to engage said carrier to retain the same against the tension of the spring in closed position, and fastening means for said flexible strip which when unfastened allows the spring means to eject the carrier to open position.

1,637,261. SUPPORTING MEANS FOR DRY ROOMS. SPIROS C. MARKATOS, New York, N. Y. Filed Feb. 18, 1926. Serial No. 89,204. 4 Claims. (Cl. 34—26.)

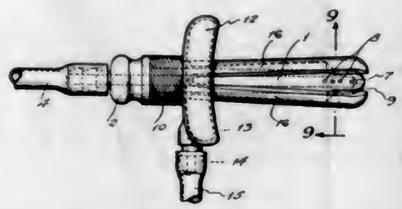
1. An attachment for steam boilers comprising a drying chamber arranged above and in axial alignment with the boiler and having a portion encircling and enclosing the boiler, and means for supporting the chamber from the floor and independent of the boiler.

1,637,262. ELECTRICAL APPARATUS. JOHN C. MARSHALL, San Francisco, Calif. Filed Jan. 2, 1926. Serial No. 79,002. 2 Claims. (Cl. 173—328.)



1. In an apparatus of the character described, a pair of pivoted handles, a terminal positioned on each of said handles, a contact member pivoted to each of said terminals, a spring interposed between each of said terminals and said contact members, and means for conducting current from said terminals through said handles to a remote point.

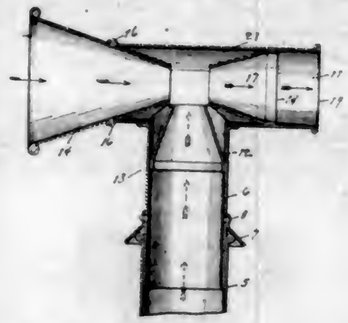
1,637,263. SPRING WHEEL. GEORGE H. MARTIN, Warm Springs, Mont. Filed May 1, 1926. Serial No. 106,067. 2 Claims. (Cl. 152—38.)



1. A spring wheel comprising a hub, an inner casing carried thereby, an outer casing, the casings having relative movement circumferentially, a ring located within the inner casing, means for fastening the ring to the outer casing, an outer row of members removably carried by the inner casing and engaging the inner circumference

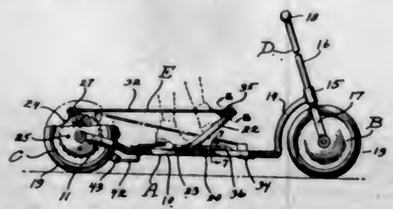
of the outer casing, an inner row of movable members carried by the inner casing and engaging the outer circumference of the ring and a coiled spring arranged be-

tween each pair of members, said springs acting to resiliently space radially therefrom the respective flanges of the inner casing.



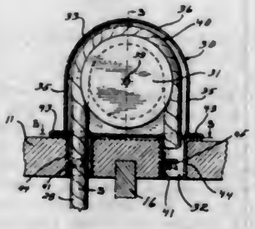
1,637,264. SYRINGE. JACOB MASONICK, GUSTAV STUEBNER, and JOHN STUEBNER, Chicago, Ill.; said Masonick assignor to said Gustav Stuebner. Filed Nov. 6, 1925. Serial No. 67,331. 3 Claims. (Cl. 128—242.)

1. In a device of the character described, a collar having resilient arms extending from one end thereof and disposed in spaced parallel relation, and a nozzle slidable through the collar and between the arms, said nozzle being provided at its inner end with spaced grooves extending longitudinally thereof, the arms being provided at their free ends with inwardly projecting elements engaging into said grooves and disposed to spread the arms apart when the head of the nozzle is positioned between the free end portions of said arms.



1,637,265. SUCTION HEAD. FRANK MASSON, San Francisco, Calif. Filed May 24, 1926. Serial No. 111,359. 1 Claim. (Cl. 98—78.)

In a device of the character described, a vertically disposed pipe, a horizontally disposed pipe secured thereto and communicating therewith, a funnel shaped member secured to one end of said horizontal pipe, the large end of said funnel being of a greater diameter than the diameter of said horizontal pipe, and having its small end of less diameter than the diameter of the horizontal pipe, a funnel shaped member disposed within said horizontal pipe, the small end of second said mentioned funnel member being of the same diameter as the small end of said first mentioned funnel and in axial alignment therewith, and a third funnel positioned within said vertically disposed pipe and having its small end positioned adjacent the small ends of said first mentioned funnel and

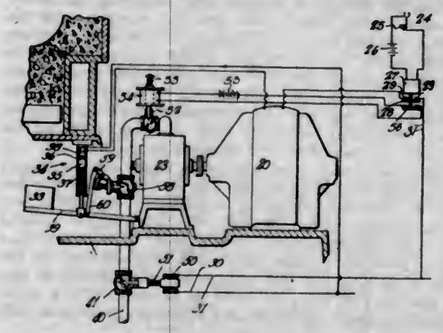


in such a manner that gases passing therethrough will pass between the small ends of said first mentioned funnel.

1,637,266. CHILD'S VEHICLE. JAMES A. MAXSON, Picher, Okla. Filed Nov. 4, 1926. Serial No. 146,228. 5 Claims. (Cl. 208—35.)

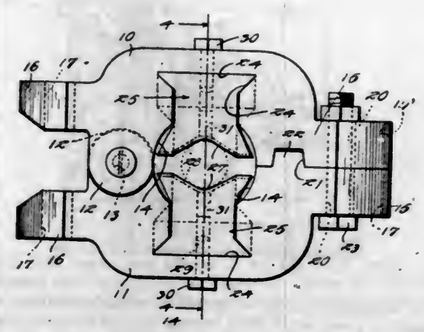
1. A child's vehicle comprising a frame embodying a platform having a way extending longitudinally at one side of the platform, steering and drive wheels mounted respectively and in alignment forwardly and rearwardly of the platform, a treadle hingedly connected at its rear end to the platform at the rear end of said way, a guard strip extending longitudinally of the platform at the inner edge of said way, a draw rod connected at its forward end to the treadle and extending rearwardly therefrom at the longitudinal center of the platform, and ratchet means connecting the rear end of the rod with the drive wheel for forward turning of the wheel upon depressing of the treadle.

1,637,267. SASH PULLEY. CLARENCE E. MCCALL, St. Augustine, Fla. Filed Apr. 12, 1926. Serial No. 101,524. 7 Claims. (Cl. 16—215.)



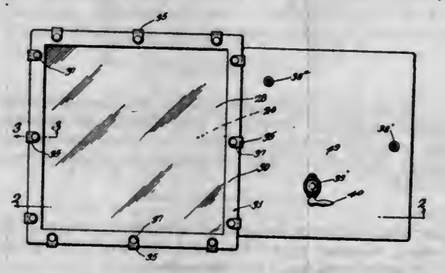
1. A sash pulley comprising a sheet metal hood having an integral outturned marginal flange at the lower end thereof, a sheave rotatably mounted in the hood, and a separate sheet metal anchoring section clamped to the outturned flange at each end of the hood and each embodying a depending sash cord receiving tubular section arranged below the outturned flanges.

1,637,268. EXPANSIVE DRILL BIT FOR CABLE TOOLS AND THE LIKE. JESSE PERKINS MILLER, Houma, La., assignor of one-half to J. H. Thatcher, Houma, La. Filed Aug. 5, 1922. Serial No. 579,851. 19 Claims. (Cl. 255—75.)



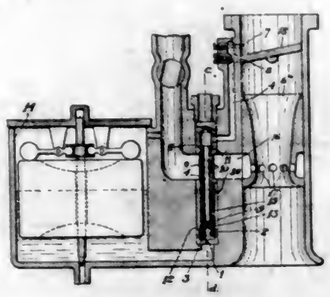
1. In drilling apparatus, a drill having expansive elements, and means for expanding said elements step by step to a permanent operative position by a series of up and down motions imparted to the drill.

1,637,269. OIL-BURNING FURNACE. FRANKLIN G. NEAL, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed June 3, 1924. Serial No. 717,646. 3 Claims. (Cl. 158—28.)



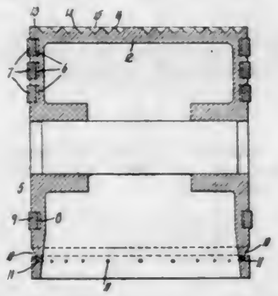
1. The combination with a power operated oil burner, of a normal and an independent driving means therefor, controlling means for both said driving means but normally effective only to start and stop said normal driving means, and means operable on failure of said normal driving means to render the independent driving means effective to be controlled by said controlling means whereby it is effective to operate the burner.

1,637,270. ELEVATOR FOR OIL-WELL DRILLING STEMS. KENNETH DONLEY NEELY, Rising Star, Tex. Filed Mar. 5, 1927. Serial No. 173,130. 1 Claim. (Cl. 294—90.)



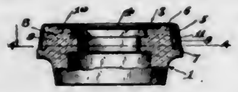
In a clamp of the character described, a pair of clamp sections having projecting from the adjacent faces thereof interdigitating lugs through which a pivot is passed, adjacent faces of the sections having vertically extending grooves for the reception of a drill stem, the ends of the body of the sections of the clamp having extensions, the extension adjacent the pivot being offset from the pivot to enable the sections of the clamp to be swung to open position, the extension at the opposite end of one of the sections having a vertically extending rib and the corresponding extension of the other of the sections having a groove, a securing element extended through the last named extensions for forcing the rib into the groove to thereby retain the sections against transverse movement which would apply strain to the pivot, there being dove tail grooves in the walls of the semi-circular grooves of the sections, slips mounted in said dove tail grooves and projecting into the semi-circular grooves and a threaded element extended through the wall of each section and having its inner end extended into a slot formed in the associated slip to thereby limit vertical movement of the slip in the groove.

1,637,271. CASKET. ALFRED H. NIEMEYER, Chicago, Ill. Filed Apr. 23, 1926. Serial No. 104,152. 3 Claims. (Cl. 27—6.)



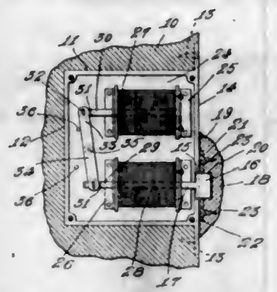
1. The combination with a casket shell, of sectional covers for the shell, a vacuum body receiving box confined in the casket shell, said box including at its head portion a slight opening, and a closure frame for the sight opening, said frame including supporting seats defined by wall portions of the box, transparent sheet compressible gasket disposed on opposite sides along the peripheral edges of the transparent sheet, a cap ring having inturned flanges disposed over one of the gaskets, and a sealing material between the other of the gaskets and the supporting seats.

1,637,272. CARBURETOR. AUGUST LEANDER NILSSON, Sodertalje, Sweden. Filed Mar. 8, 1923, Serial No. 623,789, and in Sweden Mar. 4, 1922. 1 Claim. (Cl. 261—41.)



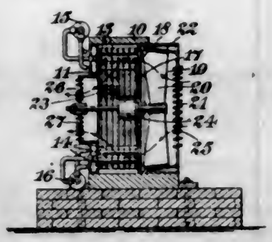
In a carburetor, in combination, a casing having an induction tube, an air duct leading to said induction tube and a well, means having a calibrated orifice at the bottom of said well, a fuel supply duct leading to said orifice, a sleeve within said well forming a chamber at the bottom thereof for which the orifice is an inlet and having a restriction within its bore, said restriction admitting fuel from said chamber to said sleeve, a second sleeve around said first sleeve and spaced to provide a normal fuel passage between said sleeves, an outlet from said chamber to said normal fuel passage, ports in said second sleeve communicating with said air duct, a port leading from said air duct to said first sleeve, and a duct leading from said sleeve to said induction tube.

1,637,273. PISTON. JOHN F. NORTON, Mattapan, Mass. Filed Feb. 7, 1923. Serial No. 617,474. 2 Claims. (Cl. 74—108.)



1. A piston for high-speed internal combustion gasoline engines embodying therein a closed end wall provided with a spiral corrugation upon the outer end surface thereof, the width of said corrugation being greater than its depth.

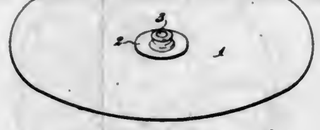
1,637,274. FUSE-PLUG-CAP ASSEMBLY. NORMAN W. NUTT, Trenton, N. J. Filed Jan. 25, 1927. Serial No. 163,468. 7 Claims. (Cl. 200—130.)



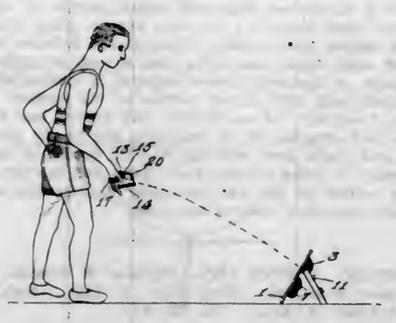
1. In a fuse plug cap assembly an insulating fuse plug body having a tapered extremity and an annular shoulder at the point of largest diameter of said extremity, said tapered extremity being serrated.

1,637,275. DOOR LOCK. VICTOR PETERSON, Chicago, Ill. Filed Nov. 22, 1926. Serial No. 150,014. 8 Claims. (Cl. 70—50.)

1. In combination, a keeper plate, two members movable relatively to each other, pivotally supported means for operative connection to corresponding end portions of said members, one of said members being adapted for latched engagement with the keeper plate, means for moving said members, and remote means for controlling operation of said moving means.



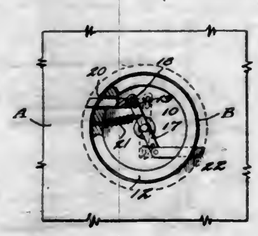
1,637,276. HEAT-EXCHANGING APPARATUS. JOHN FORGAN-POTTS, Brussels, Belgium. Filed Aug. 8, 1925, Serial No. 49,075, and in Belgium Aug. 18, 1924. 2 Claims. (Cl. 257—259.)



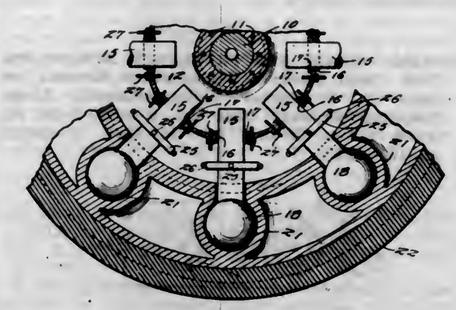
1. In heat-exchanging apparatus the combination of a casing, a bank of circularly-bent tubes disposed in a cylindrical formation therein and occupying a circumferential space betwen the internal periphery of the casing and the internal periphery of the bank of tubes, which casing has at one end a wall having an annular opening that registers with one end of said circumferential space, and at the other end a wall that closes the other end of the said circumferential space and has an outlet registering with said bank of tubes, a fan of the propeller or axial-flow type situated at the first end wall outside the casing, a second casing which surrounds said fan and is conical about the axis of rotation of the fan and is arranged to direct a whirling current of air delivered by the fan through the said annular opening to said circumferential space, and heat-transmitting vanes provided on said tubes and inclined each to the axis of its tube and also inclined to the longitudinal axis of the bank of tubes so as to lie in substantially spiral formation about the latter axis, substantially as described.

1,637,277. ACCESSORY FOR USE IN CONNECTION WITH HAIR WAVING OR CURLING APPLIANCES. BÉLA MAXIMILIAN RAY, London, England. Filed Jan. 14, 1927, Serial No. 161,139, and in Great Britain Dec. 17, 1926. 3 Claims. (Cl. 132—36.1.)

1. An accessory for use in connection with hair-waving and curling appliances comprising a flexible body portion having a central nipple portion for receiving a tress of hair, means for compressing said nipple about the tress of hair, said flexible body portion being adapted to surround and completely encase the end of a curling or waving appliance for the tress of hair and means for holding said flexible body portion about the end of the appliance.



1,637,278. GAME. GEORGE H. RENS, Newark, N. J. Filed Oct. 29, 1926. Serial No. 145,042. 1 Claim. (Cl. 273—107.)



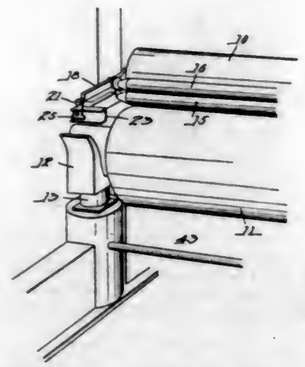
A holding means in which a sphere is to be received and from which the sphere is to be manually projected, said means including a cylindrical body having an elongated lip extension, the outer edges of the body at the opposite sides of the lip being flanged outwardly, the rear of the body being closed and having spaced slots therethrough, an endless elastic band passing through the slots and compressible members on the inner and outer faces of the body and said band designed to clamp the body on the hand or foot of a player who projects the sphere.

1,637,279. GASOLINE-TANK-CAP LOCK. CHARLES A. ROBERTS, Butte, Mont. Filed May 12, 1926. Serial No. 108,658. 1 Claim. (Cl. 220—57.)

A closure cap for a tank opening, the opening having an upstanding flange thereabout, comprising a body member of circular form having a depending inner flange portion adapted to be telescopically engaged within the filling opening and having an outer depending flange portion concentric with and spaced from the inner flange portion and adapted to telescopically engage about said first named flange, said inner flange having transverse guide openings therethrough, latch bolts slidably mounted through said openings and having their outer ends normally projecting beyond the first named flange and beveled at their lower sides, a bearing member located at the center of the cap, a cylindrical member rotatably mounted within said bearing member, an arm secured to said cylindrical member and having its ends formed with elongated slots, pins carried by said latch members and slidably received within said slots, a spring connected with said arm and normally holding the same in position with said latch bars extended, key operated means for rotating said cylindrical member, and means for limiting the rotation of said cylindrical member in both directions.

1,637,280. PUNCTUREPROOF CUSHION WHEEL. MARCEL A. ROBIN, Port-au-Prince, Haiti. Filed May 15, 1926. Serial No. 109,333. 3 Claims. Cl. 152—46.)

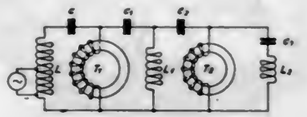
2. A wheel of the character described comprising a nondeformable air reservoir, pistons coacting therewith, means forming hermetic joints between the pistons and the reservoir, a felly carried by the pistons, abutment means on the reservoir, and a collar adjustable on each piston relatively to the abutment means for the purpose set forth.



1,637,281. PRODUCTION OF COBALTOUS ACETATE. HERMANN SCHATZ, Schwanheim-on-the-Main, Germany, assignor to the Firm I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Oct. 28, 1926, Serial No. 144,920, and in Germany Nov. 27, 1925. 4 Claims. (Cl. 260—11.)

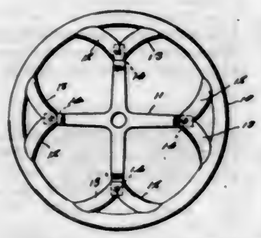
1. Process of producing cobaltous acetate from cobaltic hydroxid, consisting in heating cobaltic hydroxid with acetic acid in presence of a reducing agent in a closed vessel to a temperature above the boiling point of the solvent acetic acid.

1,637,282. PRESSURE-RELIEVING MEANS FOR HYDRAULIC CALENDERS. CARL SCHLATTER, Webster, Mass., assignor to S. Slater & Sons, Incorporated, Webster, Mass., a Corporation of Massachusetts. Filed Mar. 16, 1927. Serial No. 175,902. 14 Claims. (Cl. 26—39.)



1. In a machine for calendering textile goods, the combination with a pair of calender rolls and hydraulic rams for pressing one roll toward the other, of a detector

in advance of the rolls, a low pressure cylinder, a piston therein, yielding means for holding the piston in opposition to liquid in the cylinder, and means operated by said

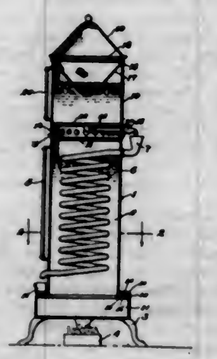


detector for controlling the flow of liquid from the hydraulic rams into said cylinder, whereby when the liquid from the source of pressure is cut off, the rolls will be capable of yielding.

1,637,283. MEANS FOR FREQUENCY MULTIPLICATION. KARL SCHMIDT, Berlin-Sudende, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed Mar. 9, 1925, Serial No. 14,259, and in Germany Feb. 15, 1924. 2 Claims. (Cl. 172—281.)

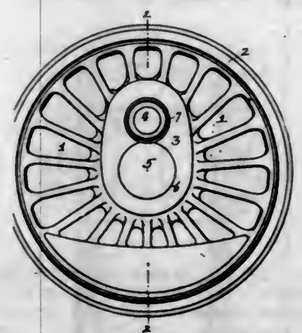
2. In a high frequency multiplication system of the character described for changing a fundamental frequency into another higher frequency comprising in combination an iron-cored frequency transformer having its input circuit fed by said fundamental frequency, a second frequency transformer having a multiplication ratio relatively small with respect to that of the first frequency transformer and means for coupling the output circuit of the first transformer with said input circuit of said second transformer.

1,637,284. STEERING WHEEL. GUSTAVE M. SCHWIERMAN, Detroit, Mich. Filed Feb. 11, 1925. Serial No. 8,548. 1 Claim. (Cl. 74—33.)



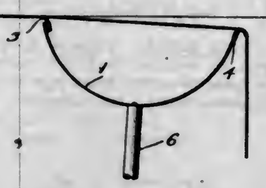
A steering wheel of the character described, including a rim, and radially extending spokes within the rim, converging hand holds extending inwardly from the rim and secured to the outer end of the spokes at the point of juncture of said hand holds.

1,637,285. BLISTER PREVENTIVE AND FOOT PAD. FRANK SHEEHAN, Ithaca, N. Y. Filed Mar. 19, 1924. Serial No. 700,321. 2 Claims. (Cl. 128—166.)



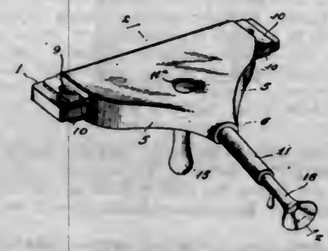
1. A device for preventing the formation or irritation of a blister on the tender central portion of the forward tread of the foot, comprising an elastic band of such size and tension as to encase the ball portion of the foot and prevent spreading of the heads of the metatarsal bones so that the forward part of the transverse arch of the foot is maintained with said central portion of the forward tread raised and protected against being contacted and rubbed with pressure when a shoe is worn on the foot, said elastic band being free of pads or projections capable of applying pressure against or causing rubbing contact with said central portion of the forward tread, and a soft mit for covering the ball portion and toes of the foot attached at its rear open end to the rear end of said elastic band, the ball covering portion of the mit forming a lining for the elastic band, and the toe covering portion of the mit preventing displacement of the band rearwardly towards the instep.

1,637,286. COFFEE URN. THOMAS W. TURNER, Newport News, Va. Filed Sept. 1, 1926. Serial No. 133,053. 2 Claims. (Cl. 53—3.)



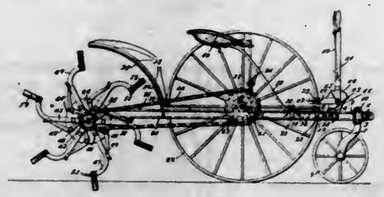
1. In a coffee urn, a heating chamber, a coil therein, a coffee reservoir supported upon the said chamber, an air ventilated chamber between the heating chamber and the reservoir, and means mounted in the air ventilated chamber for delivering coffee from the reservoir to the coil.

1,637,287. DRIVING WHEEL FOR LOCOMOTIVES, ETC. SAMUEL M. VAUCLAIN, Rosemont, Pa. Filed June 16, 1927. Serial No. 199,319. 2 Claims. (Cl. 295—2.)



1. The combination in a driving wheel for locomotives, etc., of a hub in which are openings for the axle and the driving pin, the openings being connected; an axle and a driving pin driven into the respective openings and engaging one with the other.

1,637,288. WALL-PAPERING DEVICE. BRUCE D. WOOLLEY, Johnstown, Ohio. Filed Dec. 31, 1926. Serial No. 158,273. 2 Claims. (Cl. 216—7.)

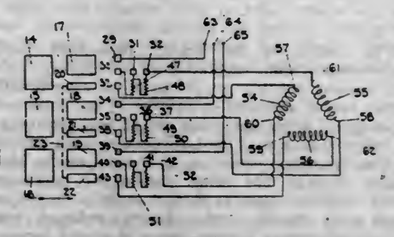


1. A paper hanger's tool of the character described comprising a handle, an elongated body formed of resilient material arranged in U-shaped configuration, a clamp secured to one end of said body, flexible material secured in said clamp, an arm formed in substantially inverted channel shaped formation and fixed to the opposite end of said body.

1,637,289. HARMONICA. WILLIAM BENJAMIN YATES, Ventura, Calif. Filed Oct. 22, 1924. Serial No. 745,219. 3 Claims. (Cl. 84—379.)

1. A device of the class described, comprising a substantially triangular shaped casing including a top, a bottom, and a pair of side walls, means for supporting a harmonica between said top and bottom at one side of the casing, a tubular member secured to and extending from the casing and having an enlarged portion, a rotatable handle having a hollow closed end extending through the top, the bottom, and said enlarged portion, and having a transverse passageway therethrough for alinement with said tubular member, the turning the handle operating to vary the extent of communication between the casing and the tubular member, and a second tubular member open at both ends and telescopically mounted within said first mentioned tubular member.

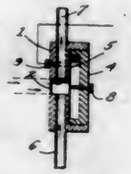
1,637,290. SOIL-BREAKING MACHINE. JOHN A. AYERS, Lima, Ohio. Filed Dec. 13, 1926. Serial No. 154,525. 4 Claims. (Cl. 97—216.)



1. In a soil breaking machine a bodily revoluble ground breaking element comprising a hub provided intermediate its ends with an annular flange, a series of radially disposed shanks each pivotally connected at a point removed from its inner end to said flange, a bow shaped spring fixedly secured at a point between its transverse median and its inner end to said flange and having each of its ends bearing against a shank inwardly and outwardly with respect to the shank pivot, and a ground breaker member secured to the outer end of each shank.

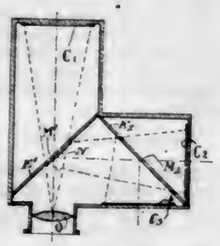
1,637,291. METHOD OF PRODUCING GEM MATERIALS. LEON H. BARNETT, New York, N. Y. Filed Oct. 6, 1923. Serial No. 667,057. 10 Claims. (Cl. 23—209.)

1. The improvement in the method of producing gem materials by high pressure which comprises melting an iron having a composition which would cause it to expand during cooling providing for the presence within the molten iron of a material which changes its character when subjected to high pressure, confining the molten iron within a rigid shell not of appreciably greater capacity than that occupied by such iron just previous to solidification and then slowly cooling such iron, substantially as and for the purpose described.



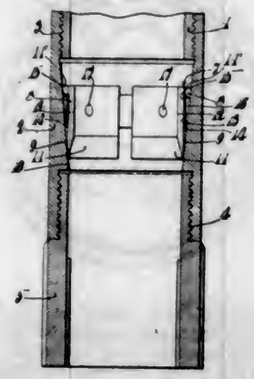
1,637,292. METHOD OF STARTING INDUCTION MOTORS AND APPARATUS THEREFOR. HELIER OSWALD BREE, Auckland, New Zealand. Filed July 15, 1926, Serial No. 122,655, and in New Zealand Aug. 19, 1925. 3 Claims. (Cl. 172—274.)

1. In combination with a polyphase alternating current motor, a source of current, a starter comprising limiting resistances, and means for connecting the stator windings



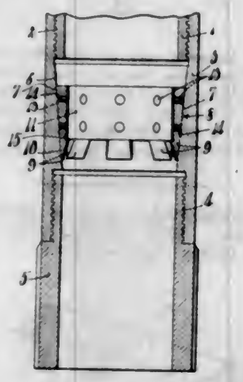
of said motor in "star" to said source of current supply and simultaneously inserting said limiting resistances in series with each of said windings, removing said resistances from said "star" connection, then connecting the stator windings of said motor in "delta" to said source of current supply and simultaneously inserting said limiting resistances in series with each of said stator windings, and then removing said resistances from said "delta" connection to permit the motor to run in straight "delta."

1,637,293. PHOTO-ELECTRIC CELL. MELCHOR CENTENO V., Caracas, Venezuela. Filed Nov. 6, 1926. Serial No. 146,794. 6 Claims. (Cl. 179—171.)



1. A photo-electric cell comprising a closed acid-proof chamber with a transparent opening therein, a microphone in the path of transmitted light, a current of hydrogen and chlorine passed through the chamber, and means for admitting intermittent light rays through the opening.

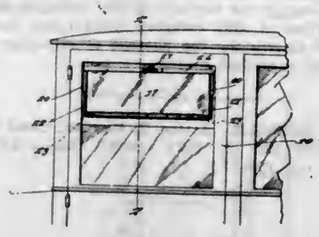
1,637,294. APPARATUS FOR OBTAINING THREE-COLOR PHOTOGRAPHS. GILBERT CUENIN, Paris, France, assignor to Compagnie Internationale Trichromia, Paris, France, a Corporation of France. Filed Dec. 26, 1923, Serial No. 682,784, and in France Dec. 27, 1922. 5 Claims. (Cl. 95—2.)



1. In apparatus for taking three-color negatives simultaneously, the combination of an objective, a pair of color screens meeting at an angle of substantially 90 degrees and so arranged in advance of the objective that the emergent beam falls upon one of said screens, means for positioning a sensitized element in such relation to the last mentioned screen as to directly receive the rays passing through the same, means for positioning a second sensitized element in such relation to the second screen as to directly receive the rays reflected from the first screen passing through the said second screen, and means for positioning a third sensitized element in such position as to directly receive the rays reflected from the second screen.

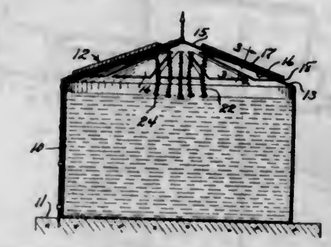
1,637,295. CORE DRILL. THOMAS L. DEE, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 30, 1924. Serial No. 710,116. 14 Claims. (Cl. 255—72.)

1. A core lifter comprising separate spaced wedge shaped supporting and core engaging elements having inclined external surfaces, a radially expansible split member encircling said elements, and means for rigidly securing each of said elements to the inner surface of said member.



1,637,296. CORE DRILL. THOMAS L. DEE, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 30, 1924. Serial No. 710,117. 14 Claims. (Cl. 255—72.)

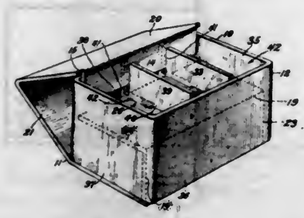
1. A core lifter comprising separate spaced wedge shaped supporting members, an annular core gripping member, and means for rigidly securing said core gripping member to the inner surfaces of said supporting members.



14. A core lifter comprising separate spaced wedge shaped supporting members each having an inclined external surface and a vertically disposed inner surface, a resilient split core gripping member, and means for rigidly securing said core gripping member to the inner surfaces of said supporting members.

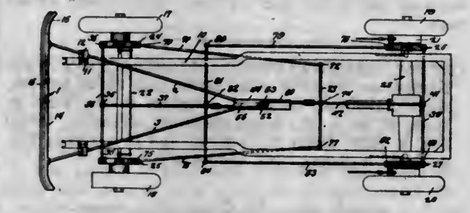
1,637,297. VEHICLE CURTAIN. JAMES L. DAOHEN, Dunkirk, N. Y. Filed May 8, 1926. Serial No. 107,771. 1 Claim. (Cl. 296—95.)

A vehicle attachment comprising a pair of brackets adapted to be secured to the frame of a vehicle window, said brackets each comprising a vertically disposed attaching portion, a roller supporting arm secured to and extending at right angles from its upper end and an outwardly extending horizontal arm extending from its inner end, a spring roller mounted in the roller supporting arms, a substantially U-shaped frame including side arms, means pivotally securing the side arms to the horizontal arms of the brackets, bracket carried adjustable stops extending from the vertical arms and engaging the side arms to limit pivotal movement of said side arms in one direction, stops carried by the side arms to limit pivotal movement of the side arms in opposite directions and a curtain wound upon the roller and having its outer end secured to the frame, whereby the frame may be extended outward in unfolded position and maintained in such position by the tension of the curtain, or arranged in folded position and held in such position by the curtain.



1,637,298. FIRE-PREVENTING COVER FOR FUEL TANKS AND THE LIKE. ENRIQUE GREGORIE GARCIA, Tampico, Mexico. Filed May 24, 1926. Serial No. 111,461. 1 Claim. (Cl. 220—88.)

A tank having a conical top provided with a plurality of trapezoidal shaped openings arranged radially and terminating short of the center, a plurality of trapezoidal shaped doors hingedly mounted adjacent the periphery of the tank for normally closing said openings in overlapping relation thereto, guide brackets mounted beneath the top and provided with openings, curved depending rods secured to said doors at the inner or free ends thereof and slidable through the openings in the brackets, and coil springs surrounding said rods and abutting against the undersides of the brackets.



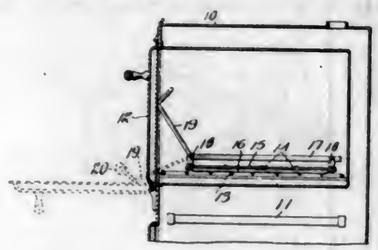
1,637,299. BOX. WILLIAM R. GRAHAM, Bronx, N. Y. Filed Nov. 19, 1926. Serial No. 149,421. 5 Claims. (Cl. 229—27.)

1. A folding box comprising a pair of coaction sections each formed of a single blank of relatively stiff foldable material, the blank of one of said sections being cut and scored to provide the cover, rear wall, bottom wall, and a horizontal partition, the blank of said other section being cut and scored to provide the end walls, front wall and a pair of vertical partitions, and interlocking

means between the horizontal partition and said vertical partitions for holding said sections in a set-up position and for dividing the interior of said box into a plurality of separate compartments.

1,637,300. BRAKE MECHANISM. JOSEPH GREENBERG and DAVID DWORKIN, Wilkes-Barre, Pa. Filed Feb. 4, 1927. Serial No. 165,890. 6 Claims. (Cl. 180—83.)

1. A braking mechanism for the wheels of motor vehicles comprising a braking device for each of the vehicle wheels consisting of a brake element adapted to be fixed to and revolve with the vehicle wheel, a pair of oppositely disposed, normally latched, spring controlled brake shoes connected together by the spring controlling means therefor, opposing, surrounding and normally spaced from said element against the action of said means and coacting, when released, with said element to apply a braking action to the wheel, and a bumper operated releasing mechanism for said shoes.



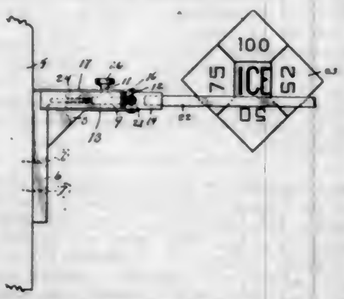
1,637,301. FLOORING TILE. GEORGE C. HANNAM, Freeport, and JULIUS W. SCHEDE, Mount Vernon, N. Y., assignors to Rubberstone Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1927. Serial No. 165,027. 1 Claim. (Cl. 106—31.)

A tile-composition, comprising gilsonite asphalt, vegetable pitch, and asbestos fiber, in substantially the proportions of twenty-five pounds of asphalt, twenty-five pounds of pitch, and one hundred and twenty pounds of asbestos fiber, in which mixture coloring matter is incorporated.

1,637,302. FLOORING TILE. GEORGE C. HANNAM, Freeport, and JULIUS W. SCHEDE, Mount Vernon, N. Y., assignors to Rubberstone Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 31, 1927. Serial No. 165,028. 1 Claim. (Cl. 106—32.)

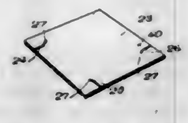
A tile composition, comprising vegetable pitch, light "Cumar" gum (a coal tar derivative), and asbestos fiber in substantially the proportions of pitch thirteen and a third pounds, light "Cumar" gum three and two-thirds pounds, and asbestos fiber forty pounds.

1,637,303. OVEN GRATE. FRANK E. HEATH, Sherman Mills, Me. Filed Jan. 27, 1927. Serial No. 164,043. 2 Claims. (Cl. 126—337.)



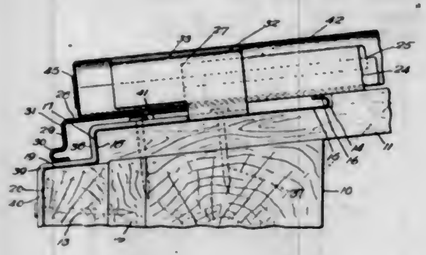
1. A rack or basket for supporting cooking utensils and the like in an oven comprising a framework, an upstanding retaining bar or guard rail on the sides and inner end of said framework for preventing cooking utensils and the like from sliding off the same and open at the front end to permit objects to be slid on and off the same, and a handle pivotally mounted at said open end and arranged to be held upright by an oven door when the same is in closed position but adapted when the door is opened to drop by gravity to a free substantially horizontal position where it may be readily engaged for removing the device from an oven, substantially as set forth.

1,637,304. TRAMWAY-SWITCH CONSTRUCTION. PAUL HEIDTKAMP, Schildow, near Berlin, and PETER MÜLLER, Berlin-Rosenthal, Germany, assignors to the Firm E. Hesse G. m. b. H., Berlin-Rosenthal, Germany. Filed Feb. 4, 1927, Serial No. 165,957, and in Germany Feb. 6, 1926. 5 Claims. (Cl. 246—442.)



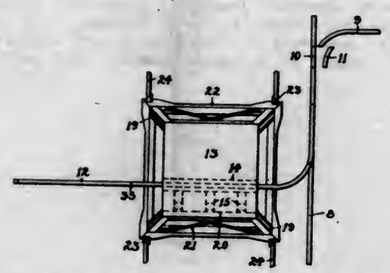
1. In a tramway switch construction a switch body or skeleton and a resilient switch tongue connected therewith, the interconnected elements provided each with a serration and the serrated parts being firmly locked together.

1,637,305. DISPLAYING DEVICE. HENRY H. HENDSCH, Bakersfield, Calif. Filed Jan. 28, 1927. Serial No. 164,290. 1 Claim. (Cl. 40—125.)



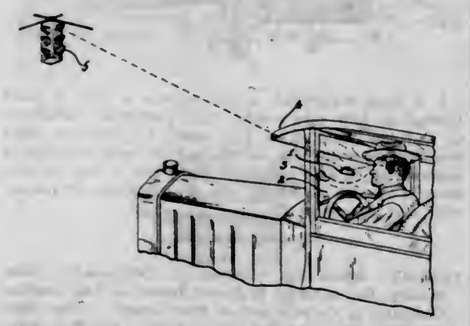
In a device of the character described, a vertical member, a horizontal member secured to said vertical member, a brace between said vertical and said horizontal members, a pair of plates secured to said horizontal member, a swinging member pivoted between said plates, recesses formed in said swinging member, a slider positioned in said horizontal member, the end of said slider being adapted to engage the recesses in said swinging member, an arm carried in said swinging member and having a slot formed therein for the purpose of retaining a display card in a vertical position.

1,637,306. SHINGLE. JAMES E. HOOKER, Coral Gables, Fla. Filed Mar. 5, 1927. Serial No. 173,075. 4 Claims. (Cl. 108—7.)



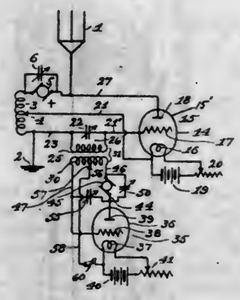
3. A shingle formed of a square sheet of roofing material being provided with a cut at three corners to form an interlocking flap at said corners, said shingles being provided with an additional cut at the inner end of the first-mentioned cuts with the second-mentioned cut extending towards an edge which forms a right angle through which the first-mentioned cut is made.

1,637,307. CAR ROOF. FRANCIS A. JACOBS, Warren, Ohio, assignor, by mesne assignments, to Chicago-Cleveland Car Roofing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 14, 1924. Serial No. 743,521. 12 Claims. (Cl. 108—5.)



1. In a car roof, in combination, roof sheathing; a flashing secured on said sheathing and having a portion depending over the side of the car; roof sheets disposed on opposite sides of the ridge of the roof, said sheets having side flanges terminating in downwardly directed portions spaced from the body of the sheet, said flanges extending from the ridge to a point short of the eaves edge of the roof, the eaves edges of the roof sheets terminating in flanges depending over the side of the car, the unflanged portions of said sheets at their sides being extended to form ears, the ears of adjacent sheets being lapped; seam caps enclosing the side flanges of adjacent roof sheets; and anchors enclosed by said seam caps at the eaves ends thereof, said anchors having a top web and depending inwardly inclined sides spaced from each other that terminate in outwardly extending flanges spaced from each other and arranged on said flashing, one end of each of said flanges being bent downwardly and secured to the side of the car over said flashing, portions of said anchor sides being cut away to provide slots into which the ears of adjacent roof sheets extend.

1,637,308. TELPHER OR OVERHEAD TRANSPORTER SYSTEM. CLAUDE WARREN LOVERIDGE, Manchester, England. Filed Apr. 13, 1925, Serial No. 22,918, and in Great Britain June 19, 1924. 4 Claims. (Cl. 104—96.)



1. In a telpher system a fixed rail, a movable rail one end of which curves towards the fixed rail, and makes sliding contact therewith, a groove formed in the upper face of the fixed rail, a tongue formed on the lower face of one end of the movable rail and engaging in the said groove, such rail end and tongue being in articulated sections, and an extremity on the movable rail which extremity is bevelled off on its upper face to zero.

1,637,309. SIGNAL-VIEWING ATTACHMENT FOR AUTOMOBILES. BRUCE W. DAVID, Cleveland Heights, Ohio, assignor to The Moonbeam Manufacturing Company, a Corporation of Ohio. Filed Dec. 28, 1926. Serial No. 157,516. 3 Claims. (Cl. 88—1.)

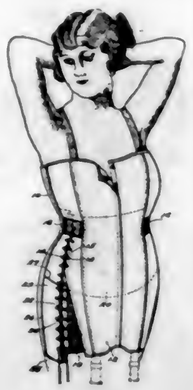
2. A device of the class described, comprising a light refracting means secured to the inside surface of an automobile windshield or the like within the range of vision of the driver, said refracting means increasing in thickness towards its top edge, the angle of refraction of said refracting means being such that it will transmit to the eye of the driver, in normal position, an image of the traffic signal which occupies elevated position and which is otherwise obscured from view of the driver by overhanging top portion of the automobile, and said refracting means having an enlarged field of view so as to transmit to the eye of the driver an image of the signal which may be to one side or the other of the direct line of vision of the driver.

1,637,310. TRANSMISSION SYSTEM FOR RADIANT ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Sept. 28, 1917, Serial No. 193,827. Renewed Aug. 1, 1924. 7 Claims. (Cl. 250—12.)

1. A system of radio transmission, comprising an aerial circuit including a source of current, means including a thermionic valve cooperating with said source to produce electrical oscillations in said circuit, and means including a thermionic valve arranged to impress periodic amplitude variations upon said oscillations.

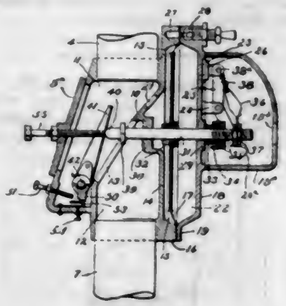
1,637,311. METHOD OF TREATING MILK POWDER AND PRODUCT PRODUCED THEREBY. WILLIAM GERE HAWLEY, Syracuse, N. Y., assignor to Merrell-Soule Company, Syracuse, N. Y., a Corporation of New York. Filed Jan. 29, 1927. Serial No. 164,513. 10 Claims. (Cl. 99—8.)

1. The process of packing milk powder comprising enclosing milk powder in a container air-tight except for a minute opening, subjecting the milk powder in the container to high vacuum conditions, and then charging the container with a combination of carbon dioxide and nitrogen.



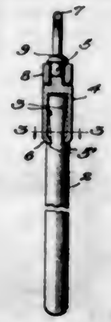
10. An article of commerce consisting of an air-tight container, milk powder within the container, the uncombined oxygen content of the powder and space within the container being less than five cubic centimeters per pound of powder, and a combination of carbon-dioxide and nitrogen within the container.

1,637,312. NONREFILLABLE COIN BANK. PHILIP O. HOAG, Newark, N. J., assignor to The Whitehead & Hoag Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 6, 1926. Serial No. 92,714. 1 Claim. (Cl. 232—4.)



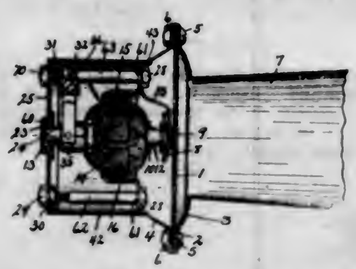
In a non-refillable toy bank, a coin receptacle having a coin inlet, and a laminated portion composed of inner, outer and intermediate layers of sheet material, the inner layer having a coin outlet, the outer and intermediate layers being continuous across the outlet, said intermediate layer being of less area than the outer layer and displaceable from across the outlet only by mutilation of the outer layer.

1,637,313. CORSET. JOSEPH LEONARD, Allentown, Pa., assignor to Fifth Avenue Corset Company, Inc., Allentown, Pa., a Corporation of New York. Filed Sept. 5, 1925. Serial No. 54,761. 4 Claims. (Cl. 2—27.)



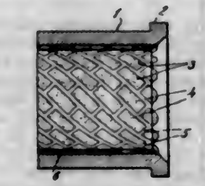
1. In a corset having a body portion split adjacent the sides and connected by lacings and having an abdominal belt also connected to said lacings, thigh controlling portions including elastic sections set into the front of the body portion and non-elastic sections over-lapping the lower portions of the sides of the garment, said non-elastic sections being connected to the body portion further around to the sides than the splits, and lacing connections independent of the first said lacings, connecting the sections of each thigh controlling portion together.

1,637,314. POWER CONTROLLER. JAMES G. MACLAREN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Mar. 26, 1926. Serial No. 97,562. 54 Claims. (Cl. 243—9.)



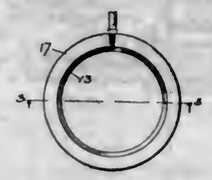
1. Power control apparatus for a pneumatic despatch system of the minimum flow type having a transmission tube and means for creating carrier propelling air flow therein, said apparatus comprising a normally closed controlling valve, a minimum flow through the tube being permitted when the valve is closed, and a pneumatic for opening the valve in response to reduction in pressure in the transmission tube due to introduction of a carrier therein, said valve closing by the direct action of the air current thereagainst when the carrier is delivered from the tube.

1,637,315. HOOK. FREDRICK W. NITTEL, Attleboro Falls, Mass., assignor to M S Company, Attleboro, Mass. Filed Mar. 19, 1927. Serial No. 176,626. 4 Claims. (Cl. 24—240.)



1. In a hook, a shank having an end of non-circular cross-section, a sleeve swaged over the said end of the shank and having a stud projecting outwardly from its opposite end, and a ring swivelled on the stud.

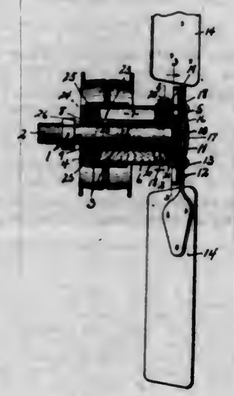
1,637,316. HORN. THEODORE J. SCOFIELD, Jackson, Mich., assignor to The Sparks-Withington Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 7, 1922. Serial No. 580,262. 14 Claims. (Cl. 177—7.)



1. A horn comprising a case section, a pair of posts secured to said case section, and projecting therefrom, an end cap mounted on said posts, an armature shaft journaled in said case section and in said end cap, a commutator on said armature shaft, and a pair of commutator brushes carried by one of said posts for contact with said commutator.

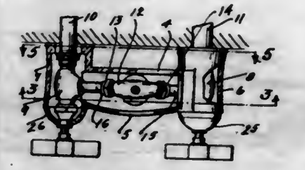
1,637,317. BEARING. GEORGE A. SHOEMAKER, Philadelphia, Pa., assignor to Bound Brook Oil-Less Bearing Company, a Corporation of New Jersey. Filed Sept. 27, 1921. Serial No. 503,474. 1 Claim. (Cl. 308—239.)

In a bearing comprising a metallic shell divided longitudinally into separable sections having interior bearing webs or fins and pockets intermediate the webs or fins, continuous marginal pockets at the meeting edges of the bearing sections extending longitudinally thereof, and communicating with the aforesaid pockets and an alloy bearing metal cast into said pockets flush with the bearing surface of said webs or fins.



1,637,318. ELECTRICALLY-WELDED PIPE COUPLING AND METHOD OF MAKING THE SAME. RICHARD STRESAU, Wauwatosa, and HARRY WOODHEAD, Milwaukee, Wis., assignors to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Dec. 20, 1922. Serial No. 608,111. 6 Claims. (Cl. 29—156.)

1. The method of making a pipe coupling, which consists in rolling a metal strip with longitudinally extending opposite slopes on one of its broader sides, converting the said strip into a tube with the sloped side upon its interior with the ends of the strip abutting, and electrically welding the abutting ends of the strip to constitute an integral tubular coupling having an inwardly tapering opening at each end.

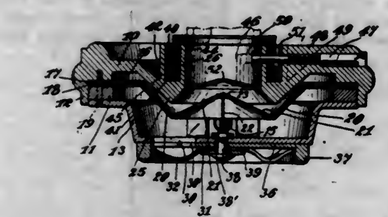


4. A pipe coupling made from a metal strip provided upon one of its broader sides with longitudinally extending surfaces which slope oppositely toward the edges of the strip, the said strip being formed into a tube with the sloped side disposed interiorly thereof, the meeting ends of the strip being welded to constitute an integral coupling having an inwardly tapering opening at each end, and the tapering openings being provided with screw threads.

1,637,319. FAN. GEORGE A. WHITE, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed Nov. 3, 1925. Serial No. 66,525. 9 Claims. (Cl. 308—109.)

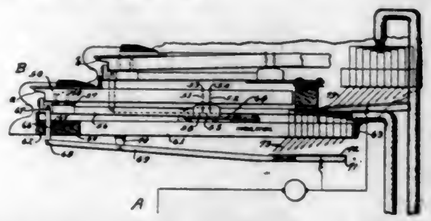
1. A fan comprising a spindle, a bearing mounted thereon, a hub secured to and having a portion spaced radially from a portion of the bearing to form an oil chamber, and means for feeding oil to said chamber comprising a passageway leading through the bearing opening into the oil chamber at a point more than 90 degrees removed from the inlet opening of the passageway.

1,637,320. SINK FIXTURE. FRANK F. BURFITT, Portland, Oreg. Filed May 17, 1926. Serial No. 109,789. 2 Claims. (Cl. 137—111.)



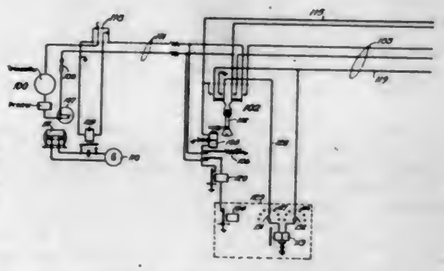
1. A sink fixture comprising a frame made from plastic material, a fitting within and disposed centrally of said frame, a valve disposed in said frame at each side of said fitting, nipples connecting the valves and fitting, gland nuts connecting the nipples with the fitting, and a soap container removably connected to said frame and adapted to form a closure to the frame.

1,637,321. METHOD OF AND COMPOSITION FOR TREATING CONCRETE. NATHAN C. JOHNSON, Englewood, N. J. Filed June 17, 1925. Serial No. 37,625. 30 Claims. (Cl. 25—154.)



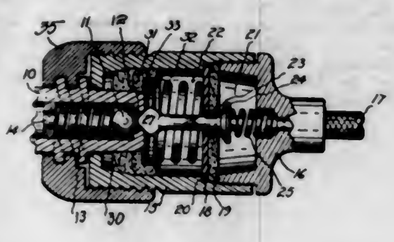
1. Process of treating concrete surfaces, which consists in applying to the concrete surface a layer of a colloidal composition containing a reagent material which will react upon the cement of the concrete to prevent or sufficiently retard the setting of such of the cement as it comes in contact with the colloid serving to provide a suitable coating or layer of the composition in contact with the concrete surface and to gradually feed the reagent from the composition to the cement.

1,637,322. SOUND REPRODUCER. MAXIMILIAN WEIL, New York, N. Y. Filed Aug. 14, 1926. Serial No. 129,144. 35 Claims. (Cl. 274—27.)



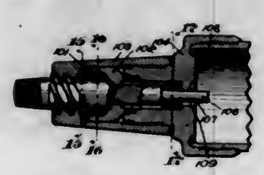
1. A sound reproducer comprising a casing having a diaphragm therein and affording a compression chamber at one face of the diaphragm and an impedance chamber at the other face of the diaphragm, said latter chamber having a wall enclosing said face and having openings in a part of said wall, said openings having cover portions associated therewith which permit emission of sound only by lateral diffusion.

1,637,323. ORGAN. CHARLES F. WINDER, Hollywood, Calif., assignor to The Symphonaer Co., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,212. 3 Claims. (Cl. 84—347.)



3. Improvements in organs having a console and a seat for the organist adjacent said console, and an organ chamber the expression of which is controlled by expression shutters, there being means controlled by the tipping of the seat to control opening or closing of the shutters; said means including a switch, and a motor coupled with the shutters, variable movement of the switch providing variable movement of the motor to provide variable movement of the shutters.

1,637,324. PRINTING-TELEGRAPH-EXCHANGE SYSTEM. DONALD B. PERRY, Yonkers, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 9, 1925. Serial No. 55,327. 22 Claims. (Cl. 178—2.)



1. In a telegraph exchange system, a plurality of subscribers' stations, printing telegraph equipment and a source of power therefor at each station, said source being normally disconnected from the associated equipment, automatic interconnecting means common to all of said stations, means responsive to the operation of said automatic means for interconnecting one of said stations with another of said stations, means responsive to such interconnection for operatively connecting the power source at said other station with its corresponding printing equipment.

1,637,325. CONNECTER FOR LUBRICATING APPARATUS. RAYNALDO P. JACQUES, Woonsocket, R. I., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 13, 1922. Serial No. 552,395. 20 Claims. (Cl. 284—19.)

1. A quick detachable connecter for lubricating apparatus, having, in combination, a nipple and a nozzle detachably secured thereon, said nozzle comprising a casing having a bore with a conical outer end, a packing ring in said conical end having an opening to receive said nipple, and means to move said packing ring axially outward in said conical end by pressure of the lubricant, thereby forcing the ring between said end and said nipple to seal the connection.

1,637,326. PRESSURE LUBRICATING SYSTEM AND APPARATUS. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 1, 1923. Serial No. 616,302. 24 Claims. (Cl. 284—19.)

1. In lubricating apparatus of the class described, a lubricant-expelling device for co-operation with a lubricant-receiving nipple, said device including a barrel having a front head and a coupling nozzle rigidly connected to said head, said nozzle comprising a female threaded portion for quick detachable connection with said nipple, sealing means for effecting a lubricant-tight connection with said nipple, a valve, and a seat for said valve all located forwardly of and detachably secured to said front head independently of said female threaded portion.

July 5, 1927

ALPHABETICAL LIST OF REGISTRANTS OF TRADE-MARKS.

Fireplaces. Readybuilt Products Company. 248,196; July 5.
Floors or the material from which they are constructed, Hardwood. R. J. Deeney. 245,959; July 5.
Iron, Finely-ground clear gray. Contract Waterproofing Company. 244,987; July 5.
Lath, Metal. Edwards Manufacturing Company. 248,624; July 5.
Laths, Metal. North Western Expanded Metal Company. 249,090; July 5.
Lime. Augusta Lime Company. 249,775; July 5.
Lime. Woodville Lime Products Co. 249,688–90; July 5.
Lime, Hydrated. Grand Canyon Lime & Cement Co. 242,720; July 5.
Material for making cementitious structures and for pointing up. Baldwin-Tarvin Company. 248,951; July 5.
Plastic substance consisting largely of wood or other fiber, a binder, and a solvent. G. J. Liebich Co. 247,798; July 5.

CLASS 13.

Bathtubs, sinks, lavatories, laundry trays, etc. D. L. Hamill Co. 248,177; July 5.
Casters for furniture, Slide. Foote, Pierson & Company. 247,469; July 5.
Nails. Strowan Corporation. 220,259; July 5.
Sash balances. Frank Graves Sash, Door & Mill Co. 249,054; July 5.

CLASS 14.

Castings, Steel. Birdsboro Steel Foundry and Machine Company. 248,808; July 5.

CLASS 15.

Oils, greases, and waxes. Vacuum Oil Company. 246,790; July 5.
Oils, Lubricating. A. From. 247,078; July 5.

CLASS 16.

Finishing compound, Automobile. Sewell Paint and Varnish Company. 247,103; July 5.
Lacquers, Cellulose-ester. Rohm & Haas Company. 247,512; July 5.
Paints, varnish stain, oil stain, etc. Sullivan Paint Company. 247,346; July 5.
Polish, Automobile and furniture. K. Sandhop. 246,935; July 5.
Whiting. Aalborg Portland-Cement-Fabrik. 247,155; July 5.

CLASS 17.

Cigars. C. F. Garcia. 248,096; July 5.
Cigars. International Tobacco Products Company. 240,260; July 5.

CLASS 19.

Automobiles, Second-hand Buick. Howard Automobile Company. 236,037; July 5.

CLASS 21.

Electric stoves and ranges. Charter Oak Stove & Range Company. 248,219; July 5.
Electric water heaters. Red Spot Electric Co. 249,021; July 5.
Electrical lighters and dispensers, Automatic. American Metal Products Corporation. 248,341; July 5.
Lavatory drying apparatus. Chicago Hardware Foundry Company. 248,346; July 5.
Lighting fixtures. Matthews Electric Supply Co. Inc. 247,275; July 5.
Loud speakers. Stewart-Warner Speedometer Corporation. 242,317; July 5.
Radio loud speakers. R. H. A. Englund. 244,436; July 5.
Radio receiving apparatus. Pal Radio Company. 238,520; July 5.
Radio receiving sets and parts thereof. Grimes Radio Engineering Co. 248,898; July 5.
Radio receiving sets and parts thereof. Neutrowound Radio Mfg. Co. 248,967; July 5.
Vacuum tubes and valves. Radio Corporation of America. 246,773; July 5.

CLASS 22.

Game, Clock golf. Premier Sport Products, Incorporated. 248,125; July 5.
Golf balls. Draper-Maynard Company. 249,648; July 5.
Golf tees. Standard Co. 248,450; July 5.
Imitation candy. J. E. Nathanson. 249,672; July 5.
Woolly dogs, dolls, rattles, etc. Best & Co. 242,469; July 5.

CLASS 23.

Adzes, axes, bush hooks, grass hooks, grub hoes, etc. Kelly Axe & Tool Co. 240,142; July 5.
Lathes. Sidney-Machine Tool Company. 247,827; July 5.
Machines for moistening, serving, or applying adhesive, etc. Nashua Package Sealing Co. Inc. 245,365; July 5.
Pumps. Dayton Pump & Manufacturing Company. 248,314; July 5.
Razors and safety razors. Friedr. Herder Abr. Sohn. 249,411; July 5.
Sprayers, spray pumps, and powder dusters. D. B. Smith & Company. 249,548; July 5.
Tackle and hoisting blocks and sheaves. Boston & Lockport Block Company. 238,567; July 5.

CLASS 26.

Adding machines. Victor Adding Machine Company. 248,333; July 5.

CLASS 27.

Watches. Goldsmith, Stern & Company. 245,902; July 5.
Watches, watchcases and watch movements. Katz & Ogush, Inc. 244,080; July 5.
Watches, watchcases, and watch movements. Katz & Ogush, Inc. 248,574; July 5.

CLASS 28.

Jewelry and novelties. Stein & Ellbogen Company. 246,510; July 5.
Necklaces, brooches, bracelets, etc. Cohn & Rosenberger, Inc. 247,888–9; July 5.
Rings, Wedding. Interstate Smelting & Refining Co. Inc. 247,795; July 5.

CLASS 29.

Powder puffs. S. Blechman & Sons, Inc. 247,254; July 5.
Powder puffs. A. L. Siegel. 247,043; July 5.

CLASS 32.

Cabinets for radio phonograph. Landay Bros., Inc. 248,578; July 5.
Pillows and mattresses. Sunset Feather Company. 238,409; July 5.

CLASS 34.

Furnaces. New Holland Machine Co. 248,511; July 5.
Gas-lighting plants. C. S. Trump. 246,239; July 5.
Ranges, etc., Gas and coal. Malleable Iron Range Company. 247,090; July 5

CLASS 35.

Rubber tires, inner tubes, etc. Chicago Mail Order Company. 235,110; July 5.

CLASS 36.

Bows for stringed instruments. Carl Fischer Inc. 242,718; July 5.
Pianos and player pianos. Behr Bros. Co. Inc. 231,180; July 5.
Reeds for metal wind instruments. Carl Fischer, Inc. 245,703; July 5.
Sound-reproducing machines, Electric pick-ups used in connection with. Adams-Sibley Development Corporation. 248,662; July 5.

CLASS 37.

Card indexes, guide cards, etc. Duradex Company. 247,363; July 5.
Fiber board. Sterling Fibreboard Company. 246,720; July 5.
Paper back with an adhesive-applied layer of cloth. Reversible Collar Company. 247,910; July 5.

CLASSIFIED LIST OF TRADE-MARK TITLES.

PUBLISHED FOR OPPOSITION.

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907.]

Paper, Cover. Holyoke Card & Paper Company. 246,552; July 5.
Paper, Wrapping. Continental Paper & Bag Mills Corporation. 246,268; July 5.

CLASS 38.

Illustrations, Pictorial. Textile Publishing Company. 247,046; July 5.
Newspaper, Title for a daily evening. News Publishing Company. 248,185; July 5.
Publication. Musical America Company. 245,857; July 5.
Publications. Upson Company. 244,582; July 5.

CLASS 39.

Apparel, Women's and children's wearing. Felix Brunschwig & Co. Inc. 247,531; July 5.
Boots and shoes. Endicott Johnson Corporation. 248,033–5; July 5.

Coffee. Clark Restaurant Company. 221,693; July 5.
Coffee. Young & Griffin Coffee Company. 244,418; July 5.
Cookie. Ontario Biscuit Company. 249,018; July 5.
Crackers, Graham. Bishop and Company. 247,247; July 5.
Feed, Poultry. Ralston Purina Company. 248,328; July 5.
Flour, Wheat. Wabasha Roller Mill Company. 248,667; July 5.
Food product. Malt-O-Egg Company. 247,877; July 5.
Food starches. Joseph Morningstar & Co. Inc. 245,866; July 5.
Fruit, Fresh citrous. Orange Mutual Citrus Association. 249,533; July 5.
Fruits and grapes, Fresh. Vacaville Fruit Growers Association. 249,558; July 5.
Gum, Chewing. Wm. Wrigley Jr. Company. 245,772; July 5.
Honey. Charles B. Justice & Co. 248,572–3; July 5.
Ice-cream confection. S. Przybyszewski. 248,066; July 5.
Macaroni. Quaker Oats Company. 248,725; July 5.
Noodles. H. B. McNeal. 247,479; July 5.
Oil, Olive. Simoncelli Bros. 231,284; July 5.
Peanuts, almonds, pistachio nuts, etc. J. C. Hersog. 245,053; July 5.
Popcorn, Raw. Cracker Jack Co. 232,814; July 5.
Potato chips and mayonnaise. Yo-Ho Pure Food Products Co. 247,053; July 5.
Sandwiches. Duncan, Sprankle & Turgeon. 229,379; July 5.
Sandwiches. Duncan, Sprankle & Turgeon. 229,381; July 5.
Sandwiches and coffee. Duncan, Sprankle & Turgeon. 229,378; July 5.
Sandwiches and coffee. Duncan, Sprankle & Turgeon. 229,380; July 5.
Sandwiches and coffee. Duncan, Sprankle & Turgeon. 229,382; July 5.
Wafers, Bran. B. Beuchel. 248,276; July 5.

CLASS 48.

Malt and hops, Extract or sirup of. Reading Malt & Hops Co. 249,540; July 5.
Malt sirup. Buckeye Producing Co. 241,516; July 5.
Malt sirup. Carr and Craig. 249,779; July 5.
Malt sirup, Hop-flavored. Brodie's, Inc. 249,509; July 5.

CLASS 50.

Household appliance. Novelty Manufacturing Company. 247,812; July 5.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 5TH DAY OF JULY, 1927.

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice). Includes patents, reissues, and designs.

Adair, Thomas D., jr., Dorchester, assignor, by mesne assignments, to L. L. Elden, Brookline, and D. S. Boyden, Boston, Mass. Transformer. 1,634,440; July 5.
Adams, Walter S., assignor to The J. G. Brill Company, Philadelphia, Pa. Brake. 1,635,021; July 5.
Aktiebolaget Svenska Kullagerfabriken. (See Hultgren, A. G. E., and Thoren, assignors.)
Aktiebolaget Vaporackumulator. (See Constam, Ernst, assignor.)
Alexanderson, Ernst F. W., Schenectady, N. Y., assignor to General Electric Company, Controlling alternating currents. 1,634,970; July 5.
Allen, Arthur F., Alameda, Calif. Hat tree. Des. 72,974; July 5.
Allen, John S., Worcester, Mass. Puzzle. 1,635,022; July 5.
Allen, Robert C., Essington, Pa., assignor to Westinghouse Gear and Dynamometer Company, Reduction gearing. 1,634,863; July 5.
Allen, Robert C., Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company. Turbine-cooling means. 1,634,894; July 5.
Allen, Seton J., Vineland, N. J. Last for making shoes. 1,634,815; July 5.
Allen, Seton J., Vineland, N. J. Shoe. 1,634,816; July 5.
Allison, Clifford E., assignor to Willamette Iron and Steel Works, Portland, Oreg. Hoisting apparatus. 1,634,529; July 5.
American Arch Company. (See Himmelright, Raleigh J., assignor.)
American Can Company. (See Butler, William F., assignor.)
American Can Company. (See Hothersall, John M., assignor.)
American Can Company. (See Peters, John F., assignor.)
American Can Company. (See Young, John M., assignor.)
American Cystoscope Makers, Inc. (See Wappler, Reinhold H., assignor.)
American Laundry Machinery Company, The. (See Carroll, Emil J., assignor.)
American Laundry Machinery Company, The. (See Colclough, William, assignor.)
American Laundry Machinery Company, The. (See Dreher, A. J., and Benjamin, assignors.)
American Laundry Machinery Company, The. (See Holden, Harry C., assignor.)
American Motor Body Corporation, The. (See Stubblebine, R. F., and Dolan, assignors.)
American National Red Cross, The. (See Clark, N. D., and Armstrong., assignors.)
American Optical Company. (See Maynard, Albert E., assignor.)
American Optical Company. (See Tully, George L., assignor.)
American Sterilizer Company. (See Hall, J Everett, assignor.)
American Telephone and Telegraph Company. (See Blauvelt, William G., assignor.)
American Telephone and Telegraph Company. (See Herman, Joseph, assignor.)
American Telephone and Telegraph Company. (See Parker, Raymond D., assignor.)
American Telephone and Telegraph Company. (See Shackleton, Samuel P., assignor.)
Amiss, James T., Baton Rouge, La. Automobile jack. 1,634,891; July 5.
Amory, William N., New York, N. Y., assignor to Arch-Cushion Corporation. Resilient support for vehicle bodies. 1,634,895; July 5.
Anchor Cap & Closure Corporation. (See Podel, Abraham, assignor.)
Anchor Cap and Closure Corporation. (See Ramsey, George, assignor.)
Anderson, Charles W., Milan, Ohio. Drain trap. 1,634,530; July 5.
Anderson, Harry S., Los Angeles, Calif. Steam generator. 1,634,604; July 5.
Andres, William J., South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill. Brake-operating mechanism. 1,634,250; July 5.
Angle, Glenn D., Dayton, Ohio. Engine-cylinder valve port and stem-guide structure. 1,635,023; July 5.
Angle, Glenn D., Detroit, Mich., and H. M. Morehouse, Dayton, Ohio. Valve-port arrangement for internal-combustion engines. 1,634,971; July 5.
Ansel, Harry R. (See Bloss, R. R., Strout, and Ansel.)
Arch-Cushion Corporation. (See Amory, William N., assignor.)
Arcturus Radio Co., The. (See Brockway, Carl P., assignor.)
Armistead, Hubert M., San Francisco, Calif., assignor to Manifold Impressions Corporation, Carson City, Nev. Ribbon-carrying arm for manifolding typewriters. 1,634,605; July 5.
Armstrong, Alma B. (See Clark, N. D., and Armstrong.)
Arnold, Robert B. (See Gross, P. M., and Arnold.)
Aronson, Louis V., Newark, N. J. Ornament. 1,634,251; July 5.
Artcolor Motion Picture Company. (See Miller, Frederic B., assignor.)
Artcraft Metal Stamping Corporation. (See Shapiro, Saul, assignor.)
Asher Manufacturing Company. (See Olson, Werner O., assignor.)
Aulenback, James R., Bridgewater, Nova Scotia, Canada. Beamer. 1,635,067; July 5.
Ayvad, Hachig A, West New York, N. J. Swimming bag. 1,634,313; July 5.
Ayvad, Hachig A, West New York, N. J. Valve for swimming bags. 1,634,314; July 5.
Babcock, Asa M., Lorain, Ohio. Spring motor. 1,634,864; July 5.
Babcock & Wilcox Company, The. (See Kerr, Howard J., assignor.)
Bach, Oscar B., New York, N. Y. Secretary. Des. 72,975; July 5.
Baily, Thaddeus F., Alliance, Ohio. Electrode control for arc furnaces. 1,634,483; July 5.
Baker, Linnaeus E., assignor to Wayne Company, Fort Wayne, Ind. Safety mechanism for dispensing apparatus. 1,634,817; July 5.
Baker Perkins Company. (See Gase, Eugene, assignor.)
Baker Perkins Company. (See Reiger, Carl S., assignor.)
Baker, William H., Montreal, Quebec, Canada. Cloth-roll mounting for looms. 1,635,024; July 5.
Baker, William H., assignor to F. W. Fairman, Montreal, Quebec, Canada. Loom. 1,634,818; July 5.
Ball Brothers Company. (See Schram, Alexander L., assignor.)
Ball, Guy M., Dayton, Ohio. Quenching fluid. 1,635,025; July 5.
Ballman, Edward C. (See Mattern, P. J., and Walter, assignors.)
Balls, Arnold K., Philadelphia, Pa. Preserving cane juice. 1,634,848; July 5.
Banker, Garrett N., Kew Gardens, N. Y. Remedy for seasickness. 1,634,315; July 5.
Banker, Oscar H., Chicago, Ill. Band-saw sharpener. 1,634,281; July 5.
Barker, Conley T., Gate City, Va. Heading and loading kafir corn, maize, and the like. 1,635,106; July 5.
Barnes, Walter C., Taft, Calif. Core drill. 1,634,865; July 5.
Barr and Stroud, Limited. (See Strang, John M., assignor.)
Barrett, George E., assignor to Lenher Engineering Company, New York, N. Y. Driving mechanism for the windlasses and capstans of vessels. 1,634,766; July 5.
Barrett, Joseph M., assignor to The "S-C" Regulator Manufacturing Company, Fostoria, Ohio. Automatic alarm and shut-off for steam boilers. 1,634,392; July 5.
Barron, Nicholas N., Newark, N. J. Burial casket or coffin. 1,634,767; July 5.
Bartlebaugh, David W., Springfield, Ohio. Weeder and the like. 1,634,606; July 5.
Bartlett Hayward Company, The. (See Kennedy, James S., assignor.)
Bartlett, Newell R., Springfield, Mass. Lock butt for asphalt shingles. 1,634,972; July 5.
Bartlett, Willard J. (See Wright, J. G. E., and Bartlett.)
Barton, John, Matador, Tex. Propeller. 1,634,393; July 5.
Baruch, Samuel, New York, N. Y. Antirattling device. 1,634,249; July 5.
Bates, Solomon W., deceased, Portland Me.; F. E. Haines, executor. Oil burner. 1,634,819; July 5.
Bates Valve Bag Company. (See Fegely, Nathan M., assignor.)
Battle-Fyre Company. (See Burke, George W., jr., assignor.)
Baur, Hugo J., assignor, by mesne assignments, to S. S. Gorham, trustee, Chicago, Ill. Fare box. 1,634,441; July 5.

Bay State Optical Company. (See Nerney, George E., assignor.)
Bay State Optical Company. (See Siddall, Wilbur H., assignor.)
Baybutt, Richard, and E. S. Farrow, jr., assignors to Eastman Kodak Company, Rochester, N. Y. Cellulose acetate and making the same. 1,635,026; July 5.
Beach, John W. (See Bristow, John J. R., assignor.)
Becher, Edward, New York, N. Y. Massaging heating roller. 1,634,316; July 5.
Bechle, Edward, Kiel, Wis. Bow-facing oar. 1,634,282; July 5.
Behr, Peter B. (See Mann, Robert C., assignor.)
Belden, Edward H., assignor to The Willys-Overland Company, Toledo, Ohio. Lubricating system. 1,634,820; July 5.
Belin, Edouard, Paris, France. Transmitting pictures. 1,635,027; July 5.
Bellevue Manufacturing Company, The. (See Martin, Jacob F., assignor.)
Bendix Brake Company. (See Andres, William J., assignor.)
Bendix Brake Company. (See Dodge, Adiel Y., assignor.)
Bendix Brake Company. (See Krieg, Walter L., assignor.)
Bendix Brake Company. (See La Brie, Ludger E., assignor.)
Bendix Brake Company. (See Thomas, George J., assignor.)
Benham, William T., Norwood, and J. E. Dwyer, assignors to The Hall's Safe Company, Cincinnati, Ohio. Time-lock means. 1,634,928; July 5.
Beni, Frank, and D. Iarussi, Cleveland, Ohio. Safety attachment for aeroplanes. 1,634,442; July 5.
Benjamin, Dana H. (See Dreher, A. J., and Benjamin.)
Bennett, Frederick F., Ypsilanti, Mich. Oil burner. 1,634,443; July 5.
Bens, Samuel J., New York, N. Y. Bearing for link chains and belts. 1,634,641; July 5.
Bens, Samuel J., New York, N. Y. Lubricant retainer or dust cover. 1,634,642; July 5.
Bens, Samuel J., New York, N. Y. Interlocking link. 1,634,643; July 5.
